Gutta Percha was discovered on the Malay Peninsula, in 1842. Like caoutchouc, with which it is identical in chemical composition, it is the exudation of a tree. Specimens of the gum were sent to the Society of Arts in London, and the gold medal awarded to the discoverer. Scientific men at once perceived that it would be of great value in the arts, and the demand for it has been gradually increasing, till hundreds of tons are now annually used.—The trade is principally confined to Singapore, but the tree is scattered over half a million square miles of territory in the islands of the vast Oriental Archipelago. The Malay name of the tree is *Percha*, and that of the sap or gum, *Gutta*.

The fine engraving on the next page represents a branch of the tree with leaves, flowers, and fruit. The fruit is said to yield a concrete, edible oil and a kind of *ardent spirit*. This is worth noticing, from the fact that Gutta Percha is insoluble in the strongest acids and alkalies, but is soluble in coal tar naphtha, and other spirits.

The sap circulates between the bark and body of the tree, which is lapped similarly to sugar maples. The sap is received in vessels, and immediately coagulates. The lumps of Gutta Percha as we have usually seen them, are about two feet in diameter, and are sold by weight. The cunning Malays sometimes take advantage of this, and place a stone in the middle of the lump, as the sap is running from the tree. Gutta Percha is a little lighter than water, and if a lump sinks in water, it may be known that it contains some heavy substance.

The purposes to which Gutta Percha is already applied are innumerable. It is unaffected by everything but heat and spirits. Moisture, or salt, or fresh water, does not affect it, and hence for belts in water mills, &c., it is far preferable to leather. For soles, it has been extensively used in England. We have worn these ourselves, and can testify to their comfort, and durability, in the wetest weather. They are glued to a leather sole, with a solution of Gutta Percha in coal tar naptha, and dispense entirely with pegs and stitches, so that every man can be his own shoemaker. They are, however, ill suited to our national habit of sticking our feet on the stove, for the heat would unglue them, and even on the side-walks in dog-days, we should soon, probably, be soleless.—We do not apprehend, therefore, though India rubber consciences are quite common, that Gutta Percha soles will become popular.

Gutta Percha, from the ease with which it can be moulded into any shape, and its hard resistant character at ordinary temperature, is admirably adapted for medallions, moulds, stereotyping, &c. It has, too, been successfully used to form large letters for printing purposes which, we are informed, are more durable than metal.

BRICK-MAKING MACHINE.

The *Farmers' Herald*, *London Artisan*, and several other of our English exchange papers, are giving glowing accounts of "Clayton's Patent Brick-making Machine," and a column or two of names of scientific men and statesmen, &c., who have recently been to see it operate. "It moulds the bricks at the astonishing rate of 1,000 per hour, with one horse." We have a machine quietly at work in this city, which has never been visited by Peer or Duke, M. P., or F. R. S., but which, nevertheless, will make, 1,000 bricks per hour, and is, in other respects, equal to Clayton's: and we have several machines in the country which work with still greater effect. It might be well for some of our Yankee manufacturers to take one of these machines to England, and show John Bull how to make bricks.

The *Tribune* thinks there are at present two discoveries most urgently required. The first is a method of hardening metal, so that *stone* may be cut with the same celerity and ease as we now cut wood with steel. The second is the production of heat, without *combustion*. It has strong hopes that these objects will be attained.

An oven heated with hot air is highly spoken of in Paris. It admits 14 charges of bread in 24 hours, and 2000 lbs. of bread can be baked for $0,50, whereas, in the ordinary ovens the same quantity costs from 60 to 80 cts. The price of this oven is about $600.

Mortar for Chimneys.—In building a chimney, put a quantity of salt into the mortar with which the inner courses of brick are to be laid. The effect will be that there never will be any accumulation of soot in that chimney. The philosophy is thus stated:—The salt in that portion of the mortar which is exposed, absorbs moisture from the atmosphere in every damp day. The soot thus becoming damp, falls down in the fire place. In consequence, there is never any accumulation, and as it is only a little that there is to fall, no inconvenience results. This appears to be an English discovery. It is used with success in Canada. —*Lewiston Journal.*

Speed of Lightning.—A wheel made to revolve with such velocity as to render its spokes invisible, is seen, when illuminated by a flash of lightning, for a moment, with every spoke distinct, as if at rest. The reason of this is, the flash is come and gone before the wheel had time to make a perceptible advance.

Domestic Economy.

Wash for Sore Mouth or Throat.—At this season of the year, sore mouths are frequent. A lady subscriber gives us the following receipt for a wash which is a sure cure:—Take half a tea-spoonful of salt petre, and dissolve it in half a tea-cupful of hot water, add a piece of alum about the size of a small white bean. Wash the mouth out with it three or four times a day. For sore throat use it as a gargle.

Boiled Meats.—Boiled meats are healthful, but as much of their juices escape into the water, they are less economical than when baked, unless the water be saved for soups or other cooking purposes. To boil meat, drop it into water already boiling *briskly*—the albumen near the surface will thus be coagulated, and less of the juices will escape. Let the heat soon subside and the meat boil *slowly*, as the slower it boils the more tender it will be. Rapid boiling does not cook meat any more quickly, but tends to harden it.

Hard water, or else water with a little salt in it, is considered preferable for boiling most kinds of meats and vegetables than soft, as less of the juices escape into the water. It is a good rule for all substances boiled for food, that they should not be suffered to stop boiling until it is done—if you wish to add water, add it boiling hot. Boil meat in as little water as will cover it. After the meat is cooked, a part of the liquor can be converted into gravy, and the remainder be left for soups and stews.

Hasket Stock.—Put on the feet and liver of the pig, with just enough water to cover them, with a little salt. Let them stew slowly; when the feet are tender, take them up, cut them in two or three pieces, but not take out the bones; chop the liver, return it and the feet to the liquor they were boiled in; set the stew-pan over the fire, add pepper, salt and sweet-marjoram to the taste. Roll a piece of butter in flour, stir in to thicken the gravy, add two glasses of port wine and serve it hot. Any kind of spice may be added.

To make Barley Water.—Choose the best pearl barley, boil it for a few minutes, then throw away the water and add fresh, in the proportion of a pint to an ounce of barley.—Boil quickly, and then let it simmer for an hour; strain and sweeten; flavor with lemon, or according to taste.

Educational.

Written for Moore's Rural New-Yorker.

MORAL EDUCATION IN COMMON SCHOOLS.

The Honorable Secretary of State tells us that the Bible cannot be used in our Common Schools, under the recognition of any of our school laws. Or, what is the same thing, he asserts that the teacher has no *authority* in this regard: and I suppose if the teacher were in possession of the delegated powers of the district, if the whole district, with the exception of one man, wished the Bible introduced into school, by the same exposition of the Honorable Secretary, the *authority* of the teacher would remain the same—a *minus*, and not a *positive* quantity. Now, I do not design to enter into an examination of the doctrine contained in that paper to which I have referred, but will simply say, that while the Honorable Secretary has limited the power of the teacher, he does not produce, to any reflecting mind, any sufficient authority to substantiate the doctrine he sets forth.

Now, what is the authority of the teacher? What may he do, and what may he not do? He is the *teacher*, to whom, for the time being, is delegated the authority of the *parent*. It is his duty to establish proper discipline in his school, and he has also authority to enforce it. But what shall he teach? What hands shall prepare the proper aliment for the immortal mind? There is more, much more, for the teacher to do than merely to instill into the youthful mind the highly important principles of natural science. This is plain business—The primary laws of matter are few, and easily understood; but how intricate and obscure are the laws of immateriality! It is easy to demonstrate a mathematical problem, to trace the various relations of different forms of matter, or to expound the laws of language; but how to cast a proper influence over the *heart*, how to direct the moral nature of the child, is far more difficult. But has the teacher nothing to do in this respect? Is the teacher of a common school a teacher of *moral science?*

A writer in a recent number of the Rural, tells us, "the child is in the hands of the teacher, as clay in the hands of the potter." In some degree this is most fearfully true, nor can we make it otherwise. Day by day that youthful mind is developing; day by day the lump of clay is receiving impressions which will fade only with the mind itself. Must the child be taught Arithmetic and Geography, and not be taught how to think and act? It is not in the province of any physical science to do this.—Arithmetic enables the scholar to deal correctly with numbers, but it does not teach him the proper application of them in all cases. Geography brings the different nations of the globe beneath the eye of the scholar, but it does not teach him how to *feel* towards them. Can a teacher impart a knowledge of the natural sciences, and fail to enforce the great moral lesson found in every examination? Can he fail to exclaim, as he examines the various departments of creation,

"My Father made them all?"

The teacher has a moral influence, and hence he imparts moral instructions. He may do much. He may impart lessons, aside from those found in our common school books, which would be of great and lasting benefit to the mind. But some tell us the moral education of the child is the work of other hands. "Let the parent or the minister attend to that." But while it is the duty of the parent and minister to labor in this behalf, it is none the less the duty of the teacher. Children who listen daily to the instructions of their teacher, become accustomed to regard his word as nearly the highest authority. Then what power for good or evil has that teacher over the mind of the child! When that little immortal being is just beginning to discern ideas in the written language before him—when he is just transforming those hitherto arbitrary characters into tangible forms, is it not very important that he read something of the God that made him, and of his duties of love and obedience? Then, if ever, is the important time.

But shall the Bible be introduced into common schools? Why not? There is certainly no *law* against it. Is it not an excellent book—chaste, pure, elegant in style, and faultless in doctrine? It is almost the only book of morals that is free from sectarianism. It is our glory that we live in "free, Christian America!" that we can boast of a government founded on the *Bible!* O! how we love the piety and sterling integrity of our noble ancestors! And while we rather sneer at the "Catechism and Testament" of old New England times, is there not danger of forgetting how much we owe to that Testament? Shall we exclude from our common schools the chief cause of our patriotic glory? That spirit would turn our glory into shame. J. W. Barker.

Kendall Mills, N. Y.

Impressions made upon the youthful mind are among the most lasting. An early incident will be remembered when later matters are buried in oblivion.

GUTTA PERCHA BRANCH.

For description of Gutta Percha,—its discovery, history and uses,—see preceding page.

DO YOU VISIT THE SCHOOL?

Stop one moment, Father, let me ask you a question, which seems to me to apply closely to the success of your school at present, and in the future. While you send your children to that nursery of the mind, the common school, tell me, do you ever go there yourself and sit an hour or a day to see how they are progressing, not only in their studies, but also in their moral and physical education? While you are so careful of their interests at home, do you follow them to their school and scrutinize closely the character of the one under whose charge they are placed? Mother, you who, with that deep and fervent love which a mother only can feel, have watched that child from the cradle to early childhood, and now see your daughter just entering the joyous mazes of youth, or womanhood, do you visit that school, that you may know the influence which is hourly being exerted over her plastic mind? Whether that influence tends to elevate her and lead her to see the beautiful and holy as such, and admire accordingly, or if her mind is left to sink itself to the low enjoyments of the under strata of humanity, by a teacher who happens to belong to that genus? Brother, you who have sat upon these seats and perhaps received the first impulse toward being a man within these walls, have you no interest in the training of your juniors? Lastly of all; Sister, you to whom my scholars look up for example and precept, do you watch with the eye of a critic the one to whose care are entrusted those in whom you seem so much engaged at home? I sat and listened for an answer, but like an empty vessel, the ghosts of departed hours came back to my vision, as void of visits to my sanctum as the snow of the mountain is of impurity. And then I soliloquized, 'tis so in No. 1; is it so throughout the other districts? Why not visit your school? How do you know in what way it is conducted? Why not thus encourage your teacher by a visit; and more, why not encourage your scholars also? Then let me ask you, readers of the Rural, do you visit your school?

E. G. Cor.

Dis. No. 1, Ridgeway.

Education in Turkey.—The Boston Atlas states, on the authority of a recent English work, that since 1846 a law of the Turkish Empire requires every citizen, as soon as his children have reached their sixth year, to inscribe their names in the books of one of the public schools, unless he can prove his ability to educate them at home. At Constantinople it is reported that there are now 396 free schools, frequented by 22,700 children of both sexes. There are likewise six secondary schools with about 1,000 pupils. In order to gain an entrance into these, five years must have been spent in the free schools. There is also a high school for young men, who are intended for public employments, a college for the same object, a normal school for the education of professors, an imperial college of medicine, a military, a naval and an agricultural school. Of these schools the Sultan is superintendent, and he attends their examinations. The public libraries of Constantinople contain 70,000 volumes.

Warfare of Life.—It is the duty of every friend of humanity to arm himself for life's contest, and keep his armor ready for constant use. We speak not of wars with flesh and blood—it is a more noble war to which we allude. It is a contest for the supremacy of truth over error—the triumph of virtuous and honorable principles over those which are vicious and dishonorable.

Useful Olio.

PLANETARY PHENOMENA FOR 1854.

Mercury will be favorably situated for observation toward the end of February, during an hour after sunset, in the west, and particularly between 4th and 10th of March. In November and December he will be a morning star, and more favorably situated for observation than most people will be, at an early hour, to observe him. He experiences six conjunctions with the sun during the year—three superior, February, May, September; and three inferior, March, July, November. His apparent size varies from five seconds to twelve seconds of arc. The length of twilight makes July unfavorable for his observation. It is said that Copernicus was never fortunate enough to behold this planet.

Mars was in opposition to the sun Feb. 26—a beautiful telescopic object. This happens once in little more than two of our years. He is much nearer to us at this phase than when in the remotest part of his orbit; and his apparent magnitude is of course larger, varying from four seconds of arc to thirty seconds, or seven times larger. In the one instance he may be 50,000,000 miles from us, in the other 240,000,000 miles.

The Sun will be eclipsed May 26, beginning at Boston 5h. 27m. P. M., and ending 6h. 46m.—duration over two hours. It will be annular in this neighborhood, a phenomenon of rare occurrence. According to the Family Christian Almanac, it will move about 100 miles a minute, and be visible in the eastern part of Upper Canada, in several counties of New York State, in nearly all Vermont and New Hampshire, in the north-east corner of Massachusetts, and the south-western part of Maine. The ring will be about one-third of a digit wide. The eclipse will be central in 73 deg. 53 min. lon. W. of Greenwich, and 44 deg. 14 min. N. lat. Draw a line from one of these positions to the other, on the map, and you cross the towns and countries over which it is central annular. Its path will be about 100 miles wide, and will extend 50 miles each side of the line above described.

Jupiter will be an evening star from July 15 till Jan. 29, 1855, and an interesting object of observation. His apparent size varies from 30 seconds to 47 seconds of arc, according to his distance. He has four moons. Will be in opposition and brilliant July 15.

Saturn is very favorably situated for observation this year. His rings all attain their maximum inclination next August, then exhibiting the largest possible portion of its southern surface. They will reach to the upper and lower boundary lines of the planet.—Mr. Bond discovered a third ring encircling Saturn, Nov. 16, 1850, P. M. In November, 1852, Mr. Lassel announced this new ring to be transparent, like crape, and "the equatorial belts of a ruddy brown color, changing pretty suddenly at the southern edge of the most southern of these belts into a dusky bluish green color, much deepened around the south pole, the exact place of which seems to be marked out by a circular lighter shade." By a diagram in the London Almanac there appear to be five different rings, three dark and two light belts, surrounding this remarkable planet. It has also eight moons, continually changing. Saturn will be in opposition to the sun, Dec. 4.

Now, if we could be favored, during this year, with a good view of the comet of 1264 and 1556, which is expected between this and 1860, it would be an additional item to the insignia of a year beginning and ending with the Lord's Day. However, the astronomers place its arrival some four or six years ahead of the present time, and we shall not be likely to witness the grand spectacle till 1858 certainly. Every reflecting, observing and reasonable man will be content with the splendid exhibitions already before him.—*Boston Post.*

MIST, FOG, FROST.

Q. What is the cause of mist?

A. Currents of air from the water coming in contact with colder land currents.

Q. Why are the currents of air from the land colder than those blowing from the water?

A. Because the earth radiates heat after sunset, more freely than water, consequently the air which comes in contact with the land is colder than that which comes in contact with the water.

Q. Why are windows often covered with thick mist, and the frames wet with standing water?

A. Because the temperature of the external air always falls at sunset, and chills the window glass with which it comes in contact.

Q. How does this account for the mist and water on a window?

A. As the warm vapor of the room touches the cold glass it is chilled and condensed into mist; and the mist, (collecting into drops,) rolls down the window frame in little streams of water.

Q. Does the glass of a window cool down more rapidly than the air of the room itself?

A. Yes; because the air is kept warm by fires, and by the animal heat of the people in the room: in consequence of which, the air of a room suffers very little diminution of heat from the setting of the sun.

Q. Whence arises the vapor of a room?

A. 1st.—The very air of the room contains vapor.

2nd.—The breath and insensible perspiration of the inmates increase this vapor; and,

3rd.—Hot dinners, steam of tea, and so on, increase it still more.

Q. What is meant by the "insensible perspiration?"

A. From every part of the human body an insensible and invisible perspiration issues all night and day; not only in the hot weather of summer, but also in the coldest day of winter.

Q. If the perspiration be both insensible and invisible, how is it known that there is any such perspiration?

A. If you put your naked arm into a clean, dry glass tube, the perspiration will condense on the glass like mist.

Q. Why are carriage windows very soon covered with thick mist?

A. Because the warm vapor of the carriage is condensed by the cold glass, and covers it with a thick mist.

Q. Why is the glass window cold enough to condense the vapor of the carriage?

A. Because the inside of a carriage is much warmer than the outside, and the glass window is made cold by contact with the external air.

Q. Where does the warm vapor of the carriage come from?

A. The warm breath and insensible perspiration of the persons riding, load the air of the carriage with warm vapor.

Q. What is the cause of the pretty frost-work seen on bed-room windows in winter time?

A. The breath and insensible perspiration of the sleeper, (coming in contact with the ice-cold window,) are frozen by the cold glass and form those beautiful appearances seen in our bed room on a winter morning.—*From "Familiar Science," edited by R. E. Peterson.*

AERIAL VOYAGES OF SPIDERS.

The number of the aeronautic spiders occasionally suspended in the atmosphere, says Mr. Murray, I believe to be almost incredible, could we ascertain their amount. I was walking with a friend lately, and noticed that there were four of these insects on his hat, at the moment there were three on my own; and from the rapidity with which they covered its surface with their threads, I cannot doubt that they are chiefly concerned in the production of that tissue which intercepts the dew, and which, illuminated by the morning sun, "glitters with rubies and sapphires." Indeed, I have noticed that, when the frequent descent of the aeronautic spider was determined, a newly rolled turnip field was, in a few hours, overspread by a carpet of their threads. It may be remarked that our little aeronaut is very greedy of moisture, though abstemious in other respects. His food is perhaps peculiar, and only found in the superior regions of the sky. Like the rest of its tribe, it is doubtless carnivorous, and may subserve some highly important purpose in the economy of Providence; such for instance, as the destruction of that truly formidable, though almost microscopically minute insect, the Furia Infernalis, whose wounds are stated to be mortal. Its existence has been indeed questioned, but by no means disproved; that and some others, injurious to man, or to the inferior creation, may be its destined prey, and thus our little aeronaut unheeded by the common eye, may subserve an important good.

Mr. Bowman, F. L. S., says:—"We arrested several of these little aeronauts in their flight, and placed them on the brass gnomon of the sun-dial, and had the gratification to see them prepare for, and re-commence their aerial voyage. Having crawled about for a short time, to reconnoitre, they turned their abdomens from the current of air, and elevated them almost perpendicularly, supporting themselves solely on the claws of their fore-legs, at the same instant shooting out four or five, often six or eight, extremely fine webs, several yards long, which waved in the breeze, diverging from each other like a pencil or rays, and strongly reflecting the sunbeams. After the insects had remained stationary in this apparently unnatural position for about half a minute, they sprang off from the stage with considerable agility, and launched themselves into the air. In a few seconds after they were seen sailing majestically along, without any apparent effort, their legs contracted together, and lying perfectly quiet on their backs, suspended from their silken parachutes, and presenting to the lover of nature a far more interesting spectacle than the balloon of the philosopher. One of the aeronauts I followed, which, sailing in the sunbeams, had two distinct and widely diverging fasciculi of webs, and their position in the air was such that a line uniting them would have been at right angles with the direction of the breeze."

Sunday Reading.

(Written for the Rural New-Yorker.)

TIME.

BY IDA FAIRFIELD.

How rapid speeds the flight of years,
How swift time's fleeces fly,
Unheeding human hopes or fears,
Or pleasure's smiles, or sorrow's tears,
The living or the dead.
Unheeding how the storm may ride,
Or rude winds lash life's sullen tide.

No spell can bind the circling hours,
Or bid the tyrant stay,
On, tho' his presence blight the flowers
Of pleasure in youth's rosy bowers,
Which bloomed but for a day;
Tho' beauty from his path has fled,
And hearts lie crushed beneath his tread.

He marches over battle-grounds,
Where bones are bleaching bare,
And smooths the grassy hillock down,
As if a warrior of renown
Had never slumbered there;
And bids us mark how weak a pride,
The fame for which the hero died.

He hurries by while nations fall,
And kings resign their sway,
And ivied porch and ruined wall,
Spread like a dark and solemn pall,
O'er cities of to-day;
And proud hearts beat no longer high,
And weary forms lay down to die.

He will not pause, tho' at his feet,
A world in ruins lay,
Tho' pestilence and famine meet,
And desolation in the street
Grim stalketh at noonday;
Tho' fiercest woes are in his path,
"The seven vials of God's wrath."

But, mid that tempest's awful roar,
An angel form shall stand,
"One foot on sea and one on shore,
And swear that time shall be no more,
By God's Almighty hand."
Then shall the monarch yield his crown,
The sword and sceptre, Time lay down.

New Haven, Conn., Feb., 1854.

(Written for Moore's Rural New-Yorker.)

A DEATH-BED.

What thoughts arise within me at the utterance of those few but touching words! Who is there that has stood beside a dying friend, and seen the death-struggle—the gasp for life, —the quick breathings—the last fond look—but feels a thrill pass through him at the mere mention of a death-bed scene?

But why this feeling of sorrow at the tho't of death? To some, death is sweet; they feel no terror at its approach, no longings for life; they wait, as it were, impatiently for its coming. Yes, the good man welcomes death with a smile, and exclaims, "O death! where is thy sting? O grave! where is thy victory?"

Who would not wish that such might be *his* last hours; that, when called to leave this beautiful world of ours, he might be prepared "to die in peace, sleep in Jesus, and be raised in the morning of the last day, to life eternal?" Then let us "live the life of the righteous, that our last hours may be like his." Neal.

THE IMMORTAL SOUL.

"The sun is but a spark of fire,
A transient meteor in the sky,
The soul, immortal as its sire,
Shall never die."

Thus Watts sweetly sings. Yes, the mind is immortal. Infinite wisdom had otherwise never implanted longings which all of earth leaves unsatisfied, or gifted us with capacity capable of indefinite improvement.

The brute is born, attains maturity, and hastens to depart. Its powers culminate and then sink into a decay ominous of extinction; whilst man's longest life closes upon an intellect yet in rapid development. The body, as it runs quickly through its cycle from youth to age, proves oftentimes, it is true, a weariness and clog to the prisoner within; but their union severed like a bird cage-freed, the disenthralled spirit will soar away on pinions imperishable.

Distinct as it is, in its nature, from the material, all analogy forbids that we should anticipate the mind's annihilation when that home where it briefly tabernacled has gone back into dust. Death involves a disintegration of parts; but in the immaterial we can conceive of no such separation, and hence can predict no decay. As the insect flutters from out its chrysalis in green and gold, to sport amid flowers and sunshine, so shall the purified spirit forsake its chrysalis, to dwell forever amid the beauties and brightness of heaven. There, in the fruition of its fondest hopes, will it find ample amends for all sorrow and every sadness, and participate in pleasures which those who deny a future—because they dread its awards—can never enjoy.

Then cheer up, travel-worn and Christian pilgrim. With thankful heart partake of such as thy present affords, and trust unwaveringly in God, assured that whatever betide, hereafter thy voice shall be attuned to angel harmonies, and thy home be in that city whose walls are jasper, and whose gates are pearl; along whose streets murmurs the crystal river, and in whose midst blooms the tree of life.—*Presbyterian.*

The Real World.—This which people call the *real* world is not real to me; all its sights seem to me as shadows, all its sounds echoes. I live at service in it, and sweep dead leaves out of paths, and do errands as I am bid; but glad am I, when work is done, to *go home* to rest. Then do I enter a golden palace, with light let in only from above; and all forms of beauty are on the walls, from the seraph before God's throne to the rose-tinted shell on the sea-shore.

Miscellaneous.

SONG FOR THE SEASON.

BY BARRY CORNWALL.

When the merry lark doth gild
With his song the summer hours;
And their nests the swallows build
In the roofs and tops of towers;
And the golden gorse-flower burns
All about the waste;
And the maiden May returns
With a pretty haste;
Then how merry are the times!
The Summer times! the Spring times!

Now, from off his ashen stone,
The chilly tobbaight cricket crieth:
And all merry birds are flown;
And our dream of pleasure dieth;
Now, the once blue laughing sky
Saddens into gray;
And the leaves sirrus sigh,
Dying all away!
Now, how solemn are the times!
The Winter times, the Night times!

Yet, be merry; all around
Is through one vast change revolving;
Even Night, who lately frowned,
Is in silver dews dissolving;
Earth will burst her fetters strange,
And in spring grow free;
All things in the world will change,
Save—my love for thee!
Sing, then, hopeful are all times!
Winter, Summer, Spring times!

[Written for Moore's Rural New-Yorker.]

POLITE LITERATURE.

The greatest of dramatists has said that there are

"Sermons in stones, books in the running brooks,"

meaning that Nature should be our instructor, since she is replete with lessons of faith, and love, and reverence. It is indeed a pleasure, and one of great value, to receive her silent, but effective instructions in her many and different schools. But a teacher, though perfect in moral excellence and wisdom, yet whose lessons are without introductions or explanations, is not always intelligible to the uninitiated. The uncultivated mind, save one of rare and peculiar organization, can seldom read "sermons in stones." It has been, and still is, the office of men of genius to point out the moral of nature, to trace the analogies between the spiritual and the natural. By the rude and ignorant man, the loveliest works of nature are disregarded. He cannot understand the voice of springs and fountains,—the language of flowers is unintelligible to him. The twinkling stars, the variegated rainbow, the gentle and musical whisperings of Æolus, the raging storm, the roaring thunder,—*all* are as mute to the untaught. Though they may produce an unconscious effect, he perceives not the soul of nature.

But the man who has visited the various schools of nature in company with the poet, finds that a primrose, for instance, will recall sweet thoughts of spring, bright memories of vernal seasons past, and brighter hopes of an everlasting revival from a state of wintry torpor. So much, and much more, has been accomplished by the great poets.

Happy, indeed, is he who has acquired a relish for polite literature. The most busy man is not always engaged in business. Mechanics and merchants, as well as the farmer, have their leisure hours. Even professional men cannot always be on the stretch of serious thought. To be idle during the hours of leisure, will certainly have a bad influence.—To have no employment subsidiary to that of a man's main pursuit, will often cause life to languish, even of the most busy man. Cheerful recreation is necessary to the mental as well as the physical state. Indeed, many cases of prolonged sickness might be traced to the want of some such proper recreation from our slavish devotion to business. But by the study of polite literature, we are entertained by the exercise of our imagination, and such entertainment is highly conducive to health. "Delightful scenes," says Addison, in his Pleasures of the Imagination, "whether in nature, painting, or poetry, have a kindly influence on the body as well as the mind, and not only serve to clear and brighten our imagination, but are able to disperse grief and melancholy, and to set the animal spirits in pleasing and agreeable motions. For this reason Sir Francis Bacon in his essay on health, has not thought it improper to prescribe to his reader a poem or a prospect, where he particularly dissuades him from knotty and subtle disquisitions, and advises him to pursue studies that fill the mind with splendid and illustrious objects, as histories, fables, and contemplations of nature."

When we speak of polite literature, let none mistake the *fashionable* novels for *polite*.—Novels might as well not be read, for they seldom make a person the better or the wiser for it, while in the majority of cases it were far better that they had been left entirely alone. As soon as the novel is excluded, we need not be told the meaning of polite literature. As poetry occupies the highest rank in this literature, and is one of the fine arts, it may be well to dwell a moment upon its excellences, compared with those of two of her sister arts,—painting and sculpture. While the latter can be presented to the eye only, poetry has the advantage of being presented to both the eye and the ear, and from its capability of being indefinitely multiplied, it is more generally diffused than either of the other two arts. The humble peasant may gladden his heart with the creation of the poet, as well as the prince in the gorgeous palace. The sailor upon the ocean can enjoy and preserve the works of the poet, as well as the nobleman in the costly libraries of the city. Poetry has another advantage in delineating the passions of the soul; for she can trace them from their cause to their effects, while the other arts can only portray some fleeting moment. Description is another advantage in poetry; she can soar from the brilliant beams of the sun to the glimmerings of pale moonlight, from torrid to frigid climes, giving, at the same time, all the interesting associations connected with every scene.

He who entertains a taste for polite literature, will find little time, and will have no inclination to read novels, nor will he be in hazard of being a burden to himself. For, by exercising a taste for poetry, we are not obliged to seek low company in order to waste time,—God's most precious gift,—but our minds are gradually raised above the attachments of sense, and prepared by the training received, for the enjoyment of virtue.

S. T.

ANECDOTES OF THE "LITTLE ONES."

The "wise sayings of children" have occupied considerable space in the "gossip pages" of the *Knickerbocker Magazine*, recently, and have thence been diffused pretty extensively through the newspapers. They show a curious compound of the really, witty, and odd ideas which the "little folk" entertain, and are not without touches of genuine wisdom, both amusing and profitable to their elders. I have known and "heard tell" of a variety of such sayings,—and below, write out a few of them for a corner in the Rural.—B.

A little boy had a colt and a dog he called and thought his, (though doubtless, the boy's *colt*, when grown up, was "father's horse,") and his generosity was often tried by visitors asking him—"just to see what he would say"—to give them one or both of his pets. One day he told a gentleman present he might have his colt—reserving the dog, much to the surprise of his mother, who asked:

"Why, Jacky, why did'nt you give him the dog?"

The boy, who had planned out a very sage stratagem of his own slily replied:

"Say nottin', say nottin, mother,' *when he goes to get the colt, I'll set the dog on him!*"

Willie F. heard of "Santa Claus," this Christmas, for the first time, and hung up his stocking with a great deal of wonder. Waking up in the night, and hearing the dog walking across the room, he says:

"Pa, Old Santa Claus is here; I hear him hopping 'round."

He was *sure* he had been there, when he looked in his stocking in the morning. How little it takes to fill to the brim the cup of a child's happiness.

What curious ideas children have of God and prayer, don't they? A "bit of a boy" was sitting in his aunt's lap, and kept putting his hand into her pocket, for which his mother reproved him. He was loth to stop, so she added:

"What! is my Frank going to steal? He will have to be taken to Batavia and shut up in the jail, if he does not keep his hands out of Aunt Betsey's pocket."

"Well," replied he, "I don't care if I am, I can pray to the Lord, *and he'll let me out quicker than percussion.*"

His father was "earnest in prayer," and "strong in faith,"—probably Frank derived his notions from him.

The following, which occurred in this neighborhood, may be found in the *Knickerbocker* for February.

"A blacksmith's little boy, some three years old, was often in the shop among the workmen, one of whom delighted in teasing him. One day he lingered long in the house near his mother; until, noticing his seriousness, she asked:

'What does my Lyman want, what is he waiting for?'

'Why, ma, I want to know who made me?'

When his mother had explained that question so puzzling to all 'little folk,' telling him that God made him, and the world, and all things, his smile returned, and he ran off to the shop as usual. As he came near the anvil, his tormentor exclaimed:

'Now, boy, I'll *cut your leg off!*'

His mother's lesson fresh on his mind, he did not shrink this time, but shouted back again:

'I don't care! I can go to *God's shop and get it mended!*'"

Sweet Thought.—Whenever we find our temper ruffled toward a parent, a wife, a sister or a brother, we should pause and think, that in a few more months or years, they will be in the spirit land, watching over us, or perchance we shall be there watching over them left behind.

AMERICAN TRAVEL.

The late celebrated Mr. Clay was a man of great resolution and considerable daring. He once told the following anecdote to a friend of ours:

"Traveling, in early manhood, in a public conveyance in a Southwestern state, he found himself in the company of three other persons, consisting of a young lady and gentleman, her husband, and an individual muffled in a cloak, whose countenance was concealed, and who appeared to be indulging in a *tete a tete* with Morpheus. Suddenly a big, brawny Kentuckian got into the coach, smoking a cigar, and frowned fiercely around, as much as to say,—'I'm half horse, half alligator; the yaller flower of the forest, all brimstone but the heel and ears, and that's aquafortis.' In fact, he looked as savage as a meat-axe, and puffed forth huge volumes of smoke, without reference to the company within, especially that of the lady, who manifested certain timid symptoms of annoyance. Presently, after some whispering, the gentleman with her, in the politest accent, requested the man not to smoke, as it annoyed his companion. The fellow answered, 'I reckon I've paid my place. I'll smoke as much as I —— please, and all —— shan't stop me, no how.' With that he looked dangerous, and rolled his eyes around as fiercely as a rattlesnake. It was evident he had no objection to a quarrel, and that if it occurred it was likely to lead to a deadly struggle. The young man who had spoken to him shrunk back and was silent.

Clay felt his gallantry aroused. He considered for a moment whether he should interfere; but experienced a natural reluctance to draw upon himself the brutal violence of his gigantic adversary. In that lawless country he knew his life might be sacrificed unavenged.—He knew himself to be physically unequal to the contest, and he thought, after all, it was not his business, Quixotically to take up another man's quarrel. Feeling pity for the insulted, and disgust towards the insulter, he determined to take no notice; when very quietly indeed, the cloaked figure in the corner assumed an upright position, and the mantle was suffered to fall from it without effort or excitement. The small but sinewy frame of a man, plainly dressed in a tightly buttoned frock coat, with nothing remarkable about his appearance, was seen, and a pair of bright gray eyes sought the fierce optics of the ferocious Kentuckian. Without a word, this 'lily fingered' passed his hand under his collar at the back of his neck, and slowly and deliberately pulled forth a long—extremely long—and glittering knife from its sheath in that singular place. 'Stranger,' he said, 'my name is Col. James Bowie, well known in Arkansas and Louisiana—and if you don't put that cigar out of the window in a quarter of a minute, I'll put this knife through your bowels, as sure as death!'

Clay said he never forgot in after life the expression of the Colonel at that moment.—The predominant impression made upon him was, the certainty of the threat being fulfilled, and apparently the same conviction impressed itself, ere long, upon the offender. During two or three seconds his eyes met those of Bowie. He was the weaker, and he quailed. With a curse he tore the cigar from between his teeth, and flung it, scowling, but downcast, out of the coach window. Upon this, Col. James Bowie as deliberately replaced his long knife in its eccentric hiding-place, and, without saying a word to any one else, or even vouchsafing a glance at any one, refolded his cloak around him, and did not utter another syllable to the end of the journey.—*New Quarterly Review.*

We talk of Adam and Eve as having been before the fall in a very happy condition; but one thing they missed—they were never children.—*Cor. Alb. Register.*

True. We never thought of that. Adam never played marbles. He never played "hucky." He never drove a tandem of boys with a string. He never skated on the pond, or played ball, or rode down hill on a bund-sleigh.—And Eve, she never made a play-house; she never rolled a hoop, or jumped the rope, or pieced a baby quilt, or dressed a doll. They never played "blind man's bluff," or "pussy wants a corner," or any of the games with which childhood disports itself. How blank must their age have been wherein no memories of early youth came swelling up in their hearts, no visions of childhood floating back from the long past, no mother's voice chanting a lullaby to the ear of fancy in the still hours of the night, no father's words of kindness speaking from the church-yard where he sleeps. Adam and Eve, and they alone of all the countless millions of men and women that have lived, had no childhood.—*Register.*

Winter.—The seasons of the year have been aptly compared to the various stages in the life of man. Spring, when nature bursts into new life, and with such grace spreads out its growing charms, amidst alternate smiles and tears, beautifully shadows forth the period of infancy and youth. Summer, with its full blown beauties and its vigorous powers, represents the maturity of manhood. Autumn, when the golden harvests are reaped, and the fields are stripped of their honors, and exhausted nature begins to droop, is a striking figure of the finished labors, the gray hair, and the advancing feebleness of old age. Winter, cold, desolate and lifeless, indicates with an accuracy not more remarkable than it is affecting—the rigid features and the prostrate energies of the human frame in death.—*Duncan.*

"Mother," said a Spartan boy, going to battle, "my sword is too short." "Add a step to it," was the reply of the heroic woman. So should it be with all our duties of life. When we cannot reach a height we aim at—add a step, and keep on adding until we reach it.

One of the most distinguished physicians of New England ascribes the fearful increase of cases of paralysis to the use of stoves in close rooms, particularly in sleeping apartments.

For the Ladies.

HOME SONG.

Now, thread my thimble in its case,
And store the spools away,
And lay the muslin rolls in place,
My task is done to-day;
For, like the workman's evening bell,
A sound hath met my ear,
The gate-clink by the street doth tell
Papa hath come, my dears.
Bear off the toy-box from the floor—
For yonder chair make room;
And up, and out, unbar the door,
And breathe his welcome home;
For 'tis the twilight hour of joy,
When Home's best pleasures rally;
And I will clasp my darling boy,
While papa romps with Allie.

There, take the hat and gloves, and bring
The slippers, warm and soft,
While bounds the babe, with laugh and spring,
To those loved arms aloft;
And let each look some comfort yield—
Each heart with love be warm,
For him whose firm, strong hands shall shield
The household gods from harm.
One fire shall light the gathering gloom;
For o'er all earthly hope,
We cherish first the joys of home;
A glad, rejoicing group;
And through the twilight hour of joy,
We turn from toil to dally
With thy young dreams of life, my boy,
And gaily fondle Allie.

[Written for Moore's Rural New-Yorker.]

THE SNOW-DROP.

BY MRS. S. WILMOTH LLOYD.

Harbinger of early spring,
From the ground awakening,
Ere another flower would dare
Breathe the cold and chilly air,
Thou hast raised thy little head,
From its cold and wintry bed,
Like a messenger, to say
Winter chill hath passed away.
And we love thy presence well,
Little snow-drop! Thou dost tell
Lovely Spring hath come again,
Spreading sweets o'er hill and plain.

All along the woodland path to school, the early spring flowers blossomed. Before the snow-banks had left the shelter of the overhanging rock, the liverwort had sprung up, with its delicate and many-colored petals, decking some sunny knoll; and from the time our eager eyes first caught the tiny blossoms, our hands seldom went empty to school. Oh, how memory loves to linger around those early days! How I love to trace the history of those school companions! How I love to recall some event, trifling in itself, and only worthy to be remembered, because of its awakening some dormant power of the mind, or of impressing some great truth upon the heart!—Such a memory lingers around little Willie V——. Willie was the only son in a family of seven; and natural feebleness of constitution had made him an object of the tenderest care, not only with the parents, but with the sisters who accompanied him to school. The sisters were chubby, rosy-cheeked, red-haired children; the brother, delicate, with clear, almost transparent complexion, and jet black hair. Very timid in disposition, and gentle in manners, he was greatly endeared to us all.—I can see him now, with his pale cheeks, sweet blue eyes and black hair,—and the image tells me now, (although I did not know it then,) that our little playmate was one of those pure spirits who are lent a little while to earth—that the parents of Willie V—— entertained an angel unawares.

Spring had come; flowers filled our baskets and our hands, and thousands were left ungathered beside our path. Willie was passionately fond of flowers, and one noontime we found him lying on a sunny bank where violets grew. He said he was sick. His sister Harriet led him to the school-room, where sunbonnets and aprons made him a bed; and all the afternoon he slept, while a bright red spot burned upon each cheek. At night we literally carried him home—and many of us never saw him again. One week from that day he slept in the village church-yard, where his grave is now lost among the hundreds of nameless ones within its precincts. Well as if it were yesterday do I remember every particular of that humble burial: the little coffin with its black pall—the wagon containing the stricken parents and the almost broken-hearted sisters—the three other vehicles, and a few men on foot. As the procession neared the school-house, the teacher said, "They are carrying poor Willie to his grave! you may all go to the door;" and, under her direction, we ranged ourselves, in silence, with uncovered heads, on either side of the road, and, as the humble procession passed along, we strewed the pathway with fresh-gathered flowers. Tearfully we watched, until all were out of sight; then we entered the house, to listen to a very few words fitly spoken, and were quietly dismissed. How vividly everything comes back to me!—the teacher—the children—the old school-house; because then, for the first time, the reality of death impressed itself upon my mind.

That evening I met Harriet V——, and would have passed her without speaking,—for childhood has a strange awe of grief—but she caught my hand. "You have been to school to-day, Sonny?" "Yes," I answered. "Ah! how does it look there, without Willie?" For Harriet, home, school, everything had changed. To her, Willie was gone!

Often and often those simple, childish words come back again—for in the pathway of our life, we have to grow familiar with a mourner's place. We, who then stood before that school-house door, are—oh! how changed! Many are sleeping with Willie the sleep of death; others have learned, each in a different way, the stern lessons of life. We have all known how sad it is to grieve for dear ones gone to rest. The teacher has again and again been stricken! aye, her hearth is left desolate. In the church-yard, four graves tell the story of her household. A little while ago, I visited her. An empty crib in the chamber where I slept—a high chair set away in the corner—the portrait of a pure young girl—a miniature which she put into my hand, and turned away in speechless sorrow—told the tale of her bereavement. I thought of little Willie—of the few words she had spoken years ago, "You will all know what it is to weep for those you love; you will all one day die, too;" but I did not recall them to her memory. She has long ago forgotten them, and she will never dream how faithfully the solemn lesson is remembered by another.

Huntington, Ky.

WOMAN'S MISSION.

The longer I live the less grows my sympathy with women who are always wishing themselves men. I cannot but believe that all in life that is truly noble, truly good, truly desirable, God bestows upon us women in as unsparing measure as upon men. He only desires us, in his great benevolence, to stretch forth our hands and to gather for ourselves the rich joys of intellect, of nature, of study, of action, of love, and of usefulness, which he has poured forth around us. Let us only cast aside the false, silly veils of prejudice and fashion, which ignorance has bound about our eyes; let us lay bare our souls to God's sunshine of truth and love; let us exercise the intelligence which He has bestowed on us, upon worthy and noble objects, and this intelligence may become keen as that of men; and the paltry high heels and whalebone supports of mere drawing-room conventionality and young ladyhood withering up, we shall stand in humility before God, but proudly and rejoicingly at the side of man!—Different always, but not less noble, less richly endowed. And all this we may do, without losing one jot or one tittle of our womanly spirit, but rather attain solely to these good, these blessed gifts, through a prayerful and earnest development of these germs of peculiar purity, of tenderest delicacy and refinement, with which our Heavenly Father has so especially endowed the woman. Let beauty and grace, spiritual and external, be the garments of our souls. Let love be the very essence of our being—Love of God, of man, and of the meanest created thing.—Love that is strong to endure, strong to renounce, strong to achieve! Alone through the strength of Love, the noblest, the most refined of all strength—our blessed Lord himself having lived and died teaching it to us, have great and good women hitherto wrought their noble deeds in the world; and alone through the strength of an all-embracing love, will the noble women who have yet to arise work noble works or enact noble deeds. Let us emulate, if you will, the strength of determination which we admire in men, their earnestness and freeness of purpose, their unwearying energy, their largeness of vision; but let us never sigh after their lower so-called *privilege*, which when they are gifted with a thoughtful mind, are found to be the mere husks and chaff of the rich grain belonging to *humanity*, and not alone to men.

The assumption of masculine airs or of masculine attire, or of the absence of tenderness and womanhood in a mistaken struggle after strength, can never sit more gracefully upon us than do the men's old hats, and great coats, and boots, upon the poor old gardenresses of the English garden. Let such of us as have devoted ourselves to the study of an art—the interpreter to mankind at large of God's beauty—especially remember this, that the highest ideal in life, as well as in art, has ever been the blending of the beautiful and the tender with the strong and the intellectual.—*Miss Hewitt's Art-Student in Munich.*

Variety.—Grave and Gay.

Why is a carpenter who is putting a roof over a schooner, that fights on her own hook, like a girl weeping in solitude for her lover?

Do you give it up?

Because he is shedding a private tear."

"'Tis strange," muttered a young man, as he staggered home from a supper party, "how evil communications corrupt good manners.—I've been surrounded by tumblers all the evening, and now I'm a *tumbler* myself."

Severe.—"She has destroyed my hopes for ever!" exclaimed an infatuated lover.

"How?" inquired a sympathizing friend.

"*By realizing them!*"

Fights are very easily got up. All that is required are three participants, two blockheads, and a pint of new rum.

Nothing can we call our own, but death: and that small motel of the barren earth, which serves as paste and cover to our bones.

Correction does much, but encouragement does more. Encouragement after censure, is as the sun after a shower.

Fidelity, good humor, and complacency of temper, outlive all the charms of a fine face, and make decays of it invisible.

How many men we meet who "might be" something, and how few are!

Words are the daughters of the wind, but actions are the sons of the soul.

MOORE'S RURAL NEW-YORKER

ROCHESTER, MARCH 11, 1854.

THOSE PREMIUMS.—We have been unable, up to the present time, to go over our books carefully and ascertain the respective positions of the competitors for our Premiums. Extraordinaries excepted, we shall do this during the ensuing week, and announce in our next number the successful competitors for the January Premiums—and also give the respective positions of those competing for the April Premiums. As before stated, most of our agents and friends have preferred the *Specific* Premiums, leaving but few competitors for the Large Prizes. Our friends will please remember that both classes are open until the 15th of April ensuing, giving abundant time for effort. Read the following notice,—and see Premium List on next page.

Agents and Friends will please remember that we are publishing a large extra edition, and can therefore furnish back numbers of this volume to all new subscribers. Those disposed, and we hope they number hundreds and thousands, can yet form new clubs or make additions (singly, or in fives, tens, twenties, or upwards,) to those already started. We are prepared, this year, for the "long pull, strong pull, and pull all together," which the friends of the RURAL are giving, and shall honor all orders for the complete volume until our edition is exhausted. But as we are receiving hundreds of new subscribers daily, those who wish back numbers should not delay. We send from the beginning of the volume, unless otherwise directed.

Foreign News.

We have foreign advices by two steamers within the week, and another steamer is now due with still later dates, the news of the Nashville being dated Feb. 15th. Rumors are afloat as heretofore of efforts being made to continue negotiations, but the extraordinary war preparations which are going forward at all the naval stations, both of England and France, belie the statements which are made in favor of peace.

Unless the Czar recedes from his position, a supposition quite unlikely, the war must go on. Active and offensive operations will be commenced by the allies, both in the Black and the Baltic Seas, and the Autocrat may expect ere long to have a battery of Paixhan guns bombarding the walls of his capital. It will be a new era in European politics when the belligerents of Aboukir and Trafalgar range their fleets in one and the same line of battle against a common enemy, instead of against each other as has been the case in nearly every former period of the world's war history.

The English papers say the Baltic fleet of 36 ships, chiefly of the line, and powerful steam frigates, was to assemble in the Downs on the 6th, where it would be joined by the 10 French vessels, chiefly of 80 to 100 guns each. The whole fleet, which was to be under the direction of Sir Charles Napier, is intended for operation against St. Petersburgh. The steamer Hecla had already left for the Baltic to make surveys for soundings.

P. S.—Since the above was written and in type, the telegraph announces the arrival of the Cunard Steamer Alps, from Liverpool, Feb. 18, with later foreign dates, but nothing specific as regards the Eastern question. Breadstuffs, according to Liverpool advices, have declined.—The Collins steamer Atlantic, which was to sail from the same port on the 22d, is now due at New York.

The Nebraska Bill.

THE question on the Nebraska bill, after a most exciting debate which lasted all night on Friday, the 3d inst., was finally taken on Saturday morning at 5 o'clock, and the bill passed the Senate by a vote of 37 to 14, as follows:

YEAS—Messrs. Adams, Atchison, Badger, Bayard, Benjamin, *Breadhead*, Brown, Butler, *Cass*, Clay, Dawson, Dixon, *Dodge*, of Iowa, *Douglas*, Evans, Fitzpatrick, Geyer, *Gwin*, Hunter, Johnson, *Jones*, of Iowa, Jones, of Tenn., Mason, Minton, *Norris*, *Pettit*, Pratt, Rusk, Sebastian, *Shields*, Slidell, *Stuart*, Thompson, of Ky., *Thompson*, of N. J., *Toucey*, *Weller*, and *Williams*.

NAYS—Messrs. *Bell*, Chase, Dodge, of Wis., Fessenden, Fish, Foote, Hamlin, *Houston*, James, Seward, Smith, Sumner, Wade, and Walker.

Senators BELL, of Tennessee, and HOUSTON, of Texas, voted against the bill, and they are the only two from slave States whose votes are recorded on that side of the question; while on the slavery side there is ranged a phalanx of FOURTEEN SENATORS FROM THE FREE STATES!—Their names are printed in italics in the list of ayes, as recorded above.

Messrs. BRIGHT, TOOMBS and MALORY are sick, but would have voted for the bill. Mr. ALLEN, absent from sickness in his family, would have voted against it.

Messrs. PHELPS, PIERCE, COOPER, EVERETT, CLAYTON, and WRIGHT either dodged the bill or paired off, and did not vote. So the repeal of the Missouri Compromise, so far as the action of the Senate is concerned, is finally settled; and it remains to be seen what will be done with it in the House. One thing is certain, and that is this: if the feeling against the repeal is as strong at the North as it at present appears to be, these Free State Senators, who have aided to put the bill through, under the idea of making political capital out of it, have voted themselves into political perdition.

FIRE IN NEW YORK.—On the morning of March 5th, a tremendous fire broke out at No. 8 Spruce st., which spread with great rapidity, and speedily involved the adjoining houses, in one mass of ruins. The loss was over $300,000.

The Way of the Transgressor.

DR. GEORGE A. GARDINER, lately tried, convicted, and sentenced at Washington to 10 years' imprisonment for perjury, committed suicide March 3d, the day of his conviction.

The history of the case is briefly as follows: an appropriation was made by Congress to pay off claims of American citizens for indemnity against losses sustained by them in consequence of the war with Mexico. A Commission was appointed to hear and adjust these claims, and this Dr. GARDINER, by means of forged papers and affidavits, obtained some $100,000 as an indemnity for the alleged loss of a valuable silver mine owned by him, near San Louis Potosi.—Subsequent developments proved the whole claim to be a fraud, trumped up for the occasion, sustained by a tissue of the blackest perjury and skillfully prosecuted before the Commission, by distinguished Counsel, who, if they did not themselves know the depth of the villany, at least made a successful use of the instruments, *pocketed enormous fees out of the ill gotten spoils, and refused afterwards to disgorge!*

Over three years ago, the doctor was indicted, and has had two trials, the jury disagreeing the first time. The second jury, however, found a verdict of guilty, and to save himself from the ignominious punishment which was impending over him, the guilty man betook himself unbidden into the presence of a higher and a more awful tribunal. He died in great agony on the day of his conviction, it is believed by means of strichnine administered by his own hand.

A grave question in ethics is presented by this case, viz, whether or not legal Counsel, who lent their aid to the prosecution of the Gardiner claim, and who profited so largely by its success in the way of enormous fees, are not morally responsible for this man's suicide, and whether his blood will not be found on their skirts at the last day? Verily, "the way of the transgressor is hard."

PAID DOWN.—ROWLAND A. SMITH, local baggage master at New Haven, on the New Haven, Hartford and Springfield railroad, has been detected in the perpetration of a stupendous system of mail robberies. Mr. HALSTOCK, special agent for the department, traced the robberies to him, through means of decoy packages placed in the mails; and secretly watching the rascal, he caught him in the act of opening the mail bags and abstracting letters therefrom.

SMITH was soon after arrested, and, on searching his private desk and trunk in the baggage room, a large number of post-bills, envelopes, letters, drafts, checks, and notes, to the amount of some $30,000, were found. Also, upon his person were found about $800 in bank notes, embracing the money contained in several of the decoy packages. The arrest was made on Friday the 24th ult., and one week from that day, viz. Friday, March 3d, the felon was arraigned in the United States Court, plead guilty, and was sentenced by Judge INGERSOLL to hard labor in the State Prison, for a term of 27 years.

SHOCKING CASUALTY.—About 2 o'clock on the afternoon of the 2d inst., a new tubular boiler driving a fifty-horse power engine in the extensive car factory at Hartford, Conn., exploded with terrible effect, shattering the building from floor to roof, killing seventeen men, and injuring many others, several of them mortally.

About 300 persons were employed in this factory, and about 100 were at work in the section of the building adjoining the boiler-room. The engineer was filling his boiler with water, when the accident occurred, and probably the cause of the catastrophe was, as is too frequently the case, that the water had become too low, the boiler over-heated, and when the cold water was injected, the generation of the gaseous vapor was too rapid to escape through the safety-valve.—Its expansive force was consequently so great as to rend asunder the strong plates of the boiler, producing the most lamentable results.

CHARTER ELECTION.—As this number is closing for the press (Tuesday, P. M.) the Election of City Officers is proceeding—with the usual street accompaniments of music, clatter of wheels and tongues, and sundry other elements of "noise and confusion." There are three tickets in the field—one Whig, and two Democratic—Hard and Soft. Dr. MALTBY STRONG, Whig—W. F. HOGEBS, Hard—and ELEAZER CONKEY, Soft, are the candidates for Mayor. Dr. S. will probably succeed,—while the "City Fathers" will generally acknowledge Whig paternity.

THE CHRISTIAN TIMES is an ably conducted and handsome weekly, published at Chicago, Ill., by Rev. Messrs. J. A. SMITH and LE ROY CHURCH, at $2 a year. The Times is worthy the attention and support of our readers in the West, and especially of members of the Baptist denomination, whose interests it advocates. Mr. SMITH was for some years, and until recently, the able and highly esteemed pastor of the First Baptist Church in this city, and bears to his new field and profession the best wishes of hosts of friends, of all denominations.

SPIRIT-ILL ADVERTISEMENT.—The Roman Catholic paper and organ of Bishop HUGHES, in the city of New York, contains the following, including also the name and place of business of the advertiser, both of which we omit, not being anxious to aid in circulating the advertisement:

"—— ——, Importer and Dealer in fine old Wines and Brandies, Dublin Porter, Scotch Ale, and Segars."

Such advertisements are not out of place in secular newspapers, but in champion sheets of the different religious denominations, they are, to say the least, quite a novelty.

Congressional Proceedings.

Feb. 27.—SENATE—Mr. Cooper followed Mr. Cass in opposition to the Nebraska bill, and Mr. Brodhead took the floor in support of the measure.

HOUSE.—Mr. Babcock moved a suspension of the rules for the purpose of taking up the Senate bill, authorizing the construction of six steam frigates for the navy, which was disagreed to.—The Secretary of the Navy was requested to communicate to the House, whether in his opinion, the steamships employed in the Ocean mail service of the United States, are of proper construction to be converted into vessels of war.

Feb. 28.—SENATE—Many petitions were presented against the repeal of the Missouri Compromise.

The bill granting lands to all the States for the benefit of indigent insane, was taken up and amended, so as to give each State 100,000 acres, leaving the other 6,000,000 acres to be apportioned among them according to population and number of square miles. Bill ordered to be engrossed.

HOUSE.—Committee on elections reported against the petition from New York, contesting Mike Walsh's right to a seat.

A sharp debate of some length occurred on referring to committee of the whole, the bill granting to Wisconsin lands for railroad purposes. Before concluding, the morning hours expired, when the House went into committee on the Homestead bill. Mr. Dean proposed an amendment, that the lands shall be chosen in the Territories and not in the States, which was rejected.

March 1.—SENATE—Remonstrances were presented from many Senators against the repeal of the Missouri Compromise, and the discussion on the bill was continued.

HOUSE.—The House resumed the consideration of the motion to refer to the committee of the whole, the Senate bill granting land to Wisconsin for railroad purposes. The House refused to lay the bill on the table, after a sharp debate, by a vote of 101 to 78.

Without further action on it, the House proceeded to the election of printer. Nicholson, 122; Gales, 48, and 33 scattering. Adj.

March 2.—SENATE—Mr. Clayton defined his position upon the Nebraska bill, and said he would vote for it. He had not concluded his speech at the adjournment.

HOUSE.—A bill was introduced granting the right of way for three railroads across the public lands from commercial points in California and Oregon. Ref. to Com. on Railroads.

Mr. Settlers asked leave to introduce a resolution requesting the President to open negotiations with Peru, either for the purchase of one of the Chincha Islands, or for abolition of the Peruvian monopoly. Not granted.

House then went into committee on the Homestead Bill. An amendment to the bill, proposing to change 25 cents per acre, instead of donating the lands, was rejected. An amendment providing that the bill shall not go into effect until one year after its passage, in order, as the mover said, to prevent the people of the West from stepping in at once, and selecting the best land, was also rejected. Before the disposing of the bill, committee arose, and the House adjourned till Monday.

March 4.—SENATE—The debate on the Nebraska bill was continued till 5 o'clock this morning, and was participated in by Messrs. Cass, Bell, Dawson, Norris, Sumner, Wade, Toucey, Fessenden, Hunston, Weller, and Douglas. At a few minutes past 5 the vote was taken and the bill passed by yeas 37, nays 14; after which the Senate adjourned to Monday.

The Legislature.

THE State Legislature continues to drag its slow length along in the consideration of an accumulated mass of private bills, and individual schemes with a sprinkling of matters of more general interest and utility. All eyes are turned, however, from the State Capitol to the more exciting drama now being enacted at the seat of the General Government, where the question of slavery propagandism, "like Aaron's serpent, swallows up the rest."

Among the petitions presented by Mr. ANGLE, member from this city, are two of special interest to our citizens, viz: For a Genesee Valley Canal Feeder; and for the reconstruction of Main-st. Bridge, in this city. Mr. ANGLE reported also upon the bill to provide for a commission to revise our City Charter, and it was referred to be reported complete, which puts it among the bills ready for final passage.

A report was made against extending the charter of the Ontario and Livingston Mutual Insurance Co.; which lies on the table.

The House concurred in the Senate's amendments to the bill authorizing Religious and Charitable Societies to mortgage their real estate.

In regard to the two great questions of the session, the *Tribune* says:

The present Legislature of our State was elected with two well defined and clearly avowed objects:—1. The perfecting of the Constitutional Amendment looking to the early completion of our Canals; 2. The passage of an act outlawing and prohibiting the Liquor Traffic. When the list of members elect was made out, it was well understood, alike by friends and foes, that these two measures had been passed upon and affirmed by the People, and that on the Legislature elect devolved only the duty of giving effect to the popular will. And, so far as the Canals were concerned, the general expectation was fully and unanimously satisfied.

Two-thirds of the Session has now elapsed, and neither House has yet acted decisively on the Temperance question. Bills have been reported in each, and abundantly debated, and pretty nearly matured; but that is all, thus far.

News Paragraphs.

☞ Lately, when a long freight train over the Northern Road reached Lowell, it was discovered that one of the cars was minus wheels. It was subsequently ascertained that the accident occurred at North Chelmsford, where two lengths of rails (thirty-six feet) were detached from their connection. Twenty-four cars passed over this break in safety, and without attracting the notice of any one on the train. The car without wheels hung safely by the couplings.

☞ During the late snow storm at Quebec, several avalanches occurred. One buried two youths, who were engaged under the mountain in sawing wood. After a lapse of twenty minutes they were dug out alive. On the same day, not far from the same spot, a man was covered to the depth of several feet, and lay beneath the snow six hours. When rescued he was in a very exhausted condition.

☞ The great-grandson of Defoe is living in poverty at the age of 77. He is the Defoe of Hungerford market, mentioned by Wilson in his life of the author of Robinson Crusoe.—Some literary men of London have been making up a sum of money for his benefit. Chas. Dickens has been among the most liberal of these.

☞ Some curious relics of Roman luxury have been discovered under the foundations of the old excise office, in Broad street, London.—A piece of tesselated pavement, of considerable beauty, has been found. The pattern is a bold representation of leaves and flowers, in their natural colors, executed in the usual way.

☞ A company of five negroes, the property of James Merton, of Gallatin Co., Ky., succeeded in making their escape on the night of the 16th ult. They had only to cross the Ohio river, when they were taken in charge by some friends who soon had them on their way to Canada by the "underground."

☞ The *Detroit Advertiser* of Monday last, says that a firm in that city have effected a sale of 200,000 bushels of corn, at 79 cents, delivered in Buffalo on the opening of navigation. The stock of corn is very large, and constantly increasing, and the same may be said of all the western ports.

☞ The Trustees of the village of Lockport have commenced a suit against the New York Central Railroad Company for the non-compliance of the Company with certain Ordinances passed by the Board, in regard to obstructions which have been placed by the former in the streets of that village.

☞ The Empress Eugenie having been prescribed exercise, she had a pair of skates made, fitted with wheels, and on these she skims the polished floors of the salons of the Tuileries.—If the Empress would busy herself about household duties a little, it would be quite as effectual, and a much more valuable exercise.

☞ A large bear, weighing about 200 pounds, was caught in a trap, in a barn in Stanford, Vt., not long since. Whether his object was mutton, or whether the extreme cold drive him to seek a comfortable lodging in the hay-mow has not been ascertained.

☞ Alexander Smith, whose worldly circumstances were poor enough, has been elected to the office of Secretary of the University of Edinburgh. We learn from his American publishers that over 20,000 copies of his poems have been sold in this country.

☞ The Roman Catholics of Boston contemplate the erection of a cathedral in the south part of that city, which shall out-do in dimensions, costliness and splendor all that this country has ever seen in the way of architectural splendor.

☞ The American Army is the most expensive in the world, and it would beggar the most wealthy nation in the world to keep up an army such as France has often done, and pay them as United States soldiers and officers are paid.

☞ Mat. F. and Robert Ward, charged with killing Mr. Butler, the school teacher, of Louisville, for punishing their brother, have been removed from Louisville to the Hardin Co. jail, where they are to be tried.

☞ The work of putting down the second track, between Buffalo and Batavia, on the Central railroad, was commenced on Monday last at the latter place, and will be completed to the former city by the first day of June.

☞ Frederick Tennyson, nephew of the great Alfred, has just published a volume of poems. There is no "family likeness" between the nephew and the uncle, but the former is only the feeble echo of the latter.

☞ The Erie Railroad Company have put on their road a telegraphic car which can be taken to any point remote from a telegraphic station, where an accident occurs, and communicate results both ways.

☞ It is intended, early in March, that a camp of thirty thousand English militia, shall be formed either at Chobham, or such other place as the general in command of the army shall deem fit.

☞ Statistics carefully prepared, demonstrate that scarcely one-fourth of the inhabitants of Philadelphia are regular church-goers; while in Boston it has been ascertained that one-half of its inhabitants are stated worshipers.

☞ Sir Robert Peel, (the second,) lecturing at Birmingham lately, said he had seen the grossest serfdom in Russia enervating the intellect of an immense population, upon whose rulers retributive justice was now to fall.

☞ M'Kay, Queen Victoria's piper, has gone crazy. He was allowed to be the first piper in Scotland. His duty was to play before the Queen and royal suite when at dinner, and at the dancing of the Scotch reels.

☞ Lieut. Mathews, of the Navy, who belonged to Com. Perry's Japan Expedition, and recently drowned while exploring a group of islands, was a native of Schenectady, where he was greatly esteemed.

☞ A poor, uninstructed youth, a sand-bearer on the river Arno, is now making a great sensation at Florence. Rossini has heard him sing, and declares that he is the finest baritone he ever heard.

☞ The steward of the steamship Africa was arrested lately on a charge of smuggling a large quantity of lace goods, which were seized in the store of an importing firm in New York city.

☞ The Senate of Rhode Island, by a majority of one, have passed a bill restoring all the rights of citizenship to Thomas W. Dorr. The House refused to concur in the passage of the bill.

News Brevities.

—— Sir David Brewster is engaged upon a new Life of Sir Isaac Newton.

—— Cholera has made its appearance at Balize, Honduras.

—— Two thousand colliers along the Monongahela river have struck for higher wages.

—— It takes 360,000 gold leaves to make an inch in thickness; and 170,000 silver.

—— Mille. Wagner has been appointed royal "chamber singer" to the King of Prussia.

—— The original manuscript of Byron's "Curse of Minerva," sold recently in London for $107.

—— Austria has an army of 450,000 men, at least 250,000 of which number were pressed into service.

—— Among the literary novelties of the day is a plan for publishing a new monthly magazine, printed in embossed type, for the blind.

—— The territory of Nebraska contains 136,700 square miles, and would make seventeen States as large as Massachusetts.

—— The steamers Samuel Dall and Ambassador, were burnt in Mobile Bay Feb. 26. Loss about $70,000.

—— The Supreme Court of Massachusetts has decided that the Maine Law of that State is constitutional, seizure clause and all.

—— The America carried off the pilot who took her out of Boston, not being able to put him off owing to the heavy sea.

—— The actual official vote on the Canal amendment was 216,110; for it, 185,802; against it, 60,356. So says the Albany Journal.

—— A bill has been reported in the Kentucky legislature appropriating $20,000 to the Clay Monument.

—— The Alabama House has passed the bill loaning to the Mobile and Ohio Railroad $100,000 at 6 per cent.

—— The time by railroad, from Pittsburgh to Philadelphia, is only fifteen hours, since the completion of the tunnel.

—— The Washington Globe says it employs a staff of sixteen short-hand writers in reporting the Congressional proceedings.

—— The Argus says, there has been an unusual amount of sickness among the members of the Legislature this session.

—— Mrs. Harriet Beecher Stowe is soon to be out in a new work entitled "Sunny Memoirs in Foreign Lands."

—— The proprietors of newspapers at Pittsburgh, are about holding a meeting to combine against the use of the telegraph wires.

—— A man fell into a well in Toronto and remained there all night, and was taken out alive next morning.

—— There are twenty vacant Congregational pulpits in Massachusetts now, and a still larger number in the adjacent Eastern States.

—— A bill is before the Ohio Legislature compelling insurance companies of other States taking risks in Ohio to place with the State authorities a guarantee to protect the insured.

—— Rev. Sebastian Streeter, of Boston, united three hundred and seventy-eight persons in the blissful bonds of matrimony in the year 1853.

—— Charles Fenno Hoffman, of Baltimore, a fine writer both in prose and poetry, is a confirmed maniac in the Hospital at Harrisburgh, Penn.

—— The Brantford Herald complains of unfairness in the U. S. journals in condemning Canadian hotels, railroads, eating-houses, women and waiters.

—— A Yankee traveler in Egypt, writes that the Americans are very often in those distant regions classed with Englishmen, doubtless from their speaking the same language.

—— The East India Company require to keep £9,000,000 of coin in their chests for the conduct of public business; in place of that they keep £16,000,000 all in hard coin.

—— Gov. Powell, democrat, vetoed a bill passed by the Legislature of Kentucky re-apportioning the congressional districts of the state, and the Legislature has passed it over his head.

—— The Cherokee Marriage ceremony is very expressive—man and woman joining hands over a running water, indicating that their life may flow on in one stream.

—— The Virginia House has authorized a contract with Galt, the sculptor, for a statue of Jefferson, to cost $10,000, and to be placed in the University of the State.

—— The three American sailors so long confined at Havana, have been liberated. They were confined for involuntary connection with a slaver.

—— The steamer Arrow took fire on her passage from New York to Newburg, last week Wednesday, and narrowly escaped total destruction.

—— Henry Ward Beecher is a man that always "comes to time." To meet an engagement at Brattleboro last Tuesday, he chartered an engine especially for the trip.

—— Mr. C. W. Field, of the National Theatre, Boston, has come into the possession of $20,000, by the dissolution of the Edinburgh Dramatic Fund Association.

—— A paper has been started in Lowell, Mass., to advocate the view that Christ's second advent will be made at some time during the year 1854.

—— Rev. Thomas Whittemore, a well known Universalist clergyman; is President of the Vermont and Massachusetts and the Fitchburg R. R. companies.

—— Five hundred millions of people, or one-half of the population of the whole world, are tipplers of tea—the beverage that cheers but not inebriates.

—— During the past year 112 ships have been chartered to bring guano from the Chincha Islands to the United States. Their cargos will amount to nearly 75,000 tons.

—— A paper at Bath, Me., states that the work has been commenced on, and the contracts have been made for a fleet of thirty ships, averaging 1,300 tons each, to be built at that place.

—— An Irishman has been justly sentenced to the House of Correction in Boston, for pouring boiling water from a tea kettle upon his wife, scalding her badly.

—— The New York and Erie Railroad Company are about to shorten their road between Olean and Corning. The distance saved is twenty-five miles.

—— Mr. Barfanti, formerly an American citizen, and a volunteer in the Mexican war, has been promoted to the rank of Major in the Turkish army.

Foreign Intelligence.

Arrival of the Andes.

BOSTON, March 1.

The Andes from Liverpool on the 14th, arrived at Boston March 1st.

The Cunard company advertise that in consequence of the Niagara being taken by government, the propeller Andes will take her place. Government has chartered 13 steamers to convey troops to Malta.

The Andes proceeds to New York, after discharging cargo, and returns again to Boston, to take mails for Liverpool.

The steamer Great Britain arrived at Liverpool the 14th, in 68 days from Melbourne, Australia.

Great excitement prevails in Lombardy. Radetzky had issued a proclamation to arrest all persons spreading false reports, creating much excitement in Italy.

Schamyl with 10,000 men is reported to be marching against Zakiatila, a very important military position belonging to Russia.

LONDON.—A new Reform Bill was introduced into the House of Commons on the 13th by Lord John Russell. The details of the bill are distasteful both to the Conservatives and Liberals.

The following are the steamers taken by government from the General Screw Steamship Co.: Propontis, Cape of Good Hope, Golden Place, and Josau. From the Oriental Co., the Hymalaya, Manilla and Ripon. From the Canard Co., the Niagara and Cambria. From the Australia Co., the Victoria.

It is expected that Lord Raglan is to have the chief command, and that the Duke of Cambridge, Earl Cardigan, Generals Evans and Brotherton are to have appointments.

The French government continues its war preparations with great activity. The Brest fleet has been ordered to sea immediately.

A reported serious conflict took place on 29th of January at Trojuna, with a great loss to both sides. The Turks retreated to Kalafat.

It was confidently announced that a manifesto signed "Nesselrode," was shortly expected at Vienna, in which the Czar will announce to the world his final intentions.

A camp of 40,000 is being formed on the sea of Marmora, near Constantinople. Gen. Guyson has commenced offensive operations in Asia against the Russians. Kalafat is infested by 60,000 Russian troops, and the Czar has given orders to every fort to drive the Turks out of Lesser Wallachia without further delay.

The Russian corps had formed a semicircle, the extent of which was about 35 English miles around the Turkish position at Kalafat.

Arrival of the Nashville.

THE Nashville arrived at New York March 5. She left Havre on the 15th ult. Her news is two days later.

The Nashville, when off Portsmouth, England, passed through the English fleet, about to sail to the seat of war.

It details the enormous military and naval preparations going on under the auspices of both England and France for attacking Russia as well in the Baltic as in the Black Sea.

Thirty British ships of the line and frigates, with ten or twelve French men-of-war, largest class, were to assemble in the Downs on the 6th of March, for service in the Baltic.

In all the dockyards and arsenals of England and France, the greatest activity prevails.

The autograph letter, addressed by the Emperor Napoleon to the Czar, must have brought the long agitated eastern question to a crisis—An answer was expected by the 22d of Feb.

Spirited debates on the war question had taken place in the British Parliament.

MARKETS.—At Liverpool, on the 14th, meat was sold at about late rates, but flour was difficult to move at 6d per bbl. lower.

Indian Corn finally offered at a reduction of 2s.

The Money Market retained an easy character.

The steamer Great Britain, from Australia, with £1,650,000 of gold on freight, had arrived in England.

The Russians are committing dreadful excesses on the peasants of Wallachia, who had refused to submit to the burdens imposed upon them.

The women and children of their villages had been massacred.

The French Government had addressed a strong note to King Otho, in consequence of the discovery of French correspondence.

Advice from Asia state that Schemyl was pushing forward his armaments with great energy.

The first battalion of the Coldstream Guards marched through London on the 14th, on their way to Chester, previous to their embarkation to the Mediterranean, and were received by the people with extraordinary demonstrations of enthusiasm.

The autograph letter of the Emperor Napoleon to the Czar of Russia proposes a treaty of peace on the basis of the Vienna note, modified by Turkey, and that negotiations take place direct between the Russian and Turkish ambassadors.

The French squadron under admiral Beuat was to take on board 12,000 troops and proceed to London to join the English squadron awaiting them there to take on board 4,000 more troops, when both squadrons will sail for the Levant. Nothing from Kalafat.

Arrival of the Alps.

THE Cunard steamer Alps arrived at Boston about 9 o'clock this morning, March 8th.

The political news possesses no feature of special interest. Turkish and Russian matters continue essentially unchanged.

MARKETS.—Flour, at Liverpool, declined on the week 6d, but Wheat was active at last week's prices. Corn, declined 2s, on the week. Provisions, without material change. Cotton, active and rather higher; sales 70,000 bales.

Consols, declined ¼.

EFFICIENCY OF SUB-MARINE TELEGRAPHS.—A correspondent of the *New York Tribune*, writing from Paris, says:—"During the uncommon cold weather which we experience, here in the latter part of December, and in the beginning of the present year, the electro magnetic telegraphs were much interrupted from snow and ice, while the sub-marine telegraph rendered uninterrupted service. To avoid these difficulties, the administration have determined to place the wires between Paris and London under ground. The sub-marine line continues to work well, and experience has shown that Wheatston's needle apparatus is the best suited for sub-marine transmissions. The same kind of apparatus will be employed between Madrid and Bayonne.

California News.

Arrival of the Empire City.

NEW YORK, March 4.

The Empire City from Aspinwall, Feb. 22d, arrived bringing the California Mail, passengers and specie of the 1st of Feb.

The Aspinwall Courier of the 22d says: Secretary Marcy has instructed the Mail Steamship Company not to pay the tax of ten per cent., imposed on the steamers by the New Grenadian Government, informing them that the United States will not permit such tax to be enforced.

Panama dates are to the 20th of February.

An unsuccessful attempt was made to rob Gen. Wool's party, while crossing the Isthmus.

Dates from Valparaiso are to the 24th, and Callao to the 23d of January.

A large fire had occurred at Guaquil, on the 27th of December, destroying $100,000 worth of property.

Peru still unquiet, Bolivia threatening instant invasion.

Domingo Elias is about to march upon Lima with a force of 3,000 men, but was awaiting the results of a revolution in his behalf in the Provinces of Tacnam and Arequipa.

There are rumors of a revolution pending in Chili. The minister had resigned.

Cavallo, formerly minister to the U. States, had been appointed Minister of Foreign Affairs.

The new steamer America, for San Francisco, and El Pinero, for the Southern coast, left Panama on the 8th of Feb.

☞ Among the bills recently presented to the Comptroller of New York for payment, was one from A. T. Stuart & Co., for one hundred and six pairs of gloves, purchased by the members of the late Common Council for the celebration of the "glorious fourth" last year! The bill was not paid, and has now been presented to the Board of Aldermen.

☞ The boy Pierce, of Dorchester, Mass., who made himself so infamously notorious by his barbarous treatment of two of his fellow school-mates, on account of an old school grudge, sailed for Calcutta on Friday night. His bonds will be forfeited, and doubtless paid by his father. These are in one case $200, and in the other $500.

Marriages.

In Candor, N. Y., on the 22d day of February, 1854, by the Rev. J. WITCOMBE, Mr. PHILIP HIBBARD, of Caton, Steuben County, and Miss SUSAN M. MULKS, of Caroline, Tompkins County, N. Y.

[The gold dollar received with above notice, indicates that the "Golden Rule" is not yet forgotten. The example is eminently worthy of imitation!]

In Andover, Mass., Feb. 22, 1854, by Rev. M. G. PRATT, THOMPSON C. MUNNELLS, Esq., of Geneva, N. Y., and Miss CARRIE E. PRATT, of the former place.

Commercial.

BUSINESS AND FINANCE.

THE Empire City from Aspinwall arrived at New York on the 4th. She had on board about half a million in gold. The Canada for Liverpool on the 1st, took out $150,000, but the Baltic which sailed on the 4th, had no specie on board. A vessel recently arrived at England from Australia imported £1,600,000, or nearly *eight millions of dollars!* Although the direct influence of such importations into a foreign country is not felt in our money market, yet it is an additional stream poured into the great ocean of commerce, which like the natural ocean seeks its own level all over the world. It makes but very little difference in the end, to which of the commercial emporiums the tide of precious metal leads, for it rapidly flows out again to meet the multiplied demands of commerce in all directions.

The aggregate imports of the year thus far are $29,040,283, against $28,985,751 same time in 1853, showing an increase of only about half a million of dollars, while the exports of merchandise and produce show an excess of $4,700,000, as compared with last year.

The amount in the United States depositories on the 30th ult., subject to draft was $26,600,000, of which there is in the New York Sub Treasury over seven millions.

The winter business on all the Railroad lines has been very great, and they are now actively engaged pulling everything in order for an unprecedented spring business.—The warehouses throughout all the Western lake ports are filled to their utmost capacity with produce awaiting shipment East at the opening of spring, which is now at hand.

Market Intelligence, &c.

RURAL NEW-YORKER OFFICE, }
Rochester, March 8, 1854. }

THE markets for breadstuffs still show a weakened price from various causes both home and foreign. The report of enormous accumulations of Grain and Flour at the West now awaiting the opening of navigation to move forward, causes Eastern buyers to hold off until the reception shall furnish a more abundant supply; and the news from abroad indicates a decline in foreign ports. Still the nominal price of wheat is as high as last week, but with extremely limited sales. Small lots, where purchases had to be made have within the week changed hands at two dollars, but these quotations are too high and $1,94 should be regarded as the maximum limit for wheat. Flour $9@9,25.

Corn lower, and quoted at 76c. per bushel. Oats unchanged.

Pork and beef nearly the same as last week but mutton carcasses higher, and now selling at 5@5½c.

Eggs declining, and offered at 16@18c.

Hay, in consequence of mild weather and the certain indications of approaching spring, is lower, first quality being offered at $12 per ton.

Publisher's Notices.

THE RURAL FOR 1854.

Rare Inducements to Agents and Others.

As heretofore announced, the Fifth Volume of the RURAL NEW-YORKER, for 1854, will be materially improved, the Proprietor having determined that it shall in all respects excel either of its predecessors, and all contemporary journals. He also offers greater inducements than ever before to each and all disposed to act as agents or form clubs. The attention of all interested is respectfully invited to the following list of very liberal

PREMIUMS FOR SUBSCRIBERS!

1. SEVENTY-FIVE DOLLARS, IN CASH, to the person sending us the greatest number of yearly subscribers (six month subscriptions to be counted proportionally) to the RURAL NEW-YORKER—remitting payment according to our club terms—previous to the 16th of April, 1854.

2. FIFTY DOLLARS, IN CASH, to the person sending us the second largest number, as above.

3. THIRTY DOLLARS, IN CASH, to the person sending us the next (third) greatest number.

4. TWENTY DOLLARS, IN CASH, to the person sending us the next (fourth) greatest number.

5. FIFTEEN DOLLARS, IN PLATE OR BOOKS, to the person sending the next (fifth) greatest number.

6. TWELVE DOLLARS, IN PLATE OR BOOKS, to the person sending the next (sixth) greatest number.

7. TEN DOLLARS, IN PLATE OR BOOKS, to the person sending the next (seventh) greatest number.

SPECIFIC PREMIUMS.

IN order to reach and reward EVERY ONE who may lend a portion of influence in support of the RURAL NEW-YORKER, we offer to those who do not compete for either of the preceding prizes, the following liberal gratuities:

1. FIVE DOLLARS, IN CASH, or a copy of WEBSTER'S UNABRIDGED DICTIONARY, (or $6 in Ag'l Books,) to EACH PERSON sending payment for FIFTY or more yearly copies (six month subscriptions proportionally,) according to our terms, previous to the 16th of April, 1854.

2d. FIVE DOLLARS, in Books, or four extra copies of the RURAL, to every person remitting payment for FORTY or more subscribers, as above.

3d. THREE DOLLARS, in Books, or a handsomely bound volume of the RURAL for 1853, to every person remitting for THIRTY subscribers.

4th. To every one remitting for TWENTY copies, ($25,) we will give an extra copy of the RURAL, and four (the present and three past) volumes of THE WOOL GROWER AND STOCK REGISTER—or,

5th. To every one remitting for TEN copies ($15,) an extra copy of the RURAL and three volumes (past or present) of the WOOL GROWER—or, instead of vols. W. G., $1 in Books.

6th. To every one remitting for six copies ($10,) an extra copy of the RURAL, either volume of the Wool Grower, and a bound Vol. of Genesee Farmer for 1848 or '49.

7th. To every one remitting for THREE copies ($5,) either volume of the Wool Grower, and a bound volume of Genesee Farmer for 1848 or '49.

8th. To every person remitting for ONE copy ($2,) we will give a copy of either volume Wool Grower or the Farmer for 1848 or '49 as preferred.

ALL competitors for premiums are expected to adhere strictly to the following

TERMS IN ADVANCE:

TWO DOLLARS A YEAR. Three Copies, one year $5 Six Copies for $10—Ten Copies for $15—Twenty Copies for $25, and any additional number at the same rate. Names of subscribers written on the papers if desired, however large the club. Club papers sent to different offices if desired.

☞ Specimen numbers, &c., furnished free to all disposed to compete for Premiums, or who desire to extend the circulation of the NEW-YORKER. Subscription money properly enclosed, may be mailed at our risk, if addressed to D. D. T. MOORE, Rochester, N. Y.

Advertisements.

ADVERTISEMENTS.—Brief and appropriate advertisements will be inserted in this paper at $1,50 pr. square, (ten lines, or 100 words,) or 15 cents a line—*to be paid in advance.*

Those who send advertisements without payment will understand from the above why they are not inserted.

FAIRFIELD ACADEMY.

THE next term of this Institution, located at Fairfield, Herk. Co., N. Y., will commence on Monday, April 10, and continue 14 weeks.

The Professors and Teachers connected with the Institution are distinguished in their profession; the Libraries, Apparatus, and Buildings extensive, and the price of tuition, &c., low. Students from a distance will leave the Railroad either at Little Falls or Herkimer, thence by daily stages (8 miles) to Fairfield. (218-3t) J. MATHER, *Sec'y.*

A BOOK FOR ALL SEASONS.

JANUARY and JUNE; or, Out-Door Thinkings and Fireside Musings. By BENJAMIN F. TAYLOR. 1 vol. large 12mo., Illustrated. Price, in handsome cloth binding, $1,00.

The first edition of 2,500 copies of January and June, were mostly taken by those who had already some acquaintance with the writings of Mr. Taylor. No book has appeared lately which has been received by the press of the country with such universal favor. In issuing the 4th thousand, the publisher begs leave to call the attention of the public to the following extracts from Notices of the Press:—

"It comprises a series of articles clothed in the most graceful and poetic imagery imaginable. Mr. Taylor is one of the most glowing writers of the day. 'January and June' ought to be on every book table in the country."—*Olive Branch, Boston.*

"What book is better fitted for the book table than such a volume as this?—one that you take up in an idle moment, and reading half a dozen pages, you make the moment no more an idle one, but one in which you have learnt some new philosophy of life. Mr. Taylor's book is a prose poem of the purest style."—*Palladium, Worcester, Mass.*

"Mr. Taylor has a style peculiar to himself in drawing apt illustrations, and imagining things which seem to live and breathe."—*Daily Times, Hartford, Conn.*

"It is a series of sketches suggested by the different seasons of the year, pure in sentiment, and very gracefully written."—*New York Observer.*

"It unfolds the interior aspects of life, the deeper and more pathetic passages of human experience, in a view of pensive moralizing which is not without a beauty of its own, and which will touch the sympathies of many hearts."—*Harper's Magazine.*

"Some may object to the style as being too stilted, but we can assure them the book is not made up of sickly sentimentality, but is full of original and striking thoughts, beautifully elaborated, and calculated to make all who read it better."—*Home Journal, N. Y.*

Such notices might be extended to columns.

The book is for sale by all the booksellers in the principal cities in the Union, and by the publisher,

SAMUEL HUESTON, 139 Nassau st., N. Y.

Lately published, The Attorney, by John T. Irving, Esq., author of John Higgs, a story now in progress in the Knickerbocker Magazine. Also Harry Harson, by same author.

Each in one volume of nearly 400 pages, with illustrations. Price $1,50 each.

January and June, Harry Harson, and The Attorney, will be sent, *post paid*, for one dollar each, sent to the publisher.

218-tf SAMUEL HUESTON, 139 Nassau st., N. Y.

SOON IT WILL BE TIME TO PLANT!

AT the Rochester Seed Store opposite the Arcade, on Buffalo-st., I can supply all kinds of Seeds, and the implements usually wanted by the farmer or gardener. I have Seeds of my own growing; also those of my own importation from England, France and Germany, which I will sell at as low rates, as can be had in this country, both at wholesale and retail.

Clover Seed.—Medium from Ohio, and the large kinds grown in this county, at market prices.

Timothy Seed—from Wisconsin, at market prices.

Peas.—Large Marrowfat—Early Washington—Early Kent, (the earliest variety)—Early Prince Albert, (imported)—Blue Imperial (imported)—and all the other varieties worth cultivating, by the bushel or quart.

Beans.—Lima—China red—Eye, &c.

Corn.—Stowell's Evergreen Sweet Corn, at 50 cents per quart.

Mexican Potatoes—of my own raising, at $5 per barrel delivered at the R. R.

Osage Orange.—New seed, just from Texas and Nebraska at $10 per bushel, or 75 cents per quart.

Orders by mail, enclosing the money, will be promptly attended to. The seeds forwarded without delay, or the money returned. JAMES P. FOGG.

Rochester, March 8, 1854. 218-6t-now

SEEDS—VEGETABLE, FLOWER, FIELD, FRUIT AND TREE SEEDS.

THE subscribers offer, of the growth of the past year, and of the finest possible qualities, their usual very extensive assortment, raised expressly for them in this country, as also in England, Scotland, France, Germany, &c., comprising every tested desirable variety known in the several departments. They would particularly call the attention of gentlemen, cultivators, market-men, and others, to their superior stocks of Beets, Broccolis, Cabbages, Cauliflowers, Extra Early and Wrinkled Marrow Peas, Lima Beans imported from Peru, Celeries, Cucumbers, improved varieties of Sweet Corn, Lettuces, Melons, Peppers, Radishes, Turnips, &c., &c., of the same superior qualities as have heretofore afforded such universal satisfaction, and which can be recommended with the fullest confidence as unsurpassed.

The list of FLOWER SEEDS, embracing nearly a thousand sorts, includes every approved standard variety, as also every novelty of value introduced in Europe the present season.

AGRICULTURAL SEEDS.—In addition to the more common sorts, the best qualities of English and Italian Ray Grasses, Orchard Grass, Sweet Scented Vernal, the Fescues and others, Lucerne, White Dutch Honeysuckle and other Clovers, supplied in large or small quantities, and at low rates.

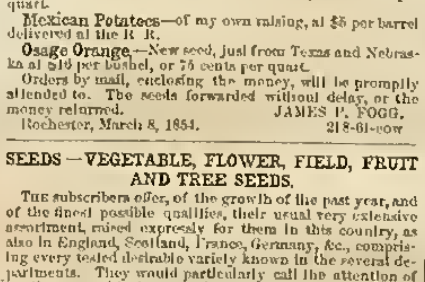
Carrots, Sugar Beets, Mangel Wurtzel, Parsnips, Ruta Baga, and other Turnips, for Field culture, of the most approved kinds; Honey Locust, Osage Orange, and other Seeds for Live Fences, with a large assortment of Tree Shrub and Evergreen Seeds.

The most approved Budding and Pruning Knives, of first quality and superior finish; Brass Green House Syringes; Garden Tools; Bass Mats and Cuba Bass, for lying and grafting; Gardening and Botanical Books; Emden Grotts; all kinds of Bird Seeds, &c., &c.

FRUIT AND ORNAMENTAL TREES, EVERGREENS, &c., &c., furnished from the Newark Nursery. This nursery has now 125 acres in the highest state of cultivation, inviting the attention of purchasers, not more by the unequalled extent of the stock than by the extremely vigorous and healthy growth of the Trees, and their admirable adaptation to any variety of soil into which they may be transplanted.

Separate Catalogues furnished free of charge to post-paid applicants, and orders by mail immediately attended to.—Particular care is given to the careful and requisite packing of Seeds for long voyages. Smaller Vegetable and Flower Seeds can at little expense be expeditiously forwarded by mail to any part of the Union. Retailers supplied at reasonable rates. J. M. THORBURN & CO.,

218-1t 15 John-st., New York.



PATENT CLOVER AND TIMOTHY SEED SOWER.

THE above cut represents a very desirable hand Implement for sowing Clover and Timothy seed. It is a simple hopper ten feet long, with a fine bottom perforated with holes at equal distances. The seed is distributed by a notched rod, which is vibrated by means of a lever attached to the top of the hopper. It sows the seed accurately, and is so arranged as to sow any desired quantity, from 2 to 16 quarts per acre.

Warranted to give satisfaction. They can be forwarded to any part of the country by Railroad or Stage. Remittances by mail at my risk. All orders (which should give full directions for forwarding) promptly attended to.—Price $5. Manufactured and sold by

F. D. HALLOCK,

215-11* 24 Exchange st., Rochester, N. Y.

LIVE STOCK AGENCY.

IN compliance with repeated solicitation, the subscriber offers his services for the purchase of Horses, Cattle, Sheep, Swine and Poultry. His long acquaintance with different breeds and *breeders* of these animals, gives him superior facilities for procuring the best. SANFORD HOWARD.

{ Office of the Boston Cultivator,
Boston, Mass., March 1, 1854. 218-6tw-3tm

FARMS FOR SALE.

THE subscriber offers for sale three farms; one of 115 acres, one of 100 acres, and one of 88 acres,—all pleasantly located within one mile of the village of Mount Morris, Liv. Co., N. Y. They are all so situated that they can be occupied as one farm. Two of them have excellent dwelling houses and barns in good condition, with orchards of the choicest fruit.

The soil is of the best in Livingston county. Terms of payment easy, and to suit purchasers. A small portion of the purchase money will be required in cash.

GEO. G. McNAIR.

Mount Morris, Liv. Co., N. Y., March 6, 1854. 218-3t

PURE BRED COCHIN CHINA FOWLS.

TWENTY-FIVE PAIRS select buff Cochin China Fowls, from 6 to 9 months old, and weighing from 14 to 18 lbs. per pair, for sale, for $5 to $8 per pair. Address

218-4t R. L. ADAMS, Lyons, N. Y.

LARGE CLOVER SEED.

MANY Farmers may not be aware that the towns of Pompey and Lafayette, in the County of Onondaga, raise considerable quantities of Large Clover Seed! This kind of clover is of the very largest sort, and extremely valuable for manure. I have been in business in this place ten years. I obtain my clover seed of reliable farmers of long acquaintance, have my seed guaranteed in writing, and I warrant every bushel the large kind. I challenge any man to produce the evidence, that I have deceived him by selling him small seed for large in these ten years. All orders supplied at the lowest market rates. E. J. FOSTER.

Syracuse Agricultural Warehouse and Seed Store

March, 1854. 218-4t

LAND PLASTER

AT Canandaigua, Victor, and Fisher's Railroad Depots. The subscriber has on hand at each of the above Railroad Stations, 500 tons of pure, fresh ground land Plaster.—Farmers can depend upon getting their Plaster at the above places, of a superior quality and not kiln dried.

217-4tp. JIREH ROWLEY.

ALFRED ACADEMY,

A FIRST CLASS MALE AND FEMALE SEMINARY.—Its location on the New York and Erie Railroad, two miles from the Alfred Depot, is romantic, retired and healthy. The course of instruction is divided into two departments, with an experienced Professor at the head of each. The edifice containing the chapel, recitation, society and library rooms, is one of the largest and finest school structures in Western New York. The supervision of the students is parental, and well adapted for securing their highest intellectual and moral discipline. The next term commences Wednesday, March 29th. Expenses moderate. For circulars, apply to

217-3t W. C. KENYON, A. M.

Alfred Centre, Allegany Co., N. Y., Feb. 20, 1854.

PURE WINE.—MEXICAN POTATO.

PURE juice of the Grape is offered by the subscriber, for medicinal and restorative purposes. City physicians may depend on its purity, and recommend it in their practice, with entire safety. Price, $1 per bottle.

Also, the Mexican Potato for sale, at $4 per barrel. The Mexican potato is becoming too well known to spend money on a long advertisement. Its excellence and delicate flavor, together with its productiveness, will meet your highest expectation, being a beautiful white color, and kidney shape. Address or apply to

H. N. LANGWORTHY,

19 South Washington st., Rochester, N. Y.

Feb., 1854. 217-3t

A HOME FOR ALL:

Or, the Gravel Wall and Octagon Mode of Building—New, cheap, convenient, superior and adapted to rich and poor, showing its superiority over brick, stone and frame houses; the cost, capacity, beauty, compactness and utility of octagon houses; the author's residence, barns and outbuildings, board and plank walls, the workingman's dwelling, &c., with engraved illustrations. By O. S. Fowler.—Price, prepaid by mail, 87 cents. Please address FOWLER & WELLS, Publishers, No. 131 Nassau st., New York.

"The author of this work, a prominent advocate of the doctrine of progress, has here applied his principles to the improvement of house-building. He has occupied much time and thought for several years past in planning the best mode of building the home of his future life. He has succeeded in devising a method, which will bring a comfortable dwelling within the reach of the poorer classes, while it admits any degree of luxury, which may be demanded by the taste and convenience of the proprietor.—Except in one particular—and this greatly improved by himself—Mr. Fowler claims this mode as his own invention. The two main features of the plan are the octagonal form and gravel wall." * * * * *

After the selection of his material, Mr. Fowler proceeds to illustrate the advantages of the octagon form, and to give minute and explicit directions for the practical realization of his ideas. His statements, which are marked by a certain pithy qualintness of expression, are accompanied by figures and specifications, showing the economical benefits that result from his plan. The volume contains numerous suggestions in regard to several important points of domestic arrangement, agricultural economies, and the practical philosophy of life in general. Hence his work is of a very readable character, and will form a welcome addition to the rural library.—*New York Tribune.* 217-2t

A VALUABLE FARM FOR SALE.

THE Subscriber offers for sale his Farm, consisting of 50 acres, on which is a good Dwelling House, Barn, Sheds, and other necessary out buildings. An abundance of all kinds of fruit, and under good improvement. Situated in the Town of Pultney, Steuben Co., N. Y., eighty rods from the west bank of Crooked Lake, and 2½ miles from the Village of Branchport. A part of the purchase money will be required down, the balance on time to suit the purchaser.

For further information inquire of S. BOOTH, Branchport, or the subscriber on the premises.

HIRAM C. WHITE. (195tf.) AMASA MASON.

THE HORTICULTURIST,

AND JOURNAL OF RURAL ART AND RURAL TASTE.—The Horticulturist is a Monthly Journal, devoted to Horticulture and its kindred arts, Rural Architecture and Landscape Gardening. It is edited by P. BARRY, late Horticultural Editor of the Genesee Farmer, and author of that popular work, "The Fruit Garden." To those who cultivate Fruit and Flowers, this work is indispensable, as it contains full directions for cultivation, as well as every thing new on the subject, either in this country or in Europe.

The Horticulturist is beautifully printed on the best paper, with costly illustrations on wood and stone. It contains 48 pages, without advertisements, and each number has a full page engraving, on stone, of some rare fruit or flower, drawn from nature, by the best living artist in the line.

TERMS.—Two Dollars Per Annum, In Advance. A discount of twenty-five per cent. allowed to agents. Postmasters and others are invited to act as agents, to whom specimen numbers will be sent, free of postage, on application to JAS. VICK, Jr., Publisher, Rochester, N. Y.

P. S.—A new volume commences on the first of January. January 1, 1854

FARM FOR SALE,

SITUATED in the town of Conquest, 4 miles north west of Weedsport, and 3½ from the Rochester and Syracuse direct railroad. Said farm contains 163 acres, 140 improved, and in a good state of cultivation, and well adapted for all kinds of produce, and well situated for two farms if desirable, as there are two houses, two barns, two orchards of a good variety of fruit trees, and a wood lot on each end of the farms; 30 acres of wheat on the ground, and 50 is seeded to clover and timothy. Half the purchase money to be paid when possession is given, the remainder on bond and mortgage to suit the purchaser. Price, $55. For further particulars inquire of the subscriber on the premises.

Weedsport, Cayuga Co., N. Y., 213-tf. H. BAKER.

Of all the welcome visitors that pay their respects weekly to our domestic circle, no one is more eagerly received than "Moore's Rural New-Yorker." We have ever regarded it as a model Family Newspaper, and since our first acquaintance with it, now of three years' standing, we have never read a single line in it that would offend the most sensitive moral feeling.—*Kalamazoo Gazette.*

Poetical.

[Written for Moore's Rural New-Yorker.]

THERE WAS A TIME.

BY J. C. MILLER.

THERE was a time, there was a time,
When music held the golden key,
To ope the prison of my heart,
And set its captive feelings free.
Then would my leaping pulses fly,
And fancy mount on starry wings,
To hear the sunny music-rain
Shook from the viol's trembling strings.

There was a time when birds and flowers,
And warbling brooks and silver streams
Could thrill my youthful heart with joy,
Like that we prove in blissful dreams.
Then I was glad when Spring blew o'er
The waking earth with balmy breath,
And sad when Autumn came, and bore
The summer's glory down to death!

There was a time when Love, which comes
To every heart, and spurns control,
Waved o'er my head its silver wing,
And stole in music to my soul.
Then Night put on a brighter crown
Of sapphire gemmed with burning stars,
And rapture swell'd till earth and heaven
"Seemed drawing their dividing bars."

Those times are past: alas, poor heart!
Which Love and Beauty thrill no more,
But like a tempest-driven bark
Lies wrecked upon a desert shore.
The music that of yore I loved,
Breathes sadly from each wailing string;
It sheds a sadness o'er my soul,
Whose echo is the song I sing.

Rural Sketch Book.

THE SUGAR PARTY.

BY J. T. TROWBRIDGE.

SUGAR Parties, in the town of C——, have from time immemorial been accounted more famous affairs than quiltings, merry-makings, or "bees;" any description of these being unable to approach them in popularity.

The reason of this may be, that the season in which the genuine sugar party flourishes, is that particular season when the country is apt to be afflicted with a scarcity of all other kinds of entertainment.

In summer, there are soft twilight hours, verdant fields, and silent groves, which invite young and sweet hearts to sweet communion, or to solitary meditation, no less sweet by the light of the "silver moon." In autumn, fruits abound, and when "paring bees" are not instituted, the adventurous youths take strange delight in tracking through corn-fields, through swamps and groves, the wild raccoon, keeping up the arduous sport till deep into the autumn night. Even in winter, country life is crowned with pleasures rare and rich; when in the garrets of great farm houses, the lads and lasses assemble to "chase the glowing hours with flying feet," or get up old-fashioned games, in the quaint parlors and homely sitting rooms: and when on the clear, sparkling night air, rings the silver chime of bells, which make music for the light hearts of merry sleigh-riders.

But in the spring time of the year—not in the balmy month of May, but when the sun, soaring northward, looks with returning heat on the barren hills, snow-loaded valleys, and frozen streams, and calls the thaw-spirits out of the oozing ground; when the warmth of noontide, like the first smiles of summer, tempts silly fowls abroad from the farm yards; but before the naked woods have thought to commence their gorgeous spring-time toilet; when spring smiles a little by day, while at night,

"When bleak winds of March
Make her tremble and shiver,"

then—then the sugar party is deservedly held in high esteem, in all regions where soil is blessed with the beautiful maple tree!

In the town of C——, especially. Everybody there could tell you, from sweet experience, that the sugar party is a delicious invention, which old and young are free to enjoy, without the most distant apprehension of trouble from infringement of society's patent rights!

But, as is usually the case, the elderly people have their sugar parties by themselves; and the youths and maidens enjoy their own, uninterrupted by "married folks." Thus, for example, the Nelby's senior, gave a party to all the fathers and mothers of families in the town of C——, at the time of the earliest "run" of sap, last season; and a couple of weeks later, when another grand thaw sent the transparent blood of the maple circulating through torpid trunks and limbs, the Nelbys, junior, with the permission of the "old people," made preparations, and sent out invitations, for their sugar party, which everybody anticipated would be a grand affair.

Certainly, Eliva Nelby and her brothers Samuel and Nicholas, spared no "pains or expense" to meet the anticipations of the public. Sam had personally attended to the boiling of the sap in its later stages, and used his utmost skill and care in keeping it free from impurities, and in reducing it to syrup of the proper consistency, without scorching. Then Eliva herself had scoured the bright copper kettle in which this delectable preparation was to be placed over the sugar-making slow fire in the kitchen, in time to have it "feather," as soon as the guests should be ready for the grand sweetening.

Meanwhile, Nicholas had busied himself in filling a large tub with the purest snow which could be found in the woods, and in hollow places, protected from the sun; and he had deposited the cooling treasure in the shed, covering it with cakes of ice, brought from a dismal ravine on the northerly side of Kellogg's Mount.

Moreover, the plotting Eliva, anxious to have the old folks out of the way, had planned an engagement for them at a married people's sugar party over the river, and now everything was arranged exactly as she desired.

And Eliva was very happy, until about three o'clock on the important day. About that time an incident occurred that threw her into the utmost confusion. Eliva wished the sugar party had never been thought of.

To explain the reason of this: Eliva Nelby was a young lady of lofty pride. Not only did she account herself the belle of the town of C——, but having twice or thrice visited relatives residing in Philadelphia, she had become ambitious of fashionable manners, and prided herself on her knowledge of the *beau monde*. Her proper sphere, she felt convinced, was accomplished society: but believing in the necessity of imitating Romans in their own dominions, she tolerated country people, and condescended to patronize the simplicity of their manners when in their midst.

And Eliva could enjoy herself with her rural friends exceedingly well too; and she anticipated as much pleasure as anybody from the proposed sugar party. But at just three o'clock—how inexpressibly provoking!—the arrival of an unexpected visitor produced the effect at which I have already hinted.

That visitor was her cousin Lawrence, from the city—her rich, handsome, accomplished, desirable cousin, who had come to spend a week with his country relatives in sugar time.

At any other time Eliva would have been delighted with the high honor which she had so long desired in vain. At no other time could she have been so utterly dismayed! Although, after she had hastily changed her dress to meet him, the young gentleman greeted her with easy familiarity, she thought it was only because he happened to be partial to her; and firmly believing him to be the slave to etiquette, that she so much admired, she shuddered at the thought of his disgust should he witness the "vulgarity" of the country people, with whom she would be obliged to associate that night!

After Lawrence had been introduced into the "best room," Eliva, all flushed and flurried with excitement, poured the turbulent lava into the stupid ear of the sloiral Sam.

"What *will* he say—when the folks come?" she exclaimed.

"Say 'how d'ye do,' of course," replied the unfeeling Samuel.

"But—everything will appear odd to him! He will think he is among barbarians! He will be disgusted with them, and us too, for associating with them."

"What'll he be disgusted for? Just as if our kind of folks ain't as good as his any day!"

"But you don't understand!" whispered the perplexed young lady. "He is used to good society—and the young folks here are so rude and uncouth ——"

"If you call *living* and *hearty* 'rude and uncouth,' he'll find us up and striving!" exclaimed Sam. "We'll have as good a time as he can read about, or my sheep are all goats."

"How can you talk so!" demanded Eliva, passionately. "Lawrence will think it insulting to introduce him into such rude company; and he will leave us in the morning in disgust."

"Let him! if he's a stuck-up chap like that!" muttered the cruel Samuel. "It's my opinion this isn't any place for him. He'd spot his shiny boots. But if he wouldn't like to see the folks," Sam added, pitying Eliva's distress, "why he needn't, you know. Let him go to bed. I say, Cousin Lawrence," he cried, as the young man made his appearance—"we're going to have a little sort of a dig here, to-night ——"

"A sugar party," said Eliva, blushing at the "vulgarity" of her brother's phrase; "a sugar party, for the entertainment of some boys and girls that we have to be civil to—living in the same town ——"

"Good-hearted, jolly fellows, and nice girls as you can find!" added Samuel. "But perhaps you wouldn't fancy visiting with them.—'Liva was saying you ain't used to such, and it would be kind of like letting yourself down to make one of our party."

"Oh! I am sure Cousin Lawrence would laugh at our country—friends," stammered Eliva, crimson with confusion. "Their manners are so odd—they are so rude ——"

"I beg that you will make no apologies," interrupted the young man, who was too much of a gentleman in his feelings not to be pained by his fair cousin's embarrassment. "Nothing will please me better than to meet these people; and I assure you I shall be able to make all allowance for what may appear to me singular in their manners. A sugar party! I shall be delighted!"

This frank declaration should have reassured Eliva. She feared that her city cousin would rank her with her country associates, and charitably overlook the simplicity of *her* manners. But she could think of no alternative but to get through with the odious party as soon as possible, assuming a patronizing air toward her old friends, in order not to lower herself in her cousin's estimation.

While Eliva's mind was in this confused state, Helen Snow, who had previously promised to come over in the afternoon and assist her in her preparations for the party, made her appearance, tripping along the door-yard path. Lawrence enjoyed a glimpse at the rustic beauty—for such she was—and felt considerably hurt that Eliva did not bring her at once into the sitting room and introduce her. But Eliva, who thought a formal introduction of her fine cousin to little Helen Snow would be absurd, did nothing of the sort. She kept Helen in the kitchen; and although the latter had occasion to pass through the sitting-room, her friend scarcely deigned to notice her in her cousin's presence.

I said Lawrence felt hurt. No wonder.—Picture to yourself a plump little creature, with a charming figure, azure eyes of crystal clearness, fair hair falling in curls around her neck, cheeks rosy red, and lips of tempting ripeness; also imagine these charms adorned by the most simple and tasteful style of dress, without a single jewel, except a diminutive gold pin that fastened a pretty neck-ribbon—and you have a faint idea of the exhilarating freshness of Helen Snow. To a mind like that of Lawrence Gray, such simple beauty is like a volume of true poetry, drawn from the pure and cooling wells of nature.

But Lawrence was a man of infinite tact; and more than half suspecting Eliva's motives, he made his way into the kitchen to her unutterable dismay. There sat Helen, paring apples for pies; not for the party, but for Lawrence Gray—Eliva being anxious that there should be something in the house "fit for him to eat."

The young man apologized; said he did not like being left alone; and wished to be considered one of the family. He desired to make himself useful too; and before Eliva could realize the extent of his unheard-of audacity, he was helping Helen with the apples! Then, he began to talk to the latter in the most polite and agreeable manner; and Eliva was shocked to hear her answer him plainly and unaffectedly as if he had been nobody but a mere country acquaintance. And afterward, when Lawrence was gone to see the sugar-bush with Nicholas, his cousin took occasion to reprove her inexperienced friend for using such freedom with a city gentleman, assuring her that he would make fun of everything she had said.

Helen opened her blue eyes. Then she shook her curls, smiling cheerfully.

"I don't believe *that*," she said. "If he is a gentleman, he wouldn't make fun of anybody that way, I am sure. Perhaps he thinks me simple—but I suppose he will excuse it; for he knows people in the country are different from those in the city."

Eliva commiserated her unsuspecting friend, being thoroughly convinced that her cousin's only object in conversing with her was to amuse himself with her simplicity.

Well, the evening came; and so did the invited guests; and likewise the greatest trial of pride Eliva had ever experienced. Lawrence having previously requested her to introduce him to her friends, in order that he might be on familiar terms with them, she went through with the ceremony like a martyr. How awkwardly the young men bowed and shook hands! How the girls blushed, at meeting so unexpectedly a fine young gentleman from the city! What a horrid calico figure Jane Fairfield wore; and what a graceless knot was that into which her brother's cravat was twisted!—What clumsy boots Lizzie Wyman tramped about in—she was so fearful of their soles!—How small were the pretensions to fashion displayed by any of their guests! What must Lawrence Gray think of all those things?—Eliva didn't know. She could only imagine. She shuddered to contemplate the scene. At one time she had no idea she would have the fortitude to go through with it. She was afraid she might die!

But Lawrence seemed to like it. He talked with the young farmers about agricultural affairs until they had gained confidence, finding that on certain subjects they could teach him. He chatted with the girls, and found out what books they had read and what they liked; then passing to gayer matters, jested about rowing into the country to settle down among them.

Besides, Lawrence was deeply concerned in the fate of the sugar. Every few minutes he would escape into the kitchen to see how it was getting along. Perhaps it was because Helen Snow was watching the slowly boiling syrup, the golden froth of which filled the shining copper kettle; or it might have been the golden froth itself that called him thither—I do not know which. He certainly talked gaily with Helen; but at the same time he tasted the luxurious liquid, by dropping a little from a ladle upon a pan of snow.

Lawrence also was much interested in the experiment of ascertaining when the sugar was done sufficiently to grain. Helen taught it to him. It is this:—Make a little hoop or bow of a splinter, or a straw you may pluck from the broom, and plunge it into the boiling sugar in such a way as to have a heavy film adhere to it; then blow through the hoop, and if the dross or sugar flies away, white and light like a feather—why the syrup has been over the fire long enough, and all you have to do is to cool it, and stir it to make it grain. Helen also explained to her new acquaintance that as soon as the trees begin to bud, the sap becomes useless for sugar. You may boil it and boil it, till you burn it up; but it will not grain—This appears to be a provision of nature.

At length the sugar "feathered;" then the kettle was removed from the fire, and all things made ready for the feast. Nicholas' tub of snow was in demand. Basins and pans were filled; and the snow covered and deeply streaked with sugar which had been poured upon it, was passed around to the company. Boys and girls ate from the same dishes, delighted; drawing the hard wax out of the snow and quarreling for it playfully. Some, however, took their sugar in saucers, and cooled it by stirring to make it grain. The kitchen was the scene of this "sugar off;" and the most perfect happiness prevailed,—with one exception.

Eliva did not like to see Lawrence drawing wax with Helen, in a corner by themselves.—Having tried in vain to separate them, she gave up in despair, and was only miserable.—Yet she would not acknowledge, even to herself, that Helen was anything but a silly goose, and that Lawrence was not "making fun" of her.

Was it possible that his cousin enjoyed himself as well as he pretended to? Was it genuine good nature which caused him to appear so highly amused when Jane Fairfield and Lizzie Wyman became engaged in a sweet combat, and fought each other with ropes of wax? Eliva felt more like crying with vexation!

At length, after a few games had been played, and the company had danced a little to Edward Jones' playing the flute; after the guests had feasted on sugar, and exhausted all the inventions of mirth—the party broke up, and the young people began to take their leave.

Eliva was congratulating herself with the reflection that it was all over, and that Lawrence would never see one of the "vulgar, odious company" again, when, to her infinite astonishment and vexation, her cousin whispered in her ear that he had engaged to walk home with Helen!

How blind is pride! Eliva saw in this arrangement only the vanity of Helen and the mischievous nature of her cousin! She would not believe he had any better motive than to amuse himself with the effect of his flattery!—And although she was a little astonished that he did not "make fun" of her on his return, she would not change.

Even on the following day, when Lawrence called on Miss Snow, Eliva silently accused him of malice. How could she think of anything else as long as it was her settled conviction that, could he forget that she ever associated with such people, he would adore her; and her hope that she should some day become Mrs. Lawrence Gray, and occupy his house in the city?

But disenchantment came. It was during the following autumn. Lawrence, having visited C—— during the summer, was at his uncle's house again. Eliva was flattering herself that she was "certain of him."

"Coz," said he, sitting down by her side, "I've some thought of changing my way of living. I think I have lived the dreary life of a bachelor long enough."

Eliva cast down her eyes discreetly.

"I hope you will make a good choice," she murmured.

"I think I have."

Lawrence looked her full in the face. She turned away modestly.

"Ever since I have known anything of the world," he continued, "I have believed that the man is less liable to be deceived who takes his wife from a country-home, than he who marries one city-born and bred."

"Oh! perhaps you are right!" sighed Eliva.

"And I have chosen accordingly. I have come here for a wife ——"

"Here!" exclaimed Eliva, affecting to be surprised.

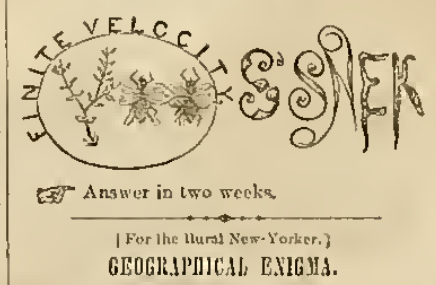
"Yes—here, in the town of C——; and I have chosen—HELEN SNOW!"

Had her cousin declared an intention to select a consort from a tribe of Esquimaux, Eliva could scarcely have been more surprised. So utterly unable was she to realize the startling truth, that it is generally thought she never believed her cousin to be in earnest, until his marriage with Helen actually took place a few days ago; and even now, in her inability to understand how such things can be, she more than half believes that there was some sort of enchantment used on the night of her last—her fatal—but never-to-be-forgotten SUGAR PARTY!

A NOVEL.—CONDENSED.—Moonlight night—shady grove—two lovers—eternal fidelity—young lady rich—young man poor—great obstacle—young man proud—very handsome—very smart—sure to make a fortune—young lady's father very angry—won't consent—mother intercedes—no go—rich rival—very ugly—very hard-hearted—lovers in a bad fix—won't part—die first—moonlight again—garret window open—rope-ladder—flight—pursuit—too late—marriage—old man in a rage—won't forgive them—disowns them—old man gets sick—sends for his daughter—all forgiven—all made up—young man getting rich—old man dies—young couple get all the money—live in the old mansion—quite comfortable—have little children—much happiness—Finis.

Youth's Corner.

ILLUSTRATED REBUS, NO. 12.



☞ Answer in two weeks.

[For the Rural New-Yorker.]

GEOGRAPHICAL ENIGMA.

I am composed of 42 letters.

My 5, 22, 27, 40 is a cape in South America.
My 3, 11, 7, 25 is a city in Pennsylvania.
My 16, 9, 18, 14, 33 is a town in Turkey.
My 10, 13, 29, 42 is a town in Russia.
My 2, 30, 11, 36, 20, 21, 13, 26 is a town in Ga.
My 35, 42, 15, 1, 12, 32, 22, 19 is a cape west of the U. S.
My 6, 27, 39, 37, 38, 18, 28 is an Island east of the U. S.
My 31, 41, 22, 15, 23 is a town in Hindostan.
My 8, 4, 34, 33, 30 is a river in Alabama.
My 24, 17, 38 is a city in India.

My whole was the title or inscription of an Egyptian Library. B. J. W.

Hollin, Mich., 1854.

TEMPEST INSURANCE COMPANY.

A FULL STATEMENT of the affairs of the Tempest Insurance Company, of Meridian, N. Y., for the year ending on the 31st of December, 1853, pursuant to the Laws of the State of New York.

Whole amount of Capital	$242,359 70
Of which the amount secured by mortgage on real estate is	95,000 00
On deposit in Cayuga County Bank, in cash	20,000 00
Cash on hand	1,472 40
In the hands of Agents and in course of transmission	4,617 00
Amount of other good securities	121,289 30
Amount of losses sustained, the same having been paid	1,500 00
Total amount of liabilities	135 00
Whole amount of commissions, salaries and fees paid during the year	2,386 00
Total amount of expenditures for the year	3,856 00

STATE OF NEW YORK, } ss.
COUNTY OF CAYUGA, }

P. P. Meacham, President, and T. L. Ferris, V. President, and T. R. Timby, Secretary, of the Tempest Insurance Company, being severally duly sworn, depose and say, and each for himself says, that the foregoing is a true, full and correct statement of the affairs of the said Corporation, and that they are the above described officers thereof.

P. P. MEACHAM, Pres't.
T. L. FERRIS, V. Pres't.
T. R. TIMBY, Sec'y.

Subscribed and sworn before me, this 17th day of January, 1854. 217-31 JAS. HICKOK, Jus. fice of the Peace.

OLD ROCHESTER NURSERY.

SAMUEL MOULSON, at the Old Rochester Nursery, office No. 38 Front street, Rochester, N. Y., is prepared to furnish Inventories to post paid applicants, of the present extensive stock of Nursery items, consisting in part of 10,000 very fine Northern Spy Apple Trees, from 7 to 8 feet high, which will be offered by the 1,000 at low prices. Also, a quantity of large sized Trees, such as Scotch Pines, Larch Fir, Maples and other ornamental things offered at very cheap rates in order to clear the ground.

90,000 Dwarf and Standard Pear.
20,000 Apple Trees in variety.
20,000 Peach do do
15,000 Plum, Cherry and Apricot.
20,000 Osage Orange of different ages.
Over 100,000 Hardy Evergreens—

And a fine selection of Weeping Deciduous Trees, Ornamental Shrubs, together with such novelties as may be classed strictly hardy, and a large collection of Dahlias, Tulips and other bulbous roots.

The amateur wishing prime fruits of well established repute, or the Agriculturist needing fine cropping, thoroughly tested varieties, may rely upon the most careful execution of their orders. The ornamental Items are entirely grown in the Nursery, consequently none of the heavy losses are sustained that usually occur to recently imported subjects.

The Evergreens are very robust and admirably furnished to the surface of the ground, none presenting the naked stems usual to imported plants.

Dealers are invited to give a call before making their purchases.

March 1, 1854. 216-6t

ATKINS' SELF-RAKING REAPER.

FORTY of these machines were used the last harvest in grass or grain or both, with almost uniformly good success, in nine different States and Canada.

Twenty-Six Premiums, including TWO *at the Crystal Palace*, (silver and bronze medals,) were awarded it at the autumn exhibitions. I am building only 500, which are being rapidly ordered. Mr. Joseph Hall, Rochester, N. Y., will also build a few. ☞ Early orders necessary to insure a Reaper.

Price at Chicago $175—$75 cash with order, note for $50, payable when Reaper works successfully, and another for $50, payable 1st December next, with interest. Or $160 cash in advance. *Warranted to be a good Self-Raking Reaper.*

☞ Agents properly recommended wanted throughout the country. Experienced agents preferred. It is important this year to have the machines widely scattered.

Descriptive circulars with cuts, and giving impartially the difficulties as well as successes of the Reaper, mailed to post-paid applications. J. S. WRIGHT.

"Prairie Farmer" Warehouse, Chicago, Feb., 1854.

216-13t-m3t

OSAGE ORANGE SEED.

JUST received from Texas and warranted good. Price, $20 per bushel, same rate per peck, with a deduction to dealers. Directions for culture, &c., sent to all customers. Packages can be sent by express at moderate cost to all places on the line of Railroads.

Five years experience has proven that this best of all hedge plants will endure the climate as far north as Western New York, and it is rapidly finding favor wherever it has become known. M. B. BATEHAM.

Columbus, O., Feb., 1854. 216-3t

MOORE'S RURAL NEW-YORKER,

IS PUBLISHED EVERY SATURDAY,

BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

SUBSCRIPTION—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion. As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 25 cents per copy to the club rates of the RURAL,—making the lowest price to Canadian subscribers $1,50 per year.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

*** The postage on the RURAL is but 3½ cents per quarter, payable in advance, to any part of the State—and 6½ cents to any part of the United States,—except Monroe County, where it goes free.

ADVERTISING.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance*. The circulation of the RURAL NEW-YORKER is several thousand greater than that of any other Agricultural or similar Journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

SPECIAL NOTICES.—TO AGENTS, &c.

☞ Mr. C. MOORE, of Gerry, Chau. Co., N. Y., is duly authorized to act as Agent for the RURAL NEW-YORKER, and the WOOL GROWER AND STOCK REGISTER, in the counties of Chautauque and Cattaraugus, N. Y., and Warren, Pa.—assisted by C. B. LANDAS in the last named county.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who enroll according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ OUR *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is obtained.

☞ IN making up clubs for the RURAL, the Wool Grower and Stock Register can be added at 35 cts. a copy, which is the lowest club price.

☞ IN writing us, please be particular to give your P. O. address correctly—the name of your Post Office (not Town,) County, and State. Write all names plainly.

☞ THOSE wishing their papers changed from one address to another, should give the names of both Post Offices—the *former address*, as well as the one desired.

☞ ADDITIONS to clubs may be made at any time, at the price per copy paid for the original club.

The Wool Grower and Stock Register is the only American Journal devoted to the WOOL and STOCK GROWING INTERESTS. It contains a vast amount of *useful* and *reliable* information not given in any other work, and should be in the hands of *Every Owner of Domestic Animals*, whether located East or West, North or South.—Published monthly in octavo form, illustrated, at ONLY FIFTY CENTS A YEAR—5 copies for $2; 8 for $3. Vol. 5 commenced July, 1853. Subscriptions can begin with the July or January number. Back volumes furnished.

Progress and Improvement.

HINTS FOR THE SEASON.

THE busy season of the farmer will soon be here. See to it, kind reader, that you are not caught napping. Are your preparations all made, so that you will have nothing to do but push right ahead when you commence operations? Suppose you sit down and think over what you intend to do, and what you will need to do it with. If we were to advise you to take a pen or pencil, and write down the various little things that will soon demand your attention, you would probably think us beside ourselves. Be that as it may, it is not a bad practice; but we will not urge the point.

Of course you intend to sow plaster (sulphate of lime) on your clover and Indian corn. Where it is as cheap as in Western New York, or anywhere that it can be bought for less than $5,00 per ton, its application to these crops, at the rate of one to two bushels per acre, is almost invariably profitable. The idea that it stimulates and exhausts the soil is an old fogy's dream, which no sensible, wide-awake farmer should entertain for a moment. If you have not done so already, put a light box on your wagon, and go forthwith to the plaster-mill, or city, or wherever the plaster is to be had best and cheapest, and get what you want. Be sure and get enough. This is not the year to be sparing in anything that will enhance the productiveness of the soil.

If you are not one of those fortunate fellows who grow their own clover seed and sow it in the chaff, but have to purchase from your neighbors or seedsmen, do not put off getting it till the last minute. Now is the time to look for good clean seed. Do not buy an inferior article because it is cheap. Much seed that is sold cheap, is dear at any price. Farmers seldom sow enough land to clover, and frequently not enough seed per acre. Ten pounds of red clover per acre is not too much. We shall take some future time to show that clover and peas afford one of the readiest and cheapest means of enriching a wheat farm. Ask any good farmer in Western New York, and there are no better wheat growers on this or the other side of the Atlantic, and he will tell you that, owing principally to the increased growth of red clover, the average yield of his wheat crop has been doubled during the last 15 years. On this point we would commend the perusal of the excellent article in the last RURAL from our esteemed correspondent LYMAN CONE. He has forestalled us in many remarks we intended to make on this subject.

See that your plows and implements are all right. Get new points, &c. Have the coulters sharpened, and get everything of this kind done now, while the blacksmith has time to attend to you. If the harness is not oiled and in perfect order, it should be attended to immediately. Whippletrees, clevises, chains, and the like, should be examined. If you have not a three-horse whippletree, now is the time to make one. Three steady horses abreast, and one man, will do as much work in a day as a double team and two men.

Fences must not be forgotten. A little attention now, will save much time when you come to turn cattle into the pastures. You had better discover any low or weak spots in the fence yourself, than let the cattle point them out to you; for, when they have once broke pasture, it is not easy keeping them in afterwards. Poor Richard's proverb, "A stitch in time saves nine," applies with equal truth to rails, boards, nails, &c.

If you intend to apply your barn-yard manure to spring crops, now is the time to set about drawing it out. It may be spread upon the land ready for plowing under. But, says some critical chemical reader, will not all the ammonia fly off and the manure be all spoiled? We think not. All the carbonate of ammonia existing *as such* in the manure, may evaporate by long exposure; but generally there is not much carbonate of ammonia in the manure, and the loss from a few days' exposure is not so great but that it will be fully repaid by the advantages gained from drawing out the manure at a leisure season of the year.

COVERED BARN-YARDS.

IN the last Journal of the Royal Agricultural Society of England, Lord KINNAIRD furnishes a paper on "Covered Farm Steadings," from which it appears that his Lordship has erected a set of farm buildings with yards, &c., entirely under cover. He finds it to answer beyond expectation. It effects a great saving in farm produce, which must otherwise be exposed to the injurious effects of the weather, while the amount consumed and destroyed by stock is considerably less; but the most remarkable result is in the value of the manure.

He took two lots of cattle; one lot was fed in the "byre" or stable, and the manure thrown into an open yard in which were twelve young cattle, getting a full allowance of turnips. The other lot were fed in a covered yard, and the manure left under them. Two hundred loads of the uncovered manure were drawn out in the winter, and put in one heap, well pressed down by the carts driving over it when emptying, and then covered top and sides with soil, road-scraping, &c. The heap was turned over as usual, a week before using. The dung in the covered yard was taken direct to the field and plowed in "being quite well enough made for the crops intended."

A field of 20 acres "of very equal quality" was selected for the experiment. Half of it was dressed with the uncovered, and the other half with the covered dung, both at the rate of 30 cart loads to the acre. Both were planted at the same time, with the same kind of potatoes. Both did equally well until the latter end of July, when the potatoes on the uncovered dung began to droop and decay—while on the half of the field manured with the covered dung the tops still retained their strong, dark green color.

The yield per acre was—With the uncovered dung, 17,077 lbs.; with the covered dung, 26,305 lbs.

The same land was sown with wheat after the potatoes, and 336 lbs. of Peruvian guano sown per acre on each portion.

The wheat on the land manured with the uncovered dung was per acre, 42 bushels, and 3,432 lbs. of straw. With the covered dung, 51 bushels and 4,730 lbs. of straw.

This is a surprising result, and argues volumes in favor of manure cellars. But we must be allowed to say that the experiments are not so strictly comparative as we could wish. The 12 head of cattle which were fed with turnips in the open yard, into which the dung was thrown, would not yield such rich dung as those fed in the byre and covered yard, which had oil-cake, linseed, &c., in addition. And it is probable that being exposed to the rain, these twelve cattle in the open yard would require, and were supplied with more straw for litter than the others in the covered yard, and accordingly the dung would be poorer. But as the experiment was designed to be comparative, we think these weak points hardly sufficient to throw doubt on the main result,—that manure in covered yards is much more valuable than that which is exposed to the rain, &c.

We would just add that the potatoes grown with the covered dung were *more diseased* than the small crop grown with the exposed dung.

NOTES FROM MY CORRESPONDENCE.

MR. JAS. R. MARTIN, of Kingston, Tenn., gives an account of a pony mare somewhat remarkable for her longevity and procreative energies. It is worthy of record. He writes: "I must give you the history of an old Indian pony mare I owned not long since. Five years ago last autumn, while in town at one of our general musters, I saw a man riding rapidly up and down the street, bantering every one to swap horses. Having an old mare at home that I wished to be clear of, I told him if he would go home with me I would give him a trade, as I thought his beast and mine nearer of one value than any two I had seen. He went with me and took mine and left his. Soon after I met a man who had owned my new mare for twelve years. From him I learned that she was twenty-five years of age, and then in foal. From her I raised four colts and sold her in foal with the fifth, which she had in due season. I saw her in town the other day, and she can now pace (she never was known to trot a step in her life,) five miles quicker than any horse I know of. I never knew anything of the horse kind to breed at so advanced an age, as she must have been at the least thirty years old when she dropped her last colt. I have lost by death one of the colts foaled while in my possession. The other three I own yet, and would not to-day take one hundred dollars apiece for them.

HOW TO JUDGE THE HEIGHT A COLT WILL ATTAIN WHEN FULL GROWN.—The same person adds on this point something that may be of use to many:

"I can tell you how any one may know within half an inch, the height a colt will attain to when full grown. The rule may not hold good in every instance, but nine times out of ten it will. When the colt gets to be three or four weeks old, or as soon as it is perfectly straightened in its limbs, measure from the edge of the hair on the hoof to the middle of the knee-joint, and for every inch it will grow to the height of a hand, or four inches when its growth is matured. Thus if this distance he found sixteen inches, it will make a horse sixteen hands high. By this means a man may know something what sort of a horse, with proper care, he is to expect from his colt. Three years ago I bought two very shabby looking colts for twenty dollars each, and sold them recently for three hundred dollars. So much for knowing how to guess properly at a colt."

BEE KEEPING AND BIRD-HELP.—Those who make war against the feathered tribes, may take a lesson from Mr. MARTIN'S success in bee keeping. Not only is the wren useful, but there is hardly one in the whole list but repays the farmer for all the damage committed—whilst most of them do vastly greater good in the destruction of insects and their larvæ.—They will see, too, that Mr. M.'s success, aside from his birds, is attributable to care and attention, which is the secret of all bee keepers' success, much more than the many vamped-up patent hives and bee feed.

Mr. MARTIN writes,—"When a boy of twelve years, I bought a swarm of bees, which increased so rapidly as to furnish my father's family with more honey than we could use. When I married, I took four stands and left some thirty behind. I have yet the same stock of bees, and range from twelve to forty hives, rarely getting lower, and seldom above that number. I have always used the common, old fashioned hive, and since the moth has been so destructive amongst bees throughout the United States, I have kept my hives raised up on small blocks or pebbles of about an inch in thickness, and during the spring, summer and fall, examined them two or three times a week, and cleaned out all dirt or moth deposit. The result has been, I have an abundance of honey, and better success than my neighbors. For five or six years I have been greatly assisted by two or three pairs of little wrens, that built their nests near by every year, and rear annually two and three broods. Through the season I have watched them as they go regularly and daily to the hives, searching around and under the gums, gathering up all moths, and the dead, cast-out larvæ of the bees, which their sharp, penetrating eyes are sure to discover. I attribute a great deal of my success to the unwearied, and cheerfully performed services of these pleasant little companions."

CULTIVATION OF CORN.—Mr. MARTIN'S cultivation of Corn and Oats may be interesting to some of our Northern farmers. It shows that good cultivation and energy will insure fair returns anywhere. He says,—"If my ground is stubble or clover, I break up with a two-horse turning plow in the fall or winter; if land tended in corn the last season, I don't plow till spring, then just before planting, harrow and cross-plow with long bull-tongues with two horses to each, running as deep as they can pull it. I then check off ground in width of row by quality of land. The two first plowings of the corn are done with one-horse bull-tongues, the two last by running a small turning plow or shovel next the corn, and breaking out the middle with bull-tongues. I soak my corn in a strong solution of saltpetre twenty-four hours before planting, and then roll in plaster,—drop three or four grains to a hill, which I afterward thin out to two stalks. My greatest object in soaking in saltpetre water, is to prevent its being taken up by birds. It is the best preventive I have tried.

For several years, I have adopted the plan of putting my oats in the ground with two-horse turning plows. It requires some more seed to insure a good stand, but the yield has been with me at least one-third greater. They stand much better—are not half as liable to lodge, as when put in by harrow or bull-tongue, and in a dry season I generally get double the yield to the acre that those do who follow the shallow system."

[Written for Moore's Rural New-Yorker.]

AN ESSAY
ON THE OSIER OR BASKET WILLOW.

In Two Parts.—Part 2.

The timber, when dry, is easily known from other wood, by its being of a salmon color; on which account it is frequently used in cabinet making and for children's toys. "Formerly," says MATTHEW, "before the introduction of iron hoops for cart wheels, the external rim or felloe, was made of this willow; and when new, the cart or train was drawn along a road covered with hard, small gravel (and in preference, gravel somewhat angular;) by which means the felloe shod itself with stone, and thus became capable of enduring the friction of the road for a long time, the toughness and elasticity of the willow retaining the gravel till the stones were well worn. Under much exposure to blows and friction, at the present time in the cars used on railroads for coal and stone, this willow outlasts all other timber. The larger shoots and branches of the tree willows are made into poles for fencing, hop-poles, props for vines, and other purposes. They are split and made into hurdles, crates, and hampers; and when interwoven with the smaller branches, into racks or cradles, for the hay and straw given to cattle in the fields, or in feeding yards. The smaller rods with or without the bark on, are manufactured into various kinds of baskets, for domestic use; and, split up into two, four or more pieces, for making lighter and ornamental articles, such as work baskets, ladies' reticules, &c. It is a remarkable fact, that basket-making was one of the few manufactures in which the ancient Britons excelled, in the time of the Romans. These baskets, or basenaiel, as they are called by MARTIAL, are said to have been of very elegant workmanship and to have borne a high price. (See Encyc. Brit., Art. Basket-making.)

Of the general uses of Willow, sufficient has been said to show its value for farming purposes, and we shall now endeavor to prove the importance of this crop as an article for commerce and ornament.

The uses of the entire plant are various. Almost all the species being of rapid and vigorous growth, they are peculiarly fitted for planting on embankments, on the banks of rivers and streams, for restraining their encroachments and retaining the soil in its place. The Salix Helix has this great advantage, that it grows readily by cuttings, and, therefore, does not require the soil to be disturbed by the operation of planting.

As Coppice wood, to be cut down every two or three years, S. Caprea and its varieties are valuable plants; few others producing so great a bulk of hoops, poles and faggot-wood in so short a time, in a cold, moist soil. Salix Alba is also an excellent species for coppice where the soil is dry and apparently barren, as this will grow readily in land incapable of producing grass.

The Salix Helix makes hedges, both in dry and in moist soils; but in the latter, such hedges are of great value on account of the use of their annual shoots for basket making.

For the purpose of basket making, almost all the species may be grown. Salix Viminalis and Salix Helix are the most vigorous and profitable; these have no disadvantage. Various other sorts might be mentioned; but these are consider by far the most preferable. The soil for Basket Willow should be deep, and thoroughly prepared; the situation, low land and moist; and if there is a command of water for irrigation, so much the better. "These firm soils," SAXBY observes, "will not bear Willows; yet some situations are unfit. Peat-moss, and land covered with standing water, or a quagmire, are not at all suitable." In no case should a plantation of Willow be commenced but in prepared ground. Nothing can be farther from good management than planting cuttings in grass land, and allowing the sward to remain green under them, or among the crop. Having fixed upon the spot, and having also carefully prepared the ground, the next step is to procure plants. These should be of last year's growth, or of shoots of one year old, taken from the under bud of well-ripened shoots of good size. Much imposition has been practiced in England and France, in the sale of "cuttings," which should be obtained "only from men of character and good reputation, who are fully capable of judging of the varieties." The most reliable source to "obtain proper" cuttings from in the United States, is WATSON G. HAYNES, Esq., of Garrison's, Putnam Co., N. Y.; or the Hon. BENJAMIN BRANNRETH, of Sing Sing—the former gentleman having studied this subject for several years in Europe, and is now devoting his entire time and energy to this business.

The distance at which osiers for baskets or wicker-work ought to be planted, are 18 inches between the rows, and 12 inches apart in the rows. This distance will not be too thick for at least five or six years; but after that period, every alternate plant should be stubbed up, which will leave those remaining at 2 feet apart in the rows.

Osier plantations (HAYNES says) must be hoed and cleaned every year. Nothing contributes more to the raising of a good crop of twigs, after due preparation of the soil, than keeping it and the plants clean. The stools should be carefully attended to annually, from the first year of producing a crop of Willow, in order to keep them clear of rotten stumps, and not allow them to be over-crowded at the bottom of the shoots. When these have become too numerous, they should be carefully thinned out, and also cut down, leaving only an eye or two at the bottom of each, until they are diminished to such a number as the stool is capable of supporting with vigor throughout the season. A basket maker finds more service from one shoot from 10 to 12 feet in length, than from four of 4 feet in length; and one of the first dimensions will not exhaust the stool or land so much as four of the others. The proper season for cleaning and thinning the stocks, is from the first of March to the middle of April.

The cleaning of the plants (HAYNES continues, and none ought to know better,) is done with a sharp knife; and if it has been regularly attended to from the establishment of the plantation, it is neither troublesome nor expensive. The shoots should not be cut till the second autumn after planting; for by being allowed to remain uncut for such a length of time, the stools become stronger and more able to produce a good crop, than if cut at an earlier period. Indeed, by the third autumn after planting, under this management the crop will

be of considerable value, and by the fourth year a full crop will be realized.

Much has been said of the profits of Willow plantations for basket making; on which, as in all similar cases, it may be observed, that extraordinary care, in the case of any crop whatever, will be attended with extraordinary produce; and that wherever there is extraordinary profit without extraordinary care, there must be extraordinary risk. This last is the case with Willow plantations, in common with those of the hop vine, rape for seed, and various other very profitable crops.

MITCHELL quaintly remarks, that where a quantity of land is planted with Basket Willow, a man will do well to make a net profit of £20 ($100) per acre. In the Transactions of the Society for the Encouragement of Arts, Vol. xxiii, for 1805, an account is given of a plantation of seven acres, made in the poorest part of the fen lands of ELY, (this land was entirely valueless for any other purpose,) from which the following extract is taken. The land was cast into beds 12 feet wide, and raised 18 inches higher than the general surface, by the earth taken out of the intervening drains. Fourteen thousand sets were planted per acre, and the following is an account of the result:

Forming the bed	$66,00
14,000 sets, $10 per 1,000	140,00
Planting at 15 cents per 1,000	10,50
Weeding twice, first season	4,00
Parish rates, and other taxes	5,50
	$220,00

First crop cut in September, dried and stacked for fodder, when dry weighed six tons two hundred and fifty-five pounds, valued at $105. Had these been pulled, they would have paid much better, as is shown by the result of the crop the following year, the cultivation, taxes and pulling costing $55, and yielding $190 worth of white or pulled Willow, leaving a net profit of about $135 per acre.

We beg to remind our readers of the hundred thousand acres of land in this, as well as in other States, yielding comparatively no interest at present, which might be profitably turned into Willow plantations—our own market supplied—the vast sums of money sent annually to Europe for Willow, be retained, and circulated among our own laborers. We have abundance of land capable of producing good crops of Willow, without incurring the expense of draining, soils that require only the plow and the harrow, and a little attention.

SWEET POTATO SQUASH.

FRIEND MOORE—If you will allow me to answer the inquiries of about two thousand readers of the RURAL through its pages, you will confer a favor on me, by lessening my labor; also on your patrons, for in no other way can I answer them in time to be of any service.

It is to the ladies and gentlemen who have ordered from me those squash seeds, that I particularly address myself. Many of you have had your patience sorely tried, and have no doubt come to the conclusion that Mr. BRIGGS, of Squash notoriety, has been playing a magnificent (?) game to swindle you out of a postage stamp. I have received a few missives of this import from impatient *friends*. To such individuals I would say, that I have exhausted my own stock of Sweet Potato Squash seed, and begged all I could bear of—traveled several miles to hunt them up—and employed considerable time and money in the purchase, and in manufacturing envelops for the seed, and have finally closed up. Have received numerous orders without the stamps enclosed, and even without being pre-paid, *all* of which I have filled and forwarded, except some eight or ten who omitted to give their address. Any who have not received their seeds, must attribute it to this omission, and I will yet send them if they will give me proper address.

Now to the inquiries. The Winter Squash requires the whole of our season, and if started in a hot-bed, would be still better. They require a rich, dry soil. Keep them clear of weeds by frequently stirring the ground.—Probably the greatest cause of failure in the culture of Squashes, is the black bug, which I will call the *stink bug*, and by this name you will know him. If attacked by this bug in large droves, your plant is gone, unless you destroy the enemy. The only effectual remedy against their depredations, that I have found, is to take them one by one and sever the head and horns from the body; though they may then walk about as if nothing had happened, they will certainly stop eating Squashes. I have slain hundreds about a single plant in this way; sometimes thirty to fifty in one engagement. Soon after their appearance, the eggs or nits are deposited on the under side of the leaf in clusters. These should also be destroyed. With a sharp pointed knife, that portion of the leaf may be removed without injury to the plant, but do not cut off the whole leaf. When the fruit has set, you may select some two to four fine healthy appearing Squashes, about the size of a goose egg, on each plant, and wound all others that they may die, or cut them away; also pinch off the end of the vines—and in course of the season a great number of lateral vines may be removed. Still, too much pruning would be injurious. The fruit is somewhat in the form of a large Long Island Water Melon; outside green, flesh thick, fine grained, orange color, and very sweet. Good for baking, and it is manufactured into pies the same way as pumpkins. Should be gathered soon after the first frosts in the fall. If observed in a frosty morning, the riper ones can be distinguished by their resisting its effects; those not so ripe will exhibit a darker green segment, just so far as the frost has affected them. The latter should be first used; the former, if not bruised in gathering, may be kept till Spring.

The Apple Squash requires the same care to keep clear of these bugs. It is supposed this said bug is fonder of the Squash than of any other plant; and from this hint many save their Melons and Cucumbers by planting Squashes between the hills, on purpose to feed the bugs—and when they have had their day, if any Squashes have withstood their ravages, they are removed from the ground before the Squash flowers, as the farina would have a bad effect upon the fruit of the other plants. The Apple Squash is only fit for table use when green; at this stage,—from one-half to full grown,—they are of a cream color, and tender. We cook them whole, like potatoes, and treat as any other summer Squash.

I am asked a great many other questions in all the departments of agriculture. Friends will please excuse me, and read the RURAL attentively. In its pages they will find, in the course of a season, answers to almost all correctable questions pertaining to the Farm and Garden.

Many seem to have the idea that I have a personal and pecuniary interest in the RURAL NEW-YORKER. Let me here say that I have the same interest in its success that every tiller of the soil has, or should have, *and no more*. It is *for our interest* that its able and indefatigable editor and proprietor is wearing away an already enfeebled constitution. It is *to our interest* that the RURAL should be well sustained, and if you and I can each secure one new subscriber for this or the next year, the list will be gratifying to those who are worthy, and the circulation and usefulness of the paper largely augmented.

Your Ob't Servant, I. W. BRIGGS.
West Macedon, N. Y., 1854.

PLATFORM SCALES.

MR. EDITOR:—As the RURAL is the farmer's friend, and protector against humbugs and frauds, it is our privilege to make our complaints known through its pages. The platform scales, which are balanced by a screw, are very convenient to weigh with, and are also very handy for a dishonest weigher to cheat by; one or two turns of the screw will vary the weight two or three pounds. The seller is surprised that his pork weighs so light; he looks at the scales, sees nothing wrong, the beam goes up quick, and the weigher assures him that the scales are correct, and it has to go so, perhaps thirty or forty pounds too little on the whole load.

On the 16th of Feb., 1854, I dressed some hogs; at night it froze severely, and next morning, Feb. 17th, the pork was as hard as Jack Frost could make it. I weighed it accurately with a balance beam, and entered the weight of each hog on paper, so as to make no mistake, and sent the pork direct to market. The purchaser weighed it on his platform scales, and the 2,300 pounds fell short forty pounds of my weight; he was told that the pork was correctly weighed, and I gave him their weight. He apologized by saying that the scales must have been out of balance, and took the pork at my weight.

Now, Mr. EDITOR, if I had not known the correct weight of my pork, I would have lost that forty pounds; and if the honest weigher has gained forty pounds from every 2,300 pounds that he has bought, it will be some profit, if he has done much business.

But what can farmers do? They can procure balance beams, and weigh accurately all that they buy or sell, and thus they can find out who are honest dealers; and when they find an *honest man*, I would advise them by all means to stick by him, and give him all their business, and not jump at every stranger who offers them a cent or two more. The country swarms with speculators, who hound into the market whenever there is a prospect of making a sixpence. They are a curse to the producer, and a pest to the regular business man.

Monroe, 1854. A FARMER.

SANFORD HOWARD, Esq., editor of the *Boston Cultivator*, has, at the request of many friends, consented to accept commissions from gentlemen wishing to purchase improved stock. Mr. HOWARD is known as an excellent judge of stock. He is well acquainted with all the best breeds and breeders, and is thoroughly posted on all importations, past and present.—From personal acquaintance, we have no hesitation in recommending Mr. HOWARD to any of our friends who desire to purchase improved stock of any kind.

PLASTER ON WHEAT.

MR. EDITOR:—In the RURAL of Feb. 18th, in an article on "sulphate of lime as a fertilizer," you say, "on wheat, barley, oats and timothy, we have usually observed little benefit derived from plaster, but should be glad to hear from various parts of the country, of any experiments that have been made on these crops." Though in this portion of Southwestern Virginia, plaster has heretofore cost from fifteen to twenty dollars per ton, I have used it freely and with much profit, for the last three years, on my wheat. I sow about the last of February, or first of March, a half bushel to the acre, mixed with an equal quantity of ashes. In 1852, a strip through a thirty acre field of wheat, and a block of a few acres at one end, were left without plaster. The strip not plastered being on the slope of a hill, in sight of the road, was in a few weeks observed by persons passing to be inferior to that on each side of it. It chanced that a late frost, that season, injured a good deal of wheat in this vicinity. The unplastered portions of my field were seriously damaged by the frost; while the plastered portions, though decidedly earlier, were not touched. Independent of the frost, I think the difference in favor of plastering would have been one-third. As it was, the strip was hardly worth harvesting; that at the end of the field, though the best land, was at least one-third below its average product.

My experiments last season were in the comparative value of Nova Scotia and Western Virginia plaster. I saw no difference; both acted well, my wheat being better than the wheat of the neighborhood generally.—Until I commenced its use, my wheat was inferior; since I have been using it, my millers pronounce it a very fine article.

Upon the supposition that plaster acts by drawing moisture from the air, and supplying it to plants, the fact that my plastered wheat was not bitten may be accounted for, as the increase of dew may have prevented the plants from freezing. This will also account for the fact, evidenced in this and other experiments, viz., that plants not plastered in the midst of those that are, do not thrive so well as if no such plastered plants were near. They are robbed by the plaster's action, of the natural supply of moisture.

If plaster is applied late, it may protract the growth of wheat and expose it to rust; but I should think it might be put on, in your climate, as late as April, without danger.

I have made several other experiments in the use of plaster, but of these hereafter.

One word of the RURAL NEW-YORKER:—I have been reading it for the last three years and am not only pleased but delighted with it. Every Virginia farmer west of the Blue Ridge ought to subscribe for it. It is much better adapted to the Agricultural interest of all that portion of the State than any southern paper; such, at least, is my honest and, as I conceive, impartial judgment. C. SHELBURN.
Montgomery Co., Va., March 2d, 1854.

MARL.

MESSRS. EDITORS:—In the RURAL of Feb. 18th, HORACE GARDNER makes inquiries in regard to marl deposited on his farm. I wish to state some facts in regard to its uses and value, for it is found deposited on a number of farms, in this and adjoining counties. It is considered a fortune to a farmer, who is lucky enough to possess it. It is worth $0,75 per ton before it is moved. Masons think it makes lime which is superior to common stone lime. The manner of preparing it is as follows:—It is first moulded into brick, dried and burnt in kilns, and is then ready for use. It requires only about 37 hours to burn it, and the lime is entirely free from grit and stones. As a fertilizer, it has no equal here, being used before as well as after it is burned.

Furnace-men think it is indispensable in the melting of iron ore. When mixed in certain proportions, it has a purifying and softening effect upon the iron, and vast quantities are used at Union City, 5 miles below this place.

I would advise Mr. GARDNER to be careful how he disposes of his marl, for I think it will be a fortune to him. If he wishes any information in regard to the construction of kilns, the manner of burning, &c. I can give it.

N. J. STRONG.
Burlington, Calhoun Co., Mich. March 8th, 1854.

WHITE BEANS.—We plowed one acre, last spring, for beans, which was slightly manured. The soil is a sandy loam, with a mixture of blue clay. The piece was plowed in May, and planted in June, with the small white bean.—We hoed them but once. They yielded thirty-five bushels to the acre, and sold for ten and sixpence per bushel. I think, on the whole, they are a paying crop.—D. N. GLASS, *Pavilion, N. Y., March*, 1854.

GREAT WHEAT CROP.—We are informed that Mr. HORACE BAILEY, of Sweden, Monroe Co., N. Y., raised, last year, on three acres of land, 171 bushels of wheat, or *fifty-seven bushels per acre*.

Agricultural Miscellany.

THE HAY CROP IN MASSACHUSETTS.

THE following extracts from the Report of the Mass. Board of Agriculture in reference to the hay crop, will be read with interest. They do not afford any evidence of that gradual diminution of crops, from the exhaustion of potash and phosphates, upon which some of our popular writers are continually harping:

An intelligent and practical farmer of Hampshire county, speaking of this subject, says:—"For ten or fifteen years past, great improvements have been made in English mowing lands. Such as were considered worthless then, have been so improved as to produce the first quality of English grass, which will yield from two to three tons of hay per acre. I should think that quantity and quality had increased, within fifteen years, at least, one-third; some farmers think one-half. Many tons of hay are sold annually at the neighboring manufacturing villages."

Another from Berkshire county writes:—"The average yield of English hay, is one ton and a quarter per acre. Probably 25 per cent. increase from improved cultivation, within the last ten or fifteen years. Several swamps have been converted into excellent meadows."

Another in Franklin county says:—"The average yield is one ton and a half per acre.—Some of the best mowing land produces four tons to the acre. The increase is about one-third."

Another practical farmer in Hampshire county says:—"Considerable attention is paid to reclaiming swamps for mowing, which has greatly increased the amount of hay upon some farms. Within sight of where I am now sitting, there is a tract of land, which, six years ago, bore nothing but brakes and whortleberries, and which, by draining and plowing, and the addition of but little manure, now produces two loads of good hay to the acre, and has paid its way during the process of reclaiming, which are amount always expect. There are hundreds of acres in this State which would do the same."

In Worcester county:—"Average about one ton and a quarter. A gradual increase per acre from year to year, for the last ten or fifteen years. From 1843 to 1853, probably one-eighth, or 12½ per cent. increase."

"Swamp lands have been greatly improved, within the last five years. They are regarded as the most valuable for grass, and are kept in a productive state, with the least expense.—The mode of improving them is to thoroughly drain, then plow, and seed down with a top-dressing of rumpost, in which is a great preponderance of loam, sand, or even gravel.—Then top-dress once in three or four years.—Herds-grass, red-top, and clover are the seeds used."

In Norfolk county, within the last ten or fifteen years, much time and attention has been given to draining and improving meadow and waste lands, much of which was almost worthless, but now produces a very valuable crop, and probably the increase is one-half."

REPORT OF THE MASS. BOARD OF AGRICULTURE.—We are indebted to the Secretary, C. L. FLINT, Esq., for the First Annual Report of the Massachusetts Board of Agriculture. It is a neat volume of 186 pages, and contains much valuable information. The Secretary's Report is an able paper. Remarks on the climate of New England, by J. C. GRAY, is a highly interesting article. "One of the striking features of our climate," he remarks, "is the long spells of dry weather." To alleviate drouth, as much as possible, he recommends irrigation, deep and subsoil plowing, mulching, and frequent stirring of the surface soil. These are all good, but we are inclined to think that *thorough underdraining* is the great primary step in all efforts to modify the effects of drouth.

MEASUREMENT OF HAY IN BULK.—A few weeks since we inadvertently admitted into our columns a short extract from an exchange, stating that from 10 to 12 cubic yards of hay would weigh a ton. We have reason to believe that this estimate is much too low, and that 400 cubic feet is nearer the average quantity required to weigh a ton.

A PROLIFIC POTATO.—The Tallahasse (Fla.) *Sentinel* tells a large story of a sweet potato. DANIEL RAMSO planted a large sweet potato of the variety known as "Negro killers," which he cut into seventeen pieces; from these pieces he obtained vines enough to plant one and a half acres, which yielded 303½ bushels, weighing 15,175 pounds.

SUFFOLK HOGS.—In a recent conversation with Mr. MELVIN POWERS, of West Farmington, Ontario Co., N. Y., he informed us that he killed ten Suffolk hogs, all one litter, which weighed alive 5,272 lbs, or 527 lbs. each, and when dressed, 24 hours after killing, 4,652 lbs, or 465 lbs. each.

LARGE CALF.—A correspondent of the *Mass. Ploughman* killed a calf, when six weeks and two days old, which weighed, when dressed, 169 lbs. The veal he sold for nine cents per lb., and the hide and head for $2,04 making in all $16,98.

WINTER RADISH FOR STOCK.—A writer in the *Mark Lane Express* recommends the winter radish for cultivation in England, instead of turnips, stating that it is more nutritious than Swedes, (ruta bagas,) and can be grown of equal weight on the same soil.

Inquiries and Answers.

WINTER BARLEY FOR SPRING PASTURE.—I have thought, and do still think as a general thing, that farmers would be better employed in trying experiments upon doubtful matters of tillage, rotation of crops, &c., than they would be in making questions of scientific men, relative thereto. In fact I sometimes think that the agricultural doctors are like doctors of another class, often mistaking *symptoms* and then making wrong *prescriptions*. But at present I will set aside doubts, and in good faith ask a question. The answer may guide me in conducting an experiment, or perhaps deter me from making one.

Some farmers in this State are in the practice of sowing rye in the fall for pasture, for sheep, during winter and spring. This, to my mind, is too exhausting to land to be profitable. Would not winter barley sowed early in the fall, to be plowed under in spring, answer the same purpose for pasture, and be less exhausting to the land? I have a patch of winter barley sown in September last, which obtained a luxuriant growth during the fall, and has remained green until within a few days, or until the last severe weather.—LINUS COSE. *Troy, Mich., Feb*, 1854.

We have not now space to answer this question fully, giving reasons for our belief, &c., but will just say, that we fully agree with you, that rye is too exhaustive to the soil to make its cultivation on a wheat farm, as food for stock, or for plowing under as a manure, profitable. English farmers who have cultivated rye as an early spring food for ewes and lambs, for many years, are generally fully satisfied, that though it is valuable food, it exhausts the soil so much that they had better let the land lie bare all winter, than to grow rye. It is not positively known *why* rye is so exhaustive, or why it should not be as beneficial to the soil as a crop of turnips or clover. But of the *fact* that it is an exhaustive crop there is no doubt.

Extensive experiments have proved that wheat needs for its growth a much larger supply of nitrogen in the soil than it contains when grown; that in other words, for some purpose not fully known, wheat destroys ammonia, and therefore requires a large quantity. Now it is highly probable that the same law extends to rye, Indian corn, barley, oats, sugar cane, timothy and other *cereals*; and if such is the case, none of them should ever be grown for plowing under as a manure, or simply to enrich the soil by feeding them to stock. At present, however, these ideas are somewhat hypothetical, though from many facts observed in practical agriculture, we think they will some day be shown by direct experiment to be not far from the truth. If they are true, winter barley would be as exhaustive to the soil as rye, or wheat itself. But do not let these remarks deter you from making the experiment. It is by practical field experiments that we must look for a solution of this and other mysteries in the cultivation of the soil.

TOBACCO PLANTS.—Would you be so kind as to inform me whether it would do to raise tobacco plants in a hot-bed, or not; for often in the usual way of sowing the seed, plants are got so late, that they are often injured in the fall by frost, before it is ripe, as far north as we are?—It seems to me that a common hot-bed, for forwarding plants, would be a good thing.—H. A. AUGATE, *East Bethany, N. Y.*, 1854.

Tobacco seeds are frequently germinated in hot-beds at the north, and the plants pricked out when quite young, into cold frames.—There is some danger of getting the plants too weakly—too much drawn out,—but transplanting them once or twice before the final planting in rows, corrects this, and gives strong healthy plants. Will some of our experienced readers give their views?

SCIONS.—Will you or some of your correspondents inform me through the RURAL, whether scions cut from young trees are as good as those from bearing trees, or will they bear as soon?—If potash is good for grape vines?—what quantity to the vine?—J. W. T., *Fly Creek, N. Y.*

FARMERS, NOTE THIS.—In a cloudy morning, it is a matter of importance to the farmer to know whether it will be sunshine or showery in the afternoon. If the ants have cleared their hole nicely, and piled the dirt up high, it seldom fails to bring a good day for the farmer, or even if it should be cloudy till ten or eleven o'clock in the forenoon. Spider-webs will be very numerous about the tops of the grass and grain some cloudy mornings, and 50 years' observation has shown the writer of this that these little weather-guessers seldom fail in their predictions of a fair day.—*South. Cult.*

BUSHEL AND ACRE.—What difference is there in the United States bushel and the English—also in the acres of the two countries? *Ans.* The standard bushel of the United States is the same as the "Winchester bushel," which was the standard in England from the time of Henry VII. to 1826, and contains 2,150.4 cubic inches. The present standard in England is the "Imperial bushel," which contains 2,218,-192 cubic inches, being within a fraction of 68 cubic inches larger than that of the United States. The *acre* is the same in both countries.

A LARGE PIG.—Samuel Alden, of Lyme, N. H., killed a half-breed Suffolk pig, that at eight months and twenty-four days old, weighed, after being dressed, and exclusive of rough lard, four hundred and one pounds!

Orchard and Garden.

"SHORTENING-IN" PEACH TREES.

All writers on the subject agree that "the Peach of all other trees, is one that from its mode of growth and bearing, requires constant pruning to maintain it in a shapely, thrifty and productive state." This is explained by the author of the "Fruit Garden" as follows:—"The sap of the peach tree tends powerfully to the extremities of the shoots, more so than in any other fruit tree. The buds that do not push and form shoots the first season after their formation, are lost; they cannot, as in most other trees, be excited into growth; and hence it is that the lower parts become so rapidly denuded of young wood, and that trees left to themselves for six or seven years are in a measure worn out or worthless.

It is a fact that must always be kept in view by cultivators of the peach, that "the fruit is borne only on wood of the preceding year; and consequently one of the great objects of pruning is to keep all parts of the tree furnished with a regular and constant succession of annual bearing shoots."

The *shortening-in* mode of pruning has been found most successful in accomplishing this. It consists in yearly cutting back the extremities, so as to counteract the spread of the limbs, and induce more frequent branches. In a young tree, for instance, the growth of a year consists of shoots all over the top or outside of the tree, from a foot to two feet long. In a bearing tree there will be one or two wood buds at the base, and two or three more near the top and terminating the shoot. The remainder—a dozen or more in number—will be fruit buds, and if untouched, will probably bear, destroying the wood buds at the base and pushing out at the extremity, new shoots, but weak in consequence of the quantity of fruit below them. At the end of the season, the shoot of last year will show a long, vacant space, without a young shoot or living bud, and in this way the centre of the tree soon contains only bare limbs, and the vigor of the tree is wasted by over production.

When the shoots are shortened one-half, or thereabouts, the sap is retained in their lower parts, one half the fruit buds are removed, and those that remain produce larger and better fruit; the lower wood buds produce vigorous shoots to bear next year, taking the place of those which bore already borne. In this way, regular, uniform crops of large and fine fruit are produced, and a succession of young shoots kept up. "If this pruning," says THOMAS, "is regularly and annually performed, the head of the tree will be preserved in an erect and compact shape, and in a healthy and vigorous condition; and it will rarely become necessary to shorten and thin out the limbs by cutting back the larger side branches."

This mode of pruning is most expeditiously and neatly performed by a pair of light hand-pruning shears, cutting every shoot separately and discriminately. Indeed this must needs be so attended to, for it will not answer to clip the trees as one would a hedge—the circumstances of growth, situation and number of buds must be considered, to perform it properly. If the top is sheared evenly all over, it tends to produce a thick, impenetrable mass of shoots on the outside, shutting out the light from the centre, and increasing instead of diminishing the evil.

Something may be done for large, neglected trees, by an intelligent operator. They will have a head composed of long, branchless limbs, and consequently an open centre. The fruit will be produced on the ends of the limbs, and the tree become tall and enfeebled from over bearing and a constant succession of terminal shoots. The proper shortening-in is performed by cutting back the principal limbs three or four feet—taking care to do so just above a considerable side branch, which leaves no stump, and causes the wound soon to heal over. Such pruning will, in a year or two, convert the unshapely and unproductive tree into a compact and vigorous one, improving the fruit exceedingly. The tree will throw out a new head of healthy bearing wood, and trees "given up by the doctors" as superannuated and worn out, have thus regained their youth again, — good at least for half a dozen years' fresh service. Some cultivators operate on only one side of a tree in a year. This does not prevent the bearing of the other side, and next year the side first cut will be ready for fruiting. Early in spring, is the proper time for this, as well as most other pruning.—S.

House Plants which have done blooming, should be removed to a cellar or other cool place. Plants which have been kept in cellars, should now be watered more freely than in the winter, and have more air admitted during warm days.

DUHAMEL asserts that fruit grown on standard trees, is far superior, in all cases, to the same variety of fruit raised on espaliers or walls, or in any other way.

PÆONY ASTER. PORTULACCA. BALSAM.

CULTIVATION OF ANNUALS.

One of the strongest evidences of the increase of true refinement amongst the rural population, is the increased attention paid to the cultivation of flowers. We rejoice to note this, not merely because it indicates a higher intellectuality, an elevated and refined feeling, and a love for the serene beauty of nature,—but because, while it refines, soothes, and elevates the mind and the affections, it strengthens the body, gives color to the cheek and lustre to the eye, and infuses new life and vigor through the whole frame. English ladies set us a good example in this respect. Nothing is more common than to see ladies of the highest rank, education and fortune, with sun-bonnet and gloves, busily engaged with spade, hoe, rake, wheel-barrow and watering can, in cultivating their flower-beds. Such exercise affords the highest pleasure and the most delightful recreation, and gives new zest to intellectual pursuits or domestic labors.

Nor is this love of flowers confined to the rich and the educated. The poor, illiterate peasant wife must have her flower garden, which though it contains fewer new and rare varieties than the Squire's lady's parterre, is, nevertheless, a source of great pleasure, whiling away many hours which would otherwise be spent in vain broodings over poverty and humbleness of birth. It is principally owing to this love of flowers, this floral adornment encircling the cot of the laboring poor, which makes the hardy, stalwart, though ill-paid British peasant so loth to leave the old hamlet of his fathers, even for the higher remuneration and brighter physical and intellectual prospects of the kindly landed New World.—Many of our fair trans-Atlantic friends, when bidding a long adieu to the scenes of their youth, have sighed with old mother EVE when quitting Paradise,

> * * * * "O flowers!
> That never will in other climate grow,
> My early visitation, and my last
> At even, which I bred up with tender hand
> From the first opening bud, and gave you names,
> Who now shall rear you to the sun, or rank
> Your tribes and water from the ambrosial fount?"

Were more attention paid to beautifying country residences, by cultivating flowers and flowering shrubs, there would be less desire among farmers' sons and daughters for the crowded, exciting, wearying life of the city.

Now is the time to turn a little attention to this subject. Of course every intelligent farmer has a vegetable garden; he should also have a flower garden, for the especial benefit of his wife and daughters. Much may be done in a single season by sowing Annuals. To encourage this as much as possible, we intend giving engravings and descriptions of a few of the choicest and best at present known.

"The *Balsam*, or *Lady's Slipper*," says the *Horticulturist*, "is a native of the East Indies, China and Japan. It has succulent stems, and beautiful, showy flowers. The plant should branch down to the ground, the flowers completely encircling the stem on all sides." Frequent transplanting is the best means to obtain these bushy plants and flowers in perfection. To obtain fine Balsams, the seed should be sown about the first of April, in a hot-bed of moderate heat, or in a cold frame. Or, if these are not at command, sow them in a warm border as soon as the soil becomes dry and in good condition to work. From this border they should be transplanted, allowing each plant at least 18 inches square.

China Asters were first sent from China to Paris in 1736. They were single, and of two colors only, red and white. The Germans have taken great pains to improve these flowers, and the better sorts are called German Asters. Their cultivation is similar to the Balsam.

The *Portulacca* is a succulent, spreading plant, that loves the hottest and dryest weather. There are four varieties—the scarlet, crimson, yellow and white. The *Horticulturist* says, "We know of few more beautiful objects in the floral world than a bed of the Portulacca." It is somewhat difficult to save the seed; but when you once get a bed of them in a garden, you will generally have plants enough from self-seeding. Sow as early as the soil will admit.

The points to be attended to in sowing Annuals, are,—the preparation of the soil, which should be dry and rich, and be *deeply and thoroughly pulverized*. The seeds should not be covered too deeply. Many err on this point. An eighth of an inch is quite deep enough. The seeds are generally small, and there is danger of sowing them much too thick, unless you intend to transplant, which, in fact, with most Annuals we would recommend you to do.

CUTTING SCIONS.

After a tree becomes dormant and the leaf falls in October, scions may be cut at any time before the buds again start, which here for seeded fruits is about the last of March or in April. In fact there is no difference in time, so far as relates to the value of the scions—the only trouble is to keep them. This may be done for six months or six years, and have them perfect. Scions cut in the fall may be buried in any dry soil in the orchard or garden until wanted for use. When one is collecting them during the winter, the best way is to select some place where snow will not be affected by thaw, and bury them in snow as received, taking them out where the snow begins to melt in the spring, and transferring them to the ice-house or cellar.

When one cuts scions on his own premises for use or distribution, the best time here is generally the last of March or early in April, as they are then as dormant as in the winter, and take less time and trouble to keep them.

Keeping Scions.—The only secret is to keep them *cool* and *damp;* not *wet*. The best course I have ever tried is to lay them on a brick floor in a *cool* cellar, and cover with thick, damp sacking—if the sacking becomes dry, sprinkle it. In this manner they are kept in perfect order from March until June, and easily taken as wanted. Many plans are recommended, some troublesome, and others unsafe. I once had more than 5,000 packed in damp pine saw-dust in a warm cellar, and though apparently in perfect order, they became worthless.

Transportation of Scions.—When sent in such quantities as to send by express, the winter is the best time—but if sent in the spring, they can easily be sent 1,000 miles or more by being packed in damp moss, which is well understood by those who sell scions, so that any one wanting can order with the assurance of receiving in perfect condition. Amateurs who wish *sorts*, can, at the present low postage, get them by mail. Get a piece of oiled silk, which you can do at any dry-goods store—enclose it with two or three stamps to your correspondent, with directions to wrap the scions in the silk; in this way they may be received from any part of the United States.

Dry Scions.—Scions that have become dry, (not injured by water,) may be buried in ordinary garden soil one or two weeks, and become perfect—which if inserted without may be worthless. This is also the true mode of treating young trees from dry transportation.—Bury the *whole tree* one or two weeks before planting, and a healthy, vigorous growth is obtained, instead of a sickly and slow one.—C. GOODRICH, *in N. E. Farmer.*

Planting Apple Orchards.—In answer to an inquiry respecting the proper distance apart to set out apple-trees, the *Horticulturist* says:

"For a permanent arrangement, forty feet will not be too much in rich, deep soil, where the apple-tree is likely to attain its greatest dimensions. In light soils, thirty feet will be sufficient. An economical arrangement is to place the trees twenty feet apart, and after they have borne a number of years, and begin to encroach upon each other, remove half of them. In this way you obtain the greatest advantage from the ground occupied and the labor expended upon it. The preparation of the ground costs as much for fifty trees as for a hundred, and the first cost of the tree is a small consideration."

Pruning Apple Trees.—In the climate of all northern New York, from the 15th of May to the 10th of June, is the season for all general pruning. The sap at this season has ceased its rapid flow, so as to prevent bleeding; it is the season of growth, so that wounds soon heal, and the surface where large branches are cut soon dries, so that no disease is caused by it. If large branches are cut off in the winter, a poisonous sap runs out, which by passing down the bark, blackens and deadens it. This every careful observer will discover. By pruning in the winter north of latitude forty-three degrees, disease is pretty sure to follow; but in a warmer climate the same results do not follow this practice.—ELIJAH CROSS, *in Country Gent.*

Domestic Economy.

To Remove Stains of any kind, from your Hands.—Take a small piece of pumice-stone, the size to suit your convenience, grind it so as to make it smooth on all sides, and rub the hands wherever they are stained, just as you would use a cake of soap, in water. Rub hard, and it will remove all stains in a few moments. Where stains are connected with grease, use soap with the stone. Soft water is the best at all times. Keep this stone in your wash-room, where it will be the most convenient: it will last a whole family a age. Try it, ladies.—H., *LeRoy, March*, 1854.

Dr. Neglen, a French physician, says, that the simple elevation of the arm will stop bleeding at the nose. He explains the fact physically, and declares it to be a positive remedy. Try it.

Kentucky Cake.—One tea-cup of butter, two of sugar, four of flour, and one of milk, five eggs, two tea-spoonfuls of cream of tartar, and one of soda.

Election Cake.—Four pounds of flour, two of sugar, two butter, and four eggs. Spice and fruit to your liking.

To Bake Meat.—In baking meat, see that the oven is of right heat, so as to bake quickly without scorching. Rub salt, and if desired, sage or other herbs upon the meat, and put it in the dripping pan, with water in the bottom, so as to absorb the juices of the meat which would otherwise be dried and burned upon the dish. Beef should be cooked "rare," other meats thoroughly. When the meat is taken up for the table, set the dripping pan on the fire, remove the extra fat, add more water and make gravy as for fried meat.

Cure for Corns.—A correspondent writes that a pint of alcohol poured in his boots caused all his corns and calluses to peel off, leaving his skin smooth and soft. If this be so, alcohol in the boots must have an effect contrary to the usual one, for we have known many individuals to get tremendously *corned* on much less than a pint of alcohol, largely diluted with Croton.

Ants.—The best method we know of to rid trees of these insects is to *trap* them with some bottles of some sweet liquid hung among the branches. In the ground, turpentine may be poured on their nests.

Dysentery.—The best remedy is parched rice—burned like coffee. After it is well browned, cook it by boiling in the usual way, and let the patient eat of it.

Mechanic Arts, &c.

Polishing Plows.—It is sometimes desirable to remove the rust from mould boards, &c. This may be easily done by moistening the surface with a little dilute muriatic acid. Sulphuric acid is frequently recommended for this purpose, but it not only dissolves the rust, (oxide of iron) but also the iron, and should not, therefore, be employed, unless the plow is run through the soil immediately after its application. The same remarks apply, not only to plows, but to all iron implements, tools, &c.

HOW TO MEND A CHAIN-PUMP.

Chain pumps are very much in use at present. They are very good pumps, especially in wells that are well protected much from the frost, as they seldom get frozen so as to prevent their operating, unless the water in the well itself freezes. Sometimes, however, the chain breaks or parts, and then it has been thought necessary to take up the whole pump in order to mend and replace it. A friend told us the other day, a method which he has adopted in such cases with perfect success.—"The chain with its plugs, you know, is an endless one, going over a pulley at the top, down outside the pump into the water in the well; then over a pulley under the water at the lower end of the pump tube, thence up the tube. Now if the chain parts, it is difficult getting one end over the lower pulley and up to the other side unless you take up the pump to do it.

Take a strong string of sufficient length to reach from the bottom of the lower pulley to the surface of the water in the well:—tie a cork to one end of it and tie the other end to the chain. Then winding the string round the cork, put it into the tube, and let the chain follow it down. As soon as it gets down under the pulley, the cork will rise to the top of the water in the well, from which it may be hooked up. The chain will be hauled up with the string, and the two ends may then be fastened together in the usual way.—*Maine Farmer.*

Important if True.—A Paris correspondent of the Times mentions the following remarkable discovery:

A very remarkable discovery was announced to the Academy of Sciences by M. Dumas in its last sitting. He stated that M. Saint-Clair Deville had succeeded in obtaining from clay a metal as white and brilliant as silver, as malleable as gold, and as light as glass. It is fusible at a moderate temperature. Air and damp do not affect this metal, which is called aluminium; it retains its brilliancy, and is not affected by nitric or sulphuric acid, either strong or diluted, if the temperature be not raised. It is only dissolved by very hot chlorhydric acid. Several specimens of this metal were exhibited to the Academy, and on the proposition of Baron Thenard, it was voted unanimously that a sufficient sum should be placed at the disposal of M. Saint-Clair Deville to enable him to make experiments on a large scale.

Immense Steam-ship.—A new and powerful steam-ship called the Himalaya has been built in England for the Peninsular and Oriental Steam Navigation Company. From the Thames to Southampton, her average progress during thirteen hours that she was under way, notwithstanding unfavorable weather during part of the time, was 13½ knots per hour.

The Himalaya is said to be the largest steam-ship in the world. She is 3,550 tons register, and equal to over 4,000 tons burden.—She is 372 feet 9 inches in length, exceeding the length of the Boston clipper, Great Republic, lately burned at New York, by 47 feet, but not of equal tonnage. The Himalaya is a screw steamer built of iron, and has engines of 800 horse power. She has accommodation for 200 first and second class passengers—stowage for 1000 tons of measurement goods in freight, and can take 1200 tons of coal.—*Scientific American.*

Hardening Cast Steel for Cutting.—Kieser, of Issy, in Switzerland, prepares admirably hardened razors, penknives, &c., from English cast-steel, by plunging the blades, at a dark cherry-red, into a bath made of 14 parts, by measure, of yellow resin in fine powder, 2 parts fish oil, and 1 part hot melted tallow; they are then allowed to cool perfectly, and without wiping them, are re-heated to a low red heat, and immersed in water in the usual way of tempering such articles. The edge of the blade treated in this manner is said to be very fine, and the hardening more uniformly than by any other process.—*London Artisan.*

Buttons.—We have often admired a set of buttons upon the overcoat of a friend of ours, and untire them for the benefit of domestic manufactures. These buttons are made of sections of the shells of black walnuts, *(juglans nigra,)* sawed off and polished, and furnished with a stout brass wire eye. The buttons may be cut the size of a cent or larger, taking off one fourth of the shell. Their brown, rough, convex surfaces, make a really handsome button, and as strong as horn pearl, or metal.—The manufacture of such buttons is well worthy of attention.—*Tribune.*

Half Bricks.—We believe that a benefit would be conferred upon masons, if brick-makers would mould half sized as well as whole bricks. Half bricks are often wanted for beginning and finishing rows, so as to have every alternate row break joint. To obtain these, the masons have to break whole or trim broken bricks. This occupies considerable time which would all be saved by half mould bricks, of which a certain number might be made for every thousand of whole bricks of the common kind.—*Sci. Am.*

Educational.

ADDRESS TO SCHOOL BOYS.

CHAPTER I.

The purpose of these remarks is to call the attention of you, boys, to the subject of your position as students, preparatory to entering on the duties of life; of assuming the places of men, and the rights and responsibilities, which, to a greater or less extent, devolve upon all mankind—to add one word of encouragement—one word of exhortation, which will tend to influence you to make the most of this important period of your lives, and to cause each moment of your school days to come back to you laden with a harvest of intelligence and wisdom, more valuable than the storied treasures of the East.

The purpose of this paper is to tell you that on you, in connection with those of your own age throughout these States, the preservation or the destruction of everything valuable in our institutions for the coming generation must depend. You, boys, in a shorter period of time than you think of now, must assume the position of men; must, whether you would or not, stand in the places of your fathers; must, some higher and some lower, according to the talents God has given you, and the use you make of those talents, occupy the positions of those who fill the legislative halls; who minister in the pulpit, and the courts of justice; who plow and sow; who wield the hammer of the smith, the axe of the carpenter, and the trowel of the mason; who guide the horses of the stage coach, the fiery locomotive on its iron track, and the mighty steam-ship over the ocean wave; who print the newspapers, write the books, and trace the courses of the stars. The thousands of occupations in which you see men engaged, will soon be left for you; and it will depend upon yourselves whether you occupy a position high or low. The better education you acquire, the more you cultivate your minds, if you remain steadfast to principles of truth and virtue, the brighter will be your destiny. It is superiority of mind that gives the advantage; strength of body will not do it. A man with a giant mind, but with the bodily weakness of a child, will rule a nation, while a man with the strength of a Sampson, but ignorant and unlearned, will only be fit to handle a pickaxe on a railroad, or a wood-saw at the corner of the streets.—Last fall the writer saw, upon a new line of railroad, a beardless youth, the leader of a party of stalwart men. The instrument he wielded was a brazen tube upon a tripod, while the tools of the others were axes and spades.—The bodily exertions of any one of the men to do their portion of the labor for a day was more than that of the leader for a week, while their strength and ages were double his; and yet he was receiving a thousand dollars a year, while they were paid only a dollar a day.—The youth's powers were mental—theirs physical. His were the attributes of the Deity—theirs of the brute.

Mere opportunities of study will not suffice unless those opportunities are improved.—Books and schools, lectures and apparatus, College degrees and University honors, will never make a learned man. This is the reason why so many who have the best chances of education, who have been kept at books, and passed through select schools, academies and colleges, come out, at last, amongst the greatest blockheads of the land. They never studied in their lives, and have spent the best years of their existence in *unnerving* instead of *nerving* themselves for the battle of life; and when they finally graduate and leave the institution where they have been no honor, either to it or to themselves, instead of receiving a diploma with the title of A. B., they deserve only to be furnished with a sole leather medal, inscribed with the picture of a donkey. The writer has known young men in his own class, who, after spending four years in college, were unfit to keep the most ordinary district school; who in the second year, when the class were in Trigonometry, and the higher mathematics, could not reduce a vulgar fraction to its lowest term. Such men are drones, and worse than drones, in the human hive; and if they are not stung to death by the workers, they at least—

> "Doubly dying shall go down—
> To the vile dust from whence they sprung,
> Unwept, unhonored, and unsung."

Ventilating School Rooms.—One of the most important considerations in the erection of school houses, is a thorough ventilation of the rooms. The rapid conversion of oxygen, the life sustaining principle of the atmosphere, into carbonic acid gas, by means of respiration, is a fact well known to the student of physical science. This latter gas is not only a non-supporter of life and combustion, but it is also a deadly poison when taken into the lungs in any considerable quantity. The deadly gas generated from burning charcoal, and also the fire damp in wells, is identical with that produced by animal respiration, and its inhalation by pupils in crowded rooms is pregnant of disease.

[Written for Moore's Rural New-Yorker.]

THE TEACHER.

The time has come in which the teacher is considered as being something more than a *mere machine*; a thing to *keep* school. He is now looked upon, and regarded as a person whose services are indispensible; and to his care immortal minds are committed to be guided by him in the paths of rectitude and virtue; and it lies in the *teacher's* power, in a great measure, to endow their minds with high and noble principles, and fit them to occupy stations of *honor, usefulness*, and *respect*, when they may be called to take their places as men and women upon the active stage of life.

How necessary it is, therefore, that the teacher should possess those qualities requisite, to make him useful in the sphere in which he may be called to move! And first of all, he should sustain a good *moral character*, be firm and just in all his dealings with his fellow men, and live in all respects so as to set before the world an example worthy of imitation. He is regarded by many as being a pattern for them to follow, and whatever he may be seen to do, or even *countenance*, is often thought, (even if it is wrong,) to be of no harm. If the teacher is so unfortunate as to become a slave to the use of the "filthy weed," in any form, it would be *nothing strange* to see the little "would-be-gentleman" with his cigar, puffing through the streets, or an enormous quid in one corner of his mouth, depositing occasionally a quantity of the *narcotic* on the side-walk, or, what is much worse, on his mother's carpet in the parlor, and if corrected by her, will say, "my teacher does so, and what he does I should not think would be wrong for me to do."

In no place can the teacher exert a greater influence than in the school room, surrounded as he is by a circle of little ones whose minds are as plastic as the clay in the hands of the potter; who are (as it were) all the time drinking in his very words and actions. His love for children should be strong and fervent.—He should not be content with merely a limited knowledge of his own state or country, but always be drinking from that fountain of truth and purity, whose springs are always *full* and *free* to all who will but seek to quench their thirst, from its living streams. He should avail himself of every opportunity to attend Institutes, Lectures, &c., and also to read the most distinguished standard works on teaching; such as Page's Theory and Practice of Teaching, Northend's Teacher and Parent, School and Schoolmaster, and a host of others. Let every teacher set his standard high, and never be content to remain where he is, but ever be pressing onward and upward, looking to Christ for an example, who when upon earth went about doing good. Lelan.

Norton, Ct., Feb. 18th, 1854.

STATISTICS OF EDUCATION.

The long-expected census of the United States, taken nearly three years ago, is now completed. The department of education exhibits, among others, the following results:

In the whole United States and the territories there are 234 colleges, with 1,651 teachers, and 27,159 pupils. Their total annual income is—from endowment, $452,314; taxation, $15,485; public funds, $184,619; other sources, $2,147,853—aggregate, $2,800,301.

Of public schools there are 80,991; teachers, 92,000; pupils, 3,354,173. Their total income is—from endowment, $482,592; taxation, $4,686,414; public funds, $2,574,669; other sources, $1,147,853—aggregate, $9,591,530.

Of academies and other schools, there are 6,032, with 12,207 teachers, and 261,361 pupils. Their annual income is—from endowments, $288,855; taxation, $14,292; public funds, $114,590; other sources, $4,235,987—total, $4,653,842.

There are, in the States and Territories, white persons over twenty years of age, who cannot read and write—males, 389,664; females, 573,234—total, 962,298.

There is a striking disparity between the numbers of persons who neither read nor write in those States respectively, where the common school system prevails, and those which provide no such privileges for their youth. Massachusetts, for instance, with a population of 994,-514, has but 1,861 native born adults who are thus illiterate; while Virginia, with a population less than one-half greater, shows 77,005 whites in the same ignorant condition. Louisiana, with a population of 245,491 whites, shows 21,221 natives who do not read nor write, against only 30,670 in New York, which has a white population of 3,058,325.

Some Requisites of a Good Teacher.—He should possess an active temperament. If the teacher is dull, and apparently indifferent, most assuredly will his scholars be infused with the same spirit; but if his eyes sparkle with interest, and everything he says and does is done with a due degree of animation, he can scarcely fail to impart that vivacity of mind which will drive all sluggishness from the school-room.

His reasoning powers should be fully developed, to enable him to give his pupils material for thought, to explain causes, and to create in them a spirit of inquiry. Much should be done to encourage the *why* and *wherefore* principles: care, however, should be taken, lest the teacher become too abstract and metaphysical. While thoroughness in all studies should be aimed at still there is a point of investigation, beyond which it is unprofitable to go. —*Conn. School Journal.*

THE AMERICAN GOLDFINCH.

The Yellow-bird, or American Goldfinch, bears a great resemblance to the canary, and in song is like the Goldfinch of Britain, but it is in general so weak as to appear to proceed from a distance, when perhaps the bird is perched on a tree over your head. I have however, heard them sing in cages with great animation and energy. In the spring, they associate in flocks, to bask and dress themselves in the morning sun, singing in concert for half an hour together; the confused mingling of their notes forming a kind of harmony not at all unpleasant. Their flight is not direct, but in alternate risings and sinkings, twittering as they fly at each successive impulse of the wings. They search the gardens in numbers, in quest of seeds and pass by various names, such as lettuce-bird, salad-bird, thistle-bird, yellow-bird, &c. They are very easily tamed.

The yellow-bird is four inches and a half in length: the male is of a rich lemon color. The wings and tail are black, edged with white.—In the fall this color changes to a brown olive, which is the constant color of the female.—They build a nest in the twigs of an apple tree, formed of lichen and soft downy substances.

The other individuals of the finch or sparrow tribe, which inhabit the United States, are too numerous for us here to particularize.—*Library of Natural History.*

The Essayist.

[Written for Moore's Rural New-Yorker.]

HAPPINESS IN ALL.

Wherever we turn our eyes, we see sources of pleasure and improvement. The earth presents a varied scene. The change of seasons brings its enjoyments and its uses. Man is tired of the heat of summer, but autumn comes with its cool and refreshing breezes, the great fountain of heat sheds his rays less directly upon us, and the barrenness and decay that come after the chilling frosts, and which may not be quite so agreeable to the sight, are clothed in a mantle of whiteness. And this is removed by the vernal warmth of the sun, when the buds, protected with so much care during the frosts and storms of winter, put forth their fresh leaves—the flowers springing up and clothing the earth as with a beautiful mantle—the fields of grain, producing the sustenance for man—are all full of lessons for our daily instruction. So too, do the forests, dark and lone, and so long the abode and pride of the Red Man—the grand old mountain, the purling stream, the impetuous river, and the broad mirror-like lake.

To the unreflecting, the ocean that covers so large a portion of the globe, might seem useless for pleasure or benefit. But if we consider it attentively, we must regard it as binding the nations of the earth together by the golden bands of commerce. Over its trackless highways the interchange of whatever can contribute to the health, wealth, or happiness of nations is made easy. Thus are the delicious fruits and aromatic spices of the tropical climes transported readily to the colder regions of the north, and made to administer to the pleasures of those less favored by these gifts of nature. The great deep is, also, the abode of myriads of animated creatures, that find abundance of enjoyment in their proper element, and which in turn extensively supply the wants of mankind. From this great storehouse the hardy and adventurous mariner supplies the table with many a luxury—and adds beside, that which makes the long evenings so cheerful and social—the oil that supplies the lamp with its flame. It is too, from this wonderful magazine that the clouds—which give us such changing forms of beauty and such grateful shade from a hot sun—have their origin, and from whence they draw the moisture they so gently distill on our fields to give fruitfulness to the earth.—Thus might we continue our survey through all the works of creation, and find them but so many sources of pleasure and profit for mankind. But the sources of our happiness are not limited even by the wide range of the natural world.

The domestic condition opens unnumbered sources of pure and rational enjoyment. What enjoyment is there more pure and hallowed than that of the well regulated domestic circle? The sacred names of the parental and filial relations must ever awaken the purest pleasures in the virtuous heart. Here are ties formed that death can only sever, and the kindness and affection shown by each, in the promotion of the happiness of others will never be effaced from the memory. The instructions derived from parents, the anxiety and solicitude which they manifest, cannot be too attentively regarded.

Our social nature also opens to us a wide field for pleasure and improvement. Whose heart does not swell with grateful and livelier emotion when he hears the accents of kindness and encouragement in the voice of a friend?—Who but can feel a higher happiness in every look of kindly condescension, and every token of regard shown by a loved superior? Every heart must give a quick response, that retains the pleasing associations of childhood in the school-room, and of mature years in the higher walks of learning. The faithful tablet of memory retains the names and images of those who associated with us in fraternal bands—and with us strove in generous emulation, to win the crowning success. How oft in after life come up in vivid remembrance, the hours of social enjoyment had, and our minds are lifted nearer and nearer the beautiful and true.

So then let all cherish the good in all things and at all times—and they shall find ever a perennial fount of enjoyment, welling up in their bosoms—giving a verdure of happiness to all that surrounds them. E. H. W.

ALL SORTS OF MINDS.

There is a strong disposition in men of opposite minds to despise each other. A grave man cannot conceive what is the use of wit in society; a person who takes a strong common sense view of the subject, is for pushing out by the head and shoulders an ingenious theorist, who catches at the slightest and faintest analogies; and another man, who scents the ridiculous from afar, will hold no commerce with him who tests exquisitely the feeling of the heart and is alive to nothing else; whereas, talent is talent, and mind is mind, in all its branches.—Wit gives to life one of its best flavors; common sense leads to immediate action, and gives society its daily motion; large and comprehensive views, its annual rotation; ridicule chastises folly and imprudence, and keeps men in their proper sphere; subtlety seizes hold of the fine threads of truth; analogy darts away in the most sublime discoveries; feeling paints all the exquisite passions of man's soul, and rewards him by a thousand inward visitations for the sorrows that come from without. God made it all! It is all good! We must despise no sort of talent; they have all their separate duties and uses; all the happiness of man for their object; they all improve, exalt, and gladden life!—*Sidney Smith.*

It would be well for newspaper critics to heed the above, and bear in mind that there are other tastes to consult besides their own; that what may be honey to them is gall to another class of readers. If a paper was made up exactly to the tastes of any single individual, to every one who would be pleased with it, there would be one hundred ready to pronounce it a wretched literary production.—Eds.

Lessing says:—"The most agreeable of all companions is a simple, frank man, without any high pretensions to an oppressive greatness—one who loves life, and understands the use of it; obliging alike at all hours; above all a golden temper, and steadfast as an anchor.—For such a one we gladly exchange the greatest genius, the most brilliant wit, the profoundest thinker."

Sunday Reading.

BURY ME IN THE MORNING.

BY MRS. HALE.

Bury me in the morning, mother,
Oh! let me have the light
Of one bright day on my grave, mother,
Ere you leave me alone with the night;
Alone in the night of the grave, mother—
'Tis a thought of terrible fear!—
And you will be here alone, mother,
And stars will be shining here.
So bury me in the morning, mother,
And let me have the light
Of one bright day on my grave, mother,
Ere I am alone with night.

You tell me of the Savior's love, mother,—
I feel it in my heart;
But oh! from this beautiful world, mother,
'Tis hard for the young to part!
Forever to part, when here, mother,
The soul is fain to stay,
For the grave is deep and dark, mother,
And Heaven seems far away.
Then bury me in the morning, mother,
And let me have the light
Of one bright day on my grave, mother,
Ere I am alone with night.

Never unclasp my hand, mother,
Till it falls away from thine—
Let me hold the pledge of thy love, mother,
Till I feel the love divine;
The love divine—oh! look, mother,
Above the beams I see;
And there an angel's face, mother,
Is smiling down on me!
So bury me in the morning, mother,
When sunbeams gild the sky—
For death is the gate of life, mother,
And leads to light on high.

Translated from the German for the Rural.

THE LAKE. — A PARABLE.

A father and his son stood upon the shore of a lake, whose waters were as calm and quiet as a child slumbering in its cradle. Flowers and trees were reflected in the clear water, and the sky above gave it a color of blue. Swans were seen swimming upon it, and fish were leaping joyfully from the cold deep to the warm sunshine.

"How calm," began the son, "is the lake to-day! Scarce a breeze curls its waves, and the sun beams forth from it, as if it were his firmament. The whole scenery is reflected in the bright water, as the if hand of the greatest painter had enchanted it therein. Nay, I almost think it appears more beautiful in the water."

Thereupon his father said:—"The soul of man is like this lake. She receives into her bright mirror all the beautiful and magnificent images of heaven and of earth. If no passion agitates or afflicts her, then quiet and happiness dwell therein, which may in every respect be called godly, for they are the reflection of heaven in human life. As the swan associates with the lake, so Religion joins herself to the soul. Friendship, Benevolence, and all other virtues, are then luminous in us, as the stars in heaven, as the sun and moon in the silent water,—now the one, now the other, shines in blissful lustre. Thus is the soul of the just like the lake."

When the father had thus spoken to his son, they left the shore for a neighboring village where they were engaged to perform some work. The road led alternately over hills and through fertile fields. At length they reached the valley where the village was situated, and having quickly transacted their business, they returned. On the way, they perceived that the sky, which was cloudless before, was now almost covered with dark clouds. They hastened with quickened step to reach their home before the storm should overtake them. The sky became more and more obscure, the sun hid his face, the herds went home, birds flew screaming through the air, and the wind began to raise the dust with his mighty wings.

Amid this terrible scene they reached the lake, — and lo! what a change was here!—Where a few hours ago all was calm, there was confusion and uproar. No swan is seen, and the clear blue of heaven is changed into the color of death. One cloud rebelliously swallows another, and the flashes of lightning glide like fiery serpents through the gloomy water. Awe-struck and fearing, the wanderers hastened to a fisherman's cottage near by.—Scarcely had they entered the cottage, and rejoiced to have found shelter from the raging tempest without, when the winds rushed forth on all sides, and scoured over the land in giddy whirls. They plow up the waters from their lowest depth, and roll vast billows to the shores. The rain descends in streams, and the devastating torrents from the mountains rush into the raging embrace of the waves.

"Does not the soul, when passion seizes upon her, resemble that boisterous lake?" asked the father. "Alas! then her usual serenity and cheerfulness fly away, and in the throng of difficulties she can no more check herself—Evil thoughts, like venomous serpents, wind around. She rushes from her bounds, doing mischief in the way, and the voice of religion penetrates her no more. O, my son, my beloved son, may Heaven guard you from such an outbreak, for often it destroys the flower of life forever, and when the time of harvest cometh, the wretched can gather nothing but—bitter tears. S. T.

Miscellaneous.

[Written for Moore's Rural New-Yorker.]

GATHER THE FRAGMENTS.

BY J. W. HARKER.

Gather the fragments, let nothing be lost,
The smallest and poorest gather;
It may be a "trifle," worth hardly the "cost,"
Yet gather them safely together;—
There's never too much, but a garner for all,
There is room for the great, and a place for the small.

Gather the fragments, ye seldom will heed,
If ye carefully heed this direction;
'Twill fill all your coffers with plenty indeed,
And sweeten the cup of reflection;
In the quiet long evening 'tis joyous to know,
That nothing is hid by the rust or the snow.

There's many a heart that would gladden with joy,
Now sadly in penury pining,
And many a hearth, where the taper of hope
Is dimly and sickly shining,
Would gather new brightness and joy to receive
The "valueless trifles" some carelessly leave.

O gather the fragments—those moments of time,
So swiftly and silently stealing,
Away to the past, that dim misty clime,
Sad tales of our conduct revealing;
Not a moment to squander—we've business to do,
There's a duty for me, and a duty for you.

Then up and be doing! no time for delay!
The hour to begin is the dawning of day,
While the hale, cheerful voices of nature resound,
From the earth to the sky, from the sky to the ground;
Be active, be cautious, well counting the cost,
And "gather the fragments, let nothing be lost."

Kendall Mills, N. Y., 1854.

[Written for the Rural New-Yorker.]

GENIUS AND WILL.

"Name not to me again, that blockhead of a word," said Mirabeau. "*Impossible*," said Napoleon, "is the adjective of fools." Thus it was with the Corsican. There was implanted in his soul a great *genius* in combination with a strong and invincible *will*, which caused him, "a man known only to himself, to rise through all the gradations of honor" to the very pinnacle of earthly power; a combination, the power of which Alpine snows could not check, nor the burning sands of Egypt turn from its purpose; a torrent which no barrier might oppose, and before which kings and princes trembled. Though crushed to earth, yet he rose triumphant, nor was it till all Europe brought its combined genius and united will to bear upon him, that his star, which had thus far shone pre-eminent in the political heavens, sunk and was extinguished. To his *genius* are to be ascribed those vast conceptions which have so startled the world; but to an invincible *will* was he indebted for their full realization. And the same principle, on which rested his greatness, may be found in the breast of every great man. Genius may lay the foundation, but will is the architect whose province it is to raise the superstructure.—What is there which it cannot accomplish?—You might as well undertake to measure the Atlantic Ocean with a quart cup, as to set limits to its power.

Mark its effects upon the student. While following the plow, shoving the jack-plane, or perchance, plying the art taught in the school of St. Crispen, it whispers to him, at first in the idle vagaries of a dream, then in the clearer tones of a still small voice, urging him to leave his humble and unhonored, though useful employment, and seek for fame at learning's shrine. Its suggestions may be smothered for a time, but, like the long pent-up fires of the volcano, it bursts forth at length, scattering to the winds every obstacle. Poverty may sit heavily upon his shoulders, but it is powerless for turning him aside. Æneas-like, he breasts every wave of opposition, and if perchance repulsed from one shore, only turns to another; for, far in the future, his eye rests upon a rich reward for all his toils.

"Not Juno's hate, nor Eolus' howling winds,
Have power to swerve him from his high resolve."

Under the impulse of will, he presses forward with never wearying ardor, up the steep and difficult paths leading to the temple, pictured in Webster's Elementary, as standing on the summit of the hill of science, far above the mists and clouds of Ignorance. Step by step as he advances, new fields for observation are spread out before him, and his eyes are continually feasted upon some new beauty in the intellectual landscape. His powers of mind expand, and new powers are given him. That which before *may* have seemed a task, becomes a pleasure, compared with which, all others sink into insignificance. Armed with knowledge, which is power, he descends into the dark caverns of the earth, bringing forth her hidden treasures, analyzing them, and describing all their properties, qualities, and relations. On the wings of imagination, which science has plumed and directed, he mounts into the firmament, scanning with his far reaching eye the mysteries and sublimities of the starry hosts; calculating with mathematical precision, their magnitudes, distances and proportions; their atmospheres, mountains, hills and valleys, and, I had almost said, the complexion and character of the inhabitants. He follows the wondrous comet during the lapse of ages in its flight to the confines of the Universe, calculating to a second, the time of its return. The times and causes of eclipses are as clear to him as the noon-day sun. His *genius* beholds the oak of the forest and conceives its uses. His *will* steps in, and as its fruits, we behold houses, temples and ships. His *genius* discovers the power hidden in the drop of water; his *will* imprisons it in the boiler of the locomotive.—The great mind of Fulton conceived the idea of steam navigation, and, in spite of the sneers of an unbelieving world, his *will* demonstrated its feasibility. With Franklin, he discovers the nature of the forked lightning; with Morse, he changes it into a news carrier. How often might the noble Washington have despaired of success when he beheld the enemy, flushed with victory, exulting over the forlorn and almost vanquished army of the colonies, had not the *Genius* of Liberty reigned in his soul, seconded by an invincible resting on a God of justice.

Much has been, and is said of *genius*. Her votaries, who can number them? We behold them here, there, on every hand. Happy indeed is he called who is numbered among her sons. But *genius*, unaided by *will*, is powerless. The literary butterflies flit around the dazzling light until they are thoroughly entangled in her meshes, when, like a heartless coquette, she forsakes them, and they find their only reward to be a pair of singed and crippled wings. Such is the fate of all who depend on simple, unaided genius. It is an iron *will* which must elevate man to his proper sphere. Poe was a genius, but lacking the *will*, he found a home in the drunkard's grave.

Many a man possesses a genius which lies dormant, till some "accident," as it is called, shall rouse his will, when it shines forth in all its lustre. It is said of the great Dr. Adam Clarke, that "He was the greatest dunce in school, until one day the master threatened to pull his ears as long as Fowler's, which so roused his *ambition* that the teacher was often wearied with the length of his lessons." When Berzelius, the great Swedish chemist, left school for the University, "Indifferent in behavior and of doubtful hope," was scored against his name; and at the age of nineteen he was taunted with the inquiry, "If he knew the difference between a laboratory and a kitchen." Sheridan was pronounced an "incorrigible dunce," in which his mother fully agreed. Carracci was advised by his masters to "confine his ambition to the grinding of colors;" and yet, the world delights to call him one of the great painters of his day. Such examples are numerous, showing conclusively, that on the *will* depends success in life as much as on *genius*.

The man who flinches from no toil, who cowers before no foe, and who places his sole confidence in God, cannot be otherwise than great. When he once resolves upon a course of conduct, and believes, and knows it to be the path of duty, he is as unmovable as the hills. You might as well attempt to hurl imperial Jupiter from his Olympic throne, as to move him, for, "He is founded upon a rock," which all the storms and tempests of the universe cannot shake. *He is a man.* Not a mere biped, endowed with the faculty of speech, and whose only aim is to cheat the world out of a living in the easiest possible manner, but a man in whom resides a spirit which angels may delight to own as brother. He lives to do good and to bless his fellow man. The Bible is the law book to which he turns for precedents, and from which he draws all his conclusions of right and wrong. He is honored as *one* of the *few* who live to fulfill the object of their creation. And when he sleeps in death, a monument is erected to his memory in the hearts of the people, and upon the face of that monument is engraved in characters which time shall not erase, the last words of the immortal Webster, "*I still live!*"

Genesee College, Feb., 1854. T. D. TOOKER.

How much did he Leave?—This question is asked concerning the property of every rich man that dies, and it was answered very happily by Cloots, who was executor upon the estate of the late Mr. Snodgrass, of this ilk. His neighbor, Mr. Nailrod, was an exceeding inquisitive man, and it was his pride that he knew as much almost of the affairs of the people as they did themselves. But Mr. Snodgrass has never been communicative, and all that he could glean of his circumstances was from the guesses and speculations of outsiders. The day after his neighbor had been put into the earth, Nailrod visited Cloots, and with an expecting face began to question him. Says he, "Mr. Cloots, if it is not an improper—I wouldn't wish to ask the question if it is the least improper, nor expect you to answer it—will you tell me how much my friend Snodgrass left?" "Certainly," said Cloots; "don't see the least impropriety in your asking, and am perfectly willing to answer it. He left every cent he was worth in this world, and didn't take a copper with him."

Decision of Character.—There is nothing more to be esteemed than a manly firmness and decision of character. I like a person who knows his own mind and sticks to it; who sees at once what is to be done in given circumstances and does it. He does not beat about the bush for difficulties or excuses, but goes the shortest and most effectual way to obtain his own ends, or to accomplish a useful object. If he can serve you, he will; if he cannot, he will say so.

CRUISE IN THE MEDITERRANEAN.

At Naples we had a fine view of the city and its environs. Vesuvius looked precisely as it stands. The weather was cold, and the wind high and towards the coast of Sicily.—But as we approached the straits of Messina, it was very fine. The fabled Scylla and Charybdis have lost all the charm of ancient story.—Steam strips them of all their glory, and we passed them all too quick. The passage of this narrow strait is very pleasant. There are no rocks on one side, or whirlpool on the other, to endanger the passage. Instead, the mountain comes down to the water on the Italian (Scylla) side, and a long, low, sandy point, projects on the other in a quiet cove, behind which is the town of Messina. We passed in plain sight of Mount Etna, and arrived here the 7th inst. We have here the most charming climate. Frost is unknown. We have beautiful, clear sunshine, plants growing, and flowers opening in the sun. Flies are sporting in the air, and the lazy and the idle of the population are lying upon the parapets, &c., to enjoy the grateful weather. This is a most interesting island. We associate it, first, with the idea that St. Paul was wrecked here, and next, with the history of the Knights of the Order of St. John. It is argued, with great force, that St. Paul was wrecked upon an island in the Adriatic sea, and some of those best entitled to confidence consider the argument conclusive.

But the Knights of Malta were a wonderful association of men. They held the island from 1630, under a grant from Charles the Fifth, of Spain, till 1798, when they surrendered to Bonaparte. These knights were highly educated, were influenced by a religious zeal, and were a band of most powerful and successful robbers. They commenced a city upon an organized and complete plan, and built it all perfect: and here it stands, just as they left it. They established a library, which we have visited. It contains a vast amount of learning, of old copies, manuscripts, &c. They provided for the permanent enlargement of the library. They built churches all over the island. The great church of St. John has the largest and most perfect mosaic floor in the world. Every portion of the floor, (and it is very large,) is covered by tablets, each distinct and perfect, beautifully wrought with Latin descriptions of the worth and valor of the knight who sleeps below the slab. It is scarcely possible to conceive the beauty of this church and floor.—Usually the latter is carefully covered with matting. We saw it clean and clear. The slabs are usually about seven feet long, and four feet wide, each wrought most perfectly with a border, and then the arms, &c.; of course no two are alike. The walls, the ceiling, &c., are all finely painted in fresco. The houses of the city (Valletta) are the same that the knights built for their occupancy. We live in one of them. The ceiling of our room is over twenty feet high. The whole island is a rock which is easily worked. The town is strongly fortified—the ditches around it (excavated in the rock) are of great depth and width, and the stone taken out served to construct the walls and bastions. There is but one gate out from the city towards the land; beyond which there is a constant succession of batteries for three-quarters of a mile. Every port upon the water is protected by an extent of bastion, curtain, &c., that is wonderful. Here are a considerable body of British troops, who are scattered through the various ports, &c. There are sentinels all over the town.—There is no need of this, for everything is perfectly quiet and innocent. We witness the reviews of the troops, and we listen to the martial airs of their music, and then we think that upon every quarter of the globe there is the same manifestation of the power of this wonderful nation.

Spare the Feelings.—If persons would reflect but a moment before giving utterance to words or expressions that are calculated to injure the feelings or mar the happiness of others, how many moments of mental anguish that are known only to the deeply sensitive heart, might be spared! How many burning tears, that have rushed unbidden to the eye, might have remained locked up within their fountains! How often, from some thoughtless word or insinuation, have we seen the cheerful countenance and cloudless brow mantled in shadow and gloom, and witnessed the struggling effort to repress the sigh that burst from the depths of the wounded soul. There is no quality of the mind or heart more elevating to its possessor, or more characteristic of the *true* lady or gentleman, than that by which we are admonished to respect the feelings and frailties of others. Genuine politeness does not consist in conforming to certain rules and customs, but in an amiable and benevolent disposition that imparts a feeling of confidence and ease.

Our Status on the Calendar.—That very common question, "Where are we?" the American Almanac answers quite specifically. From its tables we gather these important facts:

We are in the 78th year of the Independence of the United States.

In the 1855th year of the Christian era.

The 5567th year of the Julian period.

The 5614th year of the world, Jewish reckoning.

The 2606th year since the foundation of Rome, and

The 2630th year of Olympiads, or the 2d year of 658th Olympiad, beginning in July, 1853; and, moreover, we are in the 1270th year since the Hegira, or Flight of Mahomet.

That's about where we are, at this present writing.

Originality.—Originality! what do they mean by it? The action of the world upon us commences with the hour of our birth, and ends only with our death. It is here and there and everywhere. There is nothing we can claim as our home, but energy, strength, and volition. Very little of me would be left, if I could but say what I owe to my great predecessors and contemporaries.

For the Ladies.

[Written for the Rural New-Yorker.]

WORK GOES WRONG.

Our correspondent, Mrs. Sophia W. Lloyd, gives us below an amusing picture of a household, where work goes wrong. She will at some future time give us also, a home picture of a household where "work goes right."

Weary, weary, household work,
How I hate your endless store,
Treading o'er day by day,
Still the same dull pathway o'er,
Washing, starching, pickling, churning,
Dressing saucy, and coffee burning,
Sweeping, dusting, brooms, mending,
All will spiced with baby tending;
Making beds, and dressing babies,
Laying tables, washing dishes,
Scouring, baking, and preserving,
Is the routine that ye serve to.
Oh! a toilsome, weary life,
Of it has the poor housewife,
Rising oft before the sun,
Working till his race is run.
Scarcely is the breakfast through,
Dinner thrusts its claims on you,
And there's little rest I ween,
Breakfast, dinner, tea between.
If it ever chance that you
Think a "picked up" meal will do,
Just as surely there will be
A house full of company.
If perchance you wish to look
In a paper or a book,
To refresh a little bit
Your remembrance, or your wit,
Bump! there goes a baby's head
Charley's fallen out of bed!
Should you steal a minute's time,
Just to put a thought in rhyme,
Letting all the housework go,
May be for an hour or so,
Long before your musings o'er,
There's a hand upon the door;
And you read in husband's face,
"This is sadly out of place!"
Turning from his scolding eye,
What confusion you descry;
Every drawer's open wide,
All the contents are outside;
You can scarcely cross the floor
'Tis so littered o'er and o'er.
Dick has gone—you know not where,
Charley sleeps beside a chair,
Tired of mischief, tired of fun,
Resting now his work is done.
You have not a word to say,
But you wipe a tear away,
Silently resolving there,
Never more to steal from care,
While you lead the three-fold life,
Kitchen, nursery-maid, and wife.

For Moore's Rural New-Yorker.

HUSBANDS, SAVE YOUR WIVES. *

Not from California, but from an untimely and premature grave. There are two sides to all questions, and ought to be with husband and wife. If the wife has not her equal rights, she has her equal wrongs, and is equally sensitive, and as keenly and deeply feels those wrongs. How often do we hear of a woman's going to California, Australia, or some other place, because she is not happy at home? Who ever head of a mother (one who is worthy the name,) leaving the little pledges of her vows and early love, because she was unhappy at home? What! leave her tender offspring, dearer to her than life itself, to the cold and pitiless frowns of an unfeeling world, and a father who can never feel that deep and holy affection which belongs only to a mother?—When weighed down with a multitude of anxious cares and vexations, her husband, "who should be the first to stand by and encourage her," is the first to point the finger of scorn, and say, "It is your own fault,—why is it this or that one's house and family are so well regulated? If you had the government you might have, you would not be where you now are." These, and other like insinuations often drive a woman, *not* to other society, and other pleasures—but they sink deep, *deep* in that tender, throbbing heart which once beat with strong and fervent love for the man who excited and beguiled her from her once happy home, from warm and affectionate hearts. Is it a wonder, then, so many young and tender plants that are transplanted from warm and genial climes, into such cold and sterile soils, should so soon droop, fade, and die?

Now, I would say to—not all, for thank God all husbands are not cynics and tyrants, but to those whom the coat fits,—deal gently with her who is cumbered with a thousand and one cares and troubles, the sterner and stronger sex know nothing of; remember she is very sensitive to your smiles or frowns, because she loves you. A harsh and thoughtless word, carelessly uttered, may inflict a wound on a hardened and troubled heart, which time can never heal. Then be cautious; woman is not an angel, as man expects her to be, but like himself is human and liable to err. What you see amiss in her, kindly reprove, with the smile of affection; show that you love her as you once did, by repeated acts of kindness; "try to beguile her unhappy, dark and gloomy hours, by the bright sunshine of your pleasant countenance." By so doing you will fill your own cup with connubial happiness, for her perceptible and feeling heart will overflow with gratitude and affection, and your kind attentions will be returned seven fold.

"When a woman is in trouble"—her spirits sadly depressed by sickness, and the weight of many little cares and duties, imposed on her by the reckless selfishness of her liege lord—it is *not only* a little word that will save her, but it is the many and continued *deeds* of kindness and sympathy *due* her from the man of her choice, which may save her from an early grave, and his children from becoming orphans.

A Farmer's Wife.

Newark, N. Y., March, 1853.

* In reply to article entitled "Wives, Save your Husbands," published in a late number of the Rural.

[Written for the Rural New-Yorker.]

"ORNAMENTS."—ANOTHER VIEW.

"Charlie Chestnut," in a late number of the Rural, almost frightened many of its lady readers, by his wonderfully strong and inexplicable tirade on "Ornaments;" so that we girls are astonished that the proverbial quotation of the barbarous old bard did not head his chapter as a text—"Beauty when unadorned is adorned the most."

Now we do not wish to enter into a discussion on the difference between the sublime and ridiculous,—nor on the chief constituents of beauty,—yet we girls cannot help thinking that there is no sin or shame in wearing little, simple golden trinkets in *our* ears, (perhaps Charlie's are *long* enough without!)—a band on the wrist, or a brooch upon the neck.—Recollect, we do not mean a band as large as an Aztec Princess' bracelet—or a cameo big as a buckwheat pancake—but something graceful as the tendril of a flower, and a clasp delicate as its blossom.

And when one's friends go their ways on the life-path, the ring running round the finger is a remembrancer, and brings back the face over distance and the miles, suggested by the memento to the recollection. Perhaps Charlie Chestnut—hard wood as he is—would like a "fence block" for a *keepsake*.

And farther, do not men wear hair long and curly, for *ornaments?*—and whiskers and moustaches? Who knows, indeed, but that Mr. Chestnut himself wears pantaloons figured with strange devices, resembling Mitchell's outline maps—and his limbs do not, *thus* cased, take away any cultivation from his *mind*, purity from his *spirit*, or warmth from his *heart*.

Nature, we opine, has set us an admirable example—not only dressing up the fields and gardens in greenness, but *ornamenting* them with beauty and blossom,—crimson bell, and golden cup, mossy rose and pendant lily, ornament, aye *ornament*, the wilderness and the lawn—for our eyes are given us to see, as our ears are given us to hear, and we ought no more to eschew the embellishment of our persons when the flowers are here, or gone—with mimic gold and coral—than we should banish the music from our firesides, because the birds no more carol "their sweet wood notes wild."

Men do not, of course, add to their manliness by those attractions that grace women.—We would hardly think it in keeping of the oak were it to blossom like the rose—or the *chestnut* to give no perfume like the violet.—A "refined taste" will always keep within bounds the style of decoration, and a woman, poor or rich, will show her judgment as well by her dressing, as by her mind.

Good bye, Charlie Chestnut, and remember the tree whose name you adopt, is not renowned for the smallness or modesty of its blooming.

Kate.

Canajoharie, N. Y., 1854.

EDUCATION OF FEMALES IN FRANCE.

The Paris correspondent of the *New York Courier*, in a late letter, makes suggestions which are worth attention. He says:

"In France the ladies are educated in a manner to make them most agreeable in society, and, while all are taught to keep the accounts of household expenses, many among the poorer classes are taught book-keeping so thoroughly as to enable them to follow it as a profession. In almost every Paris shop, consequently, the books are kept either by the wife or shop-keeper, or by some other female employed for the purpose. Thus the French system is to teach females the useful or agreeable, according to their worldly condition. Our American system is, to teach them a little of everything; in fact, we take more pains with them than with our boys, though it would seem from the results that hitherto our efforts have been none too well directed. While we have female seminaries and colleges in which degrees are conferred, and which produce many shallow and discontented philosophers who immodestly take the rostrum at public meetings, and have begun to invade the pulpit, we have very few who can take charge of a husband's counting-room, while he is engaged in the direction of other departments of his business. In Paris you buy a carpet of your upholsterer, who shows the goods, makes all of the necessary explanations, and sends it home. But when you pay, you walk to the neat mahogany desk where Madame sits enthroned behind her large folio ledger, and it is with her you regulate the accounts. The French tradesman's wife takes an active, useful and appropriate part in the management of affairs; she knows to what extent the business is prosperous, and is therefore never in danger, like American wives, of demanding a new carriage or other extravagances when her husband is on the point of failing."

A nation cannot become degraded while the women remain intelligent and virtuous. A virtuous woman sometimes has a brute of a husband, and an exemplary mother a wretch of a son—but these are individual instances.

MOORE'S RURAL NEW-YORKER

ROCHESTER, MARCH 18, 1854.

Our January and April Premiums.

In accordance with the promise in our last number, we respectfully "report progress" as follows. According to our books the Premiums of $25, $15, and $10, in cash, offered for the three greatest lists of subscribers obtained previous to the 1st of January, were awarded to the first three persons named in the following list:

J. H. Stanley, B. Allen, I. W. Briggs, C. D. Langworthy, R. P. Allee, Jas. Van Horn, S. E. Norton, E. W. Ford, O. Kimberly.

The above list of competitors is given in proper order—commencing with the name of the person who had obtained the largest number of subscribers *previous* to the 1st day of January.

The following list embraces, in proper order, the names of the principal competitors for our April Premiums—and shows their respective positions on Saturday last, March 11:

J. H. Stanley, I. W. Briggs, B. Allen, S. E. Norton, C. D. Langworthy, Jas. Van Horn, R. P. Allee, R. D. Dickinson, E. W. Ford, O. Kimberly, A. Stone, I. A. Clark, O. B. Scott, J. Chapman, G. B. Cook, (J. D. Ferris, G. T. Smithworth—tie,) T. M. Boyer, A. C. Stone.

Several of the above named gentlemen are nearly even. For instance, the first on the list is but two ahead of the second, and the second but ten in advance of the third—while the fourth and fifth and sixth and seventh, are not far asunder. It is proper to state, here, that none of the competitors have heretofore been furnished any information as to their relative positions—as we have invariably declined giving any intimation on the subject. Indeed we could not, if disposed, have given any definite information until within the past week, for the reason that our books were not posted.

The above list comprises about every competitor for the Large Premiums—most of our agents preferring, as we have before stated, the Specific Premiums. Who will be the recipients of the prizes for, and honor of, obtaining the greatest lists previous to the 15th of April ensuing, it is impossible to foresee—inasmuch as many of the competitors are so nearly abreast.

☞ Meanwhile competitors, and all other agents and friends, will please bear in mind that additions to clubs are in order—and that we can still furnish back numbers of this volume. Many are keeping the ball in motion, by continuing their remittances. We are constantly receiving orders for new clubs, and unfinished to old ones, and confidently anticipate a large increase of subscribers to commence with the new quarter, in April.

Remonstrances.

Remonstrances against the repeal of the Missouri Compromise continue to pour into Washington, beyond all precedent. They come too late for the Senate, as that body has taken the irremediable step and passed the Nebraska bill; but they are in time for the consideration of the House.

March 9th, Mr. Seward presented a remonstrance from the students of Hamilton College, New York. Also, a remonstrance one hundred feet long, signed by three thousand persons, with their places of residence, in Brooklyn. Also of the Philadelphia Female Anti-Slavery Society.

A clerical protest against the Nebraska bill, signed by 3,050 clergymen, Presidents of Colleges, Professors of Theological Seminaries, &c., in New England, has been sent to Congress, in charge of Rev. Henry M. Dexter, of Boston.

These are only single items in the great account, and it really appears incredible that Northern Congressmen would dare to act in opposition to such an overwhelming public sentiment. The smashing of Court favor, however, is more potent just now, than the distant murmur of the coming storm, for it is as true now, as it ever was, "that we are apt to shut our eyes against a painful truth, and listen to the song of the syren until she transforms us into beasts!"

"Honor to whom Honor," &c.

Acknowledgments, most sincere and grateful, are tendered to the many representatives of "the best gift" for their generous and influential exertions in support of the Rural. The substantial manner in which many Daughters, Wives and Mothers have recently exhibited their appreciation of our efforts to furnish a choice, pure and useful *family* paper, is most gratifying and encouraging. Among the receipts from ladies during the past week, was one of $20, another of $15, &c.

We trust women will hereafter more generally exercise their rights and influence in supporting such papers—not the Rural alone—as are worthy of being placed in families. The papers read in a family have a great influence in forming the characters of young people, and no parent can be too careful in making a selection. Is not this thought eminently worthy the attention and consideration of mothers?

The Youth's Casket is one of the best magazines of its class with which we are acquainted. We again cordially commend it to young people, and all parents who wish to add to the happiness and knowledge of those who are ere long to become active participants in shaping the destinies of the country. Published monthly by E. F. Beadle, Buffalo, N. Y., at 50 cents a year.

Trouble with the Cubans.

The United States mail steamer Black Warrior arrived at the port of Havana, Feb. 28th, and was entered at the Custom House *in ballast*, as has been her custom for thirty-six previous voyages, and as is always the case with the Panama steamers when they have no freight for Havana. The Black Warrior had on board some four hundred bales of cotton for New York, and merely put into Havana for the passengers and mails, with no intention of opening her batches; and *was in ballast* so far as Cuba is concerned. The Spanish Custom House authorities, on the ground that the Black Warrior had entered a false manifest, (notwithstanding the practice has always been the same,) declared the cargo forfeited and ordered its seizure; but the captain of the steamer protested and refused to let the cargo be discharged until a sufficient force was sent to take possession of the ship; whereupon he immediately hauled down the American flag, took his crew, passengers, and mails, and went on board the American steamship Fulton, leaving the Black Warrior in the hands of the Spanish authorities.

This high-handed outrage on the part of the Cuban officials, will undoubtedly lead to very serious difficulties between the two governments. Despatches on the subject have been received at Washington from the United States consul, and speedy action will be taken in the premises—The injustice of the seizure can only be equalled by the stupidity and folly of those who made it, and can only be accounted for on the truthful old proverb, that "whom the gods wish to destroy, they first deprive of reason."

Talking Women and Dumb Women.

The talking women lately held a Woman's Rights convention at the Capital, and were loud in their complaints of "crime and outrage, with which earth is filled;" especially regarding themselves and their sex, of which they assume to be the champions. An interesting exhibition of the pupils of the Deaf and Dumb Asylum soon after succeeded in the Assembly Chamber, and among other subjects they were desired to express their sentiments in relation to the "Woman's Rights" movement. Miss Toll, of Chautauque, wrote as follows:

"Woman's Rights" is a theme on which we spend but little time in speculation, for the reason that we are not sufficiently *strong minded to discover any great wrong*. To us it seems that woman's true field is her home; and to do honor to this, her intellectual powers need a higher cultivation than is usually given them. But as a legislator, a statesman, a heroine upon the battle-field, there are but few who now so strongly advocate the system, who would not pale, should they be called upon to face the stern reality.—For ourselves, we are satisfied, and would say in the language of one of our country, women—"Let us go and learn our stations at the tomb of *Mary, the Mother of Washington*."

Planetary Eccentricities.—One of our Rochester dailies, copying an article on the subject of planetary movements, says of the planet Mars: "the oppositions occur at intervals of about two years, and as the planet when most remote, is about *two hundred and forty miles from the earth, and when nearest only one-fifth of that distance*, the change in its apparent size and light is of course very great."

Young America, reading the above statement, has concluded to memorialize Congress, as soon as they have ground out the Nebraska grist, for a donation of public lands, for the purpose of building a railroad from Washington to Mars; and to get over the practical difficulty of ruinations in distance, he proposes to manufacture the rails out of Congressional consciences or some other equally elastic material.

Court Dresses.—Mr. Buchanan, American Minister at the Court of St. James, was not present at the opening of Parliament because he was required to don a Court costume.

The Lord Chamberlain, by order of the Queen, has since notified Mr. Buchanan that he is at liberty to appear at Court in any dress he pleases, and he has attended the Queen's levee in the plain dress of an American citizen.

Where are John Y. Mason and Peter D. Vroom? the true American representatives abroad who dress themselves on state occasions like true organ grinders' monkeys!

John Mitchell's paper, the *Citizen*, says of the Japan expedition:

"Can it be that any agent of this Republic, and especially one who has charge of an American fleet—*the brave Perry, who signalized himself by his defeat of the English on Lake Erie, in the war of 1812–1814*, now enters into a conspiracy against the independence of a free nation with the same tyrants who shed so much blood, and expended so much treasure to enslave his own native land? We cannot believe it. We shall wait for more light on the subject."

Mr. Mitchell may be surprised to learn that "the brave Perry, who signalized himself, &c." died more than thirty years ago.

European News.—Interesting news is contained in our column of Foreign Intelligence.—Momentous events seem to be on the eve of consummation. The arrivals are so frequent in this age of steam communication that we receive the news as often and as early from the remotest country of Europe, as our ancestors did from the more distant of our sister states of the republic. If European nations must fight, *let them fight*, while we profit by their folly.

Periodicals.—The January number of the *Westminster Review* has been received; also the *Lady's Book* for the current month, which is profusely and elegantly illustrated, and contains the usual amount of good reading. Dewey in the Arcade has them both for sale.

Congressional Proceedings.

March 6.—House.—Several amendments were offered to the Homestead bill and discussed.—The bill finally passed by a vote of 107 to 72.

A resolution was then adopted instructing the Judiciary Committee to inquire into the propriety of directing legal proceedings to recover any sum of money which may have been paid to any person out of the Treasury on the claim of Dr. Gardiner.

March 7.—Senate—Mr. Everett gave reasons why he did not vote on the passage of the Nebraska bill, which were unavoidable absence in consequence of ill health and fatigue, and he asked unanimous consent to have his vote recorded against the bill.

Mr. Clayton, who also offered a nearly similar excuse, desired to have his vote recorded against the bill. Objections being made, both requests were withdrawn.

No business of special importance in the House to-day.

March 8.—The House went into Committee on the Minnesota Railroad Land bills. Several bills granting lands for railroad purposes were received, and referred to the Senate.

Committee of Conference on the bill for the relief of the officers and soldiers on the San Francisco, made a report, which was agreed to. The bill providing for the retirement on reduced pay of disabled army officers, was passed.

The indigent insane land bill was taken up.

March 9.—Senate.—Several remonstrances against the Nebraska Bill were presented.

Mr. Walker reported back the Homestead bill with the unanimous recommendation of the Com. in its favor. It was made the special order for Monday. The question was taken on the passage of the bill providing for retired disabled officers. The vote stood, Ayes 21, Nays 3. No quorum.

House.—Mr. Dean, of New York, made an ineffectual attempt to introduce a resolution instructing the Committee on Foreign Affairs to inquire into recent outrages committed at Havana on the persons and property of American citizens. The resolution had reference to the Black Warrior affair.

Remonstrances against the Nebraska Bill were presented, and the House then went into Committee on the Minnesota Land Bill.

March 10.—Senate.—The bill making Dubuque and Keokuk, in Iowa, ports of delivery, were passed.

After executive session adj. till Monday.

House.—A resolution passed unanimously requesting the President to communicate any information he may have received touching the seizure of the Black Warrior at Havana.

Mr. Dean gave notice of a bill to repeal our neutrality laws so far as they are applicable to Spain.

The Minnesota Land Bill was tabled amidst some excitement, and the House adjourned over till Monday.

The Legislature.

The Legislature was in session only a portion of last week, having accepted an invitation to visit the State Lunatic Asylum at Utica. The consideration of bills in reference to railroads, banks, and other corporations, absorbed a large portion of the remaining time.

The most important matter of legislation is the passage of the Temperance bill by the Senate, and its being sent down to the House, by whom it was referred to the select committee having charge of the House bill, with instructions to report the same on the 14th inst.; the final vote to be taken on 22d inst.

The bills allowing Albany to extend aid to the Northern Railroad, authorizing subscriptions to the stock of the Sodus railway, for a revision of the charter of Rochester, with other bills, were passed.

Words of Warning.—Mr. John M. Botts has addressed a second letter to the *National Intelligencer*, in which among other things in regard to the repeal of the Missouri Compromise, he says:

"No man can look abroad upon the political horizon but must see the gathering of a dark and portentous cloud in the North. A storm is approaching, the violence and fury of which threatens to sweep over the face of the country, destructive in its course, annihilating in its consequences. All confidence, all fraternity, all harmony is to be obliterated; party lines will be extinguished; there will no longer be men of the North and the South, the East and the West, meeting in National Councils, under the style of a National Democracy or a National Whiggery; but it will be a meeting of the free States against the slave, and the slave States against the free; the North against the South, and the South against the North. It needs no ghost from the grave, nor does it need much of a philosopher or statesman, to calculate the duration of the Union, when that happens, as happen it will, or happen it may, as there is too much reason to fear."

A Mystery Solved.—A Roman Catholic writer in France solves the problem of spiritual rappings and table movings in the following manner:

"Eminent theologians explain why the devil has more liberty in the United States where the holy sacrifices of the mass are celebrated at vast distances apart, and where so many millions of men, descendants of Protestants, have no religion whatever, and are not even baptized.—This rarity of the sacraments leaves the devil greater sway over men; he dares to come nearer the earth, not being driven afar by the frequent immolation of the divine victim, and he enters into communication with the human race by the mysterious means which God leaves open to him."

Verily, Judge Edmonds & Co. may as well withdraw from the field, now the above conclusive exposition of spiritual manifestations has been published to the world.

News Paragraphs.

☞ British navy estimates have been printed and published. The increase in expenditure for the year commencing with April next is to be one million two hundred and ten thousand four hundred and fifty-five pounds sterling. The number of the force will be: Seamen, 41,000; boys, 2,000; marines afloat, 8,000; marines on shore, 7,500; men in the packet service, 116; total, 58,500.

☞ A bill has been reported in the Senate, granting to James Eddy and Hiram O. Alden, two million acres of land, to build a telegraph from the Mississippi river to San Francisco!—The land warrants not to be issued till the line is completed; the government to have 8,000 words a month free forever; and customers not to be charged over $10 for ten words!

☞ Owing to the destruction of the publishing office of the Independent by fire, some of the subscribers will, doubtless, fail to receive their paper. Those who do not receive it are requested to inform the publisher, Mr. Joseph H. Ladd, No. 22 Beekman street, New York, as soon as possible, and also state the time as shown by their receipts, when their subscription expires.

☞ A very large meeting of citizens of Concord, N. H., and vicinity, without distinction of party, assembled March 6, to protest against the Nebraska bill. Asa Fowler, Esq., late law partner of President Pierce, presided, and made an eloquent speech against the measure. He was followed by Hon. John P. Hale.

☞ The brutal and degrading practice of cock-fighting is permitted to take place frequently in the immediate neighborhood of the City Hall, Toronto, and instead of trying to put down scenes so demoralizing, the police officers actually take part in them, some by supplying the animals, and others by being present.

☞ Captain Squires of the Eleventh Ward, N. Y., shows the result of enforcing the Sunday laws in his ward, by the following report to the Chief of Police. "We had no prisoners yesterday, during the day, and only one solitary lodger last night. The grog shops have been closed in this ward the last three Sabbaths."

☞ The Oswego Times of the 6th instant says:—"The propeller Dayton, Captain Williams, arrived here this morning from Toronto, with 3,500 bbls. of flour and sundries. Capt. W. is entitled to credit for the success and expedition with which he has made the first trip of the season."

☞ The Edinburgh Post is not very complimentary to his countrymen:—"It is," says our contemporary, "unfortunately the fact that the lower classes in Scotland, we might say the greater body of the population, are the most drunken brutes in the known world."

☞ The Editor of the Boston Post is a faithful seminal on the watch-towers of the Administration. The office which he holds under the General Government is worth about $5,000 a year, and he writes at least a column a day in favor of the Nebraska bill.

☞ The Bury (Eng.) Post says:—"A donkey has just died at Farnham, having reached the venerable age of 80 years and upwards. It formerly belonged to the Cornwallis family.—The Post does not state whether or not Lord Cornwallis rode it at the battle of Yorktown!

☞ The Temperance Bill passed by the Senate, March, 9th was sent in to the Assembly on the 11th. It was referred to the Select Committee on that subject, without instructions.—The Assembly resolved to take the final vote on its passage, on Wednesday, the 22d.

☞ The Boston Bee reports the exhibition in State street of two pair of beeves from the Marshfield farm, of pure Durham blood, out of Mr. Webster's imported Durham stock. One pair, 7 years old, are said to weigh 4,000 lbs. each, and another pair, 5 years old, 3,588 lbs. each.

☞ It is reported that there is a duel on the tapis between Mr. Hunt, of Louisiana, and Mr. Lane, of Indiana, both members of the House of Representatives. It is hoped and believed that the friends of both parties will bring about an amicable settlement.

☞ The surveying party of the Crawford, which left Norfolk lately for Florida, will, by direction of Professor Bache, run a line of deep sea soundings from Key West to Havana, with the view of ultimately carrying the telegraphic wires across to Cuba.

☞ It is believed by a portion of the Second Adventists in New England, who were disappointed in the result of their expectations in 1843, that the world is coming to an end in May of the present year.

☞ Most of the Members of the Legislature proceed to Utica, Saturday, in compliance with an invitation from the Managers of the Lunatic Asylum. The day is very pleasant, and the visit will be useful.

☞ It is reported at Washington, that suits will be commenced against Major Lally, Wally Thompson, and other recipients of the Gardiner claim money, wherever it can be directly traced.

☞ Recently, Mr. A. A. Sharer, formerly of Cleveland, sold in two hours and a half, in San Francisco, real estate to the value of $1,500,000, the largest sale of real estate ever made in the United States in one day.

☞ There were built in the United States in 1853, 269 ships, 95 brigs, 681 schooners, 391 sloops and clipper boats, and 272 steamers. Total 1,711; tonnage 425,572.49. Of the ships 132 were built in Maine.

☞ Persons writing to agents in the Departments on personal affairs, must pay the postage in future. An official notice from the State Department says that postage can be allowed on official matter only.

☞ The recent decision of the Supreme Court of the United States, in the case of the McDonough will, secures to the American Colonization Society about thirty thousand dollars per year for forty years.

☞ The Congregational Church in Brooklyn of which Rev. Dr. Lansing is pastor, will immediately proceed to the erection of a new house of worship, at cost, including the entire furnishing, of about $50,000.

☞ The first arrival for the season at Detroit took place yesterday. It was a small sized schooner, hailed with freight for the Great Western Railway depot. She came from one of the ports below.

☞ The House of Representatives of Illinois—Senator Douglas's State—have sustained his course in the matter of the Nebraska bill, by a vote of 30 to 21.

News Brevities.

—The Virginia House of Delegates has passed the bill for the suppression of small notes.

—On Lake Michigan, the boats are running between Chicago and Milwaukie.

—Thomas Devin Reilly, one of the Irish Exiles, died in Washington on Sunday night, week.

—The custom house valuation of the segars imported in the United States last year, was $3,311,35.

—Water has been let into the canal at Pittsburgh and shipping by it commenced today.

—The Himalaya left Malta for Southampton on the 7th ult., with the largest overland Australian mail ever known.

—Theodore Parker said in his anti-Nebraska sermon, that when we want a President, the South takes a piece of dough and makes one.

—More than two million boys in the United States are now attending the various institutions of learning in this country.

—The first cold cut nail in the world was made in 1777, by Jeremiah Wilkinson of Cumberland, R. I., who still lives.

—John Charles Gardiner, brother of Dr. Gardiner, who has been indicted for perjury, declares he will stand trial.

—Young gentlemen who dress in tight pants and bob-tail coats have received the appellation of "Shanghais."

—The three dollar gold coin, authorized by the last Congress, will be issued as soon as the dies now in progress are completed.

—The Hudson river is now open to West Point, and in about a week steamboats will commence running to Albany.

—The Sisters of Charity in Quebec are going to offer the building they occupy to the Government for the use of Parliament.

—Gov. Biegler has been re-nominated by the Pennsylvania Democratic State Convention, at Harrisburg.

—The bill for the sale of the public works of Pennsylvania passed the Senate of that State, on Tuesday, by a vote of 19 to 11.

—The insurance on the Government Buildings, according to the Quebec Mercury, turns out to be only £10,000, instead of £30,000.

—An enormous mouse, weighing 700 lbs., was killed last week by a lumberman on the Sebois River, Maine.

—Wilson, the Mayor of Montreal, who figured in the Garazzi riots, last June, has been re-elected to the Mayoralty.

—Fifteen hundred persons took the Temperance Pledge in St. Patrick's Cathedral, Montreal, on Sunday, the 19th February.

—The colored people at St. Catherines have recently held a meeting to devise means to ameliorate their condition.

—Deputy Sheriff Robinson was shot dead at Columbus, Ga., Feb. 28, by a man named Wright, whom he was attempting to arrest.

—Among the house-keepers in Philadelphia are 891 of the name of Smith, including 62 John Smiths.

—The General Land office gives notice that 76 military land warrants were stolen from the land office in Iowa City.

—Louis Napoleon has lately invested between seven and eight millions of francs in various public securities in New York city.

—Madame Goldschmidt (Jenny Lind) is not going to England this season, after all. The reason assigned is the prospect of war.

—The Gold-fever has broken out again in the Lower Province, and the precious metal is said to be found in abundance near Lake St. Francis.

—A great meeting in opposition to Nebraska, was held in Cincinnati, Tuesday night of last week. Prominent men of all parties took part in it.

—The Connecticut papers are publishing the name of Senator Toucey, with black lines around it, because of his vote for the Nebraska bill.

—There are 154 newspapers published in Illinois; of these, 20 are dailies. Chicago enjoys the publication of no less than thirty papers of every complexion.

—The French newspaper, the Journal des Debats, has only 9000 subscribers, yet it is estimated to be worth $280,000; 1-14th of it sold for $20,000 a short time since.

—On the night of March 6, the block of stone sent by the Pope of Rome as a contribution to the Washington Monument, was smashed to pieces by some unknown person.

—The amount of ice exported from Boston in the month of February, was 8,939 tons; nearly 5,000 of which went to New Orleans, and over 1,000 tons to the East Indies.

—The sixth volume of Mr. Bancroft's History, being the third volume of the 'History of the American Revolution,' will be published in March. The entire work will extend to nine vols.

—The discovery of a Greek conspiracy in the dominions of the Sultan has induced the French government to address a note, couched in strong terms, to the government of King Otho.

—Thirty-six northern members in the House are counted sure, say the Washington letter-writers, for the Nebraska bill. Many estimate that there will be a majority in its favor.

—Mr. Atchison is the author of the Clayton Nebraska amendment, which excludes slaves from ruling. Every other territorial bill allows them to rule.

—The Illustrated London News speaks of Nebraska Territory, says it is a tract of several millions of acres, recently purchased by the Americans from the king of Mosquito.

—The Chief Engineer of the New York Fire Department has made a statement, showing the amount of losses by fire in that city, during the past year, to be $5,000,000.

—The uniformed militia of the State of New York numbers 19,856 men, and un-uniformed 293,457—total 313,313 men. Quite a snug little army.

—Prosecutions under the Maine law are of daily occurrence in Boston. The fine, costs and $1000 bonds were imposed upon three liquor dealers on Tuesday, week.

—A Nebraska Expedition has been organized in Chicago. Over one hundred have signed the roll, and others are expected to go. The expedition starts April 1st.

—Dr. B. D. Carpenter relates in the Medical Times two cases of tetanus successfully treated by the application of ice to the head and the whole length of the spine.

Literary Notices.

LIFE ON THE PLAINS AND AMONG THE DIGGINGS; being Scenes and Adventures of an Overland Journey to California: with particular Incidents of the Route,—Mistakes and Sufferings of the Emigrants,—the Indian Tribes,—the Present and Future of the Great West. By A. DELANO. Auburn and Buffalo. MILLER, ORTON & MULLIGAN.—1854.

Such is the comprehensive title of a volume of nearly 400 pages, issued in the best style of its enterprising publishers. Though the successor of several works, by different authors, on similar topics, it embraces many facts and deductions entirely new—while the prominent scenes and incidents described are of absorbing interest. Some of the author's trials and adventures on the road—or rather where there was no road—forcibly remind us of the tribulations and amusing mishaps related in "Yusef—a Crusade in the East." The volume will well repay a careful perusal by all interested in the subjects indicated in its title, and prove especially valuable to those seeking information thereupon.

THE LIFE OF MARY, QUEEN OF SCOTS. By P. C. HEADLEY, author of "Life of the Empress Josephine," etc.—Auburn: DERBY & MILLER.—1854.

In his preface to this volume of some 400 pages, the author remarks that "the universal interest fell in the romantic and tragical career of MARY STUART, seemed to demand an American biography, adapted to the popular mind"—and adds that "such a work the one now offered to the public was designed to be." A perusal of some portions of the volume, and glance at others, incline us to believe the author's object has been attained,—though we have not examined the work sufficiently to express an opinion upon the merits of his performance as a whole.

MAGAZINES AND PERIODICALS.—We have omitted to mention of late several choice monthlies which are always welcome to the "table" and family circle. Prominent among these are *Putnam's Monthly*, which fully sustains its vigor and originality—*The Knickerbocker*, always well freighted with readable papers, and the choicest "table" knick-nacks—*Graham*, and *Godey*, each improving in intrinsic value and usefulness of contents—and the *National Magazine*, and *Ladies' Repository*, superior in the class of Moral and Literary Magazines. The one last mentioned is by no means the least in our estimation—for we regard it as fully equal, especially in variety and purity of contents, to any of its contemporaries, and superior to many for family reading. DEWEY and McMANUS are agents for most, if not all, the above, in this city,—and they may be obtained of periodical agents generally throughout the country.

The Phrenological Journal,—edited by Messrs. O. S. and L. N. FOWLER, *the* Phrenologists of America, and published monthly by FOWLERS & WELLS, New York, at $1 a year,—is as well filled and interesting as ever. All interested in Phrenology will find this able exponent of the science worthy their attention.

The Water Cure Journal—published as above, and at same price—is the standard in its sphere, and as such we commend it to all inclined to the Water-Cure faith or practice, or who wish reliable information on that and kindred subjects. It is ably conducted—abounding in vigor and spice—and, like the above named journal, profusely illustrated, and beautifully printed.

Arthur's Home Magazine for March is a capital number of a very commendable work. It improves from month to month in both matter and illustrations, and merits the popularity it is attaining. T. S. ARTHUR, Phila.,—$2 per annum.

California News.

Arrival of the Steamship North Star.

THE steamship North Star, Capt. Miner, arrived at New York March 11, from Aspinwall, whence she sailed on the 3d inst., with the passengers who left San Francisco on the 16th ult. in the steamship Uncle Sam. The passage has thus been made in a trifle over twenty-two and a half days, which is quicker than ever before performed by the Panama route.

The steamships George Law and El Dorado were at Aspinwall, and would sail on the arrival of the mails. The U. S. sloop-of-war Cyane, Commander Hollins, from Caledonia Bay, January 27, arrived at Aspinwall on the 1st instant—officers and crew all well.

The steamship California left San Francisco on the afternoon of the 16th ult. for Panama, with the California mails. She was detained to give parties an opportunity to answer letters which left New York on the 20th January, and arrived at San Francisco in the steamship John L. Stephens on the 14th ult.

The steamship Golden Gate, an account of the disaster to which we gave in the last news from California, arrived at San Francisco on the 3d February, having made her way up with one paddle wheel. She would soon be repaired, and resume her place.

Another proposition to remove the capital to Sacramento has been introduced and lost.

The Prices Current says that three vessels have been wrecked since 1850, when entering the harbor, and that the total loss has been $1,500,000. That paper recommends that a steam tug should be used by all vessels entering the harbor from abroad.

During the fortnight there have been 110 arrivals of vessels at this port. Of these 14 were from American ports on the Atlantic, 8 of which were clippers; 25 were from foreign ports, of which five were from Europe, and three from China; 18 were steamers and 41 coasters.

The Chinese immigration has again commenced. In the three vessels from Hong Kong 809 Celestials have arrived.

The clipper ship Sun Francisco, of 1,400 tons, 105 days from New York, was lost under the charge of a pilot, upon the rocks at the entrance of San Francisco harbor, on the 8th. The freight list of the San Francisco amounted to $60,000; her cargo was valued at about $200,000. She was sold, cargo and ship, at auction, on the 10th, for $12,100, the wreck has gone entirely to pieces, and only a small part of the cargo, to the amount of about $15,000, was saved.

Foreign Intelligence.

Arrival of the Atlantic.

THE Atlantic arrived at New York, March 7th. 3,000 troops have embarked from Liverpool.

The Greek insurrection has gained a formidable headway, 6,000 men being under arms in Epirus, Macedonia, and Thessaly.

It is stated that if Austria does not immediately declare herself, France will form an army of 10,000 men on the Italian frontier; The same on the Rhine, and send a force to operate in Italy. This statement is believed to be authentic. Great enthusiasm in favor of war, was arising in Great Britain.

LONDON, Feb. 22.—Authentic advices from St. Petersburgh, state that another warlike manifesto had been issued, levying nine men per thousand till the 15th of April.

The latest from Constantinople announces that the Russian fleet had bombarded Batoum, but withdrew without effecting much mischief, and that Rustchuck was bombarded on the morning of the 10th of February. The Turks were taken by surprise, and one of their steamers was much damaged, and six large vessels and several smaller craft rendered unserviceable.

Col. Spence, U. S. Minister, arrived at Constantinople on the 2d, in the Saranac. The same evening, the Hungarian and Italian emigrants gave him a serenade.

The Saranac and Levant were to proceed shortly on a cruise in the Black Sea. The firman for the passage of the Bosphorus was already granted.

Intelligence has been received in London, that two Russian frigates were cruising off Madeira.

All the Turkish Consuls in Russia, have been obliged to give up the *exequater* granted to them. Turkish subjects have been placed under the protection of Austrian agents.

A letter from Paris states that the reply of the Czar to Napoleon's letters, is couched in terms so offensive to Louis Napoleon himself, that it has been decided not to publish it.

Letters from Constantinople state that a legion of Jews has been formed and placed at the disposal of the Sultan.

A dreadful colliery explosion had taken place at Inchall, near Wagan; 100 men were killed.—The Lord Chamberlain has notified Mr Buchanan that he may appear at Court in any costume he likes.

MARKETS.—Liverpool breadstuffs were rising. Brown, Shipley & Co., quote wheat advanced 2d and flour 6d. Corn, rather more doing, but quotations unchanged.

Arrival of the Steamer Asia.

THE Asia from Liverpool, February 25, arrived at Halifax March 8, and reached her dock at East Boston March 10. No military or naval action of special interest had occurred since the sailing of the Atlantic, but political events of the highest importance are becoming developed.

A significant announcement appears in the *Moniteur*, saying "if the flags of France and Austria are united in the East, France will not permit any attempt to separate them beyond the Alps." This is regarded as an encouragement for Austria to declare herself on the side of the allies, and a threat to raise Italy and Hungary, if she sides with Russia.

England has formally notified the Prussian Government of her intention to send a fleet to the Baltic, and that Admiral Napier is appointed to the command. The Russian fleet in the Baltic, has been ordered to fit for sea. The allied fleet remained in the Bosphorus with cruisers in the Black Sea.

Austria continues to send troops to the South Eastern frontiers. The Greek insurrection grows more formidable.

The Paris 'Moniteur' says, "France cannot suffer the integrity of the Ottoman Empire to be broken by Greece," and further, that "France discountenances present attempts at revolution anywhere." The announcement is received as official, and important. Meanwhile the attitude of Austria, although hesitating, is becoming more and more favorable to the Allies. It was even said that she had announced her intention of formally joining with the Allies, if Russia continues aggressive acts against Turkey. This is probably a premature announcement, but it gave firmness to the funds. At the same time Austria continues to send troops to the south eastern frontier, but to allay apprehension a manifesto is about to appear, stating that Austria continues efforts in favor of peace, and the troops are merely to prevent disturbance spreading to Servia, Montenegro and Bosnia. The attitude of Prussia remains unchanged and unexplained.

From the Danube, the accounts represent both parties as preparing for a battle. The Russians had failed in the attempt to turn Omar's position.

From Asia there is nothing new.

Joseph Sturge and the Peace Deputation, had a friendly interview with the Czar.

A despatch from Persia says the Shah has officially announced to the Foreign Representatives that he will remain neutral in this war.

Lord Palmerston, in answer to a question, replied that Smith O'Brien, having acted as a gentleman in refusing to escape at the expense of breaking his parole, is to be pardoned.

Mr. Buchanan was present at the Queen's Levee.

A recent letter written by Mr. Daniel, to the Richmond, Va, Examiner, excites great annoyance at Turin, and threatens him with a duel.—The letter is copied in Gallagnani's Messenger.

It is reported in Paris that Lord Raglan, Prince George, and other distinguished officers of the English army, for the east, would pass through the city to Marseilles, and thence embark for Malta.

A private letter dated Athens, Feb. 9, describes the intense excitement existing among the Greeks. On that day, 100 students of the University called in a body upon King Otho, and demanded to be led against the Turks, and urging an alliance with Russia. On the 10th of February, the students of nearly all the schools in Athens determined to volunteer, and commenced selling their books and personal property for arms and ammunition. Large sums were being contributed by private citizens, one having given one hundred and seventy-five thousand dollars for the arming of volunteers. The King appears to be entirely powerless, so determined are the people on war against Turkey.

Liverpool Markets.—Breadstuffs have partially receded from the advance by the Atlantic, closing at an advance on the week of 6d on flour, 2d on wheat, 1s on corn.

Richardson Bro's quote western canal flour 41s 6d; white wheat 12s 3d a 12s 9d a 13s; red 11s 9d a 12s 3d.

Yellow Corn, 47s@48; White, 48s6d.

Beef firm, tending up. Pork dull. Lard easier. Bacon in good demand at full prices. Ashes unchanged. Consols unchanged.

Commercial.

BUSINESS AND FINANCE.

THE finance report this week is the dullest of the season; no specie has been shipped abroad, and not a dollar received from California. The Aspinwall steamer, North Star, arrived at New York on the 11th, with no specie or dust on board, a circumstance quite unusual in a California return steamer. No merchandise or freights of any kind being returned in exchange for the enormous amount of goods and produce, sent forward from the Atlantic States, we naturally expect a remittance of gold in return therefor. The mining interests have been very much depressed owing to a scarcity of rains; but the latest accounts are more favorable, and the miners are reported as doing well. We may expect gold remittances by the next arrivals of California steamers.

The coinage of England, France, and the United States, during the year 1853, was as follows:

Gold	£35,644,763
Silver	3,075,646
Copper	107,427
	£38,725,836

The funds in the New York Sub-Treasury continue to accumulate, the balance being now $7,781,134.

The whole amount in the Treasury is very large, but if the GADSDEN Treaty with Mexico is confirmed, and the Meadillvalley purchased, (which is not improbable,) it will deplete the Treasury to the tune of some *twenty millions*.

Market Intelligence, &c.

RURAL NEW-YORKER OFFICE, Rochester, March 15, 1854.

THE markets in essential particulars are nearly identical with those of last week. Breadstuffs unchanged, but the sales of flour at quotations are merely for home consumption.

Oats are scarce and higher, and are now selling at 42 to 44c. Mill feed also scarce and quoted at 20@25c.

Butter has declined a penny per pound on wholesale prices, and Eggs three to four cents per dozen now bringing 14c.

Present appearances indicate an early resumption of navigation and an increased activity in business attendant thereon.

Rochester Wholesale Prices.

Address I. W. BRIGGS,
219-1t West Macedon, N. Y.

THE PEOPLE'S PATENT OFFICE.

THIS well known establishment is still carried on under the personal superintendence of its founder, ALFRED E. BEACH, by whom all the necessary drawings, specifications, and documents, for Patents, Caveats, Designs, Foreign Patents, &c., are prepared with the utmost fidelity and dispatch, on very moderate terms.

Persons wishing for advice relative to Patents or Inventions, may at all times consult the undersigned *without charge*, either personally at his office, or by letter. To those living at a distance, he would state, that all the needful steps necessary to secure a Patent, can be arranged by letter, just as well as if the party were present, and the expense of a journey be thus saved. When parties wish to be informed as to the probability of being enabled to obtain Patents, it will be necessary for them to forward by mail a rough outline sketch and description of the Invention. No fee or charge is made for such examinations.

All consultations and business strictly private and confidential.

Models from a distance may be sent by express or otherwise.

For further information apply to or address, post-paid,
ALFRED E. BEACH,
[219-4t] Solicitor of American and Foreign Patents.
People's Patent Office, 36 Nassau Street, New York.

No. 1 SUPERPHOSPHATE OF LIME.

THIS valuable fertilizer has been used for several years in England and other parts of Europe, and, next to Guano, holds the highest rank in popularity, and the extent to which it is used among farmers. Its introduction in this country has been more recent; but the progress it has made in the estimation of the public has not been less marked or successful than abroad. It is now extensively used throughout the Northern States, after a full trial and investigation of its merits; and it is rapidly becoming, like its predecessor, Guano, a favorite manure at the South and West.

It is composed of crushed or ground bones, decomposed by the addition of about one-fifth their weight of sulphuric acid, diluted with water, to which is added a due proportion of guano and sulphate of ammonia. The latter is the active and one of the most efficient agents in the best Peruvian Guano.

It is suited to any soil in which there is not already a full supply of the phosphates, which is seldom the case.—All crops are benefited by its application.

For sale in large or small quantities, in bags of 150 lbs. each. No charge for packages. All bags will be branded "C. H. Dellurg, No. 1 Superphosphate of Lime."

PERUVIAN GUANO of best quality.

AGRICULTURAL and HORTICULTURAL IMPLEMENTS of all kinds.

FIELD and GARDEN SEEDS, of various sorts, fresh home-grown and imported.

THE AMERICAN AGRICULTURIST—weekly, $1 per volume—two volumes a year.

For sale at R. L. ALLEN'S Agricultural Warehouse and Seed Store, 189 and 191 Water st., New York. [219-13tow

and will be an elegant 12mo volume of 472 pages, with four illustrations designed by Coffin, and engraved by Orr and others. Price, $1,25.

☞ Dealers desiring a supply from the first edition, will do well to send in their orders at once, as the demand for the book is already very large.

All orders should be addressed to
MILLER ORTON & MULLIGAN,
219-1t Publishers, Auburn or Buffalo.

A RARE CHANCE FOR WESTERN FARMERS.

I SHALL offer for sale at auction on the first day of June, on my farm, in Ripley, about 30 head of Improved Shorthorns, males and females. My stock were bred from the choicest herds in England and the United States. The females will be in calf by my imported bull Hannibal 2d, a part of the young stock are of his get. In regard to Hannibal, I think I can safely say, there is not his superior in the United States. He has combined in him ¾ each, of four of the best Lords in England—the Earl of Carlisle and that of Sir Chas. Knightly, Bt. L, on one side, and Earl Spencer and Duke of Kirklevington, on the other. My farm is but few minutes walk from either Quincy or State line Stations, on the Buffalo and Lake Shore Railroad.—Any one wishing any further information in regard to the stock, can address me at Ripley, Chautauque Co., N. Y.

Catalogues will be ready about the middle of April.—Terms of sale, one-half cash in hand, balance in 6 months, with good paper. HENRY A. PRENDERGAST.
219-11-m2t

FOR SALE,

YOUNG SPLENDOR, a pure Short-horn Bull, of good pedigree and fine fashion, two years old. Those acquainted with Old Splendor, his sire, and his reputation as a getter of excellent stock, can fully appreciate the true value of Young Splendor, which is a perfect picture of the old bull. For further particulars inquire on the premises, ¾ mile north of Seneca village, Cayuga Co., N. Y., of
219-11* HENRY FECLOUS.

218-4t R. L. ADAMS, Lyons, N. Y.

LARGE CLOVER SEED.

MANY Farmers may not be aware that the towns of Pompey and Lafayette, in the County of Onondaga, raise considerable quantities of Large Clover Seed! This kind of clover is of the very largest sort, and extremely valuable for manure. I have been in business in this place ten years. I obtain my clover seed of reliable farmers of long acquaintance, have my seed guaranteed in writing, and I warrant every bushel the Large kind. I challenge any man to produce the evidence, that I have deceived him by selling him small seed for large in these ten years. All orders supplied at the lowest market rates. E. J. FOSTER.
Syracuse Agricultural Warehouse and Seed Store
March, 1854. 218-4t

SOON IT WILL BE TIME TO PLANT!

AT the Rochester Seed Store, opposite the Arcade, Buffalo Street I can supply all kinds of Seeds, and the implements usually wanted by the farmer or gardener. I have Seeds of my own growing; also those of my own importation from England, France and Germany, which I will sell at as low rates, as can be had in this country, both at wholesale and retail.

Clover Seed.—Medium from Ohio, and the large kind grown in this county, at market prices.

Timothy Seed—from Wisconsin, at market prices.

Peas.—Large Marrowfat—Early Washington—Early Kents, (the earliest variety)—Early Prince Albert, (imported)—Blue Imperial (imported)—and all the other varieties worth cultivating, by the bushel or quart.

Beans.—Lima—China Red Eye, &c.

Corn.—Stowell's Evergreen Sweet Corn, at 50 cents per quart.

Poland Oats—At $1,25 per bushel.

Mexican Potatoes—of my own raising, at $4 per barrel delivered at the Rail-Road.

Osage Orange.—New seed, just from Texas, at $16 per bushel, or 75 cents per quart.

Orders by mail, enclosing the money, will be promptly attended to. The seeds forwarded without delay, or the money returned. JAMES P. FOGG.
Rochester, March 8, 1854. 218-6t-eow

LIVE STOCK AGENCY.

IN compliance with repeated solicitation, the subscriber offers his services for the purchase of Horses, Cattle, Sheep, Swine and Poultry. His long acquaintance with different breeds and *breeders* of these animals, gives him superior facilities for procuring the best. SANFORD HOWARD.
Office of the Boston Cultivator,
Boston, Mass., March 1, 1854. 218-6tw-3tm

FARMS FOR SALE.

THE subscriber offers for sale three farms; one of 115 acres, one of 100 acres, and one of 58 acres,—all pleasantly located within one mile of the village of Mount Morris, Liv. Co., N. Y. They are all so situated that they can be occupied as one farm. Two of them have excellent dwelling houses and barns in good condition, with orchards of the choicest fruit.

The soil is of the best in Livingston county. Terms of payment easy, and to suit purchasers. A small portion of the purchase money will be required in cash.

ALFRED ACADEMY,

A FIRST CLASS MALE AND FEMALE SEMINARY.—Its location on the New York and Erie Railroad, two miles from the Alfred Depot, is romantic, retired and healthy. The course of instruction is divided into ten departments, with an experienced Professor at the head of each. The edifice containing the chapel, recitation, society and library rooms, is one of the largest and finest school structures in Western New York. The supervision of the students is parental, and well adapted for securing their highest intellectual and moral discipline. The next term commences Wednesday, March 29th. Expenses moderate. For circulars, apply to
217-3t W. C. KENYON, J. M.
Alfred Centre, Allegany Co., N. Y., Feb. 20, 1854.

PURE WINE—MEXICAN POTATO.

PURE Juice of the Grape is offered by the subscriber, for medicinal and restorative purposes. City physicians may depend on its purity, and recommend it to their practice, with entire safety. Price, $1 per bottle.

Also, the Mexican Potato for sale, at $4 per barrel. The Mexican potato is becoming too well known to spend money on a long advertisement. Its excellence and delicate flavor, together with its productiveness, will merit your highest expectation, being a beautiful white color, and kidney shape. Address or apply to
H. N. LANGWORTHY,
19 South Washington st., Rochester, N. Y.
Feb., 1854. 217-3t

LAND PLASTER

AT Canandaigua, Victor, and Fisher's Railroad Depots. The subscriber has on hand at each of the above Railroad Stations, 500 tons of pure, fresh ground land Plaster.—Farmers can depend upon getting their Plaster at the above places, of a superior quality and not kiln dried.
217-3m. JIREH ROWLEY.

A VALUABLE FARM FOR SALE.

THE Subscriber offers for sale his Farm, consisting of 50 acres, on which is a good Dwelling House, Barn, Sheds, and other necessary out buildings. An abundance of all kinds of fruit, and under good improvement. Situated in the Town of Pultney, Steuben Co., N. Y., eighty rods from the west bank of Crooked Lake, and 2¾ miles from the Village of Branchport. A part of the purchase money will be required down, the balance on time to suit the purchaser.

For further information inquire of S. BOOTH, Branchport, or the subscriber on the premises.
DAVID W. MILLER.
Pultney, Feb. 1st, 1854. 214-tf

KETCHUM'S MOWING MACHINE.

THIS machine stands without a successful rival, *as the mowing machine of the age.* The supply will not be equal to the demand. If any person desires one for the coming season, they cannot speak too soon. The uniform price at Buffalo is $110,00. All who will forward us an order accompanied with the cash or satisfactory reference, may depend upon being faithfully served with a machine in good season. H. C. WHITE & CO.,
Buffalo Ag. Warehouse and Seed Store, 11 & 13 West Seneca street, Buffalo, N. Y 211tf.

BUFFALO AGRICULTURAL WAREHOUSE AND SEED STORE.

NOS. 11 & 13 WEST SENECA STREET, BUFFALO.—*Hiram C. White & Co.*, successors to Mason & Lovering, wholesale and retail dealers in all kinds of Agricultural Implements and Machines, Field, Garden and Flower Seeds; Fruit and Ornamental Trees, Shrubs and Flowers; Oriental Poultry, &c. Also, Agents for the Boston Belting Company's Vulcanized India rubber goods, Belting, Hose Packing, &c., &c.

Orders solicited, all of which shall receive prompt attention at lowest market rates, and all articles warranted as represented. WILLIAM C. WHITE & CO.
HIRAM C. WHITE. [1853.] AMASA HARRIS.

THE HORTICULTURIST.

AND JOURNAL OF RURAL ART AND RURAL TASTE.—The Horticulturist is a Monthly Journal, devoted to Horticulture and its kindred arts, Rural Architecture and Landscape Gardening. It is edited by P. BARRY, late Horticultural Editor of the Genesee Farmer, and author of that popular work, "The Fruit Garden." To those who cultivate Fruit and Flowers, this work is indispensable, as it contains full directions for cultivation, as well as every thing new on the subject, either in this country or in Europe.

The Horticulturist is beautifully printed on the best paper, with costly illustrations on wood and stone. It contains 48 pages, without advertisements, and each number has a full page engraving, on stone, of some rare fruit or flower, drawn from nature, by the best living artist in the line.

TERMS.—Two Dollars Per Annum, in Advance. A discount of twenty-five per cent. allowed to agents. Postmasters and others are invited to act as agents, to whom specimen numbers will be sent, free of postage, on application to JAS. VICK, Jr., Publisher, Rochester, N. Y.

P. S.—A new volume commences on the first of January. January 1, 1854

FARM FOR SALE.

SITUATED in the town of Conquest, 4 miles north west of Weedsport, and 3½ from the Rochester and Syracuse direct railroad. Said farm contains 103 acres, 140 improved, and in a good state of cultivation, and well adapted for all kinds of produce, and well situated for two farms if desirable, as there are two houses, two barns, two orchards of good variety of fruit trees, and a wood lot on each end of the farm; 30 acres of wheat on the ground, and 50 is seeded to clover and timothy. Half the purchase money to be paid when possession is given, the remainder on bond and mortgage to suit the purchaser. Price, $55. For further particulars inquire of the subscriber on the premises.
Weedsport, Cayuga Co., N. Y., 213-tf. B. EAKER.

THE RURAL FOR 1854.

As heretofore announced, the Fifth Volume of the RURAL NEW-YORKER, for 1854, will be materially improved, the Proprietor having determined that it shall in all respects excel either of its predecessors, and all contemporary journals. He also offers greater inducements than ever before to each and all disposed to act as agents or form clubs. The attention of all interested is respectfully invited to the following list of very liberal

PREMIUMS FOR SUBSCRIBERS!

1. SEVENTY-FIVE DOLLARS, IN CASH, to the person sending us the greatest number of yearly subscribers (six month subscriptions to be counted proportionally) to the RURAL NEW-YORKER—remitting payment according to our club terms—previous to the 15th of April, 1854.

2. FIFTY DOLLARS, IN CASH, to the person sending us the second largest number, as above.

3. THIRTY DOLLARS, IN CASH, to the person sending us the next (third) greatest number.

4. TWENTY DOLLARS, IN CASH, to the person sending us the next (fourth) greatest number.

5. FIFTEEN DOLLARS, IN PLATE OR BOOKS, to the person sending the next (fifth) greatest number.

6. TWELVE DOLLARS, IN PLATE OR BOOKS, to the person sending the next (sixth) greatest number.

7. TEN DOLLARS, IN PLATE OR BOOKS, to the person sending the next (seventh) greatest number.

Poetical.

[Written for Moore's Rural New-Yorker.]

INVOCATION TO SUMMER.

BY WM. H. C. KNOWLES.

Come gorgeous summer, come once more!
Come in those fields and plains below,—
Too long already have they slept
Beneath their covering of snow.
Spread out thy mantle here of green,
Thy carpet on the meadows now;
And hang thy golden trellage here,
Once more upon the orchard bough.

Come from thy southern orange bowers,
And wake again these frozen rills;
Too long already have they slept
Beside our northern snow-clad hills.
And with the sunshine and the rain,
The fruits of the forest bring;
And fragrant breezes, such as wall
And follow in the train of Spring.

Come gorgeous Summer, come once more!
Come in the melody of song,
And thrill with music now these groves,
Which have been sad and still too long.
Come with thy warmth and gentle glow,
And revel in the Winter's track;
And bring thy garlands here again,
And call thy treasured sweetness back.

Gather thy beauties and thy wealth,
The surplus of thy southern bowers;
These barren wastes have need of all,
And thy rich livery of flowers.
Then will the sunshine on the hills
Gaze smilingly adown the plain,
And see, where once were wastes of snow,
Wide-spreading fields of golden grain!

Rural Sketch Book.

AUTOBIOGRAPHY OF A KATY DID.

BY MISS CATHERINE E. BEECHER.

I am a young lady of family and fortune; my name is Katy Did. I have a sorrowful tale to relate, to the young friends who read this sketch, which will teach them the evil effects of a habit of contradicting, which they have so often been told is ill-mannered, ill-bred, unlady-like, and ungentleman-like.

I am the only child of a distinguished family of the Katy Dids, whose musical talents are so well known in the forest world. I was born on the top of a very high tree, and ever since that time I have heard from all my friends, that there never was such a beautiful, lively, interesting little creature as I am. Indeed I think I must be very lovely, for every one around me has always told me so, and seems to consider that it is more important to gratify my wishes, than to do anything else.

My father and mother are both very amiable and intelligent people, and I know of no fault in their character, except a most inveterate habit of contradicting. So singularly persevering are they in this practice, that when some dispute has arisen as to whether I have, or have not done a certain thing, I have known them to sit up all night to contradict each other.

My father would sit on a pine-tree, and say "Katy did," and my mother would sit on a maple-tree and say "Katy didn't," from sunset until sunrise, and then after resting through the day they would begin again, and continue on through another night.

Considering the example set before me, it is not singular that I should have acquired the same pernicious habit which, as I am about to show, has proved so serious a misfortune.

When I arrived at the age of eighteen months, the period at which we Katy Dids "come out," as the fashionables have it, there was a great excitement among all my friends and relatives, as to the most suitable mode of celebrating so important an event. It was finally concluded, that it was best to give a splendid ball, to which all the gentlemen and lady insects in the vicinity should be invited. Great preparations were accordingly made for the occasion. The place selected for the *fete*, was a sweet nook, under a flowering hawthorn, one beautiful moonlight evening.

The most genteel and fashionable spiders were employed to weave the silken tapestry, and all the glow-worms and fire-flies went in their brilliants to ornament the room. The brass band, consisting of sixteen negro crickets, were engaged to furnish the music, and every other arrangement was in the same style of elegance and splendor.

As for myself, all the mantua-making silk worms were busy for a month beforehand, in gossiping, and planning the style of my dress for the evening. It was finally agreed that a light pea-green satin, ornamented with silver, would best accord with the time, place, and occasion.

I feel some hesitation in mentioning the fact, but the truth is, there was a gentleman in the vicinity who had for several months paid me the most flattering attention, and by the smiles and whispers of my friends, (for I cannot mention what were the whispers of the young gentleman,) I was led to believe that when my father selected him for my attendant on this occasion, there was some probability of an event which my refinement prevents me from mentioning. The name of the gentleman was Col. Bumble Bee. He was a most elegant and portly looking person, and generally wore yellow small clothes and yellow kid-gloves; and though his voice was rather husky you have no idea what soft and beautiful things he could say.

The eventful evening at length arrived, and such a brilliant and delightful scene my youthful eyes never beheld. I was ushered into the room with great ceremony by the Colonel; and my entrance produced no little sensation, and many were the whispers of admiration or of envy that reached my ear.

Soon after I was seated the dancing commenced, when I was led to the head of the figure by the Colonel, while my friends Miss Anna Letitia Butterfly and her partner, the elegant General Hornbug, took the second place. You would have been charmed to have seen how elegantly the company appeared, and how gracefully they danced. To be sure, there were some exceptions. There was one Mr. Devil's Darning Needle that sprawled about sadly, and made much annoyance in one of the cotillons; and Old Father Long Legs, after one unfortunate attempt, was content to stow up his legs in a corner, where he spent most of the evening in chatting with old Miss Spider.

Young Dr. Grasshopper was very much admired for his graceful and sprightly dancing, as were also the two Misses Fly, particularly Miss Encline Horse Fly. But there were two little fellows, dressed in black, that made great amusement for us. They were the most nimble, active dancers I ever saw; one could scarcely catch a glimpse of them, for, as Paddy says, "when you put your hand on him, he's not there." They were the two Mr. Fleas, who I afterwards learned were resident graduates in an adjacent university. Professor Lightning Bug, of the same institution, also honored us with his presence, and I had the pleasure of dancing with him. There was one clergyman there, who every one seemed to think was decidedly out of his place; it was the Rev. Mr. Beetle. He looked very much interested in all that was going on, but out of respect to his cloth declined dancing.

But now comes the most painful part of my story. As we were in the midst of our enjoyment, I noticed the entrance of a stranger.—He seemed to find several acquaintances, and very soon one of them presented him to me as Mr. Katy Didn't. Shortly after, I heard him making some ill-natured remarks respecting me, and finally he observed that "though a cousin of his, Katy didn't treat him with even common civility when introduced to her." Without thinking where I was, I instantly retorted, "Katy did." He faced full about, and staring me in the face, repeated, "Katy didn't." "She did," said I. "She didn't," said he. By this time my friends were all around me; great uproar ensued; Col. Bumble Bee drew his dirk, and had it not been for the interference of friends, blood would have been shed on the spot. As it was, such high words ensued among the gentlemen that the ball was broken up, and we all returned home with vexation and chagrin.

The next day the friends of the conflicting gentlemen had a meeting, and it was universally agreed that it was an extremely proper occasion for a duel, and as one had occurred among the statesmen in the American Congress, the gentlemen concluded that they should find a model for doing up the thing in the most approved style of chivalry. A committee was appointed to examine the various newspaper accounts of the congressional duel, and to report as to the most suitable method of proceeding. But these documents relating to the method of proceeding adopted by American statesmen not a little puzzled the insects. For, contrary to all other proceedings of the kind, they found that the gentleman who felt his honor insulted was *not* the challenger, and had nothing to do with the affair. After pondering over the affair for some time, they finally concluded, that according to this model, it is of no consequence who fights, provided somebody is killed, and provided the gentleman particularly aggrieved keeps out of the line of danger. Upon this, Colonel Bumble Bee declared, that he was particularly ambitious to fight, and especially as it was in the cause of a lady whom he so highly esteemed, and if it were necessary in order to secure his wishes that he should *not* be the person aggrieved, he was ready to declare that he had no cause or occasion at all for fighting any gentleman under heaven.—Upon this it was decided, that according to the high precedent before them, Colonel Bumble Bee was a suitable person, according to his declaration, to send the challenge. The next question was, who should *receive* the challenge, and as Mr. Katy Didn't had declared that he *had* felt himself aggrieved, it was decided that he ought to keep himself entirely out of the affair. Upon this the elegant General Hornet came forward, and in the most dignified and graceful manner, offered his services, saying that he should be extremely happy at any time either to kill or be killed, in the cause of so fair a lady as Miss Katy.

The day for the duel was then appointed, and all the gentry in the vicinity assembled to witness the chivalrous display. As soon as the gentlemen duelists appeared on the ground, they made many demonstrations of civility and good feeling. General Hornet, laying his claw on his heart, declared in the most interesting manner, that he had not the least feeling of ill-will towards his respected opponent, and that whatever might be the result of the present encounter, he trusted that gentleman would accept the homage of his high consideration. Colonel Bumble Bee, bowing in the most graceful manner, made similar protestations. The seconds then bowed to the company around, shook hands with each other, and then proceeded to mark out the ground, while Dr. Grasshopper arranged his surgical instruments and bandages.

At the word of command the combatants engaged. The conflict was truly awful. For a long time victory hung in suspense. At last it was manifest that Colonel Bumble Bee had received a mortal wound, for he ceased all efforts at defence. Immediately General Hornet called to aid Dr. Grasshopper, but it was soon manifest that all such instrumentality was too late. General Hornet then most tenderly inquired of his dying antagonist, whether there was anything he could do that would afford him any comfort or satisfaction. The Colonel raised his dying eyes, and replied that he had but one wish to express. "Let me hear it," said the gallant general, "and I will fly to the farthest verge of the green earth, rather than that it should be unfulfilled." The colonel, then, in the most touching manner, stated that he was dying that he might be able to vindicate the honor of the loveliest of ladies, and as his antagonist now stood in the place of the one who had given the offence, he wished him, in the presence of the assembly, to retract what had been said. "Certainly," exclaimed the general, "it is with the greatest pleasure and satisfaction I here declare that Miss Katy, when she said 'she did,' spoke simply and only the truth." Upon this Colonel Bumble Bee turned upon one side, and closing his eyes, exclaimed, "I die content," and immediately expired.

The assembly then retired, overwhelmed with grief and admiration at this interesting scene. The next day, at the general Congress of Bugs, it was unanimously voted to attend Colonel Bumble Bee's funeral, and in testimony of their high respect for his memory, that each member should wear a black string on the left leg for thirty days.

For myself, I have ever since felt very melancholy, and in while away my leisure hours I have employed myself in preparing this history of my misfortunes. Let me then conclude, by entreating all my young friends to shun the fault, that they may escape the misfortunes of their sorrowful friend—Katy Did.

THE EXECUTION OF MAJOR ANDRE.

The principal guard-officer, who was constantly in the room of the prisoner, relates that, when the hour of his execution was announced to him in the morning, he received it without emotion, and while all present were affected with silent gloom, he retained a firm countenance, with calmness and composure of mind. Observing his servant enter the room in tears, he exclaimed, "Leave me till you can show yourself more manly." His breakfast being sent to him from the table of General Washington, which had been done every day of his confinement, he partook of it as usual; and having shaved and dressed himself, he placed his hat on the table, and cheerfully said to the guard-officers, "I am ready at any moment, gentlemen, to wait on you." The fatal hour having arrived, a large detachment of troops were paraded, and an immense concourse of people assembled; almost all our general and field officers, excepting his excellency and his staff, were present on horseback; melancholy and gloom pervaded all ranks; the scene was affecting and awful.

I was so near during the solemn march to the fatal spot, as to observe every movement and participate in every emotion which the melancholy scene was calculated to produce.—Major Andre walked from the stone house in which he had been confined, between two of our subaltern officers, arm in arm; the eyes of the immense multitude were fixed on him, who, rising superior to the fear of death, appeared as if conscious of the dignified deportment which he displayed. He displayed no want of fortitude, but retained a complacent smile on his countenance, and politely bowed to several gentlemen whom he knew, which was respectfully returned. It was his earnest desire to be shot, as being the most conformable to the feelings of a military man, and he had indulged the hope that his request would be granted.—At the moment, therefore, when he came suddenly in view of the gallows, he involuntarily started back, and made a pause. "Why this emotion, sir?" said an officer by his side. "I am reconciled to my death, but I detest the mode."

While waiting and standing near the gallows, I observed some degree of trepidation—placing his foot upon a stone and rolling it over, and choking in his throat, as if attempting to swallow. So soon, however, as he perceived that things were in readiness, he stepped quickly into the wagon; and at this moment he appeared to shrink; but, instantly elevating his head with firmness, he said, "It will be but a momentary pang;" and, taking from his pocket two white handkerchiefs, the provost marshal with one loosely pinioned his arms, but with the other the victim, after taking off his hat and stock, bandaged his own eyes with perfect firmness, which melted the hearts and moistened the cheeks, not only of his servants, but of the throng of spectators. The rope being appended to the gallows, he slipped the noose over his head, and adjusted it to his neck without the assistance of the executioner. Colonel Scammel now informed him that he had an opportunity to speak, if he desired it. He raised the handkerchief from his eyes, and said, "I pray you, bear me witness that I meet my fate like a brave man!" The wagon now being removed from under him, he was suspended, and instantly expired.—*Chambers' Repository.*

The man who Dares to do Right.—That man who can stand in the breach of universal public censure, with all the fashions of opinion disgracing him in the thoughts of the lookers-on—with the tide of obloquy beating against his breast, and the fingers of the mighty-combined many, pointing him to scorn,—may, with the fury of the drunken rabble threatening him with instant death,—and, worse than all, having no present friend to whisper a word of defence or palliative in his behalf to the revilers,—but bravely giving his naked head to the storm, because he knows himself to be virtuous in his purpose; that man shall come forth from the fiery ordeal like tried gold. Philosophy shall enshrine his name in her richest unction. History shall give him a place on her brightest page, and old, yea, hoary far-off posterity shall remember him as of yesterday!

French Trees.—A tree, in the eye of a Frenchman, is a thing to be cultivated, to be trained, to be dressed; and he goes about in a perfect frenzy. First, he saws off all the limbs he can reach; then he scrapes the trunk, until it resembles a barber's pole. This done, he takes a survey, and considers whether the tree shall be of the Doric, Ionic, Corinthian, or Composite order of architecture; whether it shall be a Chinese pagoda—a dog-kennel or a cathedral. This important point settled, he rushes at the devoted trees—he saws, he chops, he clips with shears, and cuts with knives, until the tree disappears, and the creation is finished; and then his expressive and satisfactory phrase is "*tres genlil.*" The trees in the grounds of the Tuileries look as if they had started from the ground at military command, and were prepared to march upon you in platoons.—*Cor. of National Era.*

Youth's Corner.

ILLUSTRATED REBUS, NO. 15.

☞ Answer in two weeks.

[Written for Moore's Rural New-Yorker.]

ACROSTICAL ENIGMA.

I am composed of 17 letters.

My 1, 7, 5, 12 is the name of a person mentioned in the Bible.

My 2, 5, 13, 9 is a place of rest.

My 3, 6, 15, 8, 9, 15, 1, 13, 6, 12, 3, 17, 15 is what all men like.

My 4 is sometimes used on receipts and accounts.

My 5, 7, 5, 12, 1, 6, 15, 13, 17, 8 is a political party.

My 6, 13, 7, 3 means the young of fowls.

My 7, 16, 2, 14, 1, 9 is the miser's object.

My 8, 5, 9, 15, 10 is one of the planets.

My 9, 1, 12, 9, 16, 7 belongs to a weapon.

My 10, 16, 6, 16, 9 is the politician's aim.

My 11, 6, 17 is a girl's name.

My 12, 16, 16, 9, 3 is an enterprising publisher.

My 13, 9, 8 is injurious to its subjects.

My 14, 1, 12, 5, 9, 15, 13, 6, 8 is a French writer.

My 15, 13, 14, 3 is an aged personage.

My 16, 6, 8 is the foundation of arithmetical calculations.

My 17, 16, 9, 15, 16, 6 was a chemist.

My whole is the name of a revolutionary officer and distinguished American statesman.

Root, N. Y., Feb. 1854. H. H.

Wit and Humor.

Musical Criticism.—Two young ladies, says the Musical Review, were once singing a duet in a concert room. A stranger, who had heard better performances, turned to his neighbor, saying:

"Does not that lady in white sing wretchedly?"

"Excuse me, sir," replied he; "I hardly feel at liberty to express my sentiments, being not impartial in the case; it is my sister."

"I beg your pardon, sir," answered the stranger, in much confusion, "I meant the lady in blue."

"You're perfectly right, there," replied the neighbor; "I have often told her so myself; it is my wife!"

In the French translation of Paradise Lost, "Hail, horrors, hail!" is rendered thus; "*Comment vous portez vous, les horreurs, comment vous portez vous!*" that is, "How d'yo do, horrors, how d'yo doy?"

What is the difference between an attempted homicide and the butchering of swine?—Hold your breath for an answer! One is an assault with intent to kill, and the other is a kill with intent to salt.

Punch defines a Court House as a place where a penny's worth of justice is purchased with a shilling's worth of law. There is only one thing less profitable than suing people, and that is going their security.

A Lawyer wrote "rascal" in the hat of a brother lawyer, who, on discovering it, entered a complaint in open court against the trespasser, who, he said, had not only taken his hat, but had written his own name in it.

A traveler in England, observing a peasant at work, and seeing he was taking it remarkably easy, said:—"My friend, you don't appear to sweat any." "Why, no, master, six shillings a week ain't sweating wages."

Generals Lane said one day, at Indianapolis, in his speech after dinner, that he was "*too full for utterance.*"

Summit Level.—Drink, that lowers man to the level of the beast.

TEMPEST INSURANCE COMPANY.

A Full Statement of the affairs of the Tempest Insurance Company, of Meridian, N. Y., for the year ending on the 31st of December, 1853, pursuant to the Laws of the State of New York.

Whole amount of Capital	$212,379 70
Of which the amount secured by mortgage on real estate is	93,000 00
On deposit in Cayuga County Bank, in cash	20,000 00
Cash on hand	1,472 48
In the hands of Agents and in course of transmission	4,617 00
Amount of other good securities	121,289 50
Amount of losses sustained, the same having been paid	1,500 00
Total amount of liabilities	134 00
Whole amount of commissions, salaries and fees paid during the year	2,386 00
Total amount of expenditures for the year	3,850 00

State of New York, } ss.
County of Cayuga, }

F. P. Meacham, President, and T. J. Ferris, V. President, and T. R. Tibby, Secretary, of the Tempest Insurance Company, being severally duly sworn, depose and say, and each for himself says, that the foregoing is a true, full and correct statement of the affairs of the said Corporation, and that they are the above described officers thereof.

F. P. MEACHAM, Pres't.
T. J. FERRIS, V. Pres't.
T. R. TIBBY, Sec'y.

Subscribed and sworn before me, this 17th day of January, 1854. 217-31 Jas. Hickok, Jus. of the Peace.

OLD ROCHESTER NURSERY.

Samuel Moulson, at the Old Rochester Nursery, office No. 36 Front street, Rochester, N. Y., is prepared to furnish Inventories to post paid applicants, of the present extensive stock of Nursery items, consisting in part of 10,000 very fine Northern Spy Apple Trees, from 7 to 8 feet high, which will be offered by the 1,000 at low prices. Also, a quantity of large sized Trees, such as Scotch Pines, Larch Fir, Maples and other ornamental things offered at very cheap rates in order to clear the ground.

10,000 Dwarf and Standard Pear.
20,000 Apple Trees in variety.
20,000 Peach do do
15,000 Plum, Cherry and Apricot.
20,000 Osage Orange of different ages.
Over 100,000 Hardy Evergreens—

And a fine selection of Weeping Deciduous Trees, Ornamental Shrubs, together with such novelties as may be classed strictly hardy, and a large collection of Dahlias, Tulips and other bulbous roots.

The amateur wishing prime fruits of well established repute, or the Agriculturist needing fine cropping, thoroughly tested varieties, may rely upon the most careful execution of their orders. The ornamental items are entirely grown in the Nursery, consequently none of the heavy losses are sustained that usually occur in recently imported subjects.

The Evergreens are very robust and admirably furnished to the surface of the ground, none presenting the naked stems usual to imported plants.

Dealers are invited to give a call before making their purchases.

March 1, 1854. 216-61

ATKINS' SELF-RAKING REAPER.

Forty of these machines were used the last harvest in grass or grain or both, with almost uniformly good success, in nine different States and Canada.

Twenty-Six Premiums, including two *at the Crystal Palace*, (silver and bronze medals,) were awarded it at the autumn exhibitions. I am building only 300, which are being rapidly ordered. Mr. Joseph Hall, Rochester, N. Y., will also build a few. ☞ Early orders necessary to insure a Reaper.

Price at Chicago $175—$75 cash with order, note for $50, payable when Reaper works successfully, and another for $50, payable 1st December next, with interest. Or $150 cash in advance. *Warranted to be a good Self-Raking Reaper.*

☞ Agents properly recommended wanted throughout the country. Experienced agents preferred. It is important this year to have the machines widely scattered.

Descriptive circulars with cuts, and giving impartially the difficulties as well as successes of the Reaper, mailed to post-paid applications. J. S. WRIGHT.

"Prairie Farmer" Warehouse, Chicago, Feb., 1854. 215-131-m31

FAIRFIELD ACADEMY.

The next term of this Institution, located at Fairfield, Herk. Co., N. Y., will commence on Monday, April 10, and continue 14 weeks.

The Professors and Teachers connected with the Institution are distinguished for their profession; the Libraries, Apparatus, and Buildings extensive, and the price of tuition, &c., low. Students from a distance will leave the Railroad either at Little Falls or Herkimer, thence by daily stages (8 miles) to Fairfield. [218-31] J. MATHER, Sec'y.

MOORE'S RURAL NEW-YORKER,

IS PUBLISHED EVERY SATURDAY,

BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

Subscription—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion. As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 25 cents per copy to the club rates of the Rural,—making the lowest price to Canadian subscribers $1,50 per year.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

*** The postage on the Rural is but 3½ cents per quarter, payable in advance, to any part of the State—and 6½ cents to any part of the United States,—except Monroe County, where it goes free.

Advertising.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance.* The circulation of the Rural New-Yorker is several thousand greater than that of any other Agricultural or similar journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

SPECIAL NOTICES.—TO AGENTS, &c.

☞ Mr. C. Moore, of Gerry, Chau. Co., N. Y., is duly authorized to act as Agent for the Rural New-Yorker, and the Wool Grower and Stock Register, in the counties of Chautauque and Cattaraugus, N. Y., and Warren, Pa.—assisted by C. B. Hazen in the last named county.

☞ Agents.—Any person so disposed can act as agent for the Rural New-Yorker,—and all who remit according to terms will be entitled to premiums, &c.

☞ The Rural is published strictly upon the cash system—sent no longer than paid for—and all orders should be in accordance with terms.

☞ Our *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is obtained.

☞ In making up clubs for the Rural, the Wool Grower and Stock Register can be added at 25 cts. a copy, which is the lowest club price.

☞ In writing us, please be particular to give your P. O. address correctly—the name of your Post Office (not Town,) County, and State. Write all names plainly.

☞ Those wishing their papers changed from one address to another, should give the names of both post Offices—the *former address*, as well as the one desired.

☞ Additions to clubs may be made at any time, at the price per copy paid for the original club.

The Wool Grower and Stock Register is the only American journal devoted to the Wool and Stock Growing Interests. It contains a vast amount of *useful* and *reliable* information not given in any other work, and should be in the hands of *Every Owner of Domestic Animals*, whether located East or West, North or South.—Published monthly in octavo form, illustrated, at Only Fifty Cents a Year—5 copies for $2; 9 for $3. Vol. 5 commenced July, 1853. Subscriptions can begin with the July or January number. Back volumes furnished.

Address D. D. T. MOORE, Rochester, N. Y.

Moore's Rural New-Yorker:

A QUARTO WEEKLY

Agricultural, Literary, and Family Newspaper.

CONDUCTED BY D. D. T. MOORE,

ASSISTED BY

JOSEPH HARRIS, in the Practical Departments:
EDWARD WEBSTER, in the Literary and News Dep'ts.

Corresponding Editors:
J. H. Bixby,—H. C. White,—T. E. Wetmore.

The Rural New-Yorker is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter, interspersed with many appropriate and handsome engravings, than any other paper published in this Country,—rendering it a complete Agricultural, Literary and Family Newspaper.

☞ For Terms, &c., see last page.

Rural New-Yorker.

Progress and Improvement.

PERUVIAN GUANO.—NO. I.

Some years ago the marvelous effects of a few hundred pounds of Peruvian Guano, when applied to certain crops, was surrounded by much mystery to the scientific as well as to the practical farmer; and even now many farmers find it hard to comprehend how one pound of guano should prove as beneficial to their crops as forty pounds of farm yard manure. But there is really no mystery or uncertainty involved in this subject; the effect is attributable to a definite and well-understood cause. It is not our intention at this time, to explain the cause, but rather to inquire into the effect of guano, and endeavor to throw some little light on that practically most important question—Will it pay to use it?

For wheat, on all soils naturally adapted to the crop, Peruvian guano is found in all ordinary cases an exceedingly beneficial manure.—Below 35 bushels of wheat per acre, we have never seen Peruvian guano judiciously used without an increase of wheat. There is no good wheat soil, such as that of Western New York, which yields without manure, 15 bushels of wheat per acre, but may be made to produce 35 bushels, by the use of Peruvian guano. We have not sufficient data to enable us to speak so definitely in regard to the application of guano to Indian corn; but we have no doubt that up to 100 bushels per acre, Peruvian guano would, on most cultivated soils, increase the crop in the proportion in which it was used. So of timothy, and other cereal grasses, if properly applied, guano cannot fail to increase their growth. Barley, oats, and potatoes, too, are greatly increased in productiveness by Peruvian guano. In fact, guano is almost as universally beneficial as barn yard manure. The only question for us to settle is, to what crops should it be applied so as to yield the most profit.

To answer this question fully, requires more data than we at present possess. But as wheat is our most important crop, and as we know more about this than any other, it will be well to examine its effects on wheat first. British farmers have found that if their soil produces 20 bushels of wheat per acre without manure, an application of 3 cwt., or 336 lbs. of *good* Peruvian guano will increase the yield to 30 bushels per acre. That is to say, 3 cwt. of guano gives 10 bushels of wheat. This is the opinion of practical farmers, who have used guano for many years in different parts of the country. It accords exactly with the results of Mr. Lawes' series of experiments on wheat for the last ten years, made not with Peruvian guano, but with the valuable constituent of guano, as found in sulphate of ammonia, &c. We may take it for granted, therefore, that 33 lbs. of *good* Peruvian guano will produce a bushel of wheat in the climate of Great Britain.

In Delaware, Maryland and Virginia, Peruvian guano has been used to a considerable extent as a manure for wheat. By a careful comparison of all the reports of experiments at command, it would appear that an application of 100 lbs. of Peruvian guano, gives an extra yield of 4 bushels. Or 25 lbs. of guano produce one bushel of wheat. This is very much less than the quantity required in Great Britain. Two considerations may aid us, to some extent, in explaining this result. The climate of this country, for the production and elaboration of wheat, is far superior to that of Great Britain. And the unaided yield of the soil in the three States above referred to, is much less than in Europe. British farmers would think it a poor soil that would not produce 15 bushels of wheat per acre *without* guano; and their object in using guano is to get 30 or 40 bushels per acre. In Maryland, Virginia, and other Southern States, however, the soil without guano will generally not produce 5 bushels of wheat per acre, and the farmers use guano in the hope of getting 15 or 20 bushels. They leave off where the English farmer commences. And we believe they usually find that above 20 bushels per acre they get much less increase from the application of 100 lbs of guano than they do below 20 bushels per acre.

It is not impossible that the increase of wheat up to 10 or 15 bushels per acre is owing to the phosphoric acid of the guano, and that above this it is dependent upon the ammonia of the guano. That is to say, the soil and rain water may supply ammonia for 10 or 15 bushels per acre, but the soil may be deficient in phosphoric acid, and without it no wheat can grow.—Now, 100 lbs. of Peruvian guano would supply *available* phosphoric acid for *at least* 5 bushels of wheat, whereas it would not supply ammonia for more than three bushels. If this explanation is correct, it will at once reconcile the apparent discrepancy in the observation of farmers in the two hemispheres. But by the growth and plowing in of a crop of peas, these same lands are made to yield a good crop of wheat. Now, these peas supply no phosphoric acid, but simply ammonia which they have obtained from the atmosphere. It would follow from this, therefore, that the sterility of the soil is owing to a lack of ammonia and not of phosphoric acid. We must look, then, for another explanation.

CARE OF COWS PREVIOUS TO CALVING.

A little consideration will convince any one that milch cows are kept in a more artificial condition than any other of our domestic animals. We force them in many cases to give milk ten months of the year. Whereas, all that other animals,—sheep, swine, horses, &c., are required to do in this respect is to afford sustenance for their young. It would seem, therefore, that while in all animals the latter period of gestation and parturition are attended with more or less danger; in the case of the milch cow, the danger is considerably heightened, sufficiently so, at least, to warrant the greatest care and attention.

Cows should be dried at least two months previous to calving. For, however well they may be kept, it is impossible for them to sucker the calf and give milk without overtaxing nature, and producing great weakness, excitement and disorder in the milk secreting organs. Except in a few instances, there is no need of calling attention to this point, for the cows, we are sorry to say, are not sufficiently supplied with nutritious food to enable them to give milk at all in the winter. But we have known several valuable cows lost from high feeding and from a desire to obtain milk as long as possible.

Cows that are not milked can be kept in fair condition through the winter upon good straw and corn stalks. But towards spring, say six weeks before calving, they should have a little hay or shorts. When fed on a bulky and comparatively innutritious food, such as straw or stalks, there is danger of costiveness, and more or less inflammation. A more concentrated food would prevent this complaint. We know of nothing better than three or four lbs. of oil-cake meal per day. Not only is it highly nutritious, but it is slightly aperient, and therefore just suited to the case. Mangel wurzels, too, are aperient; much more so than ruta bagas or potatoes, but we do not know how they compare in this respect with beets or parsnips. Every dairyman, and in fact every farmer who keeps a cow, should have a few roots at least, to feed out in the spring of the year. Nothing can pay better. Stevens entirely objects to giving potatoes to cows at any time, because of their great tendency to produce hoven, of which, if an attack were to overtake a cow far advanced in calf, it would either kill the calf in the womb, or cause the cow to slip it.

Slipping the calf or slinking is not uncommon, and is attended, not merely with the loss of the calf, but with great injury and danger to the cow. The cause of this troublesome complaint is to be ascribed to violent exercise, fright and knocks, or other ill treatment.—Skellet says:—"A more common cause of slinking is a disagreeable, *nauseous smell*; the cow is remarked to possess a very nice and delicate sense of smelling, to that degree that the slinking of one cow is apt, from this circumstance, to be communicated to a great number of the same herd: it has been often known to spread like an infectious disease, and great losses have been suffered by cow feeders from the same." For this reason the cow stables should be well ventilated, and kept scrupulously clean at this season. Especially should caution be exercised in killing hogs, bleeding horses, &c., for cows have a mortal antipathy to blood, and nothing is so productive of slinking as carelessness in these particulars.

It is hardly necessary to remind our readers that it is absolutely necessary at all times to be good natured and kind to cows. Especially should this be remembered at this season.—Never suffer yourself to fall into a passion with a perverse cow. It will do no good, and much mischief. Kindness and gentleness to all animals is politic,—but with milch cows it is absolutely essential.

THE PARSNIP.

This plant shows the marked change that may be wrought in plants by cultivation. In its natural state it is small in size, and what is worse, hard, acrid and even poisonous; but under the fostering care of cultivation it has come to be one of the most nutritious and palatable roots of the garden. The amount of saccharine matter it contains, renders it peculiarly acceptable to either man or beast, and it may well be wondered why it has not come more into cultivation as a field crop.

In the Isle of Jersey it is raised to a large extent, and is found to be profitable as food for store or fattening stock—the yield going as high as twenty-seven tons to the acre. The leaves are found to be also an excellent feed for milch cows, but it is necessary to use caution in feeding them, as it is found that if eaten by the cows when wet with dew or rain, an inflammation of the udder is apt to be induced. From an article on this subject by Colonel Le Couteur, of the Isle of Jersey, we gather some facts that may be of interest to the readers of the Rural.

Parsnips will succeed on almost any soil, provided it be made of sufficient depth, and rich. They will grow even on a shallow soil, but the root is short, forming a shoulder and forking off into several prongs. In such soil the crop is not as profitable as in a well manured and deep soil, where the root grows to a good size, and tapers gradually down. An old grass or clover ley is preferred, which is well turned the previous Autumn. In the spring the ground is thoroughly worked over, and a liberal coating of manure well worked in. In general, the method of cultivation is similar to that for the carrot. The ground is usually cast into light ridges, eighteen or twenty-inches apart, and the seed planted or drilled in the latter part of May or early in June. Probably with us, as early as the ground could be worked, would be better. The plants should be kept clean from weeds and the ground frequently stirred, especially in the younger state of the plants. As they attain towards maturity, their broader leaves more perfectly shade the ground and smother any weeds that might be disposed to dispute territory than the carrot, and hence there is not as much need of care in the latter part of the season. The plants should be eventually thinned to a distance of six to nine inches in the drills. The seed used, should be fresh and of the last year's growth, as it loses its vitality after one year's age, and is utterly worthless, however carefully it may have been kept.

In this country the parsnip has been but little experimented upon. Those who have made trial of them, so far as our information extends, have been well pleased with their experiments. They will yield quite as much to the acre as the carrot, whilst there is no necessity of removing them from the ground, faster than wanted for use, as frost acting upon them in the ground rather improves their quality. For milch cows they are claimed to be superior to other roots, whilst for hogs they certainly are. "From a dozen to twenty-five pounds of the roots given to a cow at milking time, will have a surprising effect upon the cream, and produce fine yellow butter, which will keep admirably if properly prepared and salted, preserving an excellent and superior flavor." "It will fatten oxen and pigs, (or poultry, if boiled,) in an extraordinary manner," and we are told, add a superior flavor to the beef or pork. Daniel L. Bakeis, in the N. Y. State Agricultural Society's Transactions for 1851, says of the parsnip, that he has found it "from practical experience, to be the *best root crop* for stall feeding the milch cow, during the winter months.—*Best*, not only from having grown more (by actual measurement,) per acre, than of beets and carrots, but from the well known fact of its containing much more saccharine matter than the various roots usually grown for the purpose of stall feeding the milch cows."

According to Sir Humphrey Davy, there is three times more mucilage in the parsnip than in the carrot, which may be one reason for its superior fattening and butyraceous qualities. We would not urge our readers to cultivate this root to the exclusion of others, but we would urge them to test its value and profits, cautiously at first, as they choose, till they have attained satisfactory results. We feel quite certain it can be made a very valuable auxiliary in the feeding and fattening of various kinds of stock, equaling, if it does not excel, the carrot and other roots.

Dr. J. H. Salisbury has given an analyses of the parsnip in the Transactions of the N. Y. State Ag. Society for 1850. From this we learn, the parsnip root has a greater proportion of water than the potato, and less than the turnip, beet or carrot,—eighteen and a half per cent. being dry matter. Of the tops, eleven per cent. is dry matter. 7,813 pounds of the fresh roots contain 100 lbs. of inorganic matter, or ash, and 5,682 lbs. of the fresh tops yield a like number of pounds of ash. Of what this inorganic matter is composed, may be seen by the following table from Dr. S.'s analyses:

	100 lbs. ash of roots	100 lbs. ash of tops.
Carbonic acid,	21.85 lbs.	23.51 lbs.
Silicic acid	0.15 "	0.92 "
Phosphoric acid,	15.10 "	4.31 "
Phosphate of iron,	0.65 "	1.43 "
Lime,	3.35 "	1.32 "
Magnesia	1.60 "	0.51 "
Potash,	8.45 "	5.33 "
Soda	38.20 "	54.32 "
Chlorine,	0.60 "	3.13 "
Sulphuric acid,	8.25 "	3.92 "
	99.20	98.80

The doctor adds, that the 100 pounds of inorganic matter removed in the roots, may be returned to the soil by the addition of 100 lbs. ashes, 40 lbs. of common salt and 15 lbs. plaster. And the 100 lbs. removed in the tops, may be returned by 60 lbs. ashes, 90 lbs. common salt, and 10 lbs. plaster—and the necessary organic matter furnished by from three to five tons of cow or horse manure. As a general rule, a ton of common barn-yard manure, or its equivalent, should be added to the soil for every ton of roots removed. This furnishes sufficient organic matter to supply the demands of the plant, and to keep the soil warm, loose, soluble and retentive. Besides this, it supplies a sufficient amount of the inorganic bodies, necessary for the plant, except phosphoric acid, potash and soda. The deficiency of these can be made up with ashes, plaster and salt."

In the ultimate organic analyses, Dr. Salisbury found in the root of

Nitrogen,	0.913
Carbon,	42.222
Oxygen,	44.467
Hydrogen	6.850
	94.422

He also found it to contain a larger percentage of starch and dextrine, than the beet, carrot, or turnip; but less sugar and albuminous matter. In nitrogen it is less rich than the beet or carrot. T. E. W.

ALSYKE CLOVER.

We condense from the *Farmer's Companion* an article copied from the London *Gardener's Chronicle*, on this forage plant—from which it would seem to be a valuable one.—We understand seeds of it have been distributed from the Patent Office. If it has had a fair trial, the results should be laid before the farming public, that we may know what it promises in this country.

It is a native of Sweden, where it has been cultivated in the pastures of that country, for the last hundred years. The great Linnæus discovered it growing on poor, bare, obliterate clays in the Morea, where no other plant could be made to vegetate, and yet it grew luxuriantly—yielding tender and succulent shoots in great abundance. Sprun found it in Holland, and experimented with it in connection with other clovers. He pronounced it superior to all others. It has fibrous roots and globular heads, and in its native soil, sometimes attains a height of five feet, though in England, it does not exceed two feet. It appears to be a giant white clover, with flesh-colored blossoms, producing two mowings annually. It comes forward earlier, and ripens its seed sooner; so there is not so much loss in gathering the crop. It seems to be a perpetual clover, for when once established it will remain in full vigor, a great many years—is hardy, and will bear transplanting with perfect ease. It is uninjured by frosts, and will flourish on land so barren that other grasses will scarcely grow,—produces a heavy crop of seed and an abundance of herbage, relished by oxen, horses, and sheep. From 10 to 15 pounds of seed is sufficient to lay down an acre. T. E. W.

RURAL TOPOGRAPHY,

FROM THE RAILROAD CAR—BY S. W.

[Concluded from page 70.]

No man who has an eye for agriculture, can pass over the western district of New York, even on a railway, without reflecting on the great apparent organic discrepance between the poorest farm here, and that of the majority of farms in the eastern part of this State.—Here, when the surface soil is worn down and becomes heavy from the loss of its vegetable mould, the farmer has only to drain properly, and plow a little deeper to grow crops larger than before; every amendment added to the soil, in the shape of animal manure, is retained by its chemical affinity with the calcareous principle in the soil, to be given up slowly both to the incumbent and future crops. On the other hand, on the quartzose hilly lands, at the east, no cereal crop and very little hay can be relied on, without the yearly application of azotized manures; and so little is the chemical affinity between the components of the hungry soil, and the ammonia of the manure, that very little of this indispensable compound is retained in it for a second crop.

Dr. Underhill tells us that to make his Croton farm something more than a loose impracticable sand, he had to carry up from his swamps and low grounds 25,000 loads of muck, &c., to the hills from whence it was washed; he also tells us that he had no farm until after this herculean labor and immense outlay of capital was expended; and that before this actual construction of a true soil, he could gain nothing by the application of concentrated manures. We are also told, that Prof. Mapes found his little farm of fifty acres, in New Jersey, almost a rock, on which he carried 5,000 loads of muck, drawn by a pair of oxen that weighed 5,000 pounds, up a hill from a swamp 200 feet lower. These astounding efforts to turn the waste places of the earth into blooming fields, is most creditable to the man, and to the improvements of the age. But how thankful should be the farmer of Western New York that his lot is cast on a soil in which nature has lavished all her organic treasures; which are only to be husbanded aright to be made forever available for the support of the animal

creation. Here, in Western New York, the husbandman has a farm already made to his hand. To keep its fertility intact, by a correct system of manuring and culture, is the farmer's great vocation, a consummation only obtained by judicious ditching, draining, subsoil plowing, and the making and saving, and applying manures. Here are no barren clays, no rock, but the lime stone ledge, or the sparsely scattered erratic boulder; the lightest soil of sand or gravel, is rich in phosphates, calcareous matter and vegetable remains, to a depth inexhaustible, and not easily reached by plowing.

The railways all enter Buffalo on a level plane, less elevated than the court end of the town. Here are small wooden buildings; occasionally a more pretending mansion, with a sprinkling of trees and shrubbery, greet now and then the eye. As you near the great Railroad depot, you pass hundreds of German *frauleins*, with large bundles of refuse wood on their heads, wending their way on the roads from the new clearing now far away from the town, to their suburban homes. The first thing that strikes you on leaving the cars at Buffalo, is the lack of homogeneousness in the dress, bearing and language of the people; in this part of the town, you hear as much German spoken as English, as many men in smock frocks and caps, and women in the coarse, but substantial garb of the *father land* in one hour, than you will see in a New England town in a year. The Irish element in the population, is less common; still here, in passing, your ear is often greeted with the rich brogue of the Emerald Isle; but the Irish have no distinctive costume, no cumberous tobacco pipe always in use, to mark their nationality.

At this season, Buffalo, with the lakes frozen, presents not that rush of locomotion and business so remarkable when the lakes are open.—But the day is coming when Buffalo is to be a manufacturing, as well as a commercial city,—cheap coal, brought by railway from Pennsylvania, a distance of only seventy miles, is soon to give Buffalo those facilities which alone make Pittsburgh a great manufacturing city. One of the greatest necessities of this great town at this time, is the increase of manufacturing industry; so that the manufacturer himself is not compelled to go east for so many articles of fixed machinery.

On riding out to Mason & Lovering's Nursery, we pass through the best built, most elevated and fashionable part of the town. Here due attention is paid to ornamental trees and shrubbery; each beautiful house or cottage has sufficient breadth and area of *terra firma*, to redeem its character from that urban or commercial rapidity which so often restricts the domicil to a twenty-five feet front and rear, walled in on either side, the noisy street in front, and a shaded ten by twenty yard in rear; where even Flora's starveling flower could not bloom. At Mason & Lovering's Nursery, three miles out of town, the spacious grounds are filled with young and thrifty fruit and ornamental trees in great variety. The great range of green houses comprises about 300 feet in length, of glass; here in the vestibule a walk of marble slabs leads to the Crystal Palace within; here the alleys and graveled walks are beautifully fringed with phlox, &c., the borders filled with pots innumerable, each one bearing its glowing or blooming plant. Here were legions of roses in perennial bloom, Geraniums, Camellias, and the full-flowered fragrant Hyacinth, with a multifarious variety of flowers and flowering shrubs, too numerous to notice here.

The Orange and Lemon trees were not yet matured, but they looked fresh and healthy, giving an earnest of that coming tropical bloom which, in the same tree, gives flowers and maturing fruit, and fruit ripe for eating. This long range of glass roofed rooms is warmed throughout with pipes of iron, charged with hot water, the evaporation from which serves to give that density to the atmosphere so necessary to growing plants.

SHADE TREES.—AGAIN.

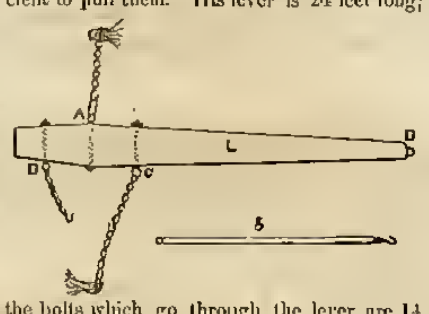
Eds. Rural:—As you invite farmers to give the results of their experience through the columns of your paper, I have thought that a few words on the subject of transplanting forest trees might not be unacceptable to some of the readers of the Rural. The presence of shade trees about the dwelling and along the highway, adds greatly to the beauty of a place, and more to its market value than many persons suppose. Yet through whatever part of our country we pass, we find the subject of arboriculture almost entirely neglected. Although there are differences of opinion as to the best method of disposing of shade trees, some preparing to plant in clusters, others in straight lines, and others, again, in curves; yet all agree in this, that they ought to be found on every farm, and surrounding every dwelling. But, says one, "shade trees are indeed a great and desirable improvement to any place, but in some soils it seems impossible to make them live through the first summer. I have often attempted it on my place, but never have succeeded, and I have given it up." Now it is to encourage such persons to try again, that I purpose to give my experience.

The first step necessary to be taken, is to prepare the holes for the reception of the trees, which I do by digging them three feet in diameter, and two feet deep, and then placing the surface soil in the bottom of the holes. The next thing is to choose a suitable time for transplanting; and this I deem to be the point of greatest importance. I have found by experiment, that forest trees taken out of the ground just as the buds are opening, stand ten chances to thrive after transplanting, where, when removed earlier, they do one. When removed, they should be trimmed to the height of 9 or 10 feet, and there cut off with a slanting stroke of the axe. I think this way is preferable to leaving a portion or the whole of the top. Thus trimmed they will be more sure of living, and will make a more beautiful head.—I prefer trees about two inches in diameter for setting. In setting, one man should hold the tree in its proper position, and by moving it up and down, settle the earth firmly about and among the roots as it is thrown in, and when the hole is filled, press the earth about the tree firmly with the foot. The tree should be left about one inch deeper than it was in its natural position. My father and myself have set out about 400 sugar maple trees, in soil of almost every description, and never with a loss of more than five per cent., seldom with more than two or three. Try this plan, you who love shade trees, and devote at least one day each spring to embellishing your grounds, which will add materially to your enjoyment, and which shall perpetuate your memory, when the marble tablet, which loving hands shall place above your grave, will fail to tell the passer by whose dust lies beneath.

Port Byron. W. D. O.

STUMP MACHINE,—AGAIN.

Eds:—In answer to J. H. Barnum's inquiry about that Stump Machine, I would say,—I do not manufacture the article, and never built any but the one I use myself; but if you understand how the machine works, and how it is made, you can get one up as well as I can. I live fifty miles from the Railroad depot, in Laurens, Otsego Co., and it would cost several dollars to deliver one there if I should build it. You inquired what the cost of one sufficiently strong for all practical purposes would be, to which I would say, it depends upon the size of your stumps. I will give you the dimensions of another machine which one of my neighbors built, and you can calculate from that and from your stumps the heft of a machine sufficient to pull them. His lever is 24 feet long;



the bolts which go through the lever are 1¼ inches square, Swedes iron; the two bolts, B, C, in the figure, he places 14 inches from A, for his smallest stumps, but for his larger ones he moves them to eleven inches from A, which gives him increased power. His chain is made of ⅞ square Swedes, hammered round. Connecting bars in room of chains, inch square Swedes. The manner of making hooks is to take a piece of old sable Russia bar, 3 inches wide, ⅝ thick, 2 feet 8 inches long, round a piece in the middle 6 inches long for the eye, double and weld the two ends for the hook; have the point of the hook short in order to hook handier. Weight of hook from 10 to 12 lbs. The heaviest ones should be on the chains fast to the lever. This machine was made for pulling green pine stumps, some of which are 3 feet through at the top, standing on hard-pan land. Now if your stumps are as large as his, the cost of the machine would not vary much from $100. He has chain and bars enough to stretch 10 rods. Less chain would cause some inconvenience sometimes, but would reduce the cost of the machine. As I said before, my stumps were mostly small and old, and I thought it better to cut a few roots for large ones than to use a heavy machine for all the small ones. The iron should all be of the first quality. H. B. G.

Laurens, Otsego Co., N. Y., March, 1853.

Measurement of Hay.—I noticed the extract from an exchange stating that "10 to 12 cubic yards of hay would weigh a ton," and your last statement that "400 cubic feet is nearer," &c. For many years under the old gross weight, 512 cubic feet, or a square body of 8 feet on all sides was called a ton, and my experience proved it quite correct. Under the new law, 2000 lbs. for a ton, I use the same rule, and for each ton found, add the gross 240 lbs, and am of opinion from *tolerable* close observation that this is nearer the just measure than 400 cubic feet, but am open for the truth founded upon facts. It is not an unimportant matter, and should be settled by universal adoption of the most correct measure.—Jos. Watson, *Clyde, N. Y.*

BROOM CORN.—AGAIN.

In reference to the inquiry about Broom Corn, I would remark that some years it is a paying crop, and in others it is not. Some years we get seed that pays for clearing off, and frequently we get neither seed nor fodder. I have cultivated it, and made it into brooms, to some extent, for 23 years. For three years previous to the present it has not been a paying crop, in consequence of the low price of brooms. This year it has paid better, and I have just finished making up my old stock of brush, two or three years old. If kept from the rats and mice, it will keep as bright as when harvested.

Four hundred brooms per acre is an average crop, on land that would produce at least 40 bushels of corn per acre. Broom corn requires three times as much cultivation as Indian corn. If there is any seed, it merely pays for the labor of getting it off. Manufacturing the brooms costs one half the crop, or a dollar per dozen. Compared with Indian corn, then, we have 200 brooms at $16 per hundred, instead of 40 bushels of corn at 80 cts. per bushel, and nothing for the extra labor required in the cultivation, and no fodder.

I cannot now call to mind any one who has made a large business of raising broom corn, but has run under and failed. It will do very well to spice in with other farm business, to fill up gaps of time in stormy weather and winter. I raise from two to four acres a year, and it will not pay to make it into brooms. I put it upon scaffolds in the barn, until it will pay. I make two sizes of brooms, sow them twice and handle well. When they are less than $2,50 per dozen for the best, and $2 for the small size, I think I had better not neglect other farming business. A Subscriber.

Penfield, Mon. Co., N. Y., 1854.

CHARRING POSTS.

I am a reader of your valuable paper, the Rural, and noticed an inquiry in regard to the effect of charring on the durability of fence-posts or other timber set in the ground. Excuse me if I take the liberty to state some facts which came to my knowledge. A gentleman made a hundred rods of post and rail fence. The posts, white oak, were charred in the fire. The effect was, *that within two years the posts were actually rotted off.* The theory would show at once, that charcoal itself will not rot. But it must be admitted that when posts or any other timber is charred, they become checked or cracked, in every direction, sufficient to admit the water into the part not charred, which causes the rot to commence at once.

My opinion would be in favor of *pitching* the part of the post within six or eight inches of the bottom, and a few inches above the ground, as the post always rots off near the top of the ground. The expense could not be great.—J. C. H., *Seneca, March 14, 1854.*

A correspondent inquires the effect of charring wood for fence-posts, etc: Ten years ago when in England, I assisted to build some cages to protect young trees. The material used, was thinned out of a young copse, and was composed of larch, horse-chestnut, linden, birch, elm, etc., from 2½ to 4 inches thick.—'They were charred over a slow fire, and dipped in boiling tar. Last fall I visited "the old house at home" when the cages were being removed, and the part that *was in the ground* was as sound as on the day it was put there; but just *above the surface*, it was quite rotten. —J. H. Skinner, *Barrytown, N. Y., March, 1854.*

SALTING CATTLE.

A piece in the Rural of March 4th, over the signature of A Farmer—headed "How to Salt Stock in Winter,"—reminded me of my own experience. A few years since, in order to invite my cattle to the manure heap at my horse stable window, I strewed over it a quantity of salt. There was at the time a light sprinkling of snow on the heap. My cattle and sheep ate freely of it. A few days after, I discovered that the mouth of every sheep in the flock was encircled with a thick scab both on the upper and under lip. I thought then, and still think, it was owing to their eating salt mixed with snow which caused their lips to freeze. Their mouths being sore, they were unable to eat their usual allowance of food, consequently they fell away and became poor. If any one doubts that salt and snow will cause their lips to freeze, let him wet snow with strong brine, and hold his fingers in it, in a cold day, and he will probably become convinced. The best way that I know of to salt stock in winter is, when we put our hay in the mow to put on to every ton from two to three quarts of salt—it helps to preserve the hay, prevents it from becoming dusty, and furnishes a good supply for the stock. Seth Paine.

So. Granby, Oswego Co., N. Y., March 11, 1854.

Samuel Alden, of Lyme, N. H., it is said, killed a half breed Suffolk pig eight months and twenty-two days old, which weighed when dressed, exclusive of rough lard, 401 lbs.

Agricultural Miscellany.

MISSOURI STOCK IMPORTING COMPANY.

A company has been formed in St. Louis for the purpose of importing cattle and horses from Belgium and France. It appears that Chas. L. Hunt, Esq., addressed a letter to the proper department of the Belgium government, in September last, asking for information respecting the price and quality of horses, cattle, &c., in Belgium. He was promptly replied to, and informed that instructions had been sent out to all the Provinces, and that as soon as returns could be had the results should be communicated to him. He was also assured that the Belgium government felt gratified with the friendly purpose manifested, and that every facility would be afforded by that government to the people of Missouri, in the purchase and exportation of Belgium stock. The information desired, was carefully collected; and after collection, so as to get the average price of the animals specified, and the aggregate of quality, the result was communicated as follows:

"There are in Belgium many breeds of horned cattle. I will not speak of the Ardennes breed, as it is too small for any purpose.

The indigenous breed, properly speaking has been greatly improved by judicious crossing, for many years, with the best milking breeds of Holland. We have also bred to the English Durham, to obtain the fattening qualities for which the English cattle are so justly celebrated.

The Belgium cow, owing to great attention in breeding, is entirely adapted to the dairy.—Her color is black-roan, her frame is large. In all our provinces, particularly in Hainaut, the two Flanders, Brabant, Leige, and Namur, you can procure excellent dairy cows well adapted to improve from.

Those coming from a cross with the Durham are best for the shambles.

Cows of the first quality can be procured at a price ranging from 300 to 400 francs. To procure them, it will be necessary to go to the farmers themselves.

The Flanders or Flemish horse, the only breed which is indigenous to Belgium, is particularly adapted to agricultural purposes, for the dray, and for transporting very heavy loads. His height measures from 1 metre 50c to 1 metre 60c, or from 15 to 16 hands.

The best breed has a straight *loin*, the limbs *clean*, the *pastern* well elevated, and the neck short and thick.

The best draught horses are to be found in the neighborhood of Bruges and Audenaerde in the province of Brabant and Hainaut.

Stallions of the first choice can be purchased at a price ranging from 1,000 to 1,500 francs; the first choice of mares for 800 to 1,200 francs; geldings at 500 to 800 francs."

The St. Louis *Intelligencer* remarks on the above,

"The finest *dairy* cows in the world are in France, Belgium, &c. The finest cattle for the shambles are in England. We have the English but not the Belgian. If, therefore, we would have in Missouri the finest and most useful breeds of cattle in the world, we should import from Holland, France and Belgium, (but we already have the Durhams,) for beef. If it be a good thing to have magnificent roasts of beef, it is not an inferior comfort to have milk, butter, cream and cheese.

As to *horses*, it is only necessary to add in favor of those on the continent of Europe, that they are imported by the ten thousand into England. The great Dray Kings of London, 'Barclay & Perkins,' we are informed get their horses from Belgium."

Many thousand head of cattle are weekly brought from Holland and Belgium, to Smithfield market, London, where we have frequently seen them. For the shambles, they compare poorly with the Short-horn, the Hereford, the Devon, or the Scot. For milky purposes they are probably superior to any of the above breeds, as they have been bred with especial reference to the dairy.

We intend shortly, to give a portrait of a Holland cow, imported by Mr. Piffard, of Livingston Co., N. Y., a description of which are published in the January number of the *Wool Grower.*

Five years ago we visited the brewery of Barclay & Perkins, and there saw 168 as fine Clydesdale horses as money could purchase.—We think it improbable that they have abandoned this breed and adopted Belgian horses.

Iowa State Agricultural Society.—The following is the list of officers for 1854:

T. W. Chaggett, of Lee, President.

D. H. Inskeep, of Wappelo, V. President.

J. M. Shaffer and C. W. Slagg, of Jefferson, Secretaries.

W. B. Chamberlain, of Des Moines, Treas.

Besides these, there is a Board of Managers consisting of three from each county.

G. W. Durant, in the *Country Gentleman*, states from his own experience, that *a good growth of buckwheat*, followed by oats and seeded heavily with clover, almost entirely eradicates the Canada thistles.

Packing Pork.—A writer in the Albany Cultivator gives the following receipt for packing pork for summer use, after having tried it satisfactorily. In packing add to each layer a sprinkling of black pepper, putting about two pounds of pepper to a barrel of pork, containing about four hundred pounds. He had salted pork for forty years, but never had it keep so sweet and fine as when packed in this way.

Inquiries and Answers.

Artesian Wells.—Will you please give us something in the Rural, in regard to Artesian Wells? In my section of the country, stock frequently die for the want of water. Our dependence mostly, is in cisterns and large *ponds* or *ponds* (artificial.) In dry seasons all these fail, and have a pernicious influence upon the health of the inhabitants. In Missouri and Illinois the Artesian Well, is beginning to excite considerable attention. We are ignorant of the manner of its construction and expense. Will it answer the wants, means, and wishes of the farmer, and those places requiring much water?—Jas. M. Martin, *Fulton, Callaway Co., Mo., 1854.*

Yellow Water.—The yellow water in horses can be cured, without fail, by attending to the following directions:—Take six pieces of butternut bark, (*Juglans Cinerea,*) say eight by four inches; thirty pieces of poplar, (*American aspen,*) four by eight inches; four pounds sweet fern, (*comptonia asplenifolia;*) put on three gallons water, boiled down to 1½ gallons. Give the horse three quarts per day in bran, or pour down. The horse should have bran or oats every day. After giving the 1½ gallons, repeat if the horse is not cured.—P. B. N., *Ireland's Corners, Albany Co., N. Y.*

[D. H., Phelps, N. Y.] Information respecting the New Rochelle Blackberry, or, as it is now called, the Lawton Blackberry, can be obtained by addressing Wm. Lawton, New Rochelle, N. Y.

Cuttings of the Clinton Grape can be obtained from any of the nurseries in this city.—A. Thomas, Esq., Delaware, Ohio, may be able to furnish you cuttings of Delaware Grape.

Peach Tree Worms.—Can any of your correspondents inform me what will destroy the worm that works in peach trees, just below the surface of the ground? It is quite difficult to destroy these worms by digging down to them, and then cutting them out with a knife, which is the only remedy that I know of; and besides, this will not destroy the eggs; so the process must be repeated several times in the course of the season, in order to save the tree.—K.

Spring Wheat.—I am desirous to sow a field I have, to spring wheat,—I wish to obtain a kind that is called File Wheat. Will you please to inform me where I can obtain 12 or 14 bushels, and for what price?—Chas. A. Jackman, *Livonia, N. Y., March, 1854.*

File Wheat can be obtained in this city, from J. Rapalje & Co., or from Barnes & Bro., for $2,50 per bushel.

Portable Steam Engine.—Can you, or some of your correspondents, inform me through the Rural, where Portable Steam Engines are manufactured, and what the cost of one, of five or six horse power would be?—J. A. Miller, *Rockdale, Pa., 1854.*

Pine Apple Cheese.—Will you, or some of your readers, posted on the subject, give the mode of manufacturing Pine Apple Cheese?—A. B., *Buffalo, N. Y., March, 1854.*

Will some of our readers answer the above?

SUGAR BEET.

We cannot too often or too confidently recommend the cultivation of this excellent field crop. It is a great yielder, hardy, easily raised, and is superior, we think, to any vegetable grown for milch cows and fattening cattle, especially when fed raw. We have grown large quantities for our own use the past seventeen years, and can therefore speak of it practically and experimentally. One of our neighbors—a lady farmer—informs us that she made thirty pounds of butter per week from six cows in December, fed upon hay and sugar beet. She adds, that the butter was fully equal to the best made in September and October on rich pasture.

The sugar beet does best in moderately rich loamy soil, but will grow where any other root does. The seed should be soaked two to four days in tepid water previous to planting, so as to insure its germination. If planted without first soaking, its shell is so hard it is a long time germinating. Hence the ill success of many who do not take this into consideration.

For field cultivation the rows should be three feet apart, so as to admit working easily with the cultivator among the rows. The plants, when finally thinned out, should not stand nearer to each other than six inches in the row. It can be pulled and secured in the fall the same as turnips.

The best variety is the White Silesian, tho' the French Yellow has been so much improved lately, we are informed it has become nearly as good as the latter. We have never found it to keep so well.

The beet requires about four pounds of seed per acre, and can be planted very rapidly in drills with a seed-sower, costing about eight dollars.—*Am. Agriculturist.*

Export of Pigs and Poultry.—We understand that one of Adams & Co's express cars was entirely occupied yesterday with pigs and poultry to be shipped at New York for England, in answer to orders from that country. The total value of the lot is about $1,000.—*Boston Traveler.*

Steaming Hay.—The ordinary plan is to enclose a lot of the hay in a box, large cask, or otherwise, to let steam in from below, where there is also a stop-cock, by which the water of condensation may be allowed to escape at intervals.—*Gardeners' Chronicle.*

Orchard and Garden.

CULTURE OF ASPARAGUS.

Asparagus has long had a place in the regetable garden, still its excellences have not arrived at a full or general appreciation, even by those who have every facility for growing it in perfection. It is either supposed to be a rarity and of difficult growth—and hence beyond their reach—by those who know little of its habits and culture, or it is looked upon as of little value by those who "have no time to waste in gardening." But it is neither difficult to raise or unworthy of pains-taking. "An humble sea-shore plant, bearing the salt breeze, the winter's cold and summer's heat, it has been brought into the garden, acclimated and tendered, until it holds the first rank among the regetable luxuries of the table." It is true that it requires both time and care to get a bed into full operation, but once properly prepared, it endures for years and amply rewards all trouble and expense incurred in its establishment.

To grow asparagus from the seed it may be sown either in autumn or early in spring, in a good loamy soil. The seeds should be from select seed, and allowed to get dead ripe before the stalks are cut. After gathering, the berries may be put in water, and when slightly fermented they can be easily washed from the pulp and third. One ounce will grow a thousand plants. Sow in drills an inch deep, about one foot apart, and cover with fine soil, pressed down lightly. Keep the weeds out, stir the soil often, and thin the plants to six inches apart, giving them every encouragement to grow—and, if properly tended, most of them will be fit to transplant at one year old. The weaker seedlings may stand another year, or until autumn, and then be removed.

The bed intended for growing asparagus should be open to the morning sun, but protected from the north and west, and away from the shade or drip of trees or buildings. It should be very rich, and on this, more than anything else, depends the value of the product. Dig up a loamy, porous soil to the depth of two feet, intermixing thoroughly and largely with manure, except the upper portions which should be of rich loam. The young plants may then be removed from the seed bed—disturbing the roots as little as possible—and carefully set out in rows two feet apart, one foot apart in the row. Then with dark colored soil, made so by mixing charcoal dust or well decomposed vegetable matter, cover the whole bed two inches deep, and sprinkle on salt until the surface is white again. This will keep down the weeds and promote the growth of the asparagus.

In autumn remove the dead stalks, and cover the bed three inches deep with stable manure, to be forked in in the spring, with another dressing of salt. For two years let the stalks grow to strengthen the roots, which in that time, will generally be pretty well established. The third year the asparagus will be fit to cut, and will—with the treatment above described, and, perhaps, a slight addition of earth to prevent the roots coming too near the surface—continue to yield well for many years. It should be remembered that room, a rich, warm soil, moist but well drained, and salt enough to prevent the growth of weeds, are particularly beneficial to the asparagus plant.

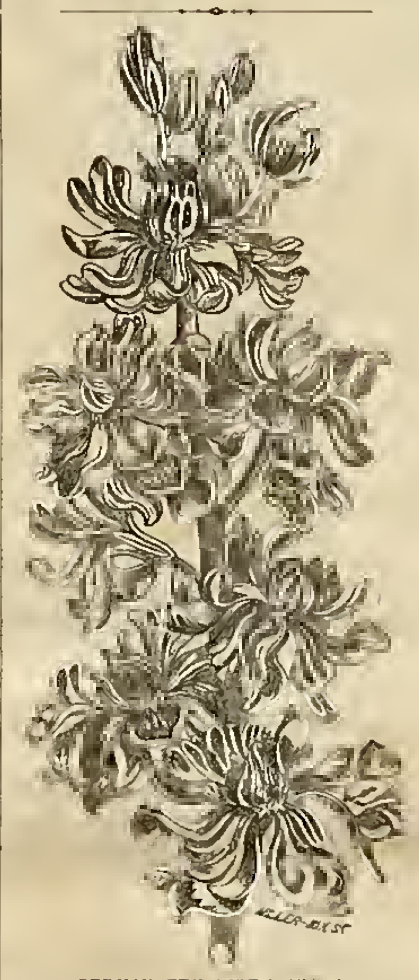
Some writers recommend earthing up so as to blanch the stalks, and give directions for cutting as soon as the plants appear, several inches below the surface. For our taking, we much prefer the succulent and juicy *green* stalks, three or four inches high, to the tough, insipid white part which has been cut beneath the surface.—a.

THE FARMER'S GARDEN.

Mr. Fanny says truly, in the February No. of the Horticulturist, that "no one can be truly said to *live* who has not a *Garden*."—The garden well supplied with its proper edibles, fruits, salads, &c., is indeed a luxury that, although easily to be had, is beyond price.—It is really strange that so many farmers will forego the enjoyment produced by one. That they, who have abundance of land and can select the best location for it, and have at hand the wherewith to make it rich in the elements of vegetables, should totally neglect it, is indeed a marvel. As a matter of economy, the garden should take the first position on the farmer's books. The choice edibles which it affords not only go a good way in lengthening out the meal and flour barrels—but what is of more importance, they go much farther in contributing to the enjoyment and health of the family, giving a healthy tone to the secretions, and a consequent buoyancy to the spirits, that enable one to meet the labors of each day with a will, and shed a halo of happiness on all around.—This living on pork and potatoes is not the best diet in the world, for the human system, though it may do well in its proper proportion.

And how much better it is to have the fruit of one's own planting, tending and picking—set fresh and crisp on the table. The zest of its enjoyment is greatly heightened, while its real value is far more than of that selected at the market, or begged of a neighbor. It does not require a large space of ground for a good garden, but it should be rich, well drained, the soil made deep, and kept in perfect cultivation. Not a weed should mar its face. In such a spot, whatever you may plant—the reward will be great in the abundance and good quality of the fruit. Your lettuce, asparagus, cress, peas, beans, onions, salsify, tomatoes, beets, carrots, parsnips, &c., &c., will come to their full perfection, and be relished above all that you can conceive from the same things raised in a half starved, half tended soil. And then the borders will yield you such a treat of the small fruits, that you will ever after rate your garden not only a luxury, but an indispensable necessary.

Another idea about it is, if you take the proper care of your garden, you will be pretty sure to have order and neatness introduced into all the affairs of your farm, and so find that your profits are marvelously increased. Order, which is only promptness and perseverance in their best form, is the key that opens the door to success. T. F. W.



GERMAN TEN WEEK STOCK.

The German Ten Week Stock (*Mathiola Annua,*) is well known. It is found in greater or less perfection in every flower garden.—There is an immense number of varieties, varying from the purest white to the darkest and richest purple. It originated in the south of Europe, from whence it was disseminated in 1831. It has been assiduously cultivated in Germany, France and England. From good seed, the flowers on most of the plants will be perfectly double, almost approaching the rose. "The plant," says the *Horticulturist*, "grows from one to two feet high, with an erect, branching stem, hoary leaves, and long spikes of flowers; the size and richness of these flowers vary greatly in the different varieties, and some of them are very splendid. The species is a native of the south of Europe by the sea-shore, whence it was introduced in 1831; but the principal varieties have been originated in England and Germany. The German varieties are particularly beautiful.

For very early flowers, a few plants may be raised in a hot-bed, or in a pot in the house, to be transplanted into the open ground as soon as the weather is sufficiently warm. For sowing in the open ground, the soil should be dug deep, and very finely pulverized with the rake. The seed may then be sown in drills, and slightly covered with fine earth. As soon as the plants show the third pair of leaves, if too thick in the bed, they may be carefully transplanted, leaving the plants in the bed about ten inches apart. Transplanting should be done on a damp day. If the plants are large, they should be removed without disturbing the roots. If much exposed to the wind, it may be necessary to tie them to a stake."

Cherry Grafting.—I have observed many *failures* in grafting cherries, and in looking for the cause, I have almost invariably found that the strong bark of the stub had curled out and let the water into the cleft. To prevent this wind, a piece of cloth around the stub after the grafts are set into it, in the ordinary manner, the wax holding it to its place. I take particular pains in setting the scion, so as to unite the inner barks of the scion and stub.—S. G., *Weedsport, N. Y.*

PRUNING DWARF PEARS.

The *Mark Lane Express*, in its calendar of operations for March, says:

Apple and pear trees, as dwarf standards, are now frequently grown, and well deserve attention. They should now be carefully looked over and pruned, observing always to keep the middle of the tree open, and all the branches at equal distances. In pruning these, take care to provide young shoots to succeed the bearing wood. These should spring from the bottom of such as it is intended to remove, and should not be shortened till they have made one year's growth above the bearing shoots, which may be as high as the operator can well reach without the aid of steps. The last year's growth may be then taken off. If they are shortened annually, the buds which ought to form fruit spurs will be forced into growth, and a profusion of wood will be the consequence, instead of fruitful shoots. Many trees are spoiled by shortening the young wood, which should never be done, if it is in a healthy state, except with a view to produce fresh shoots in a naked part of the tree. Great care is necessary on the part of the operator, to prevent his clothes breaking off the fruit spurs. When all is completed, let all moss be carefully scraped or brushed off, and if any of the trees are infested with the woolly aphis lungera, wash the infested parts with vinegar. Also burn all the prunings of such trees, as they spread with great rapidity. Nothing can be more beautiful than such trees well managed, either in bloom or fruit, and no fruit more deserving the attention bestowed on them.

RENOVATING OLD GRAPE-VINES.

The best mode of renovating an old grape-vine, is to make bare its roots for several feet around the stem—remove the ground entirely, and then apply two or three bushels of bones, which should always be preserved about a place for this purpose partially broken up; and on the top of these and from one to two bushels of wood ashes, according to the size of the hole to be filled, mixed with some hog manure and rich soil. In one year, should this plan be pursued, a marked change for the better would be produced.

In pruning an old grape-vine which has been allowed for years to take its own course, it should not be topped too short the first year. About 12 or 15 feet, according to size, should be left to remain; the lateral branches should be thinned out to one or two feet apart, and at that distance tied to the trellis firmly. The fruit-bearing twigs found upon these, should be pruned down so as to allow about three buds to each. And the work is done.

The best time to prune is at any period before the sap begins to circulate—say in January, February and first half of March.

No external application to the branches will help their productiveness. Soap-suds applied to the roots plentifully, on washing-days, are of great advantage.—*Germantown Telegraph.*

VEGETABLE GARDEN.

The operations of the garden for this month must depend on the weather, and the condition of the ground. Seeds not easily injured by frosts should be sown, such as peas, beets, parsnips, lettuce, radish seed, onion seed and sets, early carrots, asparagus seeds for new beds; and plant out two year old roots, cabbage seed, &c. Uncover spinach, parsley, lettuce, &c.—Trench ground for horse-radish, and set out pieces of old roots in rich soil. Dress up rhubarb, and manure thoroughly if not already done. Give close attention to frames, &c., and cover on cold nights. Give air on fine days.—Tomato, pepper and egg plants, which have grown thickly, should be pricked out into other frames. Start Lima beans in soils inverted, within doors, so as to be ready for planting out for early crops so soon as the weather is settled. Set out beds of sage, sweet marjoram, winter savory, pennyroyal and other perennial herbs, by dividing the roots of old plants.—Plant sweet potatoes in hot beds for sprouting, and cucumbers in frames for forcing. As a general rule in gardening, make deep soil, manure heavily, and use plenty of seed. Better to thin out than have to re-sow.—*Farm Jour.*

The Strawberry Question.—The sexual character of the strawberry has been a prolific theme of discussion for several years. A committee of the Cincinnati Horticultural Society have come to the following conclusions:

1st. That all strawberries, in their natural state, have some blossoms, perfect in what are termed male and female organs, while some are decidedly pistillate, and others staminate.

2d. That when they are in some degree perfect in both organs, the fruit will be small and indifferent, except, perhaps, in the case of "Longworth's Prolific."

3d. That if the staminate plants prevail, there will be but little fruit realized.

4th. That if they be all pistillate, there will be a like result, and that of an inferior quality.

5th. That to insure a full crop, whatever be the theory, it is absolutely necessary that the pistillate plants predominate; indeed, that the staminate plants be very sparsely distributed.

Distance apart to Plant Trees.—The *Agriculturist* says:—"After a long course of observation and experience on this subject, we have fully made up our minds to the conclusion that in *any* part of the United States and the Canadas, the following distances are the *least* at which trees should be required to stand:

Apples, 33 feet, or two rods—40 feet is none too far.

Pears, on their own stocks, 24 to 30 feet.

Pears, on quince stock, 10 to 12 feet.

Quinces, peaches, nectarines, apricots and plums, 16 to 20 feet.

English cherries, 20 to 24 feet.

Kentish, or common red, or pie cherry, 16 to 20 feet."

Mechanic Arts, &c.

LIST OF PATENT CLAIMS

Issued from the United States Patent Office,

For the week ending March 7, 1854.

Wm. Burnett, of Boston, Mass., for improved arrangement of fusible plugs or disks for steam boilers.

Isaac Hussey, of Harreysburgh, Ohio, for improvement in machines for plastering.

Caleb Cook, of Nashville, N. H., for improved arrangement of valve motion for locomotive engines.

Wirten Gale, of Louisville, Ky., for improvement in the gauge of straw cutters.

Wm. G. Phillips, of Newport, Del., for improved method of opening and closing gates.

Joel P. Heacock, of Marlborough, Ohio, for apparatus for rounding and beveling barrel heads.

Gen. W. Cooper, of Palmyra, Ga., for improvement in cotton seed planters.

Henry B. Rimble, of Rochester, N. Y., for improvement in sash fasteners.

Wm. H. Johnson, of Grantville, Mass., for improvement in sewing machines.

Geo. C. Hinman, of New Haven, Conn., for improvement in sash sustainers.

Geo. Levan, of West Earl township, Pa., for improvement in reeling machines.

Samuel Lurchund, of Astoria, N. Y., for improvement in sectional dry docks.

Levi B. Tyng, of Lowell, Mass., for improvement in tail-stocks for turning-lathes.

R. J. R. Stone, of Ohio, for improvement in machines for boring and mortising carriage hubs.

Jos. Soltenberger, of Higginsport, Ohio, for improvement in carriage brakes.

James W. Steukes, of Milan, Ohio, for improvement in apparatus for paying the seams of vessels.

Chauncey D. Woodruff, of Toledo, Ohio, for improvement in suspending rare-troughs.

Luther B. Fisher, of Coldwater, Michigan, for improvement in seed planters.

Jerh. C. Heston of Reading, Ohio, for improvement in seed planters.

Chas. Miller, of St. Louis, Mo., for improvement in sewing machines.

Clark Pulley, of May's Landing, N. J., for improved method of operating hydraulic rams.

David B. Marks, of New York, for improvement in artificial legs.

Seaman C. Ripley, of New York, for improvement in brick machines.

Jos. Sawyer, of South Royalton, Mass., for improvement in machines for splitting rattans.

Addison M. Sawyer, of Templeton, Mass., for improvement in machine for splitting rattans.

Wm. Wickersham, of Boston, Mass., for improvement in sewing machines.

Robert W. Andrews, of Staffordville, Conn., for improvement in Britannia tea and coffee pots.

Jesse Young, of Franklin Furnace, Ohio, for improvement in connecting the joints of air-heating pipes.

Wm. C. Wright, of Boston, Mass., for improvement in machines for drilling stone.

Ashley Hotchkin, of Schenevus, N. Y., for improvement in hanging gates.

Daniel Ryan and Jos. Finnigan, of N. York, for improvement in water closets.

Jos. Wilson, of Hartford, Conn., for improvement in self-acting railroad switches.

Christopher Hodgkins, of Boston, Mass., assignor to Nehemiah Hunt, of same place, for improvement in sewing machines.

Thos. Clegg, of North Andover, Mass., assignor to Thos. Clegg and Nathaniel Stevens, of Andover, Mass., for improvement in wire heddle eyes for looms.

RE-ISSUE.

Enoch R. Morrison, of Troy, Pa., for improved shingle machine. Patented Nov. 22, 1853.

ADDITIONAL IMPROVEMENT.

Samuel C. Dugdale, of Richmond, Ind., for apparatus for opening and closing gates. Patented Oct. 11, 1853.

Vegetable Mechanics.—There is a remarkable tree on the farm of the late Hon. Oliver Ballou, of Cumberland, R. I., which is an emblem of himself in his struggles against the obstacles of life. An old elm standing near a mass of rocks, died. A young elm then appeared in a fissure of this rock, casting down its slender roots, and in twenty or thirty years, it has become a foot and a half in diameter.—Its roots have penetrated into and under the rock, and have lifted and thrown off about seven tons of it, and have loosened and partly lifted ten tons more, which in a few years will be separated from the mass. The roots in bear the immense pressure upon them, have become changed from the ordinary appearance, and have a tough casing which may be compared to the skin of an alligator. The provisions thus made by nature for the growth of the tree under such difficult circumstances, furnish a striking specimen of what may be called vegetable mechanics. The greatest wonder is that the roots could grow and expand under such a heavy pressure of hard substance.—*Providence Post.*

Window Curtains and Furnaces.—The Scalpel throws a brick at curtains and furnaces, on account of the former excluding the little light which outside blinds and inside shutters permit to enter our dwellings, and which is so essential to health; and the latter producing air that destroys health like an engine of death.—Where furnaces and curtains are in vogue, the editor says the physician may always count on admirable returns in a glorious crop of catarrhs, bronchitis, prolapsus, congestions of the liver and bowels, dyspepsia, and weak eyes.

Floods in Paris.—A correspondent of the New Orleans Crescent, in Florence, writes:—"There is not one room in one hundred in Paris that has a carpet on it. The floor is made of brick, laid down generally in large squares, and it is cleaned by pouring on it a quantity of brick-dust, and then throwing over it a quantity of water, and then scrubbing it till it acquires a polish, fairly painful to look upon.

Smithfield Market in Manchester—an area of two acres and three quarters—is to be covered with a roof, open on three sides. The cost of this and other improvements, and of the enlargement of the market to some extent, will be $30,000.

AMERICAN RIFLE FOR RUSSIAN EMPEROR.

We were shown this morning a most destructive, though simply constructed weapon of war, called Sharp's patent breech-loading and self-priming rifle. It was made for the Emperor Nicholas, and the polished walnut stock is mounted with gold. The barrel and moving parts are of cast-steel, and finished in a style of excellence. To load the rifle which admits of but one charge at a time, the breech is opened by moving a lever or guard forward, the cartridge is then pressed forward with the thumb, which fixes the ball in its place; the lever is removed to its position, which closes the breech, and cuts off the rear end of the cartridge, exposing the powder to the fire which communicates from the percussion cap when discharged.

The rifle can be loaded and discharged with astonishing rapidity, and the inventor claims that, with the quantity of powder used by United States muskets, it will propel a ball with greater precision and a distance one half further than that arm or any other rifle yet invented.

Similar rifles have been made for the French Commissioner, Earl of Ellesmere, and Col. Stratton, of the British army in India. An order has also been received from the French Minister at Washington, to construct a rifle for Louis Napoleon.—*N. Y. Evening Post.*

MILK TREE.

In a narrative of travels on the Amazon and Rio Negro, just published, Mr. Wallace describes an extraordinary tree, called the milk tree, which was one of the first wonders he saw near Para. The fruit is eatable, and full of a very juicy pulp; but strangest of all is the vegetable milk, which exudes in abundance when the bark is cut. It was about the consistence of thick cream, and but for a very slight peculiar taste, could hardly be distinguished from the genuine product of the cow. Mr. Leavens ordered a man to tap some logs that had laid nearly a month in the yard. He cut several notches in the bark with an axe, and in a minute the rich sap was running out in great quantities. It was collected in a basin, diluted with water, strained, and brought up at tea time and at breakfast next morning. The peculiar flavor of the milk seemed rather to improve the quality of the tea, and gave it as good a color as rich cream; in coffee it is equally good. The milk is also used for glue, and it is said to be as durable as that made use of by carpenters.

Wood, it is said, may be petrified by the following process:—Take equal quantities of gem salt, rock alum, white vinegar, calx and pebble powder. Mix all these ingredients together and there will be an ebullition. When this subsides, throw in the wood, or any other porous matter, and let it soak for four or five days, at the end of which time the petrifaction will be complete.

Substitute for the Common Brick.—Martin Kernan, of Milford, Mass, says:—"I think a substitute for brick, as good and cheap, can be manufactured as follows:—Take a metal mould, first filled with heated gravel, and then pour melted glass into it, and leave it to cool gradually. I think each mould would not require more glass than is contained in a common black bottle. These are sold for a cent each, the blowing of which must cost half that sum." There appears to be something in this.

Domestic Economy.

ECONOMICAL WHEATEN BREAD.

A Calais correspondent sent Lord Palmerston the following receipt for making cheap bread, which his Lordship transmitted to the Council of the Royal Agricultural Society of England:

For the purpose of making this bread, only the coarsest of the bran is to be taken from the wheat; and the second coat, or what is called pollard, ground with the meal, as is usual for wheaten bread. Five pounds of this bran are to be boiled in somewhat more than four gallons of water, in order that when perfectly smooth, three gallons and three quarts of clear bran water may be poured into and kneaded up with 46 lbs of the brown flour; adding salt as well as yeast, in the same way as for the other bread. When the dough is ready to bake, the loaves are to be made up and baked two hours and a half in a pretty brisk heat.—As flour when thus made up will imbibe three quarts more of this bran liquor than of common water, it evidently not only produces a more nutritious and substantial food, but augments it to one-fifth part of the usual quantity of bread: consequently it is a saving of at least one day's consumption in every week. If this bread were in general use, it could be proved to be a saving to the nation of near ten millions per annum. This bread, too has the following peculiar property: if put into the oven and baked for twenty minutes, after it is ten days old, it will appear again like new bread.

Beet Root Wine.—It appears, according to Galignani, that a very good champagne wine is made from beet-root. When the juice has been purified by the ordinary process, and a pure solution of sugar and water has been obtained, it is evaporated to a suitable density, after which it is fermented by adding cream of tartar, and the required bouquet is given by means of aromatic plants.

A Yankee Loaf.—Take one quart of sweet milk, one pint of sour, three pints of Indian meal, one pint of flour, one teacupful of molasses, salt, saleratus, well stirred, bake six hours.—*Ohio Cultivator.*

Educational.

ADDRESS TO SCHOOL BOYS.

CHAPTER II.

We closed the former chapter of the address to you, boys, by a brief statement of the manner in which dunces and blockheads are manufactured in colleges and high schools. A diploma, although *prima facie*, is not conclusive evidence of erudition; and one titled fool is sufficient to throw discredit and suspicion upon all other men of the same rank.

On the other hand, we see boys who never had the advantages of any school but that of their own district, and even that only for a few months in the winter, rising up to be ranked amongst the great men of their time; sitting on the bench of judges, becoming orators, statesmen, and philosophers, and leaving names which are reverenced by after generations.—Why is this? was it their ignorance that made them great, or was it the learning of those college-men spoken of before that made them small? No! No!! but the opposite of all this. These poor boys educated themselves;—took hours even from their necessary rest, to study and improve; let no opportunity escape of obtaining useful knowledge, and became learned in spite of all obstacles. If they could have had the advantages which the others wasted, how much higher might they have risen? As the teetotaler responded to the toper, speaking of a man that drank five times every day and yet lived to be ninety years old; "If he lived to be ninety years old," said the teetotaler, "under such a load of liquor, if he had not drank at all he would have lived forever."

Schools and school-masters are not absolutely necessary to make great and learned men, because one determined to be great and learned, can be a school-master to himself; can teach himself, and sump his finger at all public instructors. But he must have help to begin; he must be taught his alphabet, and then must have books and paper, and all these things. He must have the silent teaching of type and pen, if not the voice of the living master; and then he must work all the harder.—Think, then, boys, of the advantages you possess, and make use of them while it is in your power. If you never should attend any more celebrated school than that of your own district, you need not go through the world as drones and dunces. George Washington, the Father of his Country, never attended, probably, any more distinguished institution. Benjamin Franklin, Henry Clay, Horace Greeley, President Fillmore, and a thousand others whose names are familiar to every school-boy, received their University honors at one of these seven by nine school houses which a few years ago were seen throughout the country standing by the way-side. Demosthenes, the model orator of the world, was self-educated, and, in the course of his discipline, overcame probably more natural defects than any other man who has risen to eminence throughout all time. Weak of voice, defective in elocution, ungainly in figure, an object repulsive to the eye of the polished Athenian, he retired to a cave by the sea shore, and practiced, to imaginary audiences, those masterly orations which were wont to sway the masses of his countrymen, as the tempest sways the waters of the great deep.

I do not expect that any boy who reads this address will become a Demosthenes. Only one Demosthenes has lived in two thousand years! In seventy generations of men, with a thousand million in a generation, only one such man has lived. But every nation, and every generation, has great orators. We have had them, and we have them now. You have heard spoken, and have spoken yourselves, I have no doubt, extracts from the orations of Patrick Henry, John Adams, Judge Story and Wm. Wirt; and Daniel Webster, Henry Clay and Edward Everett; the last still living, the first two but recently gone to their rest, will mark this generation, and furnish specimens of oratory equal to those of almost any other age. Who will fill their places?—Are they some of you? Stranger things than this have come to pass; and boys less promising than the least of you have astonished the world.

But granting that none of you can ever be distinguished; that you were born to live and die amongst the common class of men; you can, even in that case, fill those stations honorably to yourselves, and usefully to the world. The intelligent and sober farmer—the industrious and well educated mechanic, and even the day laborer who has his mind well stored with knowledge, is always respectable, and respected. It is no disgrace to work! it is no more beneath the dignity of a man to labor with his hands than with his head, if he only be equally wise. It is not the profession of the clergyman, the lawyer, or the physician, that makes those who pursue them successfully, looked upon as any more honorable than the wood-chopper, or the laborer on our public works; but it is because the former class must of course be educated, in order to succeed.—They must, of necessity, be men of intelligence, or they will starve out of their business; whilst the digger or the wood-chopper, can work at his trade if he does not know sufficient to add together two and two.

If it took a learned man to chop wood, and an ignoramus could be an eminent divine, or a good physician, wood-chopping would be the *honorable profession*, and the doctor and minister would go down. The man makes the employment honorable, not the employment the man. Any virtuous business carried on by wise men would be reputable, and any other conducted by fools would become degraded.

DULL CHILDREN.

No fact can be plainer than this: it is impossible to judge correctly of the genius or intellectual ability of the future man, by the indications of childhood. Some of the most eminent men of all ages were remarkable only for dullness in their youth. Sir Isaac Newton, in his boyhood, was inattentive to his study and ranked very low in school until the age of twelve. When Samuel Wythe, the Dublin school-master, attempted to educate Richard Brinley Sheridan, he pronounced the boy an "incorrigible dunce." The mother of Sheridan fully concurred in this verdict, and declared him the most stupid of her sons. Goldsmith was dull in his youth, and Shakspeare, Gibbon, Davy and Dryden do not appear to have exhibited in their childhood even the common elements of future success.

When Berzelius, the eminent Swedish chemist left school for the university, the words "Indifferent behavior and of doubtful hope," were scored against his name; and after he entered the university he narrowly escaped being turned back. On one of his visits to the laboratory, when nineteen years old, he was taunted with the inquiry whether he "understood the difference between a laboratory and a kitchen."—Walter Scott had the credit of "the thickest skull in the school," though Dr. Blair told the teacher that many bright rays of future genius shone through that same "thick skull."

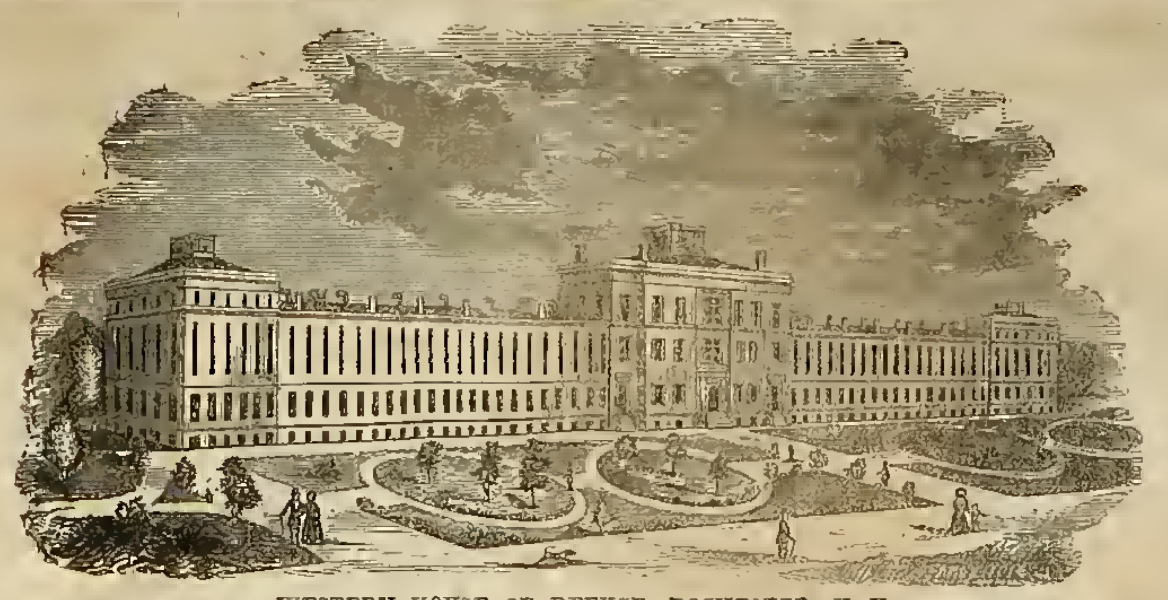
Milton and Swift were justly celebrated for stupidity in childhood. The great Isaac Barrow's father used to say that, if it pleased God to take from him any of his children, he hoped it might be Isaac, as the least promising.—Clavius, the great mathematician of his age, was so stupid in his boyhood, that his teacher could make nothing of him till they tried him in geometry. Carracci, the celebrated painter, was so inapt in his youth, that his masters advised him to restrict his ambition to the grinding of colors.

"One of the most popular authoresses of the present day," says an English writer, "could not read when she was seven. Her mother was rather uncomfortable about it, but said as everybody did learn, with opportunity, she supposed her child would do so at last. By eighteen, the apparent slow genius paid the heavy but inevitable debts of her father from the profits of her first work, and before thirty, had published thirty volumes." Dr. Scott, the commentator, could not compose a theme when twelve years old; and even at a later age, Dr. Adam Clark, after incredible efforts, failed to commit to memory a poem of a few stanzas only. At nine years of age, one who afterwards became a Chief Justice in this country, was, during a whole winter, unable to commit to memory the little poem found in one of our school-books.

Labor and patience are the wonder-workers of man—the wand by whose magic touch he changes dross into gold, deformity into beauty, the desert into a garden, and the ignorant child into the venerable sage. Let no youth be given up as an incorrigible dolt, a victim only to be laid upon the altar of stupidity, until labor and patience have struggled with him long enough to ascertain whether he is a "natural fool," or whether his mind is merely enclosed in a harder shell than common, requiring only a little outward aid to escape into vigorous and symmetrical life.—*Jour. of Ed.*

Cincinnati Schools.—The total appropriation for the public schools of Cincinnati the present year is $135,000. Her population in 1850 was 115,455. Rochester had a population of 36,403, in 1850, and appropriates $19,220 for her schools. Cincinnati has a trifle more than three times the number of inhabitants of Rochester, and appropriates more than *seven* times the amount for schools.

The Fearful Man.—He who dreads giving light to the people, is like a man who builds a house without windows, for fear of lightning.



WESTERN HOUSE OF REFUGE, ROCHESTER, N. Y.

WESTERN N. Y. HOUSE OF REFUGE.

The Western House of Refuge for Juvenile Delinquents, a very accurate view of which is presented above, is one of the finest edifices in Western New York; and the Institution among the most praiseworthy and best conducted in the Empire State.

The farm belonging to the Institution, on a portion of which the buildings are located, contains 42½ acres of excellent land, and is finely located about 1¼ miles north from the central portion of the city of Rochester, on a slight elevation between the Erie canal on the west, and the road leading to the mouth of the Genesee river on the east; 4½ acres of it are surrounded with a stone wall 20 feet in height, within which stand all the buildings belonging to the Institution, except the barn; 28 acres are enclosed with a stockade fence 10 feet in height, formed of cedar posts, and are designed for cultivation. The remaining 10 acres are appropriated to pasturage. The grounds within the walls are tastefully laid out in vegetable and flower gardens, walks and play grounds, and ornamented with trees and shrubbery, which, though now in their infancy, will, in time, add greatly to the beauty of the place, as well as to the comfort of the inmates.

The center building of the house proper fronts the east, and is 86 feet wide, 60 feet deep, and is in height three stories above the basement. The two wings extending to the north and south, are each 148 feet long, 32 feet deep, and two stories in height, above the basement, with the exception of the square towers, which form the finish at the extremities of the wings, and are three stories in height. The whole front of the building, it will thus be seen, is 382 feet in length. Two other wings extending to the west from the extreme of the two already built, can hereafter be added if required. In the basement of the centre building are a kitchen and dining-room for the subordinate officers, and the kitchen for the general purposes of the house. The latter is furnished with a steam boiler and cooking apparatus of the most approved kind, which are supposed to do the work for a family of at least 250 inmates. It is also furnished with a steam engine of three horse power, which is used in part to elevate water from the cistern to a tank of the capacity of 2,500 gallons, in the fourth story, from which water is taken by means of leaden pipes to all parts of the house where its use is required; and in part to furnish a power for boring and mortising chair seats. On the first floor above the basement is the Manager's room, with rooms for the Superintendent and his family. On the second are two large rooms for the sick, and sleeping rooms for the officers; and on the third is the chapel, which is well arranged and commodious, and will seat 500 persons, and more if necessary.

In the basement of the north wing is a bathing and washing room furnished with a plunging bath of the capacity of 5,000 gallons, a shower bath, and also with pipes and cocks so distributed that each delinquent can at the same time perform his ordinary ablutions under a running stream of water, without interfering with or being interfered with by any other.—There are also in the basement of the same wing, a washing, drying, and ironing room, tailor's shop, seamstresses' room, and store room. The first floor embraces the dining-room, school-room, recitation-room, and a room for the library; and on the second are the dormitories, which are 7 feet square, and are arranged in two tiers on either side of a hall 15 feet in width, running the whole length of the wing. Each dormitory has a narrow window extending from the floor to the ceiling, rendering it light, airy and pleasant, and a ventilating flue which can be opened and closed at pleasure. The basement of the south wing will be occupied, when completed, for store rooms and various other purposes. The first floor will be occupied chiefly by the school-room, and other rooms connected with the instruction of the delinquents; the room now occupied as a school-room in the north wing being too small for an enlarged number, and being also needed as an addition to the dining-room.—The second floor is fitted up like that of the north wing, with dormitories similarly constructed and arranged. The whole building with the addition of a few dormitories in the north wing, will well accommodate 200 delinquents, with the officers and hands necessary to take charge of them.

The whole expense of the premises, the building proper, above represented, being the principal item, is estimated at about seventy-five thousand dollars. Commissioners for erecting the buildings—Isaac Hills, William Pitkin, and D. C. McCallum.

The institution was opened on the 11th of August, 1849. The number of inmates on the 1st of January, 1850, was 37; on the 1st of January, 1851, 98; on the 1st of January, 1852, 130; on the 1st of January, 1853, 165; and the whole number now in the House is 205.

Managers.—Frederick F. Backus, Samuel W. D. Moore, Edward Rogers, Elijah F. Smith, John Greig, Isaac Hills, William Pitkin, Anon Bronson, Hemin Blodgett, Alexander Kelsey, Alexander Mann, Isaac Bates, Orlando Hastings, Jacob Gould, Joseph Field.

The institution continues under the wise and efficient superintendence of S. S. Wood, Esq.

In the 5th annual (1854) report to the Legislature, among other things, the managers say:

The Institution, under their care, has been unusually prosperous during the year which closed on the first day of January, 1854—the fifth year of its existence. The boys have enjoyed almost uninterrupted health, and no single case of severe sickness has occurred within its walls. The officers have diligently and faithfully discharged their duties, and the boys have in general performed the tasks assigned them in a quiet and orderly manner, and the progress made by them in their studies is creditable both to them and to their teachers. The records of each succeeding year in the history of the Institution, bring with them accumulated evidence of its value to the interesting class for which it was designed.

The accounts received from those who have been discharged from the Institution, show that with few exceptions they have been redeemed from the bondage of their former habits, and are pursuing with patience, industry, and sobriety, the path that leads to respectability and happiness.

Curious Facts.—The senses of smelling, tasting, and even of feeling or touch, are liable to innumerable causes of deception. It is mentioned in the Museum of Art and Science, that if two fingers of the same hand, being crossed, are placed upon a table, and a marble or pea is rolled between them, the impression will be, if the eyes are closed, that two marbles or peas are touched. If the nose be pinched, and cinnamon be tasted, it will taste like a common slice of deal. Many substances lose their flavor when the nostrils are stopped. Nurses, therefore, upon right and scientific principles, stop the noses of children when they give them doses of disagreeable medicine. If the eyes be blindfolded, and buttermilk and claret be alternately tasted, the person tasting them, after a few repetitions of the process, will be unable to distinguish one from the other.

Book Folding.—When the sheet of paper of which a book is made is folded in two leaves the book is called a folio; when folded into four leaves it is called quarto; when folded into eight leaves it is called octavo; when folded into twelve leaves, a duodecimo, or 12mo; when folded into sixteen leaves, a 16mo; when folded into eighteen leaves, an 18mo; &c. The number of folds in each sheet is ascertained by the letters or figures at the bottom of the pages, there being as many leaves between each as there are folds in the sheet—the figures at the bottom telling the number of sheets in a book, as those at the top do the number of pages.

Mr. Hillard, in his book entitled "Six Months in Italy," observes that an English man-of-war seems to be always within one day's sail of everywhere. "Let political agitation break out in any port on the globe, if there be only a roll of English broadcloth or a pound of English tea to be endangered thereby, within forty-eight hours an English steamer or frigate is pretty sure to drop anchor in the harbor, with an air which seems to say, "Here I am; does anybody want anything of me?"

Sunday Reading.

[Written for Moore's Rural New-Yorker.]

CONSOLATIONS,

Affectionately inscribed to Mary P——, on the Death of her Brother.

BY MRS. MARIA W. HUDNUTT.

There's a vacant place beside your hearth,
There's a vacant place in your heart as well;
There's a saddened strain in your song of mirth,
That falls on the ear like a funeral knell;
There's a shadow thrown on your onward way,
There's a gathered cloud in your once bright sky,
There are heart-ties rudely torn away,
That quiver with speechless agony.

There's a manly form you will see no more,
There are eyes whose lustre is faded now;
There are lips whose melody lies in the,
There's a shrouded form, and a coffined brow;
There's a dear one gone from the household band,
And his place no other love can fill;
There is missing the clasp of a brother's hand,
And a brother's heart lies hushed and still.

There's a quiet place where the sunbeams bright,
Rest on the sod the livelong day,
Where the moonbeams gently fall at night,
And the wild bird carols his merry lay;
Where the soft South wind in its wanderings by,
Calls forth the flowers from the earth's damp breast,
And there, when his heart with hope beat high,
You pillowed his head in a dreamless rest.

You have turned aside from the gentle word,
With an aching heart, and a tearful eye,
And felt that the grief which your bosom stirred
Lay too deep for human sympathy;
That the soothing tones from human lips,
Though prompted by warm hearts fond and true,
Had no power to lighten the dark eclipse,
That had suddenly settled on life for you.

There is left of the lost one a memory blest,
There's the hope of meeting beyond the sky,
In a brighter world where the weary rest,
And tears are wiped from each mourning eye;
Where the broken links of the household chain,
Are reunited no more to part;
And the weary load of grief and pain,
Is removed for aye from the breaking heart!

Burlington, Ky., 1854.

THE DISPIRITED MINISTER.

Some, there are, whose apparent success is so meagre that they, and perhaps their friends also, question at last the wisdom of their choice in entering the ministry. They are not eloquent. They are slow of speech and of a slow tongue. Their voice never holds in suspense charmed thousands. The "bees" did not "drop honey" upon their lips as they lay in the cradle. At first from necessity, and at length from choice, they seek out the solitary places of the land as the fields of their labor. Even there, they appear to human view to be ill adapted to their work. Ruder men than they despise their refined virtues. Ignorant men assail their wisdom. Brethren whose zeal is without knowledge, rebuke their unostentatious fidelity. Perhaps the best years of their lives are spent in the apparently vain effort to vindicate the simplicity of the gospel against a perverted popular taste. Good men among their parishioners are silent, while bad men plot mischief against them, because they will not degrade their pulpits into mere market stalls, and because the soul of a true-hearted preacher cannot transmigrate into the form of a political manager. They are not keen men. They do not lift up, nor cry, neither is their voice heard in the streets. They have long since learned to merge the question of mere professional success in that of a humble discharge of a present duty. Theirs is the dignity of unconscious wisdom. Their labor is in the dark. They remind us of those miners whose days are spent under ground, and who, from youth to old age, scarcely see broad daylight. Yet an unseen eye is upon these buried pastors. They preach the preaching that God bids them, and they do preach with power. A few choice spirits, unknown like themselves to the great world, and yet acquainted with God, do spring in response to their words. The best affections of the best Christians among their people do cling to them. To such they are eloquent, "beyond all Greek, all Roman fame." Through these few who have power with God, their work is destined to live. No human wisdom may be able to tell how; but it will live. It may live through the agency of some Christian mother, whose intellect such a pastor has instructed, whose tastes he has enlightened, and whose heart he has warmed, and who pours all the powers he has given to her into the training, for a few infantile years, of a son for whom her dying faith is, that his voice shall yet be heard on the pentecostal day, on the banks of the Ganges, or of a daughter whom a crown of martyrdom awaits in Central Africa. It may live in the labors of a young man whom such a pastor once carried in his bosom as a chosen lamb of his flock, and whom at length he has the means of sending into the honorable places of the ministry of our own land, and who will one day come on a pilgrimage to the grave of that pastor as to the grave of a father, and will say, "I owe to that man more than I ever gained at the schools. He it was who taught me how to preach. He formed my tastes for the pulpit. He taught me to reverence my work. He made me bow down and tremble at the thought of it. Yet he taught me too, how to trust.—He breathed into me the spirit of repose, without which a Christian preacher is as a reed shaken by the wind. I expect that I, and the souls whom God has given me, shall praise him forever for the creation of that man."—*Cheever.*

An Extraordinary Preacher.—"He is an extraordinary man; if you had once heard him, you would be disgusted with all others."

"I shall then take care not to go and hear him; on the contrary, I seek for a man who shall inspire me with such a love and respect for the Word of God, that I should be but the more disposed to hear it everywhere."—*Fenelon.*

No degree of temptation justifies *any* degree of sin.

Miscellaneous.

THE EDITOR'S SONG.

The following amusing imitation, or improvement—perhaps (?) on Tom Hood's "Song of the Shirt," is from the columns of the *Montreal Pilot*:

The editor sits at his table,
Writing as well as he's able
Paragraphs, leader, and puff;
His scissors beside him are lying,
Whilst he is in agony trying
If copy to furnish enough!

Toil, toil, toil!
What a weary life is mine!
Wasting the precious midnight oil
In leader, and column, and line;
Working from morn till night,
Working from night till morn,
Oh! why was the steam-press ever made,
Or why was the editor born?

Toil, toil, toil!
And whose is the gain when want
Where are the trophies we achieve,
And for whom are the laurels won?
To stand in the foremost rank
Of each hard fought party fray—
To share in the toil, and only get
Abuse and neglect for pay!

Toil, toil, toil!
What a thankless task is ours!
To bake the bread and to press the cheese
That Senator Jones devours!
To sit on a three-legged stool,
Whilst others have luxurious seats,
To prepare the hash, and cook up the stew,
But never to taste the meats!

Toil, toil, toil!
As the constant drop on a stone,
So the ceaseless, endless work
Wears away body and bone!
Though the pearl splutter and write,
Though the printer bully and brawl,
If it were not for the editor's pen,
What were the use of it all?

Toil, toil, toil!
Christians, Burmese, and Jews,
Is there a man on the weary earth
That grows richer by reading the news?
Richer, richer, richer,
As they read it by sunlight and taper,—
And yet there isn't a soul of them all
But grudges to pay for his paper!

Toil, toil, toil!
There's a row in the very next street!
Somebody's going to murder his wife,
And I must be off post haste.
Yesterday, just at this time,
Two policemen got choked in a riot:
And so it goes on from morning till night,
And an editor never knows quiet.

[Gets up, knocks his hat over his eyes, and rushes out in a state of distraction, "to pick up matter."]

[Written for Moore's Rural New-Yorker.]

DESULTORY PARAGRAPHS.

(Continued from page 65, this volume.)

XIII.

Minds on Mountains.—As upon a mountain you get a new and extended view of the surrounding scenery, so you there obtain fresh insight into the hearts and feelings of your companions. The soul seems to expand in the vastness and sublimity of the prospect, and the exhilarating air, as the night-closed petals of a flower open to the influence of the morning sunshine.

XIV.

Egotistic Authors.—The egotism of a great mind is always interesting. Most people like books with a spice of personality about them, and of two writers of travels, the one will be the most popular who can best describe his own adventures. Autobiographies are generally read with pleasure, because they exhibit a man's opinion of himself, and, "as a man thinketh, so is he," in a greater or less degree. As far as consistent with the subject, egotism is an allowed vanity of authors; but many themes should stand by themselves alone, whenever discussed.

XV.

Our Own Merits.—When one's modesty is shocked by the estimate which others make of his merits, he may be sure they are rated above desert, for, seek as much as we may not to "think too highly of ourselves," we are almost certain to do so, and this is good reason why we should not allow others to go beyond us.

XVI.

Who Would Wish to Forget!—Many pleasant things, like wayside flowers, are strewn along our paths, which we all pray may never fade from our memory. Yet we sometimes think of past occurrences with the wish to blot them out forever, forgetting that we need their recollection to keep us from the like follies again, and to teach us to feel for the sins and sorrows of others, as we could not but for our own sad experiences. And would any wish to forget all of sorrow and wrong they had known? would they wish to be cut off from sympathy with the "common lot." Never! if they remember their own longings for consolation when sad and heart-broken—never! if they recollect how their own feelings were misunderstood, and perhaps misrepresented,—never! if they would know the joy of pouring the balm of healing into another's heart.

XVII.

Sunshine: a Simile.—It is a damp cold day, clouds veil out the sunlight and shroud the fair sky in gloom. It reminds one of the heart which has never felt the enlivening and soul inspiring influence of love—that has never tasted its own deepest and purest fountain of happiness,—and we say; What this day might be and what that heart might enjoy, depends on the yet-concealed sunshine of Nature and of Life.

XVIII.

The Laws of Thought.—Thoughts of which we know not the origin or the occasion, and that glance through the mind so quickly that we can scarce remember even their dim and shadowy outlines, often exert an immeasurable influence upon our actions and feelings.—Why do we think of this or that so opportunely at times, or again when the occasion or place for it is past or has not yet arrived?—What vague and unexplained law of association governs the flow of our ideas? Who can unfold, even as they act in his own mental processes, the laws of thought?

XIX.

Exhilaration Evanescent.—The hours of gayety—of giddy pleasure—so exhilarating for the moment, soon pall upon the heart, and are not even remembered with satisfaction. But those hushed and quiet hours—the twilight of the heart—enshrine the memories which hallow them, as a treasure to which we may ever turn with delight. The laughing rills of happiness are like spring-brooks, soon exhausted; but the deep streams of true enjoyment flow from an unfailing fountain, pure and quietly forever.

XX.

The Sad "No More!"—How saddening the sight of those we love writhing in pain which we can do nothing to remedy! How it wakes the pangs of sympathetic anguish to find their distress beyond all human alleviation. How bitter the thought that soon the grave must hide them forever from our sight; that the places we have known together, which their memory endears, can know them no more! No more! no more! what sadder sound ever falls on mortal ears? What word knells a deeper, more sorrowful monotone upon the human heart?—H.

WELCOME TO SPRING.

We cordially welcome the Spring. Her very name awakens a glow of pleasurable emotions in the heart, and we believe with Tennyson, that her reign is the "happiest time of all the glad new year."

Genial sunlight and bland breezes heralded her advent, and, though her smile is sometimes lost in gathering clouds, we know that she will bring beauty and freshness to the earth. Once more the silvery gleam of lake and river will meet the eye, and the noisy mountain brook will go singing on its way like a happy child. The sleeping germs, folded in myriads of buds, will awaken into life; grass will spring up where all is now dark and dreary; trees and shrubs clothe themselves in the "delicate garniture of their young leaves;" and the violet and snow-drop open their starry eyes. The passage birds will wing their flight back to their forest homes, and their songs will mingle with the murmur of the stream, and the drowsy hum of the bee.

But Spring not only brings loveliness to Nature,—she is richly freighted with human hopes. How many invalids have been absolutely yearning for this season! How the pallid cheek glows—how the languid eye brightens—how the pulse bounds at the thought of gentle winds, and the breath of early flowers!

How many wanderers on the distant sea, or in foreign lands, are looking forward to Spring as the time when they shall come back to their homes, and the hearts, so anxiously awaiting their return? How many fondly believe that this season will be a sunny spot in their existence—a joyful crisis in their destiny!

Aye, Spring has a priceless wealth of *hopes*, but she has her *memories* too—some, that it will be sweet to recall, and others, of which we cannot think without deep regret, or profound sorrow. There are those, who will find delight in reverting to some Spring-time in the past, when they first chose the path, which led them to their present wealth, distinction, or peaceful happiness, and to such, no season will be so pleasant as this. But there are many to whom every soft gale, and every blossoming flower will bring a reminiscence of the dead.

* * * * * * *

Who may tell how heavily the gloom of affliction has settled on the broken household-band? Who may tell how deep and poignant is their grief? Still they have consolation in their bereavement; they "mourn not as those who have no hope." The departed sleeps in the cold embrace of death; but we believe, that, like the flowers which now awaken into new bloom, his spirit will arise in everlasting life, on the morn of a brighter day—at the dawning of a more glorious Spring.—*Olive Branch.*

Washington's Teachers.—Washington had but two teachers, one an old fellow named Hobby, one of his father's tenants, sexton as well as school-master of the neighborhood, who used to boast, after he was superannuated and somewhat addicted to strong potations, especially on the General's birthdays, that it was he who, between his knees, had laid the foundation of George Washington's greatness, by teaching him his letters; and the other the Mr. Williams already mentioned, who was according to Mr. Weems, "a capital hand" at reading, spelling, English grammar, arithmetic, surveying, book-keeping, and geography, and often boasted that he had made Geo. Washington as great a scholar as himself. We cannot doubt that to his thoroughness in teaching what he did know, his great pupil owed much of his acquired power; for a good foundation in a few important things is the best possible beginning for a boy of ability and enterprise. —*Mrs. Kirkland.*

MR. BODISCO'S WIFE.

We take the following from the Boston Transcript:

He had always mingled pleasantly with society at Washington, but the tie which connected him most nearly to America, originated in a singular romance of "love at first sight." He was one day walking with a friend out towards Georgetown Heights, when he passed a boarding school for young ladies, and was attracted by a fair girl of 16, who stood swinging her bag, and talking with great animation to some of her companions. "Who is that beautiful girl? who is she?" eagerly asked he, but his friend could not inform him. The door opened, and in she went to her books and slates, all unconscious of the daguerreotype that glimpse had left on the heart of the grave Russian Minister. The next day, and the day following, saw him taking the same walk, which subsided into a very slow step as he approached the building, and looked earnestly at every door and window. May Day was at hand, and was to be celebrated as usual in the school, by the usual festivities and the choice of queen, from among the number, and this year the floral royalty happened to fall on Miss Harriet Williams, the very girl who had so enthroned herself in the admiration of the foreigner.

Just before May Day the principal was surprised to receive a note from the Russian Envoy at Washington, expressing great interest in education, and begging permission to be present at the Festival of May Day, which it would give him particular pleasure, as a stranger to the customs of the country, to witness. Consent, of course, was very graciously granted, and the occasion was as charming as youth and flowers always make it. At the end of the term, Miss Harriet announced that she would not attend school any more. "What! not graduate? oh, why not? Are you going away? Are you going away?" But she shook her head, laughed and kept her counsel; and in a few weeks was the wife of the Russian Minister. She has accompanied her husband once or twice to Russia, where she was very much admired, and known as the "American Rose." Her face had regularity of feature, but was particularly distinguished for exquisite coloring. Nothing could surpass the chestnut brown of her hair, the bright gray blue of her eyes, nor the hue of the lily and the rose so delicately blended on her complexion. Perhaps her figure had too much *en bon point* for perfect symmetry, but she moved with grace and dignity. Although there was a great disparity of years and a great difference in appearance and character, between herself and husband, it seems to have been a very happy union.

HOW A BOY JUDGED HIS MINISTER.

"Mother, mother; I love our minister. I mean the one that preached for us to-day. I like him better than that young man who preached for us last summer."

"Why, my son! Why do you speak so about the minister? Little boys like you should not have their likes and dislikes, nor should they express their opinions as freely as you do."

"Dear mother, I did not mean to be wicked in speaking about the ministers. I cannot help loving the one, and feel quite afraid of the other."

"My son, explain yourself. What have you seen in our present minister which makes you love him so much?"

"O mother, you remember poor William Wilson's son, the boy I persuaded to go to Sabbath school last summer?"

"Yes, I remember."

"Well, last Sabbath, when meeting was done, the minister was coming down the steps with all the people; and don't you think, he left the company of that rich lady and gentleman from Boston, and came directly over to James Wilson, and put his hand on his head, and called him a fine fellow, and told him to come to his house and get a new coat and a pair of shoes, because it was cold winter weather. I tell you, mother, it is not every minister that will do that; many of them seem to feel too proud to speak to a poor ragged boy. Mother, I hope you won't be angry with me, but I must say if we can have that minister, I will love him, and teach all the boys to love him too. I think he would make a good children's minister."

The above, without alteration, is the substance of a conversation between a mother and a son, as given to me by the father who overheard it all.

THE MORAL EVILS OF WEALTH.

Orville Dewey says:—"I am obliged to regard with considerable distrust the influence of wealth upon individuals. I know that it is a mere instrument which may be converted to good or bad ends; but I more than doubt whether the chances lead that way. Independence and luxury are not likely to be good for any man. Leisure and luxury are almost always bad for every man. I know that there are noble exceptions. But I have seen so much of the evil effects of wealth upon the mind, making it proud, haughty, and impatient—robbing it of its simplicity, modesty and humility—lessening it of its large and gentle, and considerate humanity; and I have heard such testimonies, such astonishing testimonies to the same effect, from those whose professional business it is to settle and adjust the affairs of large estates, that I more and more distrust its boasted advantages; I deny the validity of that boast. In truth I am sick of the world's admiration of wealth. Almost all the noblest things that have been achieved in the world, have been achieved by poor men—poor scholars, and professional men, poor artisans and artists, poor philosophers and poets, and men of genius. A man, trained in the school of industry and frugality, acquires a large estate, his children possibly keep it, but the third generation almost inevitably goes down the rolling wheel of fortune, and there learns the energy necessary to rise again.

Ladies' Department.

CONDUCTED BY A——E.

LITTLE BELL.

He prayeth well who loveth well
Both man, and bird, and beast.
The Ancient Mariner.

Piped the Blackbird on the beechwood spray—
"Pretty maid, slow wandering this way,
What's your name?" quoth he—
"What's your name? Oh! stop and straight unfold,
Pretty maid, with showery curls of gold!"
"Little Bell," said she.

Little Bell sat down beneath the rocks—
Tossed aside her gleaming golden locks—
"Bonny bird!" quoth she—
"Sing me your best song before I go."
"Here's the very finest song I know,
Little Bell," said he.

And the Blackbird piped—you never heard
Half so gay a song from any bird—
Full of quips and wiles,
Now so round and rich, now soft and slow,
All for love of that sweet face below,
Dimpled o'er with smiles.

And the while that bonny bird did pour
His full heart out, freely, o'er and o'er,
'Neath the morning skies,
In the little childish heart below,
All the sweetness seemed to grow and grow,
And shine forth in happy overflow
From the blue, bright eyes.

Down her doll she tripped, and through the glade,
Peeped the Squirrel from the hazel shade,
And from out the tree
Swung and leaped, and frolicked, void of fear—
While bold Blackbird piped that all might hear—
"Little Bell!"—piped he.

Little Bell sat down amid the fern—
"Squirrel, Squirrel, to your task return—
Bring me nuts!" quoth she.
Up, away, the frisky Squirrel flies—
Golden wood-lights glancing in his eyes,—
And adown the tree,
Great ripe nuts, kissed brown by July sun,
In the little lap, drop, one by one—
Hark! how Blackbird pipes to see the fun!
"*Happy Bell!*" pipes he.

Little Bell looked up and down the glade,—
"Squirrel, Squirrel, from the nut-tree shade,
Bonny Blackbird, if you're not afraid,
Come and share with me!"
Down came Squirrel, eager for his fare,—
Down came bonny Blackbird, I declare,
Little Bell gave each his honest share—
Ah! the merry three!

And the while those frolic playmates twain
Piped and frisked from bough to bough again,
'Neath the morning skies,
In the childish little heart below,
All the sweetness seemed to grow and grow,
And shine out, in happy overflow,
From her blue, bright eyes.

By her snow-white cot, at close of day,
Knelt sweet Bell, with folded palms to pray—
Very calm and clear
Rose the praying voice to where, unseen
In blue heaven, an angel shape serene
Paused awhile to hear.

"What good child is this," the angel said,
"That with happy heart, beside her bed,
Prays so lovingly!"
Low and soft, oh! very low and soft,
Crooned the Blackbird in the orchard croft,
"Bell, dear Bell!" crooned he.

"Whom God's creatures love," the angel fair
Murmured, "God doth bless with angels' care:—
Child, thy bed shall be
Folded safe from harm—love, deep and kind,
Shall watch around and leave good gifts behind,
Little Bell, for ther."

[T. Westwood.

LETTERS TO THE READER.

No. I.—Health and its Duties.

Dear Reader,—Dost thou enjoy good health? Art thou rich in the possession of that greatest of earthly boons? Do thy cheeks glow with its ruddy hue—thine eyes sparkle with its animation—thy steps bound with its elasticity—and are thy spirits ever buoyant from its influence? Hast thou strength to fulfill the duties, to enjoy the pleasures of life, and be an active member of thine household, contributing to the happiness and comfort of its circle? Art thou able to mingle with thy friends in the house of worship, or on festive occasions, or wander out in the fresh invigorating air, without injury?—and dost thou, when night has drawn her sable mantle o'er the earth, lie down to rest, to sweetly rest, without an hour of pain? Dost thou never suffer, and art thou never languid from debility? Dost thou never have to practice self-denial, and learn lessons of content, debarred from social intercourse? Has thy patience and amiable disposition ne'er been tried by oft-repeated pain, and thy joyous thoughts ne'er been dimmed by visions of restless nights and fevered couch? Oh then, indeed, dost thou truly realize the blessings bestowed upon thee—the ease and pleasantness of thy pathway—deeply dost thou feel the kindness and leniency of thy Heavenly Father, in granting thee so smooth and sunny a pilgrimage, and thy heart goes out unto him in unceasing gratitude. Vividly dost thou see, and keenly feel, the difference of thy favored lot from that of some afflicted friend, (or some pale face and attenuated form that thou dost meet,) and thou knowest it is from no merit of thine own, but Divine goodness alone, that thou shouldst have benefits conferred upon thee, of which thy neighbor is deprived. Touched by such Infinite love, and moved by tender compassion for thy friend's infirmities, it is thy greatest pleasure to visit that friend (or those friends,) and offer thy kindest sympathies; and although thou canst not alleviate his sufferings, thy presence is like a ray of sun-light to the invalid, whose weary, dreary, drooping spirits are cheered by thy oft-repeated calls and consolation—and when that friend is often missed in thy frequented walks and places of public gathering, then thou dost seek him and pour out the cheering language of thy heart,—and how dearly welcome are thy soothing tones, how pleasant to realize that lone, sick apartment is not forgotten.

Dost thou this, dear reader?—then indeed dost thou follow the commands of thy Divine Master. A——E.

[Written for Moore's Rural New-Yorker.]

A PURSE FOR THE WIFE.

In a late number of the Rural a correspondent seems fearful of the consequences, if the wife have a purse of her own, separate from her husband. Although I know a woman who owns all the turkeys, &c., and expends the avails in unbecoming finery for herself, and when she fears a remonstrance from her friends, says, "I bought it myself;" yet the greater number through the country will not do this—and I would say, whatever others may do, 'The *farmer's* WIFE should have a purse of her own.

Do not be startled; I will illustrate my meaning. Mr. L. is preparing to take a load of produce to market. That unruly steed has found in mischief this morning; he finds some careless one has left open the granary door, and there are all the hens faring sumptuously. The boys have harnessed the "black colts," and he foresees he shall have trouble with *them*. He is in that state in which men and women sometimes are—"in a fret."

Mrs. L. is out of fine thread, and wishes him to procure some; likewise some pins. Reuben remembers that his teacher told him he must have a new "reader." Little Phebe is learning to work, and she wants a pair of scissors and two skeins of green and one of red worsted. Mr. L. wonders how long it is since he bought pins; what *has* become of them? He is sure Reuben has not learned his last book through; and the worsted work costs too much—"Phebe had better sew carpet rags."

Mr. L. starts for town. He meets, and mingles with his fellow-men—the sun comes out—people gaze admiringly at his fine team—he obtains good prices for his load—and *possibly*, as he turns his mind homeward, he remembers the errands and procures the articles. But how has it been at home? Mrs. L. has been sad. Naughty Reuben told his teacher he would not study, for Pa would not buy him books. Little Phebe went up stairs to cry, and thought, "If I do learn to work pretty slippers, I will give them to Uncle Ralph."

You may say these are *trifles;* so are *bee-stings*, but they sometimes render persons very uncomfortable. Now, to avoid such scenes, let the wife have something about the premises under her control and at her disposal, and with which these wants may be supplied.

Now I presume rich farmers, those out of debt, will give their wives all the *money* they want; (the purse is so heavy, it is no trouble to have some one help carry it;) but many have not reached the upper rounds of the ladder,—they are yet in debt. To such I would say, Allow your wife a purse of her own; it will please her to fill it, and it will certainly be emptied into the family fund, and possibly at a time when yours is *minus*. I would recommend to you to buy her a memorandum book, and a pencil, the next time you go to town, and request her to write down all she sells for one year, and what she buys with the money.

I have more than once heard the wives of wealthy farmers remark, in reference to benevolent objects, "If I could get a dollar and not have my husband know it, I would like to give it." Some writer has remarked, "No wife is better loved for tensing her husband for money." Now, if she has a fund of her own, she will not be tempted to practice *deception* to procure a dollar, nor will she *tease* her husband. And if you fear a *store debt* as you do the yellow fever, this is one of the best ways to avoid it. Your wife will get into the habit of paying down for what she buys, and it will be unpleasant for her to say to the merchant, "Please charge this to my husband." If you will try this way two years, and then say you are not happier, and getting out of debt, I will not again subscribe myself

One who Ought to Know.

Eloquent, but Inarticulate.—A little while ago, we passed a half-hour in a village grave-yard, reading the inscriptions on those tables of the law of "dust to dust."

Upon one of them, carved in marble, was a chain. Of the nine links composing it, one was broken.

How legible the characters! How intelligible the language! In that family there were nine once—a beautiful chain of affection, richer than gold, but death had unloosed one link, and the broken jewelry of the hearth and the heart had glittered with the dews distilled from loving eyes.

Broken jewelry! How many such trinkets of memory and affection there are in the homes of the world—souvenirs, whose possession should render humanity hallowed. Great grief makes sacred those upon whom its hand is laid. Joy may elevate, ambition glorify, but sorrow alone can consecrate.—*N. Y. Tribune.*

MOORE'S RURAL NEW-YORKER

ROCHESTER, MARCH 25, 1854.

Keep it Before the People!

KEEP IT BEFORE THE PEOPLE:—That we can still furnish back numbers of the present volume of the RURAL NEW-YORKER to all applicants,—and that the beginning of the next quarter, April 8, will be a good time for single or club subscriptions to commence.

—"That the cheapest, rarest and most interesting medium of conveying to a family, information on a vast variety of useful and important subjects, is through the well-stored pages of an able and judiciously conducted Newspaper.

—That the farmer or head of a family who neglects or refuses to subscribe for a good paper, on account of its cost, is 'penny wise and pound foolish,' as he not only keeps his family in ignorance of many things they ought to know, which cannot be acquired as well in any other way, but he excludes himself from information of practical utility, oftentimes contained in a single number, which may be worth to him many times as much as the subscription for the whole year.

—That the preparation and issue of every number of a paper is attended with considerable labor and cost, and that it is something more than meanness for a man to make it a practice of borrowing and reading papers for which other people have had the honor and honesty to subscribe and pay.

—That every well-conducted paper is worth a hundred-fold more than what it costs, in its influence on individual and public intelligence, morality and religion, and that they are true patriots who conscientiously and liberally support a vigorous and enlightened press."

—That the RURAL NEW-YORKER, by maintaining an independent course—neither commending that which is not meritorious, for either favor or influence—and ever consistently advocating the best interest of community, has attained not only a large, but wide National circulation and reputation, being as highly prized in distant States, Territories and Provinces, as in the region of its publication. And we trust its Agents and Friends throughout the land, (to each of whom we tender profound acknowledgments for most substantial encouragement,) will continue to

Keep it before the People—That they are prepared to receive and forward the subscriptions of all who desire to become stockholders in the favorite and leading Agricultural, Literary and Family Newspaper of America.

The Tempest.

On Saturday last a violent tornado visited the Northern and Eastern states, blowing down the telegraphs, unroofing buildings, sweeping away chimney tops, and doing otherwise a great deal of damage. We do not hear of its manifesting very great intensity at the West, but on its movement Eastward it gathered force as far as the meridian of Albany, at which place it seems to have reached its maximum of violence, damaging property to the amount of $75,000 to $100,000.

The steamer Maple Leaf, on approaching the harbor at the mouth of the Genesee, Saturday night, found the light extinguished, and was consequently obliged to remain out in the open lake, exposed to the fury of the gale until day break. The keeper of the pier light found it impossible to reach the lanthorn in consequence of the heavy running sea, which swept entirely over the pier. That light-house must be unfrable, and an exponent of a far seeing and beneficent government, which is capable of being lighted up only on *sunshiny days and calm moonlight nights* and is unapproachable amid darkness and the tempest.

At Oswego the gale was very violent; at Utica considerable damage was done; at West Troy a man was injured, probably fatally, by a falling chimney, and property damaged to the amount of $10,000; in Troy $75,000, in Albany $100,000. In Boston a man was killed by a falling chimney, and great damage is anticipated to shipping all along the coast. Further eastward, in Maine the gale was accompanied by a heavy fall of snow.

The Weather.

THE early part of the month was as mild and pleasant as the most splenetic grumbler at the weather could desire; and the robin and the blue-bird—those joyous harbingers of spring—were warbling their mellow notes on the tree tops, even within the precincts of our city.

But during the latter part of last week—

"A change came over the spirit of our dream,"

for we dreamed of sleeping in the park, of which some one had left the gate open, allowing free admission to the fierce north winds; and awoke at the roar of a real tempest, banging the shutters and playing the mischief with weather-cocks *that had not been set in the right direction on the previous day.* Friday, Saturday, Sunday, and Monday, were as cold as Greenland, but on Tuesday the sun peeped out from his equinoctial position in mid-heaven, and we may expect, now that his steeds have fairly leaped the formidable barrier of the equator, and resumed their course towards arctic latitudes, that summer will ere long visit us again. "So mote it be!"

—— Peach trees, roses and violets are now in bloom in New Orleans.

The New Hampshire Election.

A very important and decisive election has just come off in New Hampshire, which indicates very conclusively the sentiment of the Northern people on the question of repealing the Missouri Compromise. The State of New Hampshire, as every body knows, has been largely and entirely Democratic for a length of time, "whereof the memory of man runneth not to the contrary;" and in addition to that advantage, the pride of sustaining one of her own sons in the Presidential chair, the entire influence of government patronage both State and National, the post-office department, the Custom house, &c., &c., have been thrown into the so-called Democratic Nebraska scale. Last year the Democratic Governor was elected by a majority of over 5,000; the Senate, by a skillful gerrymander of districts, was almost entirely composed of Democrats, and the same party had more than *ninety* majority in the House.

The Democratic Governor is again elected, it is true, but with a majority reduced below 1,500; and it is yet undecided which party will have a majority of the Legislature. Great anxiety is felt upon the subject, as two United States Senators are to be chosen by the incoming Legislature. This immense change in the position of parties in New Hampshire, is owing entirely to the hostility against the Nebraska bill; for the Democratic party, under other circumstances, is as strong in that State as at any former period. We shall be able to give the true state of the vote next week.

Sad Disaster.

THE Star of the West, belonging to the Nicaragua line of California steamers, brings news of a sad catastrophe, which occurred during the transit of her passengers from the Pacific to the Atlantic side. A portion of the transit is made by means of small inland steamers which ply on lake Nicaragua and the river San Juan; and in the attempt to embark the passengers on one of these at the head of the lake, during the prevalence of a severe gale, a large iron launch containing some sixty or eighty persons was swamped, and at least twenty-four of the passengers were drowned.

The catastrophe happened in close proximity both to the steamer and the shore, for the vessel lay but about three hundred yards from the pier, and the utmost horror was felt by the spectators of the fearful scene.

The passengers held an indignation meeting subsequently, and passed resolutions condemning the steamship company for inefficiency, in not providing properly for the safety and comfort of the passengers during the transit across the country.

Serious Riot at New Haven.

A RIOT occurred at New Haven, March 18th, between the students of Yale College and some of the citizens. Fire-arms were freely used, and a bystander, named Patrick O'Neal, shot dead.

The authorities ordered cannon to be placed in front of the College building, which being done, the rioters became alarmed and quickly dispersed. The College Faculty assisted in quelling the riot.

It seems that a number of students, who attended Homan's Athenæum the evening before, were followed from the Exchange, by a crowd of men and boys, who, on account of the disturbance that occurred among them the night previous, were suspended at the collegiums, and took the occasion to vent their spite by hootings and hissings, and throwing of stones. The crowd proceeded up Chapel street, as far as Temple, when a general fight with stones and brick-bats ensued—and in the midst of the fight O'Neal was killed.

RIDICULOUS.—A Quebec paper under the head of "Strange Rumor," gravely asserts that in consequence of advices from England, the provincial post-office authorities had seized a letter intended for the Russian Government, containing a programme of a projected invasion of Canada by Russian soldiers *via. United States.*

The American people are not such ardent admirers of despotism (the Nebraska bill and its supporters to the contrary notwithstanding,) as to give countenance to any such filibustering operation; and would much sooner "give aid and comfort" to the enemies of the Czar, than to him or his allies—if he has any.

AN OLD FOGY ADMINISTRATION.—The following table of ages of the British Ministry, shows that political honors in that country do not fall upon mankind before their beards are grown, as it sometimes occurs in this fast country of ours. Young America would call such a cabinet as the following, decidedly Old Fogy.

The Earl of Aberdeen is 70; Lord John Russell, 62; Lord Palmerston, 70; and the first Lord of the Admiralty, 62. The youngest of all, Earl of Granville, is in his fortieth year, and the ages of the others, Newcastle, Sydney Herbert, Gladstone, Clarendon, and Wood, vary between forty-three and fifty-four.

The highest officers of State are the oldest on the list.

BENEFITS OF ADVERTISING.—One chap out west tried advertising for a wife. He says he has received in answer to his advertisement, 794 letters, 13 daguerreotype likenesses of ladies, 2 gold finger rings, 17 locks of hair, 1 copy of Bk Marvel's "Reveries of a Bachelor," 1 thimble, and 2 dozen shirt buttons. He *ought* to be convinced.

Perhaps the person who advertises for a wife in this week's RURAL anticipates similar success: but, though he sends to the right paper to reach the "true-eyed girls," we doubt their liberality without an introduction. However, as the card is apparently genuine, we insert.

Our Albany Correspondence.

Albany, March 20, 1854.

THE LEGISLATURE.

THE contested seat in the Senate, from the 18th District, has been given to Mr. ADAM STORING, the occupant (Mr. BLAKELY) having resigned his place. Common honesty entitled Mr. STORING to the seat, but party usages might have bestowed it upon Mr. BLAKELY. The resignation of Mr. BLAKELY, under such circumstances, is highly commendable.

The main discussions during the week, have been, upon the "Bone Bill," as the act to promote medical science has been called; the change of the charter of the Saratoga and Sackett's Harbor Railroad, so as to move the route farther north; the Temperance bill; and the New York Harbor bill.

Among the bills introduced, are the General Appropriation bill; the bill to complete the Enlargement of the Canals; and one to prevent the re-issue of bills of banks whose charters have expired, and an Act to incorporate the Women's Educational Association.

The war upon the Barnburners still rages.—Mr. DICKINSON paid his respects to the Lieut. Governor, and a resolution was passed, inquiring as to the amount of money drawn by his Honor. His salary is $6 per day, but it is alleged that he has drawn something like $6,000. The subject is in the hands of the Committee.

The Senate adjourned on Saturday, to attend the funeral of FRIEND HUMPHREY, one of the leading citizens of Albany, and former member of that body.

THE STORM.

We have been visited with a terrible storm of wind. Houses were unroofed, carriages upset, steeples pitched, and many other pranks played, but fortunately, no lives lost. Nothing was ever known here in equal it. "ONE".

Congressional Proceedings.

March 13.—SENATE—A large number of petitions against the Nebraska bill was presented.

Mr. SEWARD presented a petition from the tobacconists of New York praying for a duty of 40 per cent. on imported cigars.

Mr. FISH presented a memorial praying for a grant of land in the State of New York, in constructing a ship canal around Niagara Falls. Objected to, and motion laid on the table; yeas 15, nays 20.

HOUSE.—Messrs. Hunt and Lane made personal explanations growing out of exciting proceedings of Friday.

March 14th.—SENATE.—Mr. EVERETT presented the memorial of the New England clergymen against the Nebraska Bill.

Mr. DOUGLAS called for its reading. He said it was not respectful to the Senate, and he desired to say a word upon it. He then, in very strong language, condemned the statements of the memorialists, pronouncing them atrocious slanders.

HOUSE.—Mr. APPLETON asked leave to present a remonstrance of New England clergymen against the Nebraska Bill. A voice objected, it was withdrawn.

The resolution introduced yesterday to remedy the confusion at present existing in the appointment of cadets, caused by the new Congressional districts of the several States, was passed. The Missouri Rail Road bill has been tabled in the House by a majority of three.—The excitement was intense when the result was announced.

A motion was made to reconsider, pending which the House adj.

March 15.—SENATE.—No business of importance was transacted to day.

Mr. FOOT spoke in favor of Mr. Phelps' right to his seat. After an executive session the Senate adjourned.

The House was in Committee on the Deficiency Bill

March 16.—SENATE.—Mr. PHELPS, who claimed and has occupied the seat of Senate from Vermont since the opening of Congress, was ejected to-day.

HOUSE.—The Select Committee reported a bill which proposes two Pacific Railroads and Telegraph lines. One commencing from the Mississippi at a point not north of the 37th parallel of north latitude to San Francisco, and the other from some point on the westerly shore of Lake Superior, or Mississippi river in Minnesota, to the Pacific.

March 17.—The Senate was engaged on the private calendar until 3 o'clock, when it adjourned till Monday.

HOUSE.—This morning went into committee on the Deficiency Bill. After considering which, it adjourned until Monday.

NEW YORK ELECTIONS.—Utica, at its recent charter election, chose a Democratic (soft) Mayor. Troy, Oswego, Syracuse and Rochester have elected Whig Mayors, and a Whig majority of all other officers.

Essex, Dutchess, Wayne and Genesee counties have Whig majorities in the board of Supervisors. Madison county has in the board 6 Whigs, 5 Democrats and 1 Abolitionist. Oswego has elected 13 Democrats and 12 Whigs. Clinton is largely Democratic, (exact numbers not known,) while Ulster and Columbia are tied in the board of Supervisors.

In the above figures Hards and Softs are classed together.

☞ More than a million New Testaments for China have been subscribed for, and are to be supplied by the British and Foreign Bible Society within three years. The Bible Society has passed a resolution to send 50,000 Bibles to China.

News Paragraphs.

☞ In the Supreme Court, March 15th, in the suit by Henry Carton, against the Hudson River Railroad Company for injuries, the jury returned a verdict for plaintiff for $5,750. Mr. C. was doing business in New York, but resided at Tarrytown. While near the locomotive one morning, on his way to the cars, the boiler exploded, and his left arm was badly fractured.

☞ At the different points on the Missouri river, Hemp is held at $120 per ton. The crop coming into market is more than an average one, both as regards quantity and quality, and at the prices which the season opens it is highly probable the money to be derived from the yield will exceed the amount of any preceding year's operation.

☞ The British post-office authorities have just concluded a contract with the General Screw Steam Shipping Company, for the conveyance of a mail to Australia, via the Cape of Good Hope, every alternate month, to commence with the Golden Fleece, to sail from Southampton on the fourth of April next.

☞ Within forty miles of San Francisco, California, there is one farmer who planted 1,700 acres of potatoes, 2,500 acres of wheat and 2,500 acres of barley. He owns one steamboat and two schooners, which are exclusively employed in bringing his produce to market. The capital invested is about half a million.

☞ A car containing sixteen persons was thrown off the track and down an embankment on the New London and Palmer Railroad, North Windham, last week. The car lodged on the stump of a tree, which ran completely through it. Fifteen of the party inside were injured, some of them severely.

☞ The Welland Canal will be opened on the first of April. Bars will be placed at the Port Dalhousie and Allanburgh Locks, by which vessels drawing over 10 feet water will be prevented entering; thus removing one of the most truthful sources of detention complained of.

☞ Among the line regiments assigned to the expedition in behalf of Turkey, a distinguished Highland corps is mentioned as likely to be included, and the strict gravity of the Turk will be severely tried, if a kilted battalion is paraded in the old capital of the Cæsars.

☞ Senator Tuncey was hung in effigy, in Main st., New London, on Monday night of last week, by people of that city who were incensed at his vote for the Nebraska Bill. Over the head of the effigy was a placard, with the words, "Tuncey the Traitor."

☞ George Saunders, who was nominated Consul to London by the President and rejected by the Senate, is reported to have made half a million dollars during his brief term of official service, by the sale of muskets and speculations in Lake Superior copper stocks.

☞ The gross receipts from travel and freights on the railroads of the United Kingdom during the past year, amounted to 17,920,230 pounds sterling. These railroads cost upwards of 236,000,000, and altogether pay less than three per cent. dividend to the stockholders.

☞ The Legislature of Texas have passed a bill "to establish a Christian Sabbath," providing for the punishment by fine and imprisonment such persons as may perform any labor or procure any to be done on Sunday.

☞ Ex-President Fillmore was received at Louisville, March 16, by a large concourse of citizens, and escorted through the principal streets. The hospitality of the City was tendered to him by the Mayor and Council.

☞ A French surgeon, after directing a current of the vapor of chloroform on an abscess in the sole of the foot of a patient, was enabled to make an incision in it, without causing the slightest pain.

☞ The recent decision of the Supreme Court of the United States, in the case of the McDonough will, secures to the American Colonization Society about thirty thousand dollars per year, forty years.

☞ A great Clerical protest against the Nebraska Bill, signed by 3,150 clergymen, Presidents of Colleges, &c., of New England, has been sent to Washington, in charge of the Rev. R. M. Dexter, of Boston.

☞ Mr. George W. Kendall, the editor of the New Orleans Picayune, is now on his way to Europe with the intention of locating for a time at Constantinople, and watching from thence the course of the war.

☞ All papers devoted exclusively to Temperance, Education, Science, or Agriculture, pass free into every Post Office in Canada. So writes Hon. Malcolm Cameron, P. M. General of Canada, to E. C. Delevan, Esq.

☞ It appears from the statistical returns of the several Insane Asylums in the U. S., that there are not to exceed one-fourth of the insane enumerated in the last census now under treatment in these institutions.

☞ Green, the diver, has found two locomotives in Lake Erie, near the Canada shore, and the Buffalo Commercial says he will get them up as soon as the ice disappears. They were lost overboard from vessels.

☞ Bayard Taylor invariably receives fifty dollars for the delivery of his lectures on the Arabs, and has already cleared $3,000 on his Japan and China lectures. So say the papers.

☞ A bank police has been organized by the banks of New York city for their own private use, in order to have a policeman always at hand in each attempt of ruffians to rob the bank.

☞ The strike among the coal miners in the Cumberland region still continues, and the strikers were growing violent, threatening to drive off all who attempt to take their places.

☞ The "Rob Roy" cotton mills, at South Glastonbury, Conn., were burned lately—loss $40,000, insurance $20,000. About 200 hands are thrown out of employment.

☞ The proprietor of the Union Works, South Boston, has closed a contract with the New York and Erie Railroad company for the building of forty locomotives of the largest class.

☞ One hundred and fifty clergymen in New York have signed a memorial to Congress against the Nebraska bill. The list is headed by Bishop Wainwright.

☞ The Harpers are about to rebuild their publishing house in three separate buildings for safety against fire. Forty of Adams' power presses will be ready for use in the new buildings.

☞ The Ohio Statesman states that it is authorized to say that Mr. Pugh, the newly-elected United States Senator from that State, is in favor of Douglas's Nebraska Bill.

News Brevities.

—— The number of deaths in New York last week was 453.

—— The Tremont House, Boston, is to be greatly enlarged.

—— The first Shad of the season was taken on Tuesday week at Staten Island.

—— The University of London contains in all 838 graduates, and over 100 undergraduates.

—— There are eight hundred and seven churches in New Jersey, valued at $3,510,436.

—— The income of the Railroads in France during 1852 was $32,000,000.

—— The whole amount of land in Canada West, owned by fugitive slaves is stated at 55,000 acres.

—— The population of California, it is said, has not increased to any extent during the past year.

—— Austria has an army of 450,000 men, at least 250,000 of which number were pressed into service.

—— The Governor of Massachusetts has appointed Thursday, April 6th, a day of fasting and prayer.

—— Senator Douglas was burned in effigy at Chicago, March 17, by an immense concourse of Germans.

—— The Rev. Alexander Young, a distinguished clergyman of Boston, died in that city on the 16th.

—— Rev. Dr. Graham, President of Newark College, State of Delaware, died on the 10th inst., of pulmonary consumption.

—— Dr. Speer, of Melonville, Florida, has raised 20,000 lemons from 250 trees. He is the largest lemon grower in the country.

—— Mr. Cobden says, that in England there were 2,000,000 of adult males, if not 3,000,000, who never read a newspaper.

—— P. T. Barnum, Esq., has been elected by a unanimous vote as President of the New York Crystal Palace Association.

—— The Supreme Court has finally decided the Maine Law to be constitutional, reversing the decision of the Wayne County Court.

—— There are said to be 500,000,000 tea-drinkers in the world, of whom the Chinese constitute nearly one half.

—— A petition to the President to suspend the trial of John Charles Gardiner is in circulation. The number of signers is small thus far.

—— The Governor of Connecticut has appointed Friday, the 14th of April, to be observed as a day of humiliation, fasting and prayer.

—— At the late election for Mayor of Salem, Mass., Ambrews, "Know-Nothing," received 1,251 votes, and Sutton, Whig, 511.

—— A new Post Office has been established at South Pitcher, Chenango county, and Roswell B. Bourne, appointed Post Master.

—— The propeller Dayton landed at Oswego on the 15th inst., 3,500 barrels of Flour, from Port Credit, C. W. It goes to Boston, at 10½c. freight, from Port Credit.

—— Steamboat navigation is resumed on the Hudson. There is considerable ice in the river, but it is broken up and there is no serious obstruction.

—— The Easton (Penn.) Whig places at its head the name of the Hon. Abbott Lawrence, as a candidate for the Presidency of the United States.

—— The clipper ship Comet arrived at New York, March 14—in the unprecedented short space of 76 days and 7 hours from San Francisco.

—— The Bostonians have recently opened a Free Public Library of 12,000 volumes. Two thousand volumes were to be added in a few weeks.

—— A petition has been presented to the Maryland Legislature, praying that body to pass an act making public swearing punishable by fine and imprisonment.

—— The Espana states that a Spanish naval officer has been sent by the government of Spain to the United States to purchase vessels for ships of war.

—— Two brothers, of the ages respectively of nine and eleven years, were picked up from the sidewalk in Chicago, by the watchmen late at night, in a state of helpless intoxication.

—— No less a sum than £126,644 was remitted last year by Irish emigrants in America and Australia, to their friends in the Limerick emigration district.

—— The steamer Caroline, running to Memphis, was burned on Sunday the 5th, near the mouth of White River. Boat totally destroyed, and 40 or 50 lives lost.

—— Mr. P. Gaines has been arrested at Washington on a charge of having instigated a servant girl to burn his own house, to enable him to get the insurance.

—— The Chicago Tribune says that there are in Chicago 59 Irishmen living on Office patronage, whose salaries and perquisites amount in the snug sum of $13,200 per year.

—— By a recent decision of the Supreme Court of Texas, it is said that the wife of Senator Gwin, of California, has become entitled to a valuable tract of land, containing 50,000 acres.

—— The Roman Catholics in Minnesota outnumber all other denominations. A cathedral is to be erected this season at St. Paul which will cost $30,000.

—— A semi-annual dividend of 3½ per cent. payable on the first of April next, has been declared by the New York and Erie Railroad Company.

—— Mrs. Susan Bigler, mother of the present Governors of Pennsylvania and California, died at her residence in Delaware township, Mercer County. Aged about 70.

—— The two Cunard steamships seized at New York during Mr. Fillmore's Administration, for goods not on the manifest, were fined $15,000—one $5,000 and the other $10,000.

—— The steamer Reindeer burst her flue at Canneton, Ind., Tuesday of last week, scattering death in all directions. Forty of fifty persons were killed and wounded.

—— The U. S. Senate have decided, by a vote of 26 to 12, that Mr. Phelps, senator from Vermont, is not entitled to the seat he has been claiming.

☞ The House Committee to investigate the Gardiner claim have commenced its operations. Controller Whittlesey was called before them to advise and give a history of the claim.

—— The Boston Transcript says that the report that Prof. H. W. Longfellow, of Cambridge, has accepted an office in Antioch College, Ohio is without foundation.

Literary Notices.

MRS. GEN. HARDY; or, The Weal and Woe of Social Life. By A. MARIA COLLINS. Cincinnati: MOORE, ANDERSON & Co.—1854.

This is one of the most powerfully written Temperance Novels we have ever perused.—Though the subject is a hackneyed one, the author has produced a work of absorbing interest by weaving into it an excellent story. The scenes are laid in Virginia, New York city and the Hoosier State—and although some of the pictures, which include both high and low life, are highly colored, life and character are generally delineated with correctness and power, the author seeming at home in each locality. The volume must prove a valuable auxiliary in the Temperance movement. No one can rise from the perusal of its strong and vivid pictures of the blighting influence of intemperance, without mentally resolving to avoid or conquer an evil so destructive to the peace and happiness of society.

THE LIFE OF HARMON BLENNERHASSETT.—Comprising an Authentic Narrative of the BURR Expedition, and containing many additional facts not before published. By WM. H. SAFFORD. Cincinnati: MOORE, ANDERSON & Co.

The title of this volume is alone attractive, and will secure the attention of thousands who have, in more youthful days, heard or read sufficient concerning BURR and BLENNERHASSETT, and their inglorious expedition, to become interested in the subject and characters. To all such the book will prove most welcome.

OUTLINES OF SCRIPTURE GEOGRAPHY AND HISTORY:—Illustrating the Historical Portions of the Old and New Testaments. Designed for the use of Schools and private reading. Based upon COLEMAN'S Historical Geography of the Bible. By EDWARD HUGHES, F. R. G. S. and F. R. G. S. Philadelphia: BLANCHARD & LEA.—1854.

This is an English work, re-published by permission. A cursory examination of the volume has impressed us most favorably in regard to its merits. It contains in a condensed form, and popular style, a vast amount of information which has hitherto been inaccessible to the general reader, on account of the number, size and costliness of the works through which it is scattered. The author remarks, that he has spared no labor in the effort to make the work a complete Hand-book of Scripture Geography and History,—and submits it to the pastor, the parent, the teacher, and the pupil, in the hope that it will be found a useful companion in enabling them to "search the Scriptures." The volume comprises 342 pages, and is illustrated with twelve excellent maps.

THE DRESS-MAKERS AND MILLINERS' GUIDE, and Report of the Paris, London and American Fashions—published every two months, by S. T. TAYLOR, New York, at $1 per annum—will prove a desideratum to many of our lady readers. Inasmuch as ladies *will* patronize the fashions, we commend this excellent Guide to their attention—especially to all who have to "wait a little longer" for the dress-maker, or prefer making their own dresses. In addition to illustrations and full descriptions, each number embraces two or three seasonable patterns, cut for use.

THE WESTERN LITERARY MESSENGER commences its *twenty-second* volume with the March No., and exhibits some improvement. It is much better conducted than many magazines of greater pretensions, and deserves well of the public. It is edited by our esteemed contributor, J. CLEMENT, and published by JEWETT, THOMAS & Co., Buffalo, N. Y., at $1,50 per annum.

Foreign Intelligence.

Arrival of the Steamer Washington.

THE United States mail steamer Washington, Capt. Fitch, arrived at New York on the 16th inst. She left Bremen on the 24th of February, and Southampton on 1st March. Her accounts are anticipated by the steamer Arabia, at Halifax, with news four days later. The Washington brings a large number of passengers, and a valuable cargo of French and German goods.

The Franklin, from this port, arrived off Cowes, on her way to Havre, on the 28th ult.

A telegraphic dispatch from Trieste, in anticipation of the overland India mail, had been received. The dates are Calcutta, Jan. 20th; Madras, 25th; Hong Kong, 11th; Bombay, 28th; Burmah, 12th. The Governor-General of India has taken possession of the province of Meaday, in Burmah, in the name of the Queen of England. A party of British troops sent in pursuit of the Ducoits, having been led into ambush, lost 23 men and an officer. A special plenipotentiary was to be sent to Ava. Trade in India was active. From China, we learn that Feentoin was closely invested by the patriot army. The French expedition had returned to Hong Kong from Nanking.

Arrival of the Arabia.

THE Royal Mail Steamship Arabia, from Liverpool Saturday, 14th inst., reached Halifax, March 15.

The Arabia experienced very heavy weather throughout the passage.

Extensive military and naval preparations are still going on in every direction. Actual operations exhibit no new feature, but every Power in Europe continues to arm; France, England and Russia on an immense scale. Sir Charles Napier is appointed to the command of the Baltic allied fleets, and Admiral Seymour is in command of 20 ships already assembled at Spit Head.

The ice in the Baltic was breaking up, and part of the Russian fleet at Cronstadt was ready to sail. A report from a private source, as yet unconfirmed, says that the Czar has laid an embargo on British shipping in Russian ports.

Affairs on the Danube.—The deep snow prevented any movement by either army. The weather was becoming milder and the Russians were making ostentatious preparations to cross the Danube.

Omar Pacha was evidently aware of the plans, and was making disposition of his force to check them.

Omar has sent supplies to Varna.

The Turks no longer occupied any place but Kalafat, north of the Danube. There had been considerable fighting by small parties whenever they came in contact, but no decisive action.

Movements in Asia.—From Asia there had been no further advices. Another convoy of 17,000 men was preparing to leave Constantinople for Batoum.

The Greek insurrection was in a fair way of being suppressed. Several British ships of war were ordered from Malta to Piraeus.

The Pacha of Janina had defeated the Greek insurrectionists at Arta, but had not sufficient force to disperse them.

The Turkish Government in concert with the British, French and Prussian, had addressed a remonstrance to the Greek Court, which had apologized and dismissed the Minister of Police, but the Government is powerless. The insurrection does not extend farther north than Albania. Montenegro is quiet. A late note from England and France to the Czar demands a categorical answer.

The fact that Austria adheres to the Allied Powers was officially announced by the Emperor Napoleon to the French Legislature. She will not, however, be called upon to take offensive measures against Russia, but merely to keep peace on the frontier. Nothing further has been done.

The Vienna correspondent of the Times says, under date of 2d, "An Austrian manifesto is about to announce that the Austrians will occupy Bosnia and Servia," and that she will demand the evacuation of the Principalities by the Russians.

The St. Petersburgh Journal of the 24th contains the following as the substance of the answer sent by the Czar to the Emperor Napoleon:

"If his Imperial Majesty extends his hand to me as I extend mine, I am ready to forget the mortification I have experienced, harsh though it be. Then, but then only, can I discuss the subject treated of in his letter, and may perhaps arrive at an understanding. Let the French fleet prevent the Turks from transporting reinforcements to the theatre of War, and let the Emperor send me a plenipotentiary to negotiate with, whom I will receive as befits his character.

The conditions already made known to the Conference at Vienna is the sole basis on which I will consent to treat."

The Emperor of France opened the Legislative session of 1854 on Thursday the 2d instant. His speech commenced by referring to the deficient harvest, seven million hectolitres of wheat having been imported, and more on the way; famine had been averted, but war is beginning.

France has gone as far as honor permitted to avoid a collision, but must now draw the sword. She has no views of aggrandizement. The days of conquest are passed, never to return. The result of the frank and unselfish policy of France are—England, her former rival, is now in alliance, and becoming daily more intimate.

Report assigns the command of the army on the East to Marshal St. Arnaud, and Marshal Vaillant will succeed him as Minister of War.

An insurrection of quite a formidable nature has taken place in Spain. The insurrectionists for a considerable time held the Castle of Aljaferia and other strong positions.

Gen. Concha, the late Governor General of Cuba, is deeply implicated.

Report says that Narvaez and Espartero are united and are the real masters of the present crisis. A general insurrection is considered probable.

LIVERPOOL PROVISION MARKETS.

PROVISION.—Messrs. Gardner & Co. report beef still in good demand for all descriptions, at full prices. Sales 600 tierces prime mess at 93s 6d, retail. Pork—The high price of new, checked sales. Old moved quite freely. Bacon—holders firm, quotations unchanged. Lard quiet, sales of week being 50 tons at a further decline of 1s, quoted at 56s.—200 tons to arrive sold at 55s 6d. Tallow—but little doing; 64a65s for Petersburg. American was worth 64s. Cheese moderately active at last week's prices. Linseed Cake not lower, but operations were sparing.

BREADSTUFFS. The market had been dull and declining throughout the week and the prevailing feature has been sales for immediate payment, at a considerable reduction from current rates. There were sellers willing to make concessions of 3da 4d on wheat, 1s 6da2s on flour, and 1sa2s on Indian Corn. Messrs. Brown, Shipley & Co. quote white wheat 11s6da12s3d; red do. 10s10da11s9d. Western canal flour 39s. Baltimore, Philadelphia and Ohio 30a40s. Canadian 39s6d. White Indian Corn 46s6d; yellow do. 46s; mixed do. 45.

California News.

Arrival of the George Law.

THE George Law, from Aspinwall on the 5th, and Kingston on the 8th, arrived at New York on the 14th inst. She brings $978,000, and 240 passengers. Among them are Holcomb, Winthrop and Bird, belonging to the parties detailed from the Cyane to survey a canal route across the Isthmus of Darien.

The inhabitants of Acapulco, and all that portion of Mexico, are in a state of excitement in consequence of a revolution which had recently broke out among them. It appears that the inhabitants of this and some of the bordering States have taken arms under Gen. Alverez, and declared themselves free and independent, and are ready to enforce it if necessary.

No positive engagement has occurred between the opposing parties, but it is said by some that a slight skirmish had taken place in the plain at Chilpantsingo, where Santa Anna had 2,000 men under arms.

There was a rumor in San Salvadore that 800 North Americans had disembarked at Omoa, as allies of Honduras, against Gautamala.

An attempt has been made, but unsuccessful, to restore peace between Honduras and Gautamala.

The passengers of the Star of the West, held a meeting on board, at which they passed resolutions censuring the Nicaragua Transit Company in the strongest terms for the loss of the 24 lives on Lake Nicaragua.

Marriages.

At Rochester, March 7th, by the Rev. Mr. Hickok, Mr. REUBEN E. FRENCH and HELEN MARIA SAGE, both of East Bloomfield.

In Riga, Feb. 28, by Rev. J. W. Fox, Z. F. BEETLE, of Sweden, and EMILY O. DAVIS, daughter of Horatio Davis, of Riga.

In Sweden, March 14, by the same, ELISHA LOCKE and SARAH WAY, daughter of S. V. Way, of Sweden.

Deaths.

In Brighton, N. Y., March 13, MARY M., youngest daughter of Dea. EZRA SIBLEY, aged 31 years and 6 months.

Commercial.

BUSINESS AND FINANCE.

THERE has been a more active movement in the money market since our last report. The Star of the West, belonging to the Nicaragua line, brought a million in gold; the Aspinwall steamer, Geo. Law, $975,000, and the ship Aura, from Melbourne, (Australia,) $90,000 more. The steamers to Europe do not take out as much gold as at former periods of our commercial record, and the present rate of exchange yields no profit for its shipment.

The N. Y. & Erie Railroad Company have declared a dividend of 3½ per cent out of the earnings of the road for the past six months, and have a surplus left on hand of $70,000, which is a fair business for the worst, most expensive, and dullest half of the year.

The New York Sub Treasury has now locked up in its vaults more than $3,000,000 in specie awaiting government drafts.

The stockholders of Buffalo, Corning & New York Railroad have voted to petition the Legislature for permission to issue preferred stock sufficient to finish the road to the former city, and provide rolling stock commensurate to the increasing business of the road, which is now running as far as Batavia, and a large portion of the remaining grading, masonry, &c., well under way. The sum necessary to be raised was estimated at $480,000.

The Union Bank of Rochester has made a semi-annual dividend of five per cent.

Market Intelligence, &c.

RURAL NEW-YORKER OFFICE,
Rochester, March 22, 1854.

THE severe weather of the past week has caused a diminution in the activity of our streets, but the mild weather of to-day is again producing animation. Wheat, flour, and corn, are all lower; the first being quoted at $1,88; the second at $5,75@9, and the third at 70 cents.

Oats scarce and higher. One sale of 700 bushels was made to-day at 43c, although that may be regarded as the top of the market.

Poultry and cheese are higher, while butter has fallen, as may be seen by comparing the present with previous quotations.

Hay a dollar per ton lower, ranging from $8 to $12.

Rochester Wholesale Prices.

At Browning's—(Lower Bull's Head)—At market, 257 Beef Cattle, 70 Cows and Calves, and 2,022 Sheep and Lambs. Market active and prices firm. Beeves sold at $8,50@10,50.

Prices—Cows and Calves sold at from $30 to 45@60.

Sheep—$3,75@5,50.

At Chamberlain's—(Hudson River Bull's Head.)—At market, 275 Beeves, 60 Cows and Calves, 25 Veal Calves, and 2,900 Sheep and Lambs. Market improved.

The Beef Cattle all sold at from $8,00 to $10.

Cows and Calves at from $25 to 35@50.

Veal Calves brought from 5c to 7c. per lb.

Sheep sold at $3,25 to 5@7, as to quality. Some extra brought $10.

At O'Brien's—(No. 0 Sixth street)—On sale, 76 Beef Cattle, and 20 Cows and Calves.

Prices—Beeves from $7,00 to $10.

Cows and Calves—From $30 to 35@50, per head.

ALBANY CATTLE MARKET—March 20.

AT W. Woolford's Bull's Head, Washington street.—Beef Cattle—600 at market. Prices—Extra $7,50; 1st qual. $7; 2d do, $6,50; 3d, $5,50@6.

Cows and Calves—few in market. Prices range from $25 $30@45.

Sheep and Lambs—870 in market. Prices range at $4 @5,50.

Swine—300 in market. Prices Stores $5,50; Fat Hogs, $5,50.

Remarks.—The market was not quite as good this week as last, neither was there quite as much stock offered.

CAMBRIDGE CATTLE MARKET.—March 15.

AT market 549 Cattle—about 500 Beeves, and 49 Stores; consisting of Working Oxen, Cows and Calves, yearlings, two and three years old.

Prices—Market Beef.—Extra $8,25 ₩ cwt; first quality $7,75@8; 2d, $7@7,50; 3d do, $6,75; ordinary $6@6,50.

Hides—$6@6,50 per cwt.

Tallow—$5,50@6,00.

Pelts—$1,37½@1,75.

Calf skins—11½@12c per lb.

Veal Calves—$6, 7@0.

Stores—Working Oxen—$95, 118, 114, 128, 132, 138, 140, 145, 150, 162@212.

Cows and Calves—$25, 28, 30, 41, 45, 48, 52@58.

Yearlings—None.

Two years old—$38, 41@65.

Three years old—$44, 48, 50@72.

Sheep and Lambs—1,000 at market.

Prices—Extra $7, 8, 9@10.

Ily lot—$3,50, 4,75, 5@0.

Swine—None.

BRIGHTON CATTLE MARKET—March 16.

AT market 760 Beef Cattle, 20 Working Oxen, 60 Cows and Calves, 1,600 Sheep, and 1,000 Swine.

Prices—Beef Cattle—Extra $8,25; first quality $7,75; 2d, $7; 3d $6@6,75; ordinary $5,50@6,75.

Working Oxen—$100, 110, 120@140.

Cows and Calves—Sales $12, 24 26,28, 30@40.

Sheep and Lambs—By lot $3, 3,50, 3,75@5. Extra $6, 6,50, 6,75, 7@10.

Swine—5@5¼c. Retail 6@7½c. Fat hogs, of which there were, of the above reported 300, at 6¼c.

THE RURAL NEW-YORKER is the finest paper of its class on our exchange list. We think on the whole that, as a family journal, it has no equal in this country.—*Free Press.*

Advertisements.

ADVERTISEMENTS.—Brief and appropriate advertisements will be inserted in this paper at $1,50 pr. square, (ten lines, or 100 words,) or 15 cents a line—*to be paid in advance.*

Those who send advertisements without payment will understand from the above *why* they are not inserted.

POLAND OATS.

FOR SALE, a few bushels of Poland Oats, at $1,50 per bushel, and 25 cents each for bags. I. W. HIGGS,
229-3t West Macedon, N. Y.

TO THE GIRLS.—A PARTNER WANTED.

A BLACK-EYED, and above all a true-eyed girl for a Wife. She must be of the ordinary stature, or a little below—well educated—heir of a comely face—fond of rural life—of prepossessing appearance, and age not to exceed 20. A black-eyed lassie from the country preferred.

Such a one can hear of a partner that will not fail to please, by addressing CHARLEY FEIN,
Waterville, Oneida Co., N. Y.

N. B.—The strictest confidence will be given and required. Daguerreotypes received, will be safely returned, accompanied by a letter, and exchange if desired.

FRUIT AND ORNAMENTAL TREES, &c.

PERSONS wishing any Nursery article, can have the rare chance of being supplied out of the immense stock these old Nurseries contain, either at wholesale or retail.

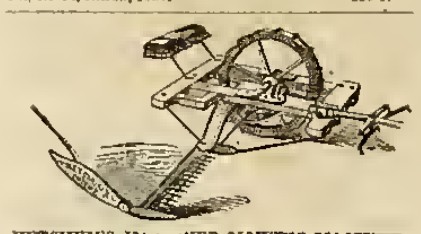
We cannot here enumerate articles, but will furnish gratis, all mail applicants with a descriptive and price Catalogue.

Standard and Dwarf Fruit Trees, Deciduous and Evergreen Ornamental Trees and Shrubs, Grape Vines, Currant, Gooseberry and Juneberry bushes, Climbing Shrubs and Plants, Roses, Dahlias, Green-house Plants, Strawberries and Nursery stocks, compose a part of the stock.

Orders amounting to ten dollars, delivered free to the purchaser, at any station on the N. Y. & Erie Railroad, including Dunkirk and New York city.

Particular attention has been paid to the cultivation of the very best and most profitable varieties of Apples for orchard and market purposes. E. C. FROST.

Seneca Lake Highland Nurseries, Catharine, Chemung Co., N. Y., March, 1854. 229 3t*



KETCHUM'S IMPROVED MOWING MACHINE,

WITH ENTIRE CHANGE OF GEAR, THE ONLY SUCCESSFUL MOWER NOW KNOWN.

Ketchum's *improved* Machine, which we are building for the harvest of '54, was thoroughly tested last season, and the advantages gained by our change of Gear are in all respects as we designed, viz: *durability, convenience and ease of action.* The shafts now have bearings at both ends, which overcomes all cramping and cutting away of boxing. A counter balance is attached to the crank shaft, which gives it a steady and uniform motion. Each Machine can be thrown out of gear; there is great convenience in getting at each and every nut, all of them being *on upper side of the frame;* oil cups are attached to all the bearings, which, by the use of a wad of cotton, will hold oil for a long time, as well as protect the bearings from dust, grit, &c.; the finger bar is lined with iron its whole width, which protects it from wear.

There are various other additions for strength, durability, &c., makes them the most simple and perfect agricultural implement in use. They weigh about 750 lbs. each, and can easily be carried in a one-horse wagon.

It requires not over ten minutes to get one ready for operation, there being but two bolts, (besides the pole bolts,) to be secured to have one ready for use. They will cut *all kinds of grass,* and operate well on uneven or rolling lands, or where there are dead furrows. This Machine took the highest award, with special approbation, at the World's Fair; it also received, during last season, one silver and four gold medals, and various other flattering and substantial testimonials of approval. We have spared neither pains nor money to make this machine deserving of public favor, and hope to be able the coming season to supply the great and increasing demand.

We take this occasion to caution farmers against buying *untried* Mowers; if they do (as was the case with many last year) they will incur loss, vexation and disappointment.

If any parts are wanted to repair any machine we have sold, or may hereafter sell, they will be furnished and only manufacturers' cost for the same be charged.

☞ In all cases where extras are wanted, be sure to give us *the number of your Machine.*

(WARRANTY:) That said machines are capable of cutting and spreading, with one span of horses and driver, from ten to fifteen acres per day of *any kind of grass,* and do it as well as is done with a scythe by the best of mowers.

The price of the Mower, with two sets of knives and extras, is $110 cash. In Buffalo, delivered on board of boat or cars free of charge.

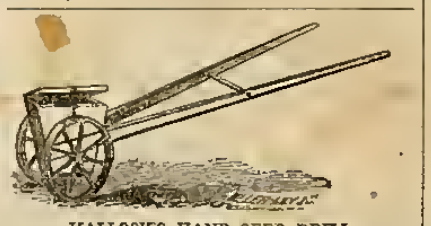
Office and Shop, corner of Chicago street and Hamburgh Canal, near the Estern R. R. Depot, Buffalo, N. Y.

HIWARD & Co., Manufacturers and Proprietors.

The Mower is also manufactured by HUGGLES, NOURSE, MASON & Co., at Worcester, Mass., for the New England States.

By SEYMOUR, MORGAN & Co., Brockport, N. Y., for Illinois, Iowa and Michigan.

By WARDER & BROKAW, Springfield, O., for Ohio and Kentucky. 229-4t.



HALLOCK'S HAND SEED DRILL.

THIS Drill is adapted to sowing carrot, turnip, beet, onion and other small seeds in drills, with perfect regularity and without regard to their weight or shape. The seeds are forced out by a circular brush, which revolves against a perforated tin plate inserted in the bottom of the hopper. A series of these plates accompanies each drill, with holes of different sizes for regulating the quantity and kinds sown. It is a light, compact, and durable machine, and not liable to get out of order. 200 of these Drills were sold last season, giving entire satisfaction. They are warranted to perform as above stated. They can be forwarded to any part of the country by railroad or stage. Remittances by mail at my risk. All orders (which should give full directions for forwarding,) promptly attended to. Price $5. Address E. D. HALLOCK,
220-3t 24 Exchange St., Rochester, N. Y.

PIE PLANT FOR SALE.

CANOON'S *well known Seedling,* superior in quality and size to any of the varieties of Mammoth, Colleosal, or Victoria, and continues to produce new leaf stocks until November, not being affected by the early frosts. This variety was raised by the subscriber 14 years ago from seed, and after being under cultivation that length of time holds good in size, having last year produced stocks weighing FIVE pounds and over.

Testimonials from Agricultural, and Horticultural, and other Papers could be produced in abundance to show that this Pie Plant, is all that is represented. I will only insert one from a paper published in this city, where the Editor has availed himself of opportunities of frequently visiting my garden, for the last ten years. It is as follows:

"But the most remarkable feature of this garden is the *Mammoth Pie Plant,* and certainly any person who is curious to know what Pie Plant is, and how it may be cultivated and developed, would do well to look at it. We state what we witnessed, (and what we should doubt if we had not witnessed it,) that from one root was cut a quantity, which after being trimmed ready for cooking, weighed 18 *pounds,* and certainly as much more was left on the root, uncut; making the product of one root nearly, if not quite *one hundred pounds* of plant. And we are not aware that this was a very unusual growth, for we saw thousands of bunches, which seemed quite as large as the one in question; and all this too, young and tender plant, as delicious as any raised. Of this plant, Mr. Canoon is raising immense quantities, with which he not only supplies home demand, but ships to other places, furnishing one house in Chicago with a thousand pounds per week."—*Telegraph.*

I am now growing quantities of it for the California and Oregon market. [Onwarding the roots.] I send a few roots to Oregon last January, and the growth last season *astonished* the citizens there, notwithstanding they had seen *tall* growths of vegetation at home.

I will securely pack in boxes, and forward according to directions, Ten Roots for $5; Five Roots for $3; or One for $1; the Cash to be sent with the order. A severe frost does not injure the roots, and they can be sent with safety to any part of the Union. D. P. CANOON,
Kenosha, Wis., March, 1854. 220-4t

EARLY EXCELSIOR POTATO.

THIS is a new and very superior sort. They are as early as the June potato, grow above the average size, are mealy and palatable, and have kept better than any other variety. The rot has never been known among them.

H. L. ALLEN,
229-3t-cow 189 and 191 Water St., New York.

MICHIGAN FARM FOR SALE.

SITUATED in Branch Co., 10 miles north of Coldwater, lying one mile on the main road from Tekonsha to Litchfield 320 acres, with 100 acres under improvement, and a small framed house and a log barn on the premises. The country is well settled, a new school house on the farm, and a school kept up. The location healthy, and the land excellent, well adapted to wheat or other crops. An abundance of the choicest timber. Sold cheap entire, or in 80 acre lots. Inquire of D. C. HOUGHTON,
March, 1854. 220-3t Lima Liv. Co. N. Y.

OLD ROCHESTER NURSERY.

SAMUEL MOULSON, at the Old Rochester Nursery, office No. 36 Front street, Rochester, N. Y., is prepared to furnish Inventories to post paid applicants, of the present extensive stock of Nursery Items, consisting in part of 10,000 very fine Northern Spy Apple Trees, from 7 to 8 feet high, which will be offered by the 1,000 at low prices. Also, a quantity of large sized Trees, such as Scotch Pines, Larch Fir, Maples and other ornamental things offered at very cheap rates in order to clear the ground.

60,000 Dwarf and Standard Pear.
20,000 Apple Trees in variety.
20,000 Peach do do
15,000 Plum, Cherry and Apricot.
20,000 Osage Orange of different ages.
Over 100,000 Hardy Evergreens—

And a fine selection of Weeping Deciduous Trees, Ornamental Shrubs, together with such novelties as may be classed strictly hardy, and a large collection of Dahlias, Tulips and other bulbous roots.

The amateur wishing prime fruits of well established reputation, or the Agriculturist needing fine cropping, thoroughly tested varieties, may rely upon the most careful execution of their orders. The ornamental items are entirely grown in the Nursery, consequently none of the heavy losses are sustained that usually occur to recently imported subjects.

The Evergreens are very robust and admirably furnished to the surface of the ground, none presenting the naked stems usual to imported plants.

Dealers are invited to give a call before making their purchases.

March 1, 1854. 219-6t

MILL FEED.

A FEW thousand bushels of Fine and Coarse Mill Feed, for sale cheap, at the Rochester Buildings, on Exchange street, near the canal bridge. Also, Salt and Water Lime for sale by the barrel. H. C. WHITLOCK,
219-2t 79 Exchange st.

ASIATIC FOWLS.

FOR sale at auction prices, a choice lot of Asiatic Fowls, consisting of the Brahma Pootra, Chittagong, Grey Shanghai, and Cochin China varieties, all young fowls and warranted to be of pure blood, and of the large breeds. Per pair, $10. Two pullets and a cock, $15. Coupe and sent by express, to any part of the United States, promptly, on receipt of the money. The above prices are extremely low, the ordinary charge for the same birds being $20 to $30 per pair. ALFRED E. BEACH,
86 Nassau street, New York.

Reference—P. T. BARNUM, Esq., President of the National Poultry Society. 219-4t-w-1tm

PURE BRED COCHIN CHINA FOWLS.

TWENTY-FIVE PAIRS select buff Cochin China Fowls, from 6 to 9 months old, and weighing from 14 to 18 lbs. per pair, for sale, for $5 to $8 per pair. Address
218-4t R. L. ADAMS, Lyons, N. Y.

ATKINS' SELF-RAKING REAPER.

FORTY of these machines were used the last harvest in grass or grain or both, with almost uniformly good success, in nine different States and Canada.

Twenty-Six Premiums, including *two at the Crystal Palace,* (silver and bronze medals,) were awarded it at the autumn exhibitions. I am building only 300, which are being rapidly ordered. Mr. Joseph Hall, Rochester, N. Y., will also build a few. ☞ Early orders necessary to insure a Reaper.

Price at Chicago $176—$75 cash with order, note for $50, payable when Reaper works successfully, and another for $50, payable 1st December next, with interest. *Or* $160 cash in advance. *Warranted to be a good Self-Raking Reaper.*

☞ Agents properly recommended wanted throughout the country. Experienced agents preferred. It is important this year to have the machines widely scattered.

Descriptive circulars with cuts, and giving impartially the difficulties as well as successes of the Reaper, mailed to post-paid applications. J. S. WRIGHT.

"Prairie Farmer" Warehouse, Chicago, Feb., 1854.
215-13t-m3t

FAIRFIELD ACADEMY.

THE next term of this Institution, located at Fairfield, Herk. Co., N. Y., will commence on Monday, April 10, and continue 14 weeks.

The Professors and Teachers connected with the Institution are distinguished in their profession; the Libraries, Apparatus, and Buildings extensive, and the price of tuition, &c., low. Students from a distance will leave the Railroad either at Little Falls or Herkimer, thence by daily stages (8 miles) to Fairfield. [218-3t] J. MATHER, *Sec'y.*

THE YOUTH'S CASKET,

An Illustrated Magazine for the Young. Monthly; Fifty Cents a Year, invariably in advance. E. F. BEADLE, *Publisher, Buffalo, N. Y.*

THE Third Volume of the *Youth's Casket* commences with January, 1854. The publication has now become well established in the public confidence and estimation, and it is our intention to spare no pains to make it worthy of increased patronage and support. The Casket is devoted to the best interests of the young, combining instruction and amusement, in a style suited to the capacities of those for whom it is designed. Useful knowledge is made attractive by being presented in a pleasant garb, and moral lessons are enforced, not in hard, didactic sentences, but in the form of tales and stories, toward which the youthful mind is instinctively drawn. And the Pictorial Illustrations, which are in profusion in every number afford great aid in interesting and fixing the attention of the young reader, and in impressing what is read, upon the memory.

The Casket is printed on good paper, from clear type; and is published in monthly numbers of twenty-four pages each, making altogether, at the close of the year, a handsome volume of nearly 300 large magazine pages.

The January number, which commences the volume for 1854, is now ready for mailing; it contains a splendid lined engraving, entitled, "*Going to School;*" which will form a beautiful frontispiece to the volume.

Terms to Clubs.—Invariably in advance.—Seven copies, one year, $5; Fifteen copies, one year, $6; Twenty-four copies, one year, $9.

AGENTS WANTED.—Respectable and responsible persons wanted, to canvass for subscribers for the Casket, in every town in the United States and Canadas. To whom a liberal percentage will be paid. Specimen numbers supplied gratis. Address, post-paid,
210-3t. E. F. BEADLE, Buffalo, N. Y.

Publisher's Notices.

SPECIAL NOTICES.—TO AGENTS, &c.

☞ Mr. C. MOORE, of Getty, Chau. Co., N. Y., is duly authorized to act as Agent for the RURAL NEW-YORKER, and the WOOL GROWER AND STOCK REGISTER, in the counties of Chautauque and Cattaraugus, N. Y., and Warren, Pa.—assisted by C. B. LANDAS in the last named county.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—send no longer than paid for—and all orders should be in accordance with terms.

☞ OUR *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is obtained.

☞ In making up clubs for the RURAL, the Wool Grower and Stock Register can be added at 35 cts. a copy, which is the lowest club price.

☞ In writing us, please be particular to give your P. O. address correctly—the name of your Post Office (not Town,) County, and State. Write all names plainly.

☞ Those wishing their papers changed from one address to another, should give the names of both post Offices—the *former address,* as well as the one desired.

☞ ADDITIONS to clubs may be made at any time, at the price per copy paid for the original club.

☞ EXTRA numbers of the RURAL will be forwarded to all disposed to aid in augmenting its circulation.

Poetical.

(For Moore's Rural New-Yorker.)

"THERE IS A NAMELESS SPELL."

BY J. C. MILLER.

There is a nameless spell
Which holds my soul in thrall,
Whene'er I view the pallid moon
On heaven's cerulean wall—

I seem to hear the stars
Ring out their changing chime,
In welcome to their throned queen
Who rideth forth sublime!

I seem to see them cast
Their burning crowns before
Her shining car, to pave the way
Across heaven's azure floor.

And when her placid brow
Sheds holy light on mine,
My loyal heart its homage pays
At her celestial shrine.

Beneath the burning sun—
The garish glare of noon,
My fancy droops, my spirit faints,
But when the stars and moon,

Those lamps of ray serene
Relight their evening fires,
My soul is thrilled with melody
From thousand charmed lyres!

And this it is that holds
My dreaming soul in thrall,
Whene'er I view the pallid morn
On heaven's cerulean wall!

Rossel, O., March, 1854.

Rural Sketch Book.

BEING SOMEBODY;

A SKETCH FOR YOUNG MEN AND BOYS.

BY ELIZA A. CHASE.

"Come, William, you will go with us this afternoon," said James Grey to his cousin.

"No, James, I have already given you my reasons for refusing," was the reply.

"A fig for such reasons! You can't afford the time! Why, man—or boy, rather, for you will never be a man—what is one afternoon, that you are so afraid of spending it!"

"Much, very much, James. I have a difficult plan almost completed, and wish to finish it while the idea is fresh in my mind."

"That everlasting plan again. Some old machinery, enough to puzzle the brain of Archimedes himself. Are you going to invent a perpetual motion? I do declare, you are enough to provoke the patience of a saint.—Forever moping over plans, diagrams, and models, and heathenish machinery, that would make one think your room a pagan temple.—I expect you will apply for a patent for an improvement in the car of Juggernaut. But it is of no use to talk to you, for you are joined to your idols."

"I would try to be somebody," he pettishly continued, as he turned toward the door.

"Would you, James?" was the quiet reply of William, "well, I am *trying* to be somebody."

"You take a strange way for it, though.—Here you are shut up in this dismal room, night after night, never enjoying a harmless trick with the rest of us, or giving yourself any of the indulgences that make life pleasant.—Even a holiday makes no difference with you. One would suppose you loved the very sight of the tools and workshop, for you have them forever with you."

"Don't get excited, James," said William, smiling, "Come, be serious now. Do I neglect any of my duties? Do I not perform as much labor and succeed as well in my trade as any of you? And as for enjoyment, no one loves pleasure better than I do. I should enjoy a sail with you this afternoon very much, but my means of improvement are limited, and but little of my time can I call my own."

"James, we are machinists, causing gross, material substances to assume shapes of beauty and fitness, under the mysterious supremacy of our wills. Some call this a low, a common business, a mechanical operation; but it is not so. There is a mental power to which matter must bow, and there is nothing higher than to elevate and ennoble our conceptions, so as to make this plastic matter subservient to the best interests of man. It is thus improvements are made. First, the ideal, then the corresponding outward form. In my mind there is shadowed forth, though but dimly ——"

"Save me from such learned inflictions," exclaimed James. "I have no taste for what I cannot understand. Well, William, be a dreamer if you please, I am for active life and its pleasures. Hurrah for our sail, and good-bye to the second Fulton!"

"Poor James! A mere hewer of wood and drawer of water," said William, as he closed the door and resumed his occupation.

"Where's Will?" cried several voices, as James joined his companions in the street.

"Oh, in his room, of course, calculating how much beetle power it will take to draw an acorn up an ant-hill."

"Couldn't you prevail on him to come?—He is one of the best rowers we have."

"Prevail on him? You might as well try to prevail on an oyster to leave his shell! I was really vexed, and gave him a short piece of my mind. I told him, at length, I would try to be somebody," said James, lighting his segar and twirling his cane after the most approved fashion.

"Good!" said Harry Gilbert, "I am glad you showed your spirit. He is a good-hearted fellow, if he is full of oddities, and it may perhaps start him from his burrow. But what did he say?"

"Oh, after arguing the matter while he went off into a learned dissertation, in the midst of which I made my escape. He will never be anybody in the world, that's the long and short of it."

James and William Grey were cousins, and were apprentices in a machine shop, where various kinds of machinery were made. James, as may be inferred by the foregoing conversation, looked upon his employment as a necessary evil. To him it was mere manual labor, a given number of blows, a requisite degree of heat, a certain expenditure of strength—in a word, it was toil in its most literal sense.

William, on the contrary, viewed it with the eye of an artist. There was not merely the rough iron to be moulded into some unrequired form, but, as he told James, a plastic material, assuming beauty by the will of man. He studied, therefore, not only the mechanical part of his trade, but his inventive genius was excited. Curiosity led him to examine the uses and peculiar adaptation of the machinery he made, till at length his active mind suggested various improvements.

All his leisure time was employed in the construction of models, and his room might have been taken for a miniature patent-office. The last year of his apprenticeship was nearly at its close, and William had not only improved, but had invented several really useful designs.

Looking over a paper one day, he read an offer of a prize of $1,000 for the best model for a peculiar kind of machinery to be used in a cotton factory.

"Why should I not try," said he.

He understood what was wanted, and day after day did he study intensely on the subject. At length he grasped the idea, and it was upon this he was at work when James urged him to join the sailing party.

Late at night his cousin returned, weary with pleasure, and found him sitting at the table, a sealed package before him, his cheeks flushed, an unusual brightness in his eye, and a peculiar expression on his countenance.

About a week after this, a gentleman knocked at the door. It was opened by James, who was alone.

"I wish to see Mr. Grey," said the stranger, glancing with a smile at the peculiar decoration of the room.

"My name is Grey," returned James, placing a chair for the guest.

"Allow me to congratulate you on your success, Mr. Grey," said the gentleman, pointing to a counterpart of the model which stood upon the table.

"My success! I do not understand you sir," said James.

"Are you not Mr. Grey, the inventor of this delicate and important machinery."

"I am Mr. Grey, but I am not the inventor of anything," returned James, somewhat bitterly. "Here is the fortunate person, my cousin, William Grey," he continued, as William entered.

"I rejoice in your success, young man," said the stranger to William. "Your plan has met the entire approbation of the committee, of which I am one. My name is Wilson, and I am authorized to pay you the thousand dollars, and also to advance you another thousand on condition that you superintend the erection of the works to be established."

William was astonished, overwhelmed, and after expressing his thanks, added, "I am yet an apprentice, and my time will not expire within some three months. After that I will accept your offer, if you will wait till then."

"An apprentice!" said Mr. Wilson. "How, then, let me ask you, have you obtained such a knowledge of mechanics?"

"By saving my leisure moments, joined to a love of my business as involving some of the best interests of man."

Six months from that time saw William in a responsible office, with a high salary, and the patentee of several useful inventions, while James was a journeyman laborer with $25 a month.

"Well, James," said Harry Gilbert, a short time after, "William is *somebody*, after all."

"Yes," returned James, "I think we judged him wrongfully once. I would give all I have in the world to live over my apprentice life again. These leisure moments are what make the man, after all, Harry!"

ROMANCE OF REAL LIFE.

Mr. C——, assuming the name of Jones, some years since, purchased a small piece of land, and built on it a neat house on the edge of a common in Wiltshire. Here he long resided, unknowing, and almost unknown, by the neighborhood. Various conjectures were formed respecting this solitary and singular stranger; at length a clergyman took some notice of him, and occasionally inviting him to his house, he found him possessed of intelligence and manners, which evidently indicated his origin to have been in the higher stations of life. Returning one day from a visit at this clergyman's, he passed the house of a farmer, at the door of which was the daughter employed at the washing-tub. He looked at the girl a moment, and thus accosted her:—"My girl, would you like to be married; because if you would, I will marry you." "Lord, sir! these are strange questions from a man I never saw in my life before."

"Very likely," replied Mr. Jones, "but however, I am serious, and will learn you till ten o'clock to-morrow to consider of it; I will then call on you again, and if I have your father's consent, we will be married the following day."

He kept his appointment, and meeting with the father, he thus addressed him:—"Sir, I have seen your daughter; I should like her for a wife, and I am come to ask your consent."—"This proposal," answered the old man, "is very extraordinary from a stranger. Pray, sir, who are you?" "Sir," replied Mr. J., "you have a right to ask these questions; my name is Jones; the new house on the edge of the common is mine, and if it be necessary, I can purchase your house and farm and half the neighborhood."

Another hour's conversation brought all parties to one mind, and the friendly clergyman afore-mentioned, united the happy pair.—Three or four years they lived in this retirement, and were blessed with two children.—Mr. J. employed the greater part of his time in improving his wife's mind, but never disclosed his own origin. At length, upon taking a journey of pleasure with her, while remarking the beauties of the country he noticed and named the different gentlemen's seats as they passed; coming to a magnificent one—"This, my dear," said he, "is B—— house, the seat of the Earl of E., and if you please, we will go in and ask leave to look at it; it is an elegant house, and probably will amuse you.

The nobleman who possessed this mansion was lately dead. He once had a nephew, who, in the gayties of his youth, had incurred some debts, on account of which he had retired from fashionable life to about £200 per annum, and had not been heard of for some years. This nephew was the identical Mr. Jones, the hero of our story, who now took possession of the house, title, and estate, and is the present Earl of E——!!—*English paper.*

A REMARKABLE STORY.

One night, while Sir Evan Napean was Under-secretary to the Home Department, he felt the most unaccountable wakefulness that could be imagined. He was in perfect health, had dined early, and had nothing whatever on his mind to keep him awake. Still he found sleep impossible, and from eleven till two, he never closed an eye. At length, weary of this struggle, and as the twilight was breaking, (it was summer,) he determined to try what would be the effect of a walk in the park. There was nothing but the sleepy sentinels. But, in this walk, happening to pass the Home Office several times, he thought of letting himself in with his key, though without any particular object. The book of entries of the day before still lay on the table, and through listlessness he opened it. The first thing he saw appalled him—"A reprieve to be sent to York for the coiners ordered for execution." The execution had been appointed for the next day. It struck him that he had received no return to his order to send the reprieve. He searched the "minutes"—he could not find it there. In alarm, he went to the house of the chief clerk, who lived in Downing street, knocked him up, (it was past three,) and asked if he knew anything about the reprieve being sent. In great alarm, the chief clerk could not remember.

"You are scarcely awake," said Sir Evan.—"Recollect yourself, it must have been sent."

The chief clerk said that he now recollected he had sent it to the clerk of the crown, whose business it was to forward it to York.

"Good!" said Sir Evan, "but have you his receipt and certificate that it is gone?"

"No."

"Then come with me to his house; we must find him, it is so early."

It was now four, and the clerk of the crown lived in Chancery lane. There was no hackney coach to be seen, and they almost ran.—They were just in time. The clerk of the crown had a country-house, and meaning to have a long holiday, he was at that moment stepping into his gig to go to his villa. Astounded at the visit of the Under-secretary of State, at such an hour, he was still more so at his business.

"Heavens!" said he, "the reprieve is locked up in my desk!"

It was brought. Sir Evan sent to the post office for the truest and fleetest express. The reprieve reached York the next morning, just at the moment when the unhappy men were ascending the cart.

"HE HAS A HARD ROW TO HOE."

Who, not in cities bred, has not heard this a thousand times, and said it a thousand more, about anybody and everybody that encountered some difficulties, and did not advance at a 2.40 rate toward the acquisition of fame or fortune.

"Poor fellow! a hard row to hoe," so they all say, some with a sigh, but more with a laugh. Like many sayings, it is the casing of a pretty picture; a field of waving corn, and a bright blue sky in June, and the workmen going through the rustling ranks for the last time; the rows so long that they seem to come together acres away, and the weeds all the while on a great race with the corn.

That's the picture, but there's something more than a specimen of the fine arts in the expression—there's a bit of philosophy.

It occurs to us, there is all the difference in the world in the way people ply that humble instrument, the hoe: and almost everybody works with something very like it, whether they work in the field, or the counting-house, or the mechanic-shop. The thing is done that is *worth* doing, by hard digging. Some people go through the field and through the world, slashing this way and that, now through a hill of corn and now through a weed, making the whole men look like the lightning's summer-fallow. Such people certainly "have a hard row to hoe," if indeed, when they finish it, it proves worth hoeing at all.

Others, again, strike at the little weeds with a sufficient expenditure of strength to fell quite a respectable tree, and the result is, that about midway of the field, and on the first row, they lean upon the implement and sigh to themselves, "We have a hard row to hoe." And they tell the truth, for so they do.

Now and then a man manages to strike every stone in the vicinity a perfectly annihilating blow—annihilating to the hoe we mean—and before the day is half done, his weapon is disabled and *he* fumes like the rest, that "he has a hard row to hoe."

Sometimes a little green remnant of the fall springs up close at the root of a blade of corn as much as to say, "touch me if you dare."—Well, the man is too lazy to stoop and pluck away the intruder from its anchorage, and so he levels a very dexterous blow at the offender, cuts it off without benefit of clergy, in a twinkling, and—*the blade of corn too!*—and when harvest comes, and the corn cribs are half filled, he murmurs to himself that "he has a hard row to hoe."

In fact, the world is a huge corn-field, and there's nothing like knowing how to handle the hoe.—*N. Y. Tribune.*

Youth's Corner.

ILLUSTRATED REBUS, NO. 14.

☞ Answer in two weeks.

(Written for Moore's Rural New-Yorker.)

MISCELLANEOUS ENIGMA.

I am composed of 28 letters.

My 23, 26, 24, 13, 15 is a law if passed, would benefit our country.

My 14, 26, 4, 18, 7, 14, 5, 27, 13 is the name of an author.

My 6, 26, 9 is a great orit.

My 6, 2, 24, 21, 10, 15, 28 often proves the ruin of young men.

My 25, 3, 6, 7, 12, 16, 10, 22, 27 all love to receive.

My 6, 8, 23, 26, 13 bachelors do not love to see.

My 6, 12, 23, 26, 18, 21 their rights are being asserted.

My 9, 24, 11, 2, 5, 24 is the chief object of too many men.

My 21, 12, 14, 1, 21 is the name of a political party.

My 9, 12, 11, 2, 5, 24, 1, 15, 27 is the name of a city in this State.

My 21, 10, 7 is over all things.

My 15, 26, 16, 1, 9 is beneath all things.

My whole is the name of an Educational Institution, that can claim the largest number of students of any Seminary in this country.

Charlottesville, N. Y., March 3, 1854. H. S.

Wit and Humor.

Wonderful Cure.—The following wonderful effect of one of the cure-all patent medicines, advertised so extensively in many of the newspapers of the day, is about as well authenticated as most of the remarkable cases which are backed up by a long array of bogus certificates:

A boy had swallowed a silver dollar.—None of the faculty could devise any alleviation, whereupon the inventor of the Cure-all medicine was sent for. It is evident, said he, that so considerable a coin can never be forced up by any emetic known to science. However, let him take this pill, and flattering consequences will be likely to ensue. An hour afterwards the boy threw up the dollar, but in small change, principally five cent pieces.

Loafers.—Different nations have different kinds of loafers. The Italian spends his time in sleeping—the Turkish loafer in dreaming—the Spanish in praying—the French in laughing—the English in swearing—the Russian in gambling—the Hungarian in smoking—the German in drinking—and the American in talking politics. Which of these different kinds of loafing is most destructive to morality?

One of the best double puns we have ever heard, says the Yankee Blade, was perpetrated by a clergyman. He had just united in marriage a couple whose Christian names were respectively Benjamin and Ann. "How did they appear during the ceremony?" inquired a friend. "They appeared both *Annie*-mated and *Bennie*-fited," was the reply.

"Have you any limb-horn bonnets?" inquired a very modest miss of a shopkeeper.

"Any what?"

"Any limb-horn bonnets?"

"Any—you don't mean leghorn?"

The young lady was brought to, by the proper restoratives.

Aunt Hannah desires to know who that "Voluptuous Swell" was who rose with music, at a ball, given in the capitol of Belgium on the night before the battle of Waterloo, described by Byron.

The old fogy who poked his head out from "behind the times" had it knocked soundly by a passing event.

The man who couldn't "trust his feelings," is supposed to do business strictly on the cash principle.

A Frenchman invented a remedy for the *Shake* which will *alleviate* all pain *therewith*.—This beats the Yankees.

Did the "Heat of passion" ever cook anybody's goose?

THE PEOPLE'S PATENT OFFICE.

This well known establishment is still carried on under the personal superintendence of its founder, Alfred E. Beach, by whom all the necessary drawings, specifications, and documents, for Patents, Caveats, Designs, Foreign Patents, &c., are prepared with the utmost fidelity and dispatch, on very moderate terms.

Persons wishing for advice either by letter to Patents or Inventions, can at all times consult the undersigned without charge, either personally at his office, or by letter. To those living at a distance, he would state, that all the needful steps necessary to secure a Patent, can be attended by letter, just as well as if the party were present, and the expense of a journey be thus saved. Where parties wish to be informed as to the probability of being enabled to obtain Patents, it will be necessary for them to forward by mail a rough outline sketch and description of the invention. No fee or charge is made for such examinations.

All consultations and business strictly private and confidential.

Models from a distance may be sent by express or otherwise.

For further information apply to or address, post-paid,

ALFRED E. BEACH,

[219-tf] Solicitor of American and Foreign Patents.

People's Patent Office, 26 Nassau street, New York.

MEXICAN WILD AND SWEET POTATOES.

The subscriber can still furnish the Mexican Potatoes, delivered on board of the cars, at $2 per bushel, in new bags, at 25 cts. each. All orders accompanied by the cash will receive prompt attention. Something less, for ten or more bushels to one address.

Sweet Potatoes for seed, at 25 cts. per pound, sent by Express to any address. And plants at $1 per hundred to be shipped about middle of May, by Railroad or Express.

Address J. W. BURGS,

219-tf West Macedon, N. Y.

FARMS FOR SALE.

The subscriber offers for sale three farms; one of 116 acres, one of 100 acres, and one of 58 acres,—all pleasantly located within one mile of the village of Mount Morris, Liv. Co., N. Y. They are all so situated that they can be occupied as one farm. Two of them have excellent dwelling houses and barns in good condition, with orchards of the choicest fruit.

The soil is of the best in Livingston county. Terms of payment easy, and to suit purchasers. A small portion of the purchase money will be required in cash.

GEO. S. McNAIR.

Mount Morris, Liv. Co., N. Y., March 6, 1854. 218-3t

LIVE STOCK AGENCY.

In compliance with repeated solicitation, the subscriber offers his services for the purchase of Horses, Cattle, Sheep, Swine and Poultry. His long acquaintance with different breeds and *breeders* of these animals, gives him superior facilities for procuring the best. SANFORD HOWARD.

{ Office of the Boston Cultivator,

THE HORTICULTURIST.

And Journal of Rural Art and Rural Taste.—The Horticulturist is a Monthly Journal, devoted to Horticulture and its kindred arts, Rural Architecture and Landscape Gardening. It is edited by P. Barry, late Horticultural Editor of the Genesee Farmer, and author of that popular work, "The Fruit Garden." To those who cultivate Fruit and Flowers, this work is indispensable, as it contains full directions for cultivation, as well as every thing new on the subject, either in this country or in Europe.

The Horticulturist is beautifully printed on the best paper, with costly illustrations on wood and steel. It contains 48 pages, without advertisements, and each number has a full page engraving, on steel, of some rare fruit or flower, drawn from nature, by the best living artist in the line.

Terms.—Two Dollars Per Annum, in Advance. A discount of twenty-five per cent. allowed to agents. Postmasters and others are invited to act as agents, to whom specimen numbers will be sent, free of postage, on application to JAS. VICK, Jr., Publisher, Rochester, N. Y.

P. S.—A new volume commences on the first of January. January 1, 1854

FARM FOR SALE.

Situated in the town of Conquest, 4 miles north west of Weedsport, and 8½ from the Rochester and Syracuse rail road. Said farm contains 163 acres, 140 improved, and in a good state of cultivation, and well adapted for all kinds of produce, and will shortly for two terms if desirable, as there are two houses, two barns, two orchards all good variety of fruit trees, and a wood lot on each end of the farm; 30 acres of wheat on the ground, and 60 is seeded to clover and timothy. Half the purchase money to be paid when possession is given, the remainder on bond and mortgage to suit the purchaser. Price, $35. For further particulars inquire of the subscriber on the premises.

Weedsport, Cayuga Co., N. Y., 213-tf. E. BAKER.

KETCHUM'S MOWING MACHINE.

This machine stands without a successful rival, as the *crowning machine of the age.* The supply will not be equal to the demand. If any person desires one for the coming season, they cannot speak too soon. The uniform price at Buffalo is $110,00. All who will forward us an order accompanied with the cash or satisfactory reference, may depend upon being faithfully served with a machine in good season. H. C. WHITE & CO.,

Buffalo Ag. Warehouse and Seed Store, 11 & 13 West Seneca street, Buffalo, N. Y 211tf.

A VALUABLE FARM FOR SALE.

The Subscriber offers for sale his Farm, consisting of 50 acres, on which is a good dwelling House, Barn, Sheds, and other necessary out buildings. An abundance of all kinds of fruit, and under good improvement. Situated in the Town of Fultney, Steuben Co., N. Y., eighty rods from the west bank of Crooked Lake, and 2½ miles from the Village of Branchport. A part of the purchase money will be required down, the balance on time to suit the purchaser.

For further information inquire of S. BOOTH, Branchport, or the subscriber on the premises.

DAVID W. MILLER.

Fultney, Feb. 1st, 1854 214-tf

BUFFALO AGRICULTURAL WAREHOUSE AND SEED STORE.

Nos. 11 & 13 West Seneca Street, Buffalo.—*Hiram C. White & Co.*, successors to Mason & Lovering, wholesale and retail dealers in all kinds of Agricultural Implements and Machines, Field, Garden and Flower Seeds; Fruit and Ornamental Trees, Shrubs and Flowering Oriental Poultry, &c. Also, Agents for the Boston Belting Company's Vulcanized India rubber goods, Belting, Hose Packing, &c., &c.

Orders solicited, all of which shall receive prompt attention at lowest market rates, and all articles warranted as represented. HIRAM C. WHITE & CO.

Hiram C. White. [1951f.] Amasa Mason.

MOORE'S RURAL NEW-YORKER,

IS PUBLISHED EVERY SATURDAY,

BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

Subscription—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion. As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 25 cents per copy to the club rates of the Rural,—making the lowest price to Canadian subscribers $1,50 per year.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

*** The postage on the Rural is but 3½ cents per quarter, payable in advance, to any part of the State—and 6½ cents to any part of the United States,—except Monroe County, where it goes *free.*

Advertising.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance.* The circulation of the Rural New-Yorker is several thousand greater than that of any other Agricultural or similar journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

The Wool Grower and Stock Register is the only American journal devoted to the Wool and Stock Growing Interests. It contains a vast amount of *useful* and *reliable* information not given in any other work, and should be in the hands of *Every Owner of Domestic Animals,* whether located East or West, North or South.—Published monthly in octavo form, illustrated, at Only Fifty Cents a Year.—5 copies for $2; 8 for $3. Vol. 5 commenced July, 1853. Subscriptions can begin with the July or January number. Back volumes furnished.

Address D. D. T. MOORE, Rochester, N. Y.

VOLUME V. NO. 13. ROCHESTER, N. Y.—SATURDAY, APRIL 1, 1854. WHOLE NO. 221.

Moore's Rural New-Yorker:

A QUARTO WEEKLY

Agricultural, Literary, and Family Newspaper.

CONDUCTED BY D. D. T. MOORE,
ASSISTED BY
JOSEPH HARRIS, in the Practical Departments:
EDWARD WEBSTER, in the Literary and News Dep'ts.

Corresponding Editors:
J. H. BIXBY,—H. C. WHITE,—T. E. WITHROE.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the Important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter, interspersed with many appropriate and handsome engravings, than any other paper published in this Country,—rendering it a complete AGRICULTURAL, LITERARY and FAMILY NEWSPAPER.

☞ FOR TERMS, &c., SEE LAST PAGE. ☜

Rural New-Yorker.

Progress and Improvement.

PERUVIAN GUANO.—NO. II.

Assuming that the estimate of practical farmers, in regard to the increase of wheat from the application of Peruvian guano is correct, and that in Great Britain 33 lbs. of guano are required to produce a bushel of wheat, while 25 lbs. only are needed in Delaware, Maryland and Virginia, it becomes a matter of scientific interest to ascertain the cause of this difference.

We have said that it was not improbable that on soils which, without manure, do not yield much more than the seed, the increase may be owing in part to the phosphate of lime of the guano; while on richer soils the increase is dependent solely on the ammonia of the guano. But as we have said before, there are some facts which cast doubt on this theory.—But as a few carefully conducted experiments will decide the point, we will abstain from discussing probabilities, in the hope that some enterprising Southern farmer will undertake to clear up the matter.

One thing, however, is quite certain. The proportion of grain to straw is much higher in this country than in Great Britain. In other words, to produce a bushel of grain the British farmer has to grow much more straw than we do, and consequently to produce a bushel of wheat in England, more organic and inorganic elements of plants are required than in this country. We know, too, that in the production of wheat much more ammonia is used than the plant contains when grown. In other words, that the wheat plant destroys ammonia. From some recent investigations, it would seem probable that this ammonia is used to convey silicic acid to the straw of the plant, evaporating into the air as soon as it has deposited the silica. But, as in this climate, in the production of a bushel of wheat, less straw is grown than in Great Britain, it follows that less ammonia would be required here in the production of wheat than in Great Britain. But the great value of guano depends on its ammonia, and therefore, less guano is needed to grow a bushel of wheat in our dry climate than in the humid air of the British isles. There is, therefore, nothing irreconcilable in the different results obtained by practical farmers in the two hemispheres.

If this explanation be deemed satisfactory, and we may assume that 100 lbs. of Peruvian guano will increase the wheat crop 4 bushels, it is quite an easy matter to decide whether or not its application to the wheat crop will be profitable. The present price of guano is 2½ cents per lb. Freight, crushing the guano, and sowing would make the cost average about $3 per hundred, and for this we get 4 bushels of wheat, in the field. The extra cost of cutting, threshing, &c., can easily be estimated, and every one can judge for himself whether he may profitably use guano. The whole question turns on the price of wheat. If it should be $2 per bushel, it would be a highly remunerative investment. If it should be but $1, the profits, if any, would be small. Many farmers, we observe in discussing this question, calculate that it will do some good the second or third year. When two wheat crops are grown in succession, we have never seen the good effects on the second of an application of guano on the first crop. If it is followed with clover, the phosphates on some soils would do some good, but on such soils as Western New York we should expect no benefit the second season.

The same remarks will apply in regard to the application of guano to Indian corn, grass, &c. It will do much good, but a high price for the product is required to make it profitable. We believe good timothy hay near cities is usually relatively much higher than wheat, corn, oats, &c., and that guano may be applied to meadows with profit. At the present prices of onions, carrots, beets, parsnips, tomatoes, cabbages, celery, &c., good Peruvian guano can be used for these crops with great profit.

The best *practical* manner of applying guano is sowing it broadcast *alone*, and harrowing or plowing it in, so as to incorporate it with the soil. When once mixed with the soil there is no danger of the ammonia escaping. *Never mix it with lime, ashes, or plaster.*—These have all a greater or less tendency to liberate the ammonia. Peat or loam would be good, but in our opinion their benefit is more than counterbalanced by the extra labor of sowing; while the chance of equal distribution is diminished rather than increased, unless the mixture be scattered by hand or by machinery.

There are three different guanos in market, the Peruvian, the Bolivian, and the Mexican. The Peruvian is the most valuable, and should contain 16 per cent. of ammonia. The Bolivian contains more phosphate but less ammonia than the Peruvian, and is, therefore, an inferior article. The Mexican contains a large per centage of phosphates but scarcely any ammonia, and is, therefore, comparatively of but little value. Every dealer should obtain a correct determination of the ammonia in guano before buying from the importers; and farmers should not purchase from dealers without getting a guarantee that it contains from 14 to 16 per cent. of ammonia. If it contains less, the price ought to be proportionally lower. But this is not the case. The agents of the Peruvian government in this country and in Great Britain sell their guano at a fixed price; whereas it is notorious that it differs vastly in composition and true value. We have known different cargoes of Peruvian guano that contained respectively, ammonia ranging from 8 to 18 per cent., and in one instance a small cargo that contained 22 per cent.; yet they were all sold to the dealers at the same price. But their true value was in proportion to the per centage of ammonia. We repeat, then, be very careful with whom you deal.

CULTURE OF SPRING WHEAT.

The present and prospective high price of wheat has induced many farmers to turn their attention to the culture of spring wheat: and we anticipate that a considerable breadth of land which would otherwise have been sown to barley or oats, or planted with Indian corn, will be sown with spring wheat. It is impossible to conjecture, with any confidence, whether these high prices will be realized. It depends more on the harvest of 1854 in England, than on any other one circumstance. We learn from private sources, that an unusually large quantity of land has been sown to wheat, and that it was got in, in fine condition. If they have a propitious season, they will reap an abundant harvest, and be comparatively independent of our breadstuffs. Nevertheless, with war on the continent, and the consequent interruption of the production and exportation of wheat from the two great grain exporting countries of Europe—Russia and Turkey we anticipate a higher range of prices. We expect wheat to fetch next fall, at least a third more than the average of the last five years.

We would not be understood as recommending every one to rush into the culture of spring wheat. Other grains will undoubtedly be proportionally high. But where soil and circumstances suit, an additional quantity of spring wheat may be sown with profit.

Spring wheat is usually sown in the place of barley, after Indian corn. Many people recommend fall plowing, but this is by no means essential. The land should be plowed and sown as early as the soil is dry enough to work well. Like barley, spring wheat requires a very fine tilth; the soil cannot be too mellow and smooth. Though for winter wheat we think unleached ashes of little use, yet for spring wheat, from their vivifying, mellowing influence on the soil, it is probable that where they can be obtained cheap, they may be used at the rate of 20 bushels per acre, with profit. Try it, and report the result.

The great drawback to the cultivation of spring wheat, is its liability to be attacked by rust, Hessian fly, and all the ills that wheat is heir to. We have no remedy to propose for this, except early sowing, on naturally dry, warm or well underdrained soils. Some good authorities recommend very late sowing, so that the wheat may not approach maturity till after the period of rust and fly had passed. There may be something in this; but if the ground can be well prepared, the earlier the seed is in, the better we should like it. The *Black Sea* or *bearded* wheat is the favorite spring wheat. There are two varieties—the red and the white chaff. The former does not make such fine white flour as the white, but it is much hardier, and withstands the attacks of rust and fly better, and is, on these accounts, preferred.—In Canada, and to some extent in this country, *Fife* Wheat has been raised, and well spoken of as a spring wheat. Our knowledge is not such as to enable us to pass an opinion of its merits compared with the *Black Sea*, the *Italian*, or the *Siberian*, but many who have grown it think it a very superior spring wheat.

CULTIVATION OF THE BASKET WILLOW.

Considerable attention has been given to the cultivation of the Osier or Basket Willow, but with indifferent success, for the want of accurate information on the subject. Mistakes have been made in the selection of soils and plants, as well as in the culture and treatment of the willow when grown, which have discouraged many who have attempted it. But others have succeeded—and from the instructions and results they have given to the public, we prepare the following.

All European Osiers do not succeed in this country—indeed, some of the most excellent there are worthless here. There are many good varieties, however, and among them, C. Downing, Esq., of Newburgh, recommends the following as "of surpassing excellence:

1. *Triandra*—It is perfectly hardy, thrives in a great variety of soils, and is as productive here as any willow in its own country. Its rods are long, tough and pliable, and particularly adapted for all kinds of split work requiring those qualities. 2. *Forbyana*—Another very valuable one in all respects; and 3. *Purpurea* or Bitter Willow—Valuable in all respects as an Osier, and particularly so for work that requires long, slender, unsplit wands of great toughness. These compose a complete assortment for basket-makers, supplying all their wants."

An experienced willow grower and manufacturer, John Fleming, Jr., of Sherborne, Mass., gives, in the Transactions of the Norfolk Agricultural Society, an Essay on the Willow, which, though imperfect in some particulars, contains many valuable hints on soil and culture, from which we gather the subjoined paragraphs.

Good springy, side-hill land is to be preferred, because such land is more healthy both for the willow and him that cultivates it. Such land, *facing the south*, will produce more willow, and in greater perfection, than can be grown on flat land of any kind. Willow will grow well and fair, by the side of running streams, on meadow land, and on the flats by the side of rivers, if there be sufficient suitable soil into which the roots can strike, and by which the plant can be sustained in dry weather. But when clay is too near the surface, the willow will become diseased, and when the land is dry it will die. It will also grow for a time in sand, gravel, clay or peat, but not to perfection, or to profit. If willow be planted in clay the plantation will not be healthy, nor will it ever be of that quality which is necessary for basket-making. In some instances the plant will look promising for a few years, but then becomes diseased and stunted, and covered with yellow rings. In blue clay, nothing can preserve it alive for five years; for generally in half that time the plant will be burned at the root by the action of the clay. The same effect is produced on the willow by the black mud that collects in stagnant water.

Very wet land may produce a greater and fairer crop; but it is not the largest and rankest willow that yields the greatest profit; for that which is of moderate size, smoothest grown, and most tough, commands the greatest price in market.—It is wrong to suppose that the extra bulk or quantity will more than make up the deficiency in price, for there is generally a very full supply of such material. Hence the cultivator should seek to produce willow of the average size, rather than a mixture of very small and very large. To secure this, a proper soil is of much consequence, and, as remarked before, good springy, side-hill land is unquestionably the best. What is not accomplished by the soil, must be effected by a proper selection of the kind of plant, and by regulating the growth of young wood by cutting the yearly produce at different and suitable seasons of the year.

The best and most profitable plantations of willow are found where the land is well chosen, and properly prepared by plowing, and the previous cultivation for one or two years of a crop of potatoes. If it is on low, wet land, which cannot be plowed, ditches should be cut in such a manner as to allow of draining off the water in wet weather, and of retaining it when necessary to moisten the land. Where the land can be plowed, it should be done; for tho' willows will grow like the apple tree in a grassy meadow, it is those who plow and harrow and hoe, who reap profit therefrom.

From the first-named authority we gain some additional particulars. We give them in his own words:

"To plant an acre, from ten to fifteen thousand cuttings are required; those of vigorous upland growth, possess far more vital energy than those of lowland productions, and make the most healthy and productive plantations. Cuttings are used from 8 to 14 inches in length; 10 to 12 inches is probably the best for deep soils, and not more than eight on very retentive soils; but more than three inches should be left out of the ground. They are set in rows three feet apart, and from twelve to sixteen inches distant in the rows. The first two crops will be in proportion to the number of cuttings, but after four or five years, they will entirely occupy the ground, even if more than sixteen inches apart; but when the value of the early crops is considered, twelve inches will be found to be the most economical distance.

"Cuttings must be prepared in fall or winter, but to avoid being thrown out by the frost, not be planted till spring: if necessary, they may be kept in a cool place until last of May or June even, without much injury—but April or May is the preferable time for planting, or as soon as warm, growing weather is established.

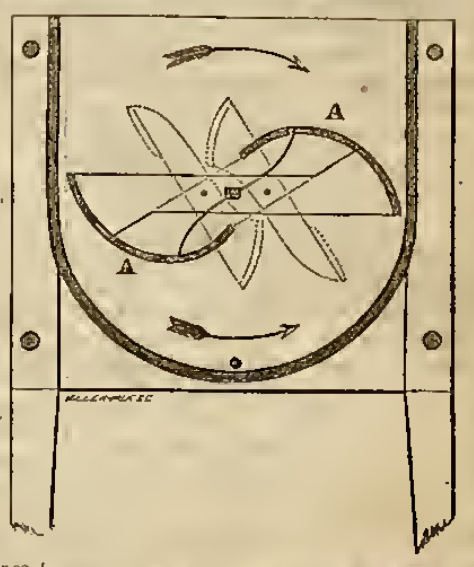
"The entire cultivation required the first season, is such as would be given to a crop of corn, and may be chiefly done with a cultivator, on land that is so firm as to admit the traveling of a horse; but simply keeping the weeds down in ground that is too soft, is often all that is required yet great productiveness is generally inseparable from clean culture.

"For the second and third years, frequent communications with some successful cultivator, whose knowledge and experience enable him to give precise directions in every stage of operation, will be very important if not indispensable; after that, the plantations will be fully established, and sufficient knowledge acquired to manage the business pleasantly and successfully."

Of the profits of successful culture we have little need or room to speak. They are known to be large and certain.—B.

In Scotland draining has become an expensive operation, in consequence of the scarcity of hands and the increased demand for labor, and may be said to have advanced in cost, of late, at least 25 per cent.

Great Wheat Crop.—We are informed that Mr. Horace Bailey, Sweden, Monroe Co., N. Y., raised last year on three acres of land, 171 bushels of wheat, or *fifty-seven per acre!*



CHURN AND BUTTER-WORKER COMBINED.

Next to churning, the great labor of butter making is to get out all the buttermilk from the butter, previous to salting, and then to thoroughly and evenly incorporate the salt with the butter. A machine that will not only churn the butter, but that will work it well in plenty of clean water afterwards, has been a desideratum. R. W. Davis, of Dundee, Yates Co., N. Y., has shown us a churn designed to accomplish this object, and we think it will prove an acquisition to every dairyman.

The cut represents an end view. The dasher is the only part that differs from ordinary churns. It is so constructed that, by the resistance of the cream, it is adjusted so as to present six centripetal cutting, or agitating blades, to the cream, as represented by the dotted lines in the cut; and then, after the butter is produced, by reversing the motion, it is adjusted so as to present but two centrifugal gathering blades or scrolls, A, A, which gather the butter, work it into rolls, and, by drawing off the buttermilk, (for which purpose there is a hole at the side of the churn,) and adding fresh water as required, expel the buttermilk in the most perfect manner. For further particulars, see advertisement in this number.

The Sweet French Turnip again.—For two or three years I have raised a white-fleshed solid turnip, that perhaps may be identical with the kind spoken of in J. D. B's inquiry.—I have known no name for it, though some have called it the white ruta baga. But it is much sweeter than any ruta baga I ever saw. It is generally a smoother turnip, with perhaps more fibrous rootlets, grows deeper in the earth, and has less neck than the ruta baga, though its shape is much like a ruta baga of good form. Its leaves are of a much deeper green, and perhaps more spreading. It is a good producer, yielding as well or better than the ruta baga under similar cultivation. For table use it is much superior, and for stock feeding purposes, so far as my experience goes, I prefer it to any turnip I am acquainted with. As a spring keeper it excels, too. One of my neighbors received a sample of French turnip, (so called,) from Vermont, the past season, whose produce seemed to be almost or quite identical. If J. D. B.'s turnip is like this, I think there can be no doubt as to its superiority over the ruta baga for any purpose whatever. T. E. W.

The Peruvian Government has employed a French Engineer, with several assistants and chemists, to measure the guano deposits on the Chincha Islands. The result has just been made known. It appears that the total deposits on the Chincha Islands amount to 16,501,466 tons (gross.) Besides these, Peru owns several other deposits of considerable extent which are now being surveyed. From this it is evident that the fears which many have entertained, that the supply of guano would be exhausted, are groundless. The present high price in this country, and the *close of the guano market* in England, are owing to the great and unexpected demand during the past year, and to the fact that the trade is a most perfect monopoly, confined to a single firm in this country and Great Britain.

FARM ACCOUNTS.

The attention of the readers of the RURAL has been called, in former volumes, to the economy—we might say necessity—of every farmer keeping a correct account with his farm. It is quite as necessary to him, if he would make his business yield the greater profits, as it is to the mechanic or tradesman. If his farm, with its fields and crops, and animals, is strictly debited and credited to all things proper, the farmer knows at a glance how stands the balance, and can tell what branch of his business, or what crop, all things considered, is, to him, the most profitable. It induces too that careful oversight—that looking to the items, which tells him at once, whether the expenses are too large for the income, and where is the proper place to curtail the outgoes. Where order and system prevail, profits are pretty sure to follow.

It is not then going too far out of the way, to urge this matter again, and earnestly, upon the attention of our readers—hoping that some, who are not already practicing it, may be induced to make a commencement with the month of April—which is a very good time to begin, as generally with this month, the business of the farm, as it were, begins for new crops. Once commenced, it is not such a task as many imagine. A few minutes before retiring, will note down all the charges and remarks for the day. Overcome the dread of beginning, and all will go easy after. If one does not wish to go to the expense of blank books, he can very readily stitch together a few sheets of paper, that will answer all practical purposes. One may get along very well with one book—though two are better, one to serve as a day book, in which each item is properly given to the proper field, crop, &c., whilst remarks upon the weather, time of planting, sowing, condition of the soil, &c., &c., may be added. This would, in fact, form somewhat of a Diary—which would increase annually in interest to the members of the household, as they occasionally glanced over its pages, in after times, and recalled to mind many pleasant incidents that otherwise might be forgotten.—The other book would answer the purpose of a ledger, and in which the items from the day book would be condensed and arranged, each in its proper place—thus giving at a glance, the exact cost, yield, and profit or loss of every crop, field, stock, &c.; and in a grand total, of the farm. This book could be filled out in the long winter evenings, or when there was the most leisure, so that at the end of each year a balance could be struck.

In this second book, or in one for the express purpose, it would be a good idea to give, first, a correct outline map of the farm, with all its fields, position of buildings, &c. This to be followed by a brief history of the farm, from its native state, or as far back as might be. Such a history would be the more interesting if it gave in detail, a brief description of the trees, plants, and flowers, with minerals, &c., that were originally found upon it. Such a history is not absolutely necessary, but it would be of so much interest to those of your descendants who might occupy it afterward, as well as to subserve the cause of progress generally, that it is well worthy of consideration.—The fields should for convenience be numbered, and a description of each, the soil, &c., given—with number of acres, and length of sides.—Then might follow a description of the several animals of the farm—color, size, age, and any peculiar marks noted. Such a description would be of much value in case an animal strayed or was stolen. Then might follow, or more properly perhaps precede the description of the animals—a description of the buildings, fences, springs, streams, &c. And, afterward, of the tools and implements.

The first preparation of this book would be more laborious than afterward, as there would then be no necessity of a further description, except upon an alteration of the fields, the addition of new stock, &c. When any animal is disposed of, it should be noticed under its description.

There are several forms that may be followed in carrying on the accounts; the good sense of any one with a little experience, will suggest the most feasible method for him to pursue.—That which shall exhibit a full and accurate account, in the least space, and which can be understood at a glance, is the best. Besides the advantages accruing to him who keeps the account, as already indicated, there are many incidental ones. With those who have pursued such a method, occasions have arisen by which a reference to their journal has saved disputes, and consequently ill feelings with workmen and others; for what is written, and written with all the circumstances just transpiring, is satisfactory to the parties concerned. Strict accounts keep many a friendship from being broken, through hard feelings.

To the young farmer, this course is all important, and he should not, for any consideration, forego it. Following it out, order and system will become to him a second nature.—Those who have so long traveled in the old ways, that such a task is irksome, should set their boys at it. Induce them to take hold of the matter for you. It will not only benefit yourself, but be of more use to them than gold in the pocket; for careful business habits, attached to an upright character, is the best of passports to fortune's favor. T. E. W.

ARTESIAN WELLS.

MR. MOORE:—Your correspondent of Fulton, "M.," asks some questions, on the subject of Artesian Wells, which are difficult to answer without being familiar with the location and knowing the underlying formation.

One thing is well settled, that water rises to the surface every where, if the boring is continued deep enough, though in some situations, a great depth is required; and that it does not depend upon elevated or low land, but upon the variety and constitution of the rock.

In some regions the water when procured is useless for family or farm stock, being often highly impregnated with sulphur, salt, or bitumen. For facts to judge from, reference should be had to springs, ravines, or other borings in the neighborhood.

The expense of boring would be covered by 50 cents the foot, for the first hundred feet in all the sedimentary or secondary rocks, except the cherty lime stones, which sometimes contain so much flint, as to interpose very serious difficulties and delays. Some rocky strata are so cavernous and loose, as to render the rising of the water impossible, without tubing below the fissures and cavities, which is expensive. If the rocks drop out and show themselves in the streams and ravines, a pretty good judgment could be formed of their practicability, or the opinion of a geologist acquainted with the formation of the region, would be a good guide to the experiment.

The primitive rocks give the best water, but often require great depths of boring, at great expense, and are then quite uncertain.

In all deep borings, the water is found to grow colder for about 50 feet, after which it grows warmer, at the rate of one degree for every 55 feet as far as is yet known, say over 2000 feet.

The cause of the rising of the water to the surface and often greatly above it, is one of the most difficult problems to explain in the whole circle of natural philosophy. The books give no other solution to the question, than a higher source and water seeking its level; but that presumption utterly fails to meet the facts, as the water rises as readily in high land, as in low, and it cannot be supposed that dipping strata is every where formed, to meet the contingency of water rising wherever an opening is made of sufficient depth.

Others have suggested that as water was the sole agent of the distribution and deposition of all the sedimentary rocks, it enters largely into their present composition; and thus on boring and allowing vent, the superincumbent pressure forces it up, on the principle and laws that all fluids obey. But this principle will hardly bear investigation, as the force being spent, the fountain would fail, which is not found to be the case, as they are constant and uniform in their discharges.

It has also been attempted to account for the difficulty, by the admitted fact of great central heat, in fact of the melted fluidity of the entire centre of the globe; which acting upon the water that is constantly percolating down, is converted into steam, which forcing upwards, creates a great pressure, and finding its way to the surface wherever the rocks are perforated artificially, and in the warm and hot springs in various parts of the earth.

All the theories are mere hypotheses, while at this period of our knowledge of the interior portions of the earth, it is presumptuous to attempt to settle. E. Y.

TAR FOR SQUASH BUGS.

In answer to inquiries of friends, in regard to the culture of squashes, Mr. BRIGGS says, "their greatest enemy is the *stink-bug*, and the only effectual remedy against their depredations he has found, is to take them one by one and sever the head and horns from the body, &c." This is rather a serious talk, and I would modestly suggest to him to drop, every few days, a little *tar* upon the ground, around and between the plants, when the insect first makes its appearance, being always specially careful not to let it touch the plants, as it will in that case blacken and kill. It has seemed to me that the smell of the tar is as offensive to the bug as their odor is to my olfactories when engaged in such an onset as he recommends; and if it really is so, I am sure the bug will keep a respectful distance. I have found this application as effectual for plants as the same upon the nostrils of a sheep is against the fly with which it is assailed in the hot season. Y.

STRETCHES IN SHEEP.—Having had considerable experience in this disease, I would recommend giving sheep affected with it a strong dose of salt and water. I have treated several cases in this way, and have never lost a patient. —C. P., *Jersey, Ohio.*

YELLOW WATER IN HORSES.

A CORRESPONDENT asks how to cure the yellow water. The symptoms of yellow water are, looseness of mane and hair of the tail, yellowness of the eyes and gums, the coat stares and looks rough. If I should be allowed to advise, I would say, take two quarts of blood from the neck vein, and by allowing the blood to cool, it will be nearly all turned to a yellow liquid, which may be taken as sure testimony that the horse has the disease commonly known as yellow water.

The following recipe has been found successful in a number of cases, within my knowledge: Half pound aloes, ½ lb. castile soap, ½ lb. copperas, ½ lb. saltpetre, ½ lb. antimony; pulverize and mix with honey,—make the mass into balls about the size of partridge's eggs. Divide the number of balls into four equal doses; give one of these doses each morning till the balls are used up. Let the horse's food be light. Give a mash of bran and warm water, morning and evening, and let his water be warmed a little by throwing a few embers into it before allowing him to drink. After the balls are used, take wild salindine, boil it slowly and mix the liquor with bran for his mash, night and morning. For a week after that, gradually improve the feed, and the probabilities are that the horse will soon regain his wonted health and strength. If the horse is young and of very full habits, it is deemed a good practice to take two quarts of blood more about the fifth day after the first bleeding; but copious bleeding is not advisable in this disease.

RUFUS S. RANSOM.

YELLOW WATER.—I noticed in your paper an inquiry for a remedy for the yellow water in horses. Some years ago, in Montgomery county, the above disease proved very fatal to a great number of horses, until a traveler gave a remedy, which he had known successful in the disease, which was:—Take sweet apple tree twigs and hard maple tree twigs; make a strong tea of them; dissolve a table-spoonful of copperas, and a tea-spoonful of nitre, in a quart of the above tea, and give it to the horse three times a day; wet up wheat bran with the tea and give him to eat, and all he will drink. If that is but a little, give it to him from a bottle. The above remedy had the desired effect to cure all that were recently attacked by the disease.—C. P. KIMBALL, *Rutland, N. Y.*

GIVE your horse one table-spoonful of powdered copperas, once a day for three days, then omit three days, then give the same quantity again another three days, and at the same time give him no other drink but tea made of the bark or the limbs of the shaking asy, or quiver leaf. You may secure the drink in a pail, so that he can get at it when he wants, and not upset it. Continue the drink by him four or five days after giving him the copperas. Mix the copperas in a mess of chopped feed, in which he will be most likely to eat it.

SIMON W. VESCELIUS.

Enfield, Tompkins Co., N. Y.

SPRING WHEAT.

MR. MOORE:—I notice an inquiry about spring wheat,—"what is the best kind to sow, and what quantity of seed per acre." The suggestion is made, that on account of the high price of bread-stuffs, it would be advisable to sow largely of spring wheat. I have cultivated spring wheat to a considerable extent in former years. Have sown the white chaff bearded, and white bald, and also the Italian spring wheat. This last is decidedly the best kind I ever was acquainted with. One excellence peculiar to it is, it will produce well on light thin land. It has a strong stalk, and except on very rich ground will not lodge or fall down. Its kernel is long, not white in appearance, like the "white flint winter wheat"—the skin or bran very thin, and the flour white, sweet and excellent. About the time of its introduction, samples were sent to Virginia—it was cultivated, weighed, ground, and made into bread, and decided upon, by a company of gentlemen engaged in wheat growing and milling, and pronounced equal to winter wheat. It has weighed 60 to 64 lbs. the bushel. In my experience it has never failed to produce a large crop, much larger than winter wheat, and has never been affected with rust or smut, nor by the fly, except once. In this instance, it was sown alongside a piece of winter wheat that was destroyed by the fly, and it shared the same fate. Two bushels to 2½ per acre is the amount of seed needed. It was introduced from Italy into Rome, Oneida County, N. Y., and has probably been cultivated there until the present time—the earlier it is sown the better. FARMER D.

WIRE WORM.—The garden of one of my neighbors was very much infested with wire worms. He happened to open a corn-cob that had been in the ground, and found a number in the pith of the cob. He took the hint, and stuck two or three half cobs around each hill of corn, leaving one end visible above ground. In a few days he found from one to eight in each cob. Try it, who will.—C. P. KIMBALL.

Agricultural Miscellany.

AGRICULTURE IN THE SOUTHERN STATES.—Our brethren at the south are making great and commendable efforts to place agriculture on a scientific basis. At a recent meeting of the "Agricultural Association of the planting or slave holding states," after listening to some half dozen addresses on several scientific and practical subjects, the following resolution, among a series of others was passed:

"*Resolved*, That it is the opinion of this meeting that the Association should, at its next annual meeting, or as soon thereafter as the amount of subscription shall amount to $500,000, memorialize Congress and the Legislatures of the Southern States, for the purpose of obtaining their aid in the completion of a work [that is, the establishments of a Central Agricultural College] which involves so much of welfare, not only of the South, but of the entire confederacy."

BEET ROOT SUGAR.—French papers speak in glowing terms of some recent improvements in the manufacture of beet root sugar. The new process is not fully described, but it consists in lixiviating or washing the pulp, instead of pressing it. The apparatus is very simple, costing much less than the hydraulic presses now used, and 20 per cent. more sugar can be obtained and with less labor.

THE NEW YORK HORTICULTURAL SOCIETY has concluded to accept Mr. BARNUM's proposition to hold their next horticultural exhibition in his museum. Mr. BARNUM has agreed to pay all the premiums, and all the necessary expenses of the exhibition, including advertising, fitting up the hall, tables, &c., and will pay the Society at least $100.

MR. C. C. PALMER, of Lima, Mich., sends the editor of the *Michigan Farmer* a sample of wool, that is something of a curiosity. It is of a dark brown color, but barred at intervals with a lighter color—presenting in miniature the appearance of a raccoon's tail. The editor is assured that it is a fair sample of the whole fleece.

MICHIGAN AGAINST THE WORLD FOR ONIONS.—We are told by the *Michigan Farmer*, that the Rev. Mr. HAMMOND, of Grand Rapids, raised, the last season, thirteen and a half bushels of onions from one rod of ground.—This is at the rate of 2,160 bushels to the acre. Who can present a greater product?

MR. J. A. POLHEMUS, of Calhoun Co., Mich., sold the last season, $211 worth of wool from sixty-five Spanish Merinoes. A good profit, truly.

MR. HENRY CASE, of Irondequoit, Monroe Co., N. Y., has just shown us a parsnip root weighing 4¾ lbs. Who can beat this?

Inquiries and Answers.

FALL PLOWING, &c.—What is your opinion respecting fall plowing for spring crops on clay or gravelly soil. Also which is the cheapest food for milch cows, shorts at $13 per ton, or Indian corn at 75 cents per bushel.—T. KIPLER, *Conesus, Liv. Co., N. Y.*

On an underdrained clay soil, we should prefer fall plowing. On a wet clay soil, fall plowing leaves the land cold and sodden in the spring, and in poor condition for early operations. On such land fall plowing may be a matter of convenience, but to our minds it is of questionable benefit. As a general thing, we should not fall plow a light gravelly soil.—But there are many circumstances which modify such a conclusion.

We think the shorts would be cheapest.

GRASS SEED FOR AN ORCHARD.—I wish to know whether timothy or clover seed is best to stock an orchard with that has been plowed for years? It has been remarked to me that clover will ruin an orchard. The soil is sandy.—P. S., *Mound Morris, N. Y.*

We would not seed down a good orchard at all. It is taxing our generous soil too much to ask for an abundance of good fruit, as well as wheat, or Indian corn, or timothy, clover &c. But if you must seed it down, we should prefer clover to timothy, as less exhausting to the soil.

CULTURE OF HOPS.—Will you or any of your readers inform me of the best mode of preparing the ground for hops? Also where the roots can be procured, and at what price. Any other information in regard to laying down a hop-garden, will be gratefully acknowledged by—M. J. S., *Williamsburg, Va.*

EARLY PLANTING.—Farmers in the vicinity of Camden, N. J., have commenced planting potatoes. The soil is a dry sandy one. In the neighborhood of Freehold the frost is quite out of the ground and plowing commenced.—The soil there is a sandy loam, not quite so light as at Camden, which is opposite Philadelphia.

Many farmers on Long Island are busy preparing for spring crops.

Sunday and Monday, March 12 and 13, in this City, were clear spring-like days. A few such will set the gardeners agog about here.—Grass is beginning to sprout.—*N. Y. Trib.*

BREAKING HORSES.

MR. EDITOR:—I notice in your valuable paper some remarks on "breaking horses," from the "Patent Office Report." In this operation, Madam Glass' receipt for cooking a sturgeon, will apply, viz:—"First catch the sturgeon."—In order to break a colt well, first get a colt of good blood; and then he will need very little breaking.

A colt of good blood is always a colt of good courage, and the best way of ascertaining a good blooded colt, is to try his courage.—See if anything will frighten him—see if he delights in loud noises, such as the sound of a drum—the noise of a bridge—the sound of cannon, &c.

A good colt will generally precede his dam in traveling. If he lags behind—if he is easily frightened at sights, or sounds,—get rid of him at once. He will not be worth raising. If you have a colt from a good stock, treat him with kindness, never irritate him. Feed him with salt, crusts of bread, pieces of carrots, &c., from the hand. Feed him well—give him a warm stable, and good bed in winter. Halter him and lead him about when he is a year old. Bridle him at two years, and occasionally put a saddle on his back, and always keep him in hand, and under kind control. Keep up this practice, till three years old—you may then put a harness on him, and lead him round in it. Take care that he never gets a chance to break from you, or run away. In the spring, summer and fall, give him a good pasture to exercise in, where he can run and consolidate his limbs. At four, you may harness him in a sled, and afterward in a light wagon—always remain by his head. Do not blind him—let him see every thing that is going on around him. A harrow is a good thing to tame him down.

If you want him to work with another horse, you may now harness him with a horse that is perfectly gentle, and kind, and sure in all situations. At five years old, he will be fit to put to any light work, in saddle and harness. But them he should not be overloaded or strained at this or any other age. At eight years old, the horse is mature. His bones, muscles and cords are fully developed and consolidated.—N. C. BETTON *in Granite Farmer.*

SOWING CORN FOR FODDER.

As spring will soon be upon us, it is reasonable to suppose that every practical farmer is laying out certain grounds for his various crops; and as the period in the history of agriculture has arrived when all farmers must economize, by putting in those crops which will most remunerate him for his labor, as a means to effect this end, allow me to call the attention of practical agriculturists to the subject of sowing corn for fodder.

Last spring, I sowed about three acres of corn, intending to cut it green for soiling, but owing to the favorableness of the season for grass, but one acre was cut—the other two were cured for fodder. I have no doubt the produce from the one acre was equal to ten acres of ordinary grass made into hay. The best way to raise it, is to plow and harrow the ground as if for corn or potatoes; then start the plow, and let a man or boy follow and drop every other furrow until the piece of ground is completed; then run the roller over, and it needs no more attention. We put three and a half bushels of seed to the acre. I would prefer putting it on a piece of ground that was not to be seeded, in order to save labor in the curing. All that would be necessary is to cut and shock as other corn, and let it stand until dry, then bind it in sheaves and haul it to the barn or shed, and *salt* it. Cattle eat it with great avidity, and milk better than when fed on hay. We purpose putting down from ten to fifteen acres this spring, and calculate to save twofold by the operation. First, in curing hay there is almost always difficulty in procuring men even at the highest wages. Second, instead of mowing from forty to fifty acres we will have them for pasture, which does not impoverish the land like mowing. I think there is no crop which will pay better than sowed corn.—Let our farmers try it.—*Del. Republican.*

WARMING WATER FOR ANIMALS.

AT one of the agricultural discussions at the State House last winter, the question was raised in regard to the advantages of warming water for stock, in cold weather. Mr. BROOKS, of Princeton, stated that he had tried an experiment on a small scale which satisfied him that the thing, under some circumstances, might be made to pay.

Our attention has lately been called to a plan for warming water by steam, which is deserving notice. At the New England Stable, in this city, sixty horses are kept, and all the water used for their drink, and for such other purposes as are required about the establishment, is warmed to about the temperature of blood-heat by a very simple and cheap contrivance. A boiler is placed on the stove which is used for warming the office and harness-room, and a lead pipe is attached to the boiler and carried to the watering trough, which is supplied from a hydrant. The fire ordinarily required in the stove, raises sufficient steam to keep the water in the trough constantly warm, although the length of pipe is over sixty feet, and is exposed to the cold air.

We are informed that the advantage to the horses, of drinking warm water, is very great. The proprietors of the stable state that formerly, horses were frequently injured by drinking cold water, when they were heated by exercise. No difficulty of the kind is experienced now. The animals are allowed to drink freely, and the water is used copiously in cleaning their limbs, evidently for the promotion of their health.—*Boston Cultivator.*

GEARING AND HARNESS of all kinds, should be carefully overhauled and examined. All found out of order should be repaired, and such as may not be needed for use should be put away out of the weather. It should all receive a coat of oil or grease and lampblack.

Orchard and Garden.

NOTES FROM MY CORRESPONDENCE.—No. 2.

Three New Seedling Apples.—Mr. L. Norris, of Windsor, Ashtabula Co., Ohio, has recently favored me with scions of three new seedling apples, originated in his township.—One of them is remarkable from all other apples, for the peculiarity of its fruit, retaining a beautiful white color when dried. I have a small sample of this dried fruit before me, which is almost as white as snow, and which Mr. N. assures me was dried in the usual way. It cooks tender and is a pleasant flavored fruit, and its smooth, regular surface combined with these other qualifications, must render it, in the estimation of all, the *ne plus ultra* among apples, for drying, and especially worthy of general dissemination. Mr. Norris has christened it the *White Beauty*—a very appropriate name—and adds in his letter:

"It is a native of the township of Windsor, Ashtabula Co., Ohio, where the original tree is now growing, on the farm of S. A. Latimer. Its fruit is very highly esteemed, by all who have tested its value, for all culinary uses. It is peculiar from all other apples we have seen, for the *beautiful whiteness* its fruit retains when *dried*, and its tenderness in cooking.

The fruit is of medium size. Form, globular, with a smooth and regular surface. Color, dull greenish, dotted with greyish specks.—Stem, medium size, three-fourths of an inch long, set in a shallow and regular cavity.—Calyx, in a broad, open, not deep basin.—Flesh, white, tender and juicy, with a sprightly, sub-acid flavor. In season from September to December. This is as correct a description as I can give, without any specimens at hand. I think it must become a general favorite as soon as known and tested."

Of the other seedlings he further adds:

"The *Jacksonian* is another original of this township, and was grown on the farm of the Rev. John Norris, a distant relative of mine. The good old man, now gone to his 'long home,' was one of the 'old settlers' of this town. Some years ago I called on the old gentleman, when the conversation fell upon his favorite apple, and he presented me with some of its scions. Now the old man was somewhat troubled with an impediment in his speech, and being withal, a still Jackson man, I was much pleased to hear him christen his apple. Said he, 'It is s-o g-o-o-d, I w-w-i-l-l call it the *J-a-c-k-s-o-n-i-a-n*.' In size, it is medium.—Form, roundish, with the surface a little irregular and undulating. Color, a rich yellow ground, striped, and splashed with a fine, clear red, which, on specimens exposed to the sun, prevails and assumes a beautifully dark hue.—Stem, short, set in a deep cavity. Calyx, in a deep basin. Flesh, white, splashed with bright red, crisp and juicy. In season, from December to March.

We have also another original seedling—the tree growing in the same orchard with the *White Beauty*. We call it the *Honey Sweet*, and think it worthy of general cultivation. It has a rich honey-sweet taste, and is most excellent for preserves or for making apple butter."

A Vigorous Tomato Vine.—Mr. Norris, in another letter, speaks of a tomato vine which grew in his garden the past season, and which I think is pretty hard to beat. He says:—"Perhaps you will think I *stretch my story*, or the *vines* a little, but it is a fact. I measured the vines, as accurately as I could, that grew from one root of a yellow grape tomato, that sprung up beside my hot-bed the past season, and which had no cultivation. Five of the main or leading vines averaged eight feet each. Three branches six feet each; three, five feet each; nine, four feet each; eighteen, one foot and six inches each. Whole length of the vine, one hundred and thirty-six feet! How much the product was, I cannot tell, as I did not take the pains to measure that, but it was indeed, a '*fruitful vine*.'" T. E. W.

PROTECTION FOR FRUIT TREES.

Eds. Rural:—I saw an article in the Rural of Feb. 25th, headed "Planting Orchards, &c.," wherein the writer stated, that he intended to set out three or four thousand apple trees,—also, that he was going largely into the raising of sheep, and wished to know if any plan could be adopted, to prevent the trees from being barked by sheep. The remarks made in reply upon that point, are very good; although I think they are wrong in one particular, and will fail to meet the wishes of the inquirer.—That trees need no other protection than a good fence I think, is a mistaken idea. I fully concur in the opinion, that orchards should be kept under cultivation, for the benefit of trees; yet, it often proves (from carelessness or otherwise,) a serious injury to many of them. In order that the ground should be properly cultivated, it is necessary to go over it from two to five times in the course of a season; and generally at a time of year when, seemingly, the least touch with a drag or whiffletree, will take the bark off. To keep an orchard, of three thousand trees, under cultivation five or six years, (where the land is as stumpy as Mr. Bush's probably is,) could not easily be done without ruining very many of them. Therefore, I will give him my manner of protecting trees, by which he can cultivate without injury, or turn his sheep or calves among them if he chooses.

Go to the woods at a time of year when the bark will peel, select basswood or elm poles from four to six inches in diameter; cut the bark into pieces, four or five feet in length, split them open on one side, slip them from the poles and set them around the trees. As they dry they will roll together, (though not light enough to injure the trees,) and soon become so firm that it is a difficult matter to pull them off again. To one inexperienced, it might seem quite a task. But I think, after trying, like myself, they would be happily disappointed. The expense is a mere trifle compared with the benefit that would result from it.—The idea was new to me one year since, having received my information from an aged gentleman, who tried the experiment nearly 40 years ago, much to his satisfaction. Knowing that your paper has a wide circulation, I think the plan may be new, and perhaps beneficial to some of your readers, as there are probably but few who are able to own an acre of land but what have more or less fruit trees thereon.

R. N. Warren.

Carlton, Orleans Co., N. Y., March 3, 1854.

MALOPE GRANDIFLORA. NEMOPHILA MACULATA.

THE MALOPE AND THE NEMOPHILA.

It would be difficult to select two more beautiful annuals than the *Malope Grandiflora*, and the *Nemophila Maculata*. We place them together because they will thus take up less space, and not because they have any particular botanical or natural relationship. In fact they have few things in common. The *Malope Grandiflora* is a tall, gay, showy plant, attracting and dazzling the superficial observer by a bold display of her rich, magnificent beauty. She is a foreigner, and talks loudly of the great care and attention she received in Paris and London, of the many conquests she has made, and of the greatness and rank of the ancient *Malvaceæ* family, from which she is descended, and of the insignificance and low birth of the family of that name found in the fields and woods of this country. The *Nemophila Maculata*, on the other hand, is a native American, indigenous to California, and though she received her education in London, yet she still retains much of her native republican simplicity. She is, nevertheless, conservative. Unlike her gay, aspiring sister *Malope*, she does not display her charms indiscriminately to all. She almost shrinks from the rude gaze and touch of common humanity; but to her special admirers, those who have the tact and requisite knowledge to draw her out, she unfolds all her hidden grace and loveliness, a beauty and delicacy of form which, combined with her quiet, humble and modest demeanor, perfectly charm her scientific friends. She prefers a rather shady situation, and sometimes, in consequence of the drying up of her slender collar, dies out when exposed to a hot sun on dry soil. It is well to make several sowings during the season. She is of procumbent habit, and the whole plant is clothed with short, spreading hairs. The flowers grow from the axils singly, on stalks longer than the leaves, whitish in their ground color, and each lobe of the corolla is tipped with a large, deep violet botch, which, when perfect, gives the flower a rather peculiar appearance. It blossoms freely, and is, in every respect, worthy of cultivation.

The *Malope Grandiflora* grows from three to four feet high. It should be sown early, on well prepared soil. A bed covered with its magnificent blossoms, and no less lovely buds, is an object of no ordinary beauty, as may be imagined from the drawing. It should have a place in every collection of annuals.

Frozen Trees.—The warm weather during the first two weeks of March, induced our Nurserymen to send off large numbers of fruit trees. The subsequent severe frost will materially injure such as are out of the ground.—When frozen trees are received they should be immediately placed in a cool cellar, or on the shady side of a barn or other building, and the roots covered with soil, where they will thaw gradually. Exposure to warm air will kill most of them.

California Wine.—Considerable quantities of wine are made in Lower California, and the article is manufactured from the *pure juice* of the grape, which is extracted something after the Madeira fashion. The San Francisco Advertiser says that the grapes are thrown into a small box, about the size of a candle-box, perforated at the bottom with numerous small holes. An Indian steps barefoot into this box and tramps out the juice, which flows through the holes into the receiver beneath. The wine thus produced is very sweet and good.

Shade and Fruit Trees.—As the spring of the year approaches, would it not be well to call the attention of towns, in their corporate capacities, to setting trees in the highways?—Some of the advantages would be that the roads are not so liable to fill with drifted snow; they would afford shade and fruit for travelers, protect orchards from depredations, and would perhaps yield income enough to pay the expense of the labor and the town's poor, and have a surplus left.—*Bost. Cour.*

A Large Pear Tree.—Henry Ward Beecher tells of a pear tree in Illinois, about ten miles from Vincennes, Ind., that bore 181 bushels of pears in 1834, and 140 bushels in 1840, of large sized pears. One foot above the ground it girths ten feet, and nine above, six and a half feet, and its branches spread over a space sixty-nine feet wide. It is said to be about fifty years old.

The easiest method of rising the locust is to plant 20 trees on an acre, and, when 15 or 20 feet high, run straggling furrows through the ground, and wherever the roots are cut with the plow, new trees will start up.

Mechanic Arts, &c.

LIST OF PATENT CLAIMS

Issued from the United States Patent Office,

For the week ending March 14, 1854.

Geo. B. Field, of St. Louis, Mo., for improvement in rotary cultivators.

Oliver Lesley, of Attica, Indiana, for improved saw set.

Orrin Newton and J. A. Crever, of Pittsburgh, Pa., for improvement in excluding dust from railroad cars.

Andrew Overend, of Philadelphia, Pa., for improvement in machine for damping printing paper.

Jas. W. Robinson, of Kirkland, N. Y., for improvement in form of scythes.

Edwin Milford Bard, of Philadelphia, Pa., for improvement in mould boards of plows.

James Perry, of Roxbury, Mass., for improved method of constructing moulds for making printing blocks.

Russell D. Bartlett, of Bangor, Maine, for improvement in machines for making shovel handles.

Chas. W. Billings, of South Deerfield, Mass., for improvement in seed planters.

Joshua Cross, of New London, Ohio, for improvement in faucets for measuring liquids.

Frederick Espenschade, of Millintown, Pa., for movable tapering nozzles to the exhaust pipes of locomotives.

Edward S. Haskins, of Boston, Mass., for improvement in spring clamps for clothes lines.

Elbridge G. Hastings, of Brooklyn, N. Y., for improvement in machines for dressing stone.

Albert Huck, of Paris, France, for process for gilding or plating fibrous substances. Patented in France, Dec. 15, 1852.

J. B. Larwill and J. Cross, of Bucyrus, Ohio, for improvement in faucets for measuring liquids.

Eldridge H. Penfield, of Middletown, Conn., for improvement in metallic gnomonic for sails.

Orson C. Phelps, of Boston, Mass., for improved stop-cock.

Ezra Ripley, of Troy, N. Y., for improvement in rotary engines.

Nathaniel Smith and Asa Crandall, of North Kingston, R. I., for improvement in machines for grinding cotton cards.

Welcome Sprague, of Ellicottsville, N. Y., for improvement in seed planters.

Jas. H. Sweet, of Pittsburgh, Pa., for hanging of the griping-jaw of spiking machines, in weighted levers.

Philander Shaw, of Abington, Mass., for improvement in rotary cultivators.

Abijah Taylor, of Pekin, Ill., for improvement in steam engine faucet-valves.

Manuel Blake, of Sutton, N. H., assignor to himself, Jas. B. McAlester, and Erastus Blake, of same place, for improved folding-blinds.

Westel S. Daniels, of Panama, N. Y., for improvement in obstetrical supporters.

Lewis Fagin, of Cincinnati, Ohio, for improvement in snuff machines.

Alpheus Kimball, of Fitchburg, Mass., for improvement in securing window-sashes.

Daniel S. Middlekauff, of Hagerstown, Md., for improvement in grain harvesters.

Simon Pettes, of New York, for improvement in machines for drilling stone.

Jonathan Burrage, of Roxbury, Mass., assignor to himself and Frederick W. Newton, of Newton, Mass., for improvement in processes for making varnishes.

J. G. Macfarlane, of Perry county, Pa., for improvement in seed planters.

For the week ending March 21, 1854.

Victor Beaumont, of New York, for improved machine for distributing types.

Henry Green, of Ottawa, Ill., for improvement in grain harvesters.

Ralph Bulkley, of New York, assignor to G. S. Cameron, of Charleston, S. C., for improvement in machines for rubbing type.

F. C. Goffin, of New York, assignor to Alfred B. Ely, of Boston, Mass., for improvements in safe locks.

Obadiah Marland, of Boston, Mass., for improvement in iron safes.

R. P. Benton, of Rochester, N. Y. for improved machine for dressing spokes.

Jeremy W. Bliss, of Hartford, Conn., for improvement in lifting jacks.

Chas. T. Appleton, of Roxbury, Mass., for improvement in processes for dyeing.

A. C. Carey and Jeremiah Smith, of Ipswich, Mass., for improved hydraulic engine.

Dexter H. Chamberlain, of Boston, Mass., for improvement in screw wrenches.

Thos. Carpenter, of Manlius, N. Y., for improvement in concaves of shiver hullers.

Chas. H. Foude and T. B. Lyons, of Mobile, Ala., for improvement in dredging machines.

J. L. Garlington, of Snapping Shoals, Geo., for improvement in grain threshers.

Chas. W. Hawks, of Boston, Mass., for improvement in nippers for printing papers.

Philip H. Kells, of Hudson, N. Y., for improvement in harvesters.

Jordan L. Mott, of New York, for improvement in railroad car wheels.

Ambrose Nicholson, of Poland, N. Y., for improvement in self-fastening shutter hinges.

J. G. Shands, of St. Louis, Mo., for improvement in machines for dressing mill stones.

C. V. Aurent, of Dansville, N. Y., for improvement in devices for preserving hens' eggs in the nest.

David A. Morris, of Pittsburgh, Pa., for improvement in anti-friction boxes.

Chas. T. Appleton, of Roxbury, Mass., for improvement in dyeing apparatus. Patented in England, Jan. 7, 1854.

D. A. Cameron, of Butler, Pa., for improvement in belt-saws.

Thos. Dougherty, of Erie, Pa., for improvement in shoe lasts.

Geo. W. Livermore, of Cambridgeport, Mass., for improved machinery for making barrels.

Saml. McKenna, of Cincinnati, Ohio, for improvement in portable metal punches.

David and Herman Wolf, of Lebanon, Pa., for improvement in seed planters.

Alex. Wilbur, of Lancaster, Pa., for improvement in machines for jointing staves.

Heman Gardiner, of New York, for improvement in quartz crushers. Patented in England, July 5, 1853.

Jeremiah W. Brown, of Hartford, Conn., assignor to S. M. Folsom, of Charlestown, Mass., for rotary smoothing iron.

Patent Elastic Horse-Shoe.—This shoe is of German spring steel, padded with gum elastic, and it is said will outwear several common shoes. All concussions and consequent heat are avoided, and hence those causes by which so many valuable horses are lamed and ruined, are by this invention almost entirely obliterated.

HOBB'S LOCK PICKED.

The London *Mechanics' Magazine* asserts that a Mr. Coater has succeeded in picking four of "Day & Newell's American Locks" in one day. Mr. Hobbs, who has charge of these locks, and who, it will be remembered, picked all the crack locks at the Great Exhibition, is now assailed for asserting that Day & Newell's Lock was "secure against picking,"—that in fact, it was *impossible* that it could be picked. Perhaps Mr. Hobbs has boasted a little too much; but from the fact that, though many had repeatedly tried, no one had ever succeeded in picking it, he was perfectly justified in saying that it could not be picked, though the result has shown that he was mistaken. We have another American invention, Yale's Magic Bank Lock, described in the Rural for 1853, page 367, which, we opine, will baffle either Hobbs' or Coater's lock-picking skill. We commend it to their notice.

DISCOVERIES, INVENTIONS, IMPROVEMENTS.

Fire-ships invented, 1588.
Sealing-wax first made, 1556.
Pins first used in England, 1543.
Bullets of iron first made, 1550.
Knives first made in England, 1563.
Needles first made in England, 1545.
Lotteries first drawn in England, 1569.
Pullocks first invented at Nuremberg, 1540.
Grape vines first planted in England, 1552.
Knitting stockings first invented in Spain, 1550.
Newspapers first published in England, 1588.
Hemp and flax first raised in England, 1533.
Post offices first established in England, 1581.
Bombs and mortars invented in Venloo, 1588.
Sextant invented by Tycho Brahe, *Swede*, 1550.
Coaches first made in England, by Rippon, 1564.
New Style created by Pope Gregory XII., 1582.
Diamond mines of Golconda first discovered, 1584.
Mail first carried in England in stage coaches, 1589.
Newspapers first published in Europe, at Venice, 1562.
Tobacco first introduced in Europe by T. Nicot, *Fr.*, 1561.
Silver mines of Potosi first discovered by an Indian, 1545.
Glass bottles and window-glass, first made in England, 1557.
Astronomical observatory first built in Europe, at Cassel, 1560.
Fans, muffs and false hair brought to England, from France, 1572.
Potatoes first introduced into England and Ireland, from South America, 1586.

Domestic Economy.

SPONGE-CAKE.

Beat some eggs as light as possible. Eggs for sponge or almond-cakes require more beating than for any other purpose. Beat the sugar, by degrees, into the eggs. Beat very hard, and continue to beat some time after the sugar is all in. No sort of sugar but loaf will make light sponge-cake. Stir in, gradually, spice and essence of lemon; then, by degrees, put in the flour—a little at a time—stirring round the mixture very slowly with a knife. If the flour is stirred in too hard, the cake will be tough. It must be done lightly and gently, so that the top of the mixture will be covered with bubbles. As soon as the flour is in, begin to bake it, as setting will injure it. Put it in small tins, well buttered, or in one large tin pan. The thinner the pans, the better for sponge-cake. Fill the small tins about half full. Grate loaf-sugar over the top of each, before you set them in the oven. Sponge-cake requires a very quick oven, particularly at the bottom. It should be baked as fast as possible, or it will be tough and heavy, however light it may have been before it went into the oven. It is, of all cakes, the most liable to be spoiled in baking. When taken out of the tins, the cakes should be spread on a sieve to cool. If baked in one large cake, it should be iced. A large cake, of twelve eggs, should be baked at least an hour in a quick oven.—For small cakes, ten minutes is generally sufficient. If they get very much out of shape in baking, it is a sign that the oven is too slow.

Chocolate Custards.—Dissolve gently by the side of the fire an ounce and a half of the best chocolate, in rather more than a wineglassful of water, and then boil it until it is perfectly smooth; mix with it a pint of milk well flavored with lemon peel or vanilla, and two ounces of fine sugar, and when the whole boils, stir into it five well beaten eggs that have been strained. Put the custard into a jar or jug, set it into a pan of boiling water, and stir without ceasing until it is thick. Do not put it into glasses or a dish till nearly or quite cold. These, as well as all other custards, are infinitely finer when made with the yolks only of the eggs.

To Make Breakfast Cake.—Take four pints of flour, one of corn mush, add two tablespoonfuls of yeast and one of lard; salt to the taste. Let it stand till light, then roll it out, cut it as you would biscuit, and bake in a quick oven.—*Ohio Cult.*

Essence of Celery.—Steep an ounce of celery seed in half a pint of vinegar. A few drops of this gives a fine flavor to soups, and sauce for fowls.

Educational.

ADDRESS TO SCHOOL BOYS.

CHAPTER III.

THERE is another thing, boys, I wish you especially to remember; and that is, to remain steadfast in principles of honesty and virtue.—Wisdom may make you eminent, but it cannot alone make you respectable and happy. An educated villain is more to be dreaded in society than pestilence or war! Just as much more knowledge as a bad man has, just so much nearer and nearer does he become a devil! Just as much more as education helps to elevate a man in society, and give him capacity to do good if he turns it to the right account, just so much it is injurious in a bad man's hands. Wrongly directed, it will tend to sink you lower in the scale of moral being, and render you doubly guilty in the sight of God. It will sink you deeper in the end, than a nether mill-stone hung around his neck would sink a struggling drowning wretch in the bottom of the sea!

Besides all that, it costs as much time and study to become an accomplished scoundrel as it does to become a philosopher. It requires as much labor to become a first rate counterfeiter, as it does to become a first rate banker. It requires as much study to commit a felony and escape a felon's doom, as it does to preside in a criminal court and administer the laws.—The accomplished thief or robber, with the same mental acumen, might have become, if he had chosen it, a governor of a State, or a Judge of the Supreme Court. An eminent rogue labors as hard to establish a claim to the penitentiary, as an eminent statesman does to establish a claim to a seat in a Legislative Hall.

When we reflect, that the latter of these is followed by honor, respect and love, and the former by curses, disgrace and punishment, is there anything short of madness would tempt a man to take the former path? In the State of New York, alone, there are fifteen hundred men confined in State prisons, to say nothing of those shut up in county jails, houses of correction, and houses of refuge. Are the Auburn and Sing-Sing prisons to be shut up and unoccupied after the present tenants have gone to their long home? I would to God they were, but I have no such hope! The millennium is not so near at hand as that. The cells of the present race of convicts will be occupied by their successors in crime and guilt;—many of them fallen from a high estate; who forgot the lessons of their youth, the admonitions of parents—the instructions of the school-master—the warnings of their minister, and the lessons of their sabbath-school teacher; who cast aside the chances of being virtuous and happy, and chose to be vicious and wretched.

But a virtuous boy very seldom makes a wicked man. If he live to the age of twenty-one, with the good seed of upright principles sown in his heart, it is not often choked out by the tares of vice. "Train up a child in the way in he should go, and when he is old he he will not depart from it." Remember this, young men, and be warned in time! Go on as you have begun, and swear upon the altar of your hearts, that you will be law-abiding, industrious and sober citizens—that you will use your best efforts to cultivate your intellectual powers—that you will let no opportunities slip to gain a new idea or carry an old one into effect, and you will go on rising higher and higher. Some of you may become legislators, some of you clergymen, some of you teachers, some of you merchant princes—some intelligent farmers, prosperous mechanics, successful tradesmen: all of you, each according to his talents and industry, sober, respectable, and upright men. If any of you should possess, in the language of MARK ANTHONY, "neither wit nor worth, nor words, action nor utterance, nor power of speech to stir men's blood," you have at least, plain, common sense minds, susceptible of cultivation, abilities to place yourselves in a fair position in society, and be useful in the world. If you do not do it, it will "be a grievous fault, and grievously will you have to answer for it."

You cannot all be rich or great, neither is it desirable that you should be so; but you need not be so poor as to come to want. All men are not born with silver spoons in their mouths, but all men ought to be provided with a respectable livelihood, and if they are willing to work they rarely will be without it. Your parents cannot always support you, and give you the chances of education which you have now; and the time set apart for school purposes will not stay with you long. It is a wise man who makes use of the passing hour, and lays up intellectual treasures. He who squanders his time is a worse prodigal than he who squanders his inheritance. The latter may be recovered by industry and prudence; the former, once gone, is gone beyond redemption. The poverty of an ill-spent life is poverty indeed. The wretch who is poor in spirit, is poor for eternity as well as time.

WHEN an extravagant friend wishes to borrow money, consider which of the two you had rather lose.

ABOUT THE LETTER J.

MANY people in writing the capital J make no distinction in form from that of I, or if they do, it is so slight that most people would be at a loss to distinguish the two unless the letter is accompanied by the whole word. Such indistinctness often occasions mistakes; mistakes that might at times result in something serious, always in that which is unpleasant. Every letter should have a characteristic form that will distinguish it from all others at a glance.—And why J has come to be written so much like I, is hard to be told. The fault must lie in the teacher, or him who leads the hand in use of the pen.

J should always, when designed as a capital, be made with its lower half *below*, while I should only come *to* the line; then there can be no mistake, and if the renowned "John Doe" should take the notion to write his first name with only its initial, the printer would never transform him into I. Doe. Every one who instructs in penmanship, should bear this in mind, and teach the pupil the difference in constructing these two letters; and those who have acquired the habit, should at once break it, and so write their J's that they may be "known of all men."

T. E. W.

YOUNG FOLKS AT SCHOOL.

WE have a word of advice for parents who have children at school.

Your little ones are dear to you—about as dear as the apple of your eye. Their success at school is near your heart. Of course you'll do nothing to interfere with it. You are anxious to help them along, provided helping them will not seriously tax you. Pardon us for refreshing your knowledge on the subject with a few hints.

Keep them regularly at school.—Absence of a day is bad. They lose one day's lessons. They drop a stitch by the means. It deranges the teacher's plans, and makes it easier for the absence to occur again. Better suffer a great inconvenience than to keep them home a day. Better spend several shillings and some hours, and do errands yourself, than keep them home to run them.

Be sure they are punctual.—Ten minutes in the morning does you no good, and them much harm. Arrived at the school-room ten minutes too late, they disturb the punctual, lose an exercise, provoke the teacher and cultivate a miserable habit of procrastination.—The matter of habit is the great objection, though. In after years it sticks to a body like a boy to a bare-backed horse, and the harder one runs to be clear of it, the closer it hugs him.

They have lessons to learn out of school.—Let it be held a religious duty that they *learn them well.* By this the teacher judges of your interest in their progress. If they always go prepared on these home lessons, he is careful that they get well on with their school lessons. He feels that he is watched; he is interested for your children; and whether he means it or not, knows it or not, he labors more faithfully for their advancement. If the evidences are that you pay no attention to them at home, he does his duty mechanically, and only hopes for the best.

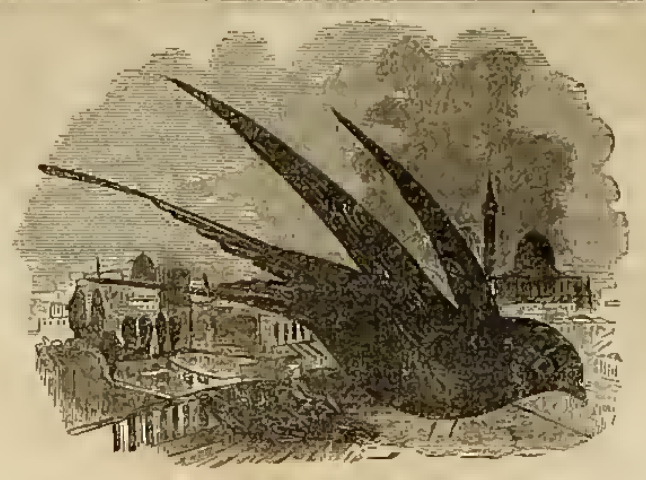
Sometimes you are a little at leisure. Once in a great while you don't know what to do with yourself. Then, we pray you, bestir yourself, and give up an hour to *visit the school*—Make suddenly your appearance in the room where they are reciting. You will see whether the room is an ill-ventilated, close, stifled pen, or a room fit for a half fledged immortal to grow in; by whose side they sit; whether they look tired, weary and languid, or as if they were careful to learn, and doing well; whether they are associating with lads or lasses fit for their company, or breathing impurities, and contracting evil habits, unawares, daily.

Try it a month, if you are not now doing it, and accept our pledge that before the thirtieth day is up, you will see a most marked improvement in your little folks' scholarly habits and attainments, and that you will come to the conclusion that their teacher is one of the best in the world. If you have never paid much attention to such things, you will be surprised to see *how much the teachers are doing for you;* and *still* further, you will wonder how much more they will do if their efforts are RECOGNIZED AND APPRECIATED.—*N. Y. Times.*

EDUCATIONAL BEQUEST.—By the death of Mrs. Bird, of So. Boston, the sum of $20,000 has fallen to South Boston for school purposes, according to the will of her son, John K. Bird, who died in 1835, leaving his property to his mother during her lifetime, and at her death to be equally divided between certain relatives and South Boston—the portion of the latter to be appropriated "to the support of a seminary of the first order for the education of females," to be established in that section. The property lying in Dorchester and South Boston, as stated by the Traveler, is worth $40,000, but the real estate yields but little direct income as at present situated, and to be made immediately available must of necessity be sold and converted into other property.

PLEASURES.—I see that when I follow my shadow, it flies me; when I fly my shadow, it follows me. I know pleasures are but shadows which hold no longer than the sunshine of my fortunes. Lost, then, my pleasures should forsake me, I will forsake them. Pleasure most flies me when I most follow it.—*Warwick.*

THERE are three classes of readers; some enjoy without judgment; others judge without enjoyment; and some there are who judge while they enjoy, and enjoy while they judge. The latter class reproduces the work of art on which it is engaged. Its numbers are very small.



BARN SWALLOW. [Hirundo Americana.]

Useful Olio.

THE BARN SWALLOW.

OUR readers will recognize in a glance, at the above engraving, the portrait of a very diminutive, but familiar friend; one whose cheerful note and glancing wing enliven the rural scenery of all our country dwellings, and of the few wild birds which delight to build their nests and rear their young under the roof built for the comfort and convenience of civilized humanity.

The swallow, for that is the tiny bird represented by the cut, comes among us about the middle of April, from his far-off winter home in a more genial clime. These birds haunt our barns and out-buildings by thousands. In a single day, the comparative stillness is broken in upon by the little noisy but welcome intruders, whose airy circuits and sportive gyrations seem to speak, as plainly as words could do, their joy at greeting once more their rural summer homes.

Eave and rafter, gable end and cornice, very soon give support and shelter to their mud-built nests, out of whose feather-lined interiors, curious little heads will be seen watching suspiciously the passer-by. If an adventurous or mischievous school-boy should climb to one of their nests, what an outcry is raised around his head! The whole republic of swallows is on the wing, and recruits from the neighboring colonies are seen coming in from all directions, to increase the "noise and confusion."

The swallow, as are all the other feathered songsters of the field and forest, is a welcome summer visitor to our homes; and the man who does not greet its coming with a smile, and afford it shelter and protection while he has a roof to cover his own head, is a wretch by nature and a brute at heart; and the boy who would deliberately tear down its dwelling, or destroy its callow young, must be looked after and reformed by his mother and the parson, or he will be certain to come to some bad end. Let the swallow, then, everywhere, as he generally is, be voted the freedom of the barn and out-buildings, and he will lend his humble but best efforts to make the home of the farmer both cheerful and attractive.

A CHAPTER OF CURIOUS FACTS.

A LEAD wire, the thirteenth of an inch, sustains 281 pounds.

A tin wire, the thirteenth of an inch sustains 341 pounds.

Gun metal is 12 pounds of tin and 100 pounds of copper.

The emerald is ranked among the gems, but is rarely found only in Peru. It is green, harder than quartz, and always in crystal. Oriental emerald is a green sapphire.

The European mountains consist of primitive and transition rocks.

The surface of the earth is 196,862,256 square miles: and its solidity is 250,926,935,315 cubic miles.

The sea is to the land, in round millions of square miles, as 160 to 40, or 4 to 1.

The narrowest part of the Atlantic is more than two miles deep. In other parts, about one and a half miles.

Bullock describes a fossil lizard 150 feet long.

Rounded pebbles are broken fragments of rocks, rendered smooth by mutual attritions in a long time, by water and tides.

The Amazon falls but a foot in fifty miles; the Rhine one foot in a quarter of a mile; the Loire a foot in one and a half miles.

Ninety species of bones of quadrupeds have been found, which are now unknown.

The waters of the Red Sea appear to be thirty-two feet higher than the Mediterranean, and the Gulf of Mexico is twenty-two feet higher than the Pacific.

About thirty fresh water springs are discovered under the sea, on the south of the Persian Gulf.

The Mediterranean makes a tide of only one or two feet.

The Caspian is 300 feet lower than the Baltic, and 345 lower than the Euxine.

No certain theory is formed of the cause of earthquakes; but the most general and rational ascribes them to steam and the force of gases formed by water and metallic oxydes.

Fourteen earthquakes, in different parts of the globe, were recorded in 1827, and perhaps this is an average number.

The Sandwich Islands are volcanic.

Orizaba is in the cone of a volcano higher than Mount Blanc.

AMERICAN YOUNG MEN.

AMERICAN history presents many remarkable instances of young men taking prominent and commanding stations at an age that would be thought very young in other countries.—We subjoin a few striking examples, from the list of those who have passed off the stage of human action.

At the age of 29, Mr. Jefferson was an influential member of the Legislature of Virginia. At 30 he was a member of the Virginia Convention; at 32 a member of the Continental Congress; and at 33 he wrote the Declaration of Independence.

Alexander Hamilton was only 20 years of age when he was appointed a Lieut. Colonel in the army of the Revolution, and Aid-de-Camp to Washington. At 25 he was a member of the Continental Congress; at 30 he was one of the ablest members of the Convention which framed the Constitution of the United States; at 32 he was Secretary of the Treasury, and organized that branch of government upon so complete and comprehensive a plan that no great change or improvement has since been made upon it.

John Jay, at 29 years old, was a member of the Continental Congress, and wrote an address to the people of Great Britain, which was justly regarded as one of the most eloquent productions of the times. At 32 he prepared the Constitution of the State of New York, and in the same year was appointed Chief Justice of the State.

Washington was 27 years of age when he covered the retreat of the British troops at Braddock's defeat; and the same year was honored by an appointment as Commander-in-Chief of the Virginia forces.

Joseph Warren was 29 years of age when he delivered the memorable address on the 5th of March, which aroused the spirit of patriotism and liberty in that section of the country; and at 34 gloriously fell in the cause of freedom on Bunker Hill.

Fisher Ames, at the age of 27, had excited public attention by the ability he displayed in the discussion of questions of public interest.—At the age of 30, his masterly speeches in defence of the Constitution of the United States, had exerted very great influence, so that the youthful orator of 31 was elected to Congress from the Suffolk District over the revolutionary hero, Samuel Adams.

Joseph Story entered public life at the age of 26; he was elected to Congress from the Essex District, when he was 29; was Speaker of the Massachusetts House of Representatives at 32, and the same year was appointed by President Madison a Judge of the Supreme Court of the United States.

De Witt Clinton entered public life at 28; Henry Clay, at 26. The most youthful signer of the Declaration of Independence was William Hooper of North Carolina, whose age was but 24. Of the other signers of the Declaration, Thomas Haywood, of South Carolina, was 30; Eldridge Gerry, Benjamin Rush, James Wilson and Matthew Thornton were 31; Arthur Middleton and Thomas Stone were 33.

It will be observed that we have confined our our illustrations to persons under 35 years of age, and have only alluded to those with national reputations.

RUSSIAN WILD HORSE.—In the steppes of Russia it is not rare to see a two-year-old colt rush singly to attack a band of four or five wolves, kill one or two of them, lame the rest, and spread the terror of his name throughout the country. The wild horse strikes with his fore feet, like the stag, and not with his hind legs, as is popularly believed. He draws himself up to his full height against his enemy, pounds him beneath his murderous pastes, then seizes him between the shoulders with his formidable incisors, and tosses him to his mares to make sport for themselves and their offspring.—*Household Words.*

A NUTSHELL OF TRUTH.—Here is a brief paragraph into which a big heap of truth is squeezed:—"Did you ever scratch the end of a piece of timber slightly elevated, with a pin?—Though scarcely heard at one end, it was distinctly heard at the other. Just so it is with any merit, excellence, or good work. It will be sooner heard of, and applauded, and rewarded on the other side of the globe, than by your immediate acquaintances."

A DOLLAR.—If you want to know precisely how much a dollar is worth, just try to borrow that amount from your most intimate friends. Perhaps you won't. If you have occasion to ask, you can easily obtain it; but if the world honestly believes you need a dollar to save you from actual starvation, you will stand a remarkable good chance for the potter's field before the dimes are forthcoming.

QUINTILLIAN mentions the fact of a rich man, his contemporary, who poisoned the flowers and herbs in his garden, that his neighbor's bees might not gather honey from them.

SUNSET MUSINGS AT MOUNT HOPE.

THE following lines, suggested by the tender and affectionate expressions always used, when speaking of their deceased mother, are respectfully dedicated to the Misses B——, by the author.

How slowly fades the dying day!
As loth to leave a world so bright;
How gleams the sun's departing ray,
O'er city spire and forest height!
The fragrance of earth's brightest flowers,
Is wafted on the twilight breeze,
And zephyr tones are whispering soft,
Like angel voices 'mid the trees.

Mount Hope! within thy calm retreat,
When earth-born passions sink to rest;
We heeded not the sun's decline,
Toward yonder bright and glowing west.
We've lingered long among thy hills,
Where giant trees their branches wave;
And once again, with saddened hearts,
We're knelt beside our mother's grave.

Our mother! Oh, those tender words
Awake sweet memories of the past!
Of scenes o'er which the hand of time,
Oblivion's dark'ning shade has cast.
They waft us back, on fancy's wing,
To childhood's bright and sunny bowers;
They tell of pure and holy love,
Which strewed life's morning way with flowers.

Once more our mother's gentle smile
Seems beaming o'er our childish play;
And now, we kneel beside her chair,
With infant hands uprais'd, to pray.
The scene is changed, and childhood's years
Have vanished like a summer's day:
And youth, with all its hopes and fears,
And blissful dreams, has passed away.

And we have wept full many a tear,
O'er fairest prospects blighted now,
And often have our hearts been chilled,
By friendship's cold and altered brow.
But 'mid these varied, changing scenes,
One star has o'er our pathway shone;
And ever, in life's darkest hours,
A cheering radiance o'er us thrown.

Our mother's pure, unchanging love,
Has cheered us 'mid the storms of life;
And nerved our spirits to endure,
When fainting in the world's rude strife.
But now 'tis past; and we have laid
"Our darling mother" down to rest:
Life's dream is ended, and she sleeps,
Mount Hope! upon thy peaceful breast.

Our home is sad and cheerless now;
Life's dearest, holiest charm has flown;
But though we miss her tender love,
We feel that we are not alone.
Her spirit ransomed from earth's chains,
Is ever hovering round our way;
Her angel voice will lead us back,
If e'er from virtue's path we stray.

And when life's "silver cord is loosed,"
And slowly falls its latest sand;
Her harp will ring a heavenly song,
Of welcome to the better land.
Love cannot die: for God is Love—
And He its holy light hath given;
It lights the Seraph's golden lyre,
And all is love and joy in heaven.

Mount Hope, farewell! Thou'lt ever be,
To us the holiest spot on earth;
And dearer far thy silent gloom,
Than gilded halls of boisterous mirth.
The sun's last ray has faded now,
And twilight falls o'er hill and dell;
With hearts subdued we turn away,
And bid thee, once again—farewell!

CHARITY THE BEST OF ALL GIFTS.

(1 Corinthians, Chap. xiii.)

CHARITY is a gift more to be coveted than human or angelic eloquence, music, or melody. The gifts of prophecy, of a mystery-solving wisdom, and of a miracle-working faith, are not to be compared with *love.* For love outlasts the gifts of prophecy and of tongues: it still will live, when, in the immediate and perfect light of the presence of the Father of spirits; and in the period of the soul's manhood, the darkness of our present, partial, childlike knowledge will have vanished away.

Charity is better than alms-giving; better than a martyr's spirit: for it alone profiteth the soul. Charity is long-suffering and kindness—the opposite of an envious, a vaunting, or a puffed-up spirit. It manifests itself in seemliness of behavior: in the absence of all self-seeking. It is a spirit not easily provoked; and slow to think evil. It is a spirit that weeps when iniquity abounds, and rejoices when the truth prevails. It is a spirit of meekness, candor, hopefulness, endurance. Above faith and hope—*charity* is a spiritual gift earnestly to be desired and followed after, the best and greatest gift of God.

E.

CLERGYMEN.—Some people talk a great deal about ministers, and the cost of keeping them, paying their house rent, table expenses, and other items of salary. Did such croakers ever think that it costs thirty-five millions of dollars to pay the salaries of American lawyers; that twelve millions of dollars are paid out annually to keep our criminals, and ten millions of dollars annually to keep the dogs in the midst of us alive, while only six millions of dollars are spent annually to keep six thousand ministers in the United States?

These are facts, and statistics will show them to be facts. No one thing exerts such a mighty influence in keeping this mighty Republic from falling to pieces, as the Bible and its ministers.

IT was a good answer that was once given by a poor woman to a minister, who asked her —"What is faith?" She replied, "I am ignorant; I cannot answer well; but I think faith is taking God at his word."

Miscellaneous.

WHAT IS NOBLE?

BY CHARLES SWAIN.

What is noble to inherit?
Wealth, estate and proud degree?
There must be some other merit
Higher yet than these for me!
Something greater far must enter
Into life's no brief life span;
Filled to create and center
True nobility in man!

What is noble? 'Tis the finer
Portion of our mind and heart;
Linked to something still diviner
Than mere language can impart;
Ever prompting—ever seeking
Some improvement yet to plan;
To uplift our fellow being,
And, like man, to feel like man!

What is noble? Is the sabre
Nobler than the humble spade?
There is dignity in labor
Truer than e'er pomp arrayed!
He who seeks the mind's improvement
Aids the world in aiding mind;
Every great commanding movement
Serves not one—but all mankind.

(Written for Moore's Rural New-Yorker.)

SOCIAL RELATIONS.

No sane man enjoying even tolerable opportunities and making a reasonably good use of them, will deny that he derives far greater benefits from society than he can possibly return. The extremely small number, who, from disappointed ambition, from inability to reconcile themselves with the almost endless seeming contradictions abounding in social life, or from any other cause, have been repelled from the companionship of men, and led to seclude themselves as hermits, furnish striking proof that society is the natural state of humanity; and we see that the vast majority will sooner yield a portion of what they may fancy their individual rights, than forego the advantages of association with their species. Nor do dwellers-apart, in renouncing the world, wholly relinquish the use of those appliances for mental gratification and physical comfort which are the fruits of associated industry, and reduce themselves to a dependence on their own unaided resources for the answering of their various wants. A moment's reflection will suffice to show how futile must be any attempt on the part of a disaffected member of the great brotherhood of man, to render himself absolutely independent of his kind, either in material or spiritual respects; for, without such aids as the progress of invention furnishes, he can neither feed nor clothe himself; and an entire discontinuance of his accustomed mental intercourse unmakes him a lone, miserable being indeed. Thus, we see, a person withdrawing from society retains, to serve him in retirement, many things for which he is indebted to the very society he abandons and complacently imagines himself independent of.

An organization that bestows so much on the individual, is, in return, entitled to his best exertions. The difficulty of maintaining right relations with the community in which one lives, cannot be admitted as a valid excuse for declining to co-operate with its members in any necessary or useful undertaking; nor can such refusal be justified by an earnest determination on the part of one standing aloof, to do his utmost in his *individual* capacity, toward advancing the common good. Men sometimes persuade themselves that each person laboring alone can accomplish an equal amount of good with that he effects when acting in concert with others. The idea appears to me fallacious. In disjointed effort much labor is wasted, which, if combined, might be made available. If an immense stone requiring the united energies of ten men to displace it, encumber the highway, each of the ten may labor upon it singly and never be able to move it a hair's breadth; whereas, the whole number striving together, easily set it aside, though no one of them expend more strength upon it than he did when toiling alone.

A narrow, but by no means unusual interpretation of the term social, seems to forbid its application to others than such as are fond of participating in those tea-drinking, dinner-eating and other similar expedients for amusement which prevail so generally in fashionable life, and pass by the name of *social*, though they merit rather that of *convivial* entertainments. Accordingly, it not unfrequently happens that a person is regarded as solitary, when in fact he is eminently social. Those who pass for lovers of solitude, are many times people who feel most need of society, and as they do not find such as is congenial to them, among men, seek it in retirement within themselves, and perhaps in books. To this class belong such as are less lonely when alone, than when obliged to be with persons whose society they do not relish. They possess this advantage over such as find no companionship except in the bodily presence and moving tongue of their associates, that, having ample means for self-entertainment, they are less liable to irksome hours than those whose resources lie in the world immediately around them. Solitude, so far from engendering misanthropic feelings, as is sometimes supposed, has a generalizing influence on our estimate of others; making us think more of the commonality, and perhaps a little less of individuals. Besides, one leading a recluse life, often contracts such an indifference, sometimes contempt for mere worldly honors, as not to be so easily drawn from rectitude by their attractions, as one to whom their glitter is daily exposed; though I am not certain but it oftenest happens that this disgust *precedes* the voluntary retirement from the world of such as have been exposed to its temptations, and have successfully resisted them. Still, read and reflect as much as we may, there are yet times when the mind craves direct intercourse with other minds, and is ill satisfied without such intimate communion. And an interchange of views on subjects of mutual interest, besides being agreeable, proves beneficial in many ways, often giving a fresh impulse and furnishing a new starting point to inquiry.

Ambition, to render one's-self worthy the companionship of the great, is a powerful stimulus to improvement. For those able to sustain themselves in such an acquaintance, perhaps few social pleasures equal that of being able to know intimately such noble persons as EMERSON, CARLYLE, the late MARGARET FULLER, &c.; and how ardently we desire to be favored with pictures of the domestic life of these natures, not indeed, that we may servilely imitate them, but for the satisfaction of knowing their every-day relations with common humanity. It may not be untimely to speak here of a complaint, occasionally uttered forth, by one struggling to enter the charmed circle of the so-called best society—a complaint of non-appreciation—of being held at arm's length, while others, less deserving, are cordially welcomed. To such, it may be said—"if you have not made your society desirable, you have no right to complain, because it is not sought; if you have, there is no occasion for such complaint, as you have already provided yourself with good company:" and they can scarcely be injured by adopting the following sentiment, which, if not embodied in a tenet, at least harmonizes with the spirit of a certain proud philosophy. Know only those that come in your way; anything more eager than this involves a descent from real manly dignity.

South Livonia, N. Y., 1854. A.

(Translated from the French for the Rural New-Yorker.)

HORACE, OR THE ENTHUSIAST.

HORACE is an enthusiastic genius. He thinks and acts in a way different from other men.—The eccentricity of his manners often affords subject of comment. Sometimes, his singular appearance, strange actions, and peculiar views create emotions of surprise, but more frequently the smile of derision and contempt. His genius, though appearing brilliant to himself, is but the wild, chimerical exuberance of a heated fancy. Yet he is not without influence. There are those who admire and follow him with blind veneration. His crude ideas seem to them refined sentiments, his incoherent vagaries as the expressions of wisdom.

He retires to his bed at dawn of day, and arises at evening twilight. The curtains of his chamber window are not withdrawn until nightfall. That he may be more fixed in thought, he frequently in the day time, reads by the light of the lamp. His mind becoming warmed up, and his imagination excited by study, he leaves his book to talk to himself and to pronounce words of trivial import. He has been seen at Rome, in summer time, walking the whole night among the ruins of that once proud capital; or sitting among the tombs, has been heard to invoke the mighty dead of the past. He loves the olden time, and often imagines himself one of the distinguished personages of antiquity. He is also a man of the world, whose imagination is sprightly, and whose mind, prompt and fertile, is quick to perceive and able to understand.

At one time hearing the Minister of State speak to his Sovereign in favor of some affair of minor importance, HORACE, in transport of feeling writes, and in the name of the people applauds him for a commendable action he has not performed. If censured for his extravagant conduct, he willingly confesses his error. He speaks so plainly of his faults, that one with pleasure pardons his singular follies.—Sometimes he speaks with so much sense, fitness and appropriateness, that it is impossible to remain indifferent to his exhortations. His impassioned and resistless eloquence sways the minds of a thronging crowd. And those who were deriding his chimerical fancies, very often become his proselytes, and more enthusiastic than himself, disseminate his sentiments and fully.

A. J. E.

LITTLE CHARITIES.—Little opportunities of doing good are neglected by many who are waiting to perform great acts of charity and beneficence. But few have both the *will* and the *means* for deeds of high benevolence, hence none should forget that the cup of cold water was commended and written in Heaven, while the rich man's alms, though heralded abroad by the sounding trumpet, had its empty and short-lived tones as their only blazon.

COLONEL BURR AND JOHN RANDOLPH.

COL. BURR, who had been Vice-President of America, and probably would have been the next President, but for his unfortunate duel with General Hamilton, came over to England, and was made known to me by Mr. Randolph, of Virginia, with whom I was very intimate.—He requested I would introduce him to Mr. Grattan, whom he was excessively anxious to see. Colonel Burr was not a man of very prepossessing appearance; rough-featured, and neither dressy nor polished; but a well-informed, sensible man, and though not a particularly agreeable, yet an instructive companion.—People in general form extravagant anticipations regarding eminent persons. The idea of a great orator and an Irish chief carried with it, naturally enough, corresponding notions of physical elegance, vigor and dignity. Such was Colonel Burr's mistake, I believe, about Mr. Grattan, and I took care not to undeceive him. We went to my friend's house, who was to leave London next day. I announced that Colonel Burr, from America, Mr. Randolph, and myself, wished to pay our respects, and the servant informed us that his master would receive us in a short time, but was at the moment much occupied on business of consequence. Burr's expectations were all on the alert. Randolph also was anxious to be presented to the great Grattan, and both impatient for the entrance of this Demosthenes.

At length the door opened, and in popped a small, bent figure, meagre, yellow, and ordinary; one slipper and one shoe; his breeches' knees loose; his cravat hanging down; his shirt and coat-sleeves tucked up high, and an old hat upon his head. This apparition saluted the strangers very courteously, and asked, without any introduction, how long they had been in England, and immediately proceeded to make inquiries about the late General Washington and the revolutionary war. My companions looked at each other; their replies were costive, and they seemed quite impatient to see Mr. Grattan. I could scarcely contain myself, but determined to let my eccentric countryman take his course, who appeared quite delighted to see his visiters, and was the most inquisitive person in the world. Randolph was far the tallest and most dignified-looking man of the two, gray-haired and well-dressed; Grattan, therefore, of course, took him for the Vice-President, and addressed him accordingly. Randolph, at length, begged to know if they could shortly have the honor of seeing Mr. Grattan. Upon which our host, not doubting but they knew him, conceived it must be his son James, for whom they inquired, and said he believed he had that moment wandered out somewhere to amuse himself. This completely disconcerted the Americans, and they were about to make their bow and their exit, when I thought it high time to explain, and, taking Colonel Burr and Mr. Randolph respectively by the hand, introduced them to the Right-Honorable Henry Grattan. I never saw people stare so, or so much embarrassed! Grattan himself, now perceiving the cause, heartily joined in my merriment. He pulled down his shirt-sleeves, pulled up his stockings, and in his own irresistible way apologized for the *outre* figure he cut, assuring them that he had totally overlooked it in his anxiety not to keep them waiting; that he was about returning to Ireland next morning, and had been busily packing up his books and papers in a closet full of dust and cobwebs! This incident rendered the interview more interesting. The Americans were charmed with their reception, and, after a protracted visit, retired highly gratified, while Grattan returned again to his books and cobwebs.—*Barrington's Sketches.*

A CURIOUS PASSPORT.

PETER HENRY BRUCE, in his curious memoirs, gives the form of a passport which, in the reign of Peter the Great, always before the coffin of a Russian was closed, was put between the fingers of the corpse:

"We, N. N., do certify, by these presents, that the bearer hereof hath always lived among us as becomes a good Christian, professing the Greek religion; and although he may have committed some sins, he hath confessed the same; whereupon he hath received absolution, and taken the communion for the remission of sins: That he hath honored God and his saints; that he hath not neglected his prayers; and hath fasted on the hours and days appointed by the Church: That he hath always behaved himself towards me, his Confessor, in such a manner that I have no reason to complain of him, or to refuse him the absolution of his sins. In witness whereof, I have given him these testimonials, to the end that St. Peter, upon sight of them, may not deny him the opening of the gate to eternal bliss!"—*Southey's Doctor.*

PAUPERISM CAUSED BY INTEMPERANCE.

IN the county of Baltimore, Md., out of 1134 paupers received in one year, 1059 were brought there by intemperance. In the county of Cumberland, Penn., of 50 paupers, 48 were made by intemperance. The Superintendent of the N. Y. Alms-house believes that the establishment would be tenantless but for ardent spirits. The whole number of inmates of the Alms-House at South-Boston, in 1843, was 1273: of whom 927 are known to have been brought there by intemperance: a majority of the others being attributed to the same cause. The expense of supporting the paupers in the Alms-House at Philadelphia for one year was estimated at $130,000, and the Superintendent testified, that he believed *nine-tenths* of it was to be attributed to the use of ardent spirits.—*Ballot Box.*

THE FLATTERY OF APPRECIATION.—The sympathizing spirit which appreciates whatever of good we possess—telling us so by its actions or even words—uses that delicate varnish of flattery which cannot soil the most fastidious self-respect; and a very different article in its effects and appearance from the coarse white-wash some people are ever scattering about them.

Ladies' Department.

CONDUCTED BY A——E.

SPRING HAS COME AGAIN.

Balmy Spring has come again,
Welcome to its dawn!
Sleeping buds will wake to life,
Grass creep o'er the lawn:
Now a soft and gentle breeze—
Wild, fierce winds are o'er,
Leaves again will deck the trees,
Birds will sing once more.

Flow'rs will ope their starry eyes
To the warm sun-light,
Glist'ning 'neath the morning skies
With the dew-drops bright—
Violets blue o'er hill and dale
Peep from mossy beds,
And Epigeas* low and pale
Raise their tiny heads.

Now the sound of brook and stream
Gliding through the vale,
Lake and river silv'ry gleam
In the moon-light pale—
And the buzz of humming bee,
All the sunny hours,
Seeking from each shrub and tree
For the sweetest flow'rs.

Now the forest, long so drear,
Dons new robes and gay—
Carols sweet and soft we hear,
Wood-lark's merry lay—
And the plow-boy, blithe and free,
Up at early sun,
Mingles in their joyous glee
'Till his task is done.

Joyfully we greet thee, Spring,
Wreathing garlands fair,
Zephyrs wafting on their wing
Fragrance in the air—
Wearied eyes will beam more bright
Nature's smiles to see,
Hearts will bound with warm delight,
All will welcome thee.

Rochester, March 28, 1854. A——E.

*Trailing Arbutus.

AUNT JANE'S LECTURE.

BY MRS. S. C. HALL.

"WELL," exclaimed Geraldine, with an impatient toss of her pretty head—"Well, I was never before taxed with want of generosity; I am sure I give away every thing I have in the world."

"Excuse me—you do not."

"Indeed, aunt, I give up every thing."

"Again, excuse me; there is one thing you never give up."

"What, aunty?"

"Your temper."

Geraldine pulled at the fingers of her gloves, one by one, and then tossed them on the table, while her cheeks flushed and her eyes grew bright, but not with pleasure.

"I am sure I give away all my money; is not that being generous?"

"You give away the thing, of all others, you want least, and which it gives you the least trouble to part with. All your wants and wishes are supplied to you, without money."

"I give away my books and my toys."

"They are constantly replaced by others—not at your own cost, but by the liberality of those whose love is, perhaps, injudicious."

"I even give away my pets."

"When you are tired of them."

Geraldine burst into tears. "I am sure," she said, sobbing, "I am sure, people seem to think they have done their duty when they give money; and I—gave—all—mine—yesterday—and uncle Richard—said—I was—so—good—I should—have—plenty—more—to-day."

"However necessary money is to us all," observed aunt Jane, gravely, "I often consider giving it as but a small evidence of generosity, particularly when certain of having it replaced. Let us look at this matter steadily, and with a gentle yet inquiring spirit."

"You gave a shilling to Dame Godfrey, the other morning; you did not want the shilling. Do you remember what she said?"

"Yes, aunt."

"She said, 'thank you, my dear young lady; but, oh, how grateful I should be if you would read to me just one chapter in the New Testament.'"

"I don't like reading to old women," pouted out Geraldine.

"Your generosity did not extend to the sacrifice of doing what you disliked, but Mary Collier's did."

"Mary Collier," repeated the little girl disdainfully; "poor little Mary Collier! how can *she* be generous?"

"Mary Collier's chest is weak, and heaves and pants when she reads aloud, and yet I often find her sitting beside Dame Godfrey's bed, and doing—what you refused to do—though *you* can read and sing, without panting. Your shilling gift robbed you of neither ease nor comfort; Mary Collier sacrificed both—that was generosity. And there is that poor, aged woman, Alice Grey; Alice is one of the most truly generous women I ever knew."

"Alice?" exclaimed Geraldine; "Why, Alice would not have had dinner at Christmas, but for your kindness—how can she be generous."

"There is one great gift, amongst many which God gives us at our birth, Geraldine, and which remains with us from the cradle to the grave—OUR TIME. We work it or waste it—we sell it and exchange it; but still it is our own—it is the only treasure the working man, or the working woman possesses; we have no right to squander or abuse it, or lead others to do so. Now, Alice lives by her TIME—mind you, *she lives by it*—so she understands and appreciates its value. If she learns her daily labor, even for an hour, she knows that she is depriving herself of a quantity of food, or light, or fire, or abridging the size or quality of her poor dress, miserably scanty as it is; and yet Alice Grey gives that hour—aye, and many hours—to comfort the fatherless and the widow; she works for others—she thinks for others—she deprives herself of what to her is necessary, to serve others. *That* is generosity."

"I saw a little boy, the other day, go into a baker's shop; he was really hungry, and he was very fond of buns—all little boys are—but the great matter was, he was hungry; he bought a large two-penny bun; he was so hungry that he turned all the marbles and bits of string, and odds and ends of queer boy-like things, out of his pockets, hoping to find another penny, to add a small bun to the large one, but he had not even another farthing: so he took a great, hungry bite out of his bun, and looked with pleasure at the piece in his hand, spotted over with little black currants. 'What a nice bun,' said the little boy, 'and I am so hungry!'—When he looked up from the bun, he saw a pair of large, blue eyes, staring from amid a shock of wild hair. Alas! the nose and lips, the very cheeks, of the child who gazed so eagerly at his bun, were pinched and yellow from starvation. My little friend saw it in a moment, and not a moment did he hesitate, but, without a word, he walked up to the starving child, and placed the remainder of his bun in his thin hand. *That* was generosity. The boy who had the bun was hungry and poor, yet he remained hungry, rather than suffer one poorer and more hungry than himself to starve. Now, it is not enough for you to say, 'well done, fine fellow!' but I want you to 'go and do likewise.' It is not enough for the heart to beat and the eyes to swim in tears, when a generous action is recorded; if it makes a proper impression, you will not be happy until you have done 'likewise.'"

Geraldine looked straight on. She hardened her heart sometimes, and when she did, you saw it in the expression of eyes turned almost to stone—eyes hard and tearless. She had a long time believed that she was very generous in giving her money; her aunt's observations had nearly convinced her that generosity was something more than giving what she did not care for or want, and it made her very uncomfortable; but she was too stubborn to confess she was wrong. God had not yet softened her heart. She knew but little of prayer, and had very seldom proved how a prayer is answered, when it is laid before the footstool of the Almighty in a pure and humble spirit. "Aunt Jane" loved her dearly, and the more dearly she loved her, the more anxious she became that Geraldine should conquer the evil and cultivate the good of her disposition; but that is a thing the young are slow to understand—They think—silly things—that those who love them most, will indulge them most.

"I will tell you," continued aunt Jane, after a pause—for she was so wise, that she paused to let one thing sink into Geraldine's mind, before she spoke of another—"I will tell you of a boy, who had a very aggravating temper—it was not so very violent, but it was wilful, obstinate unyielding; if he was told to read at one o'clock, write at two, and do his Latin exercise at three, he would argue that it would be better to do his Latin at one, and read at three. Half his time was spent in contradiction. He was absurd enough to suppose that he knew better than his teachers; he would not of course, *say* he did, but he would act as if he did. He knew nothing of the generosity which yields a will to the will of others—he had not learned the duty of obedience, and did not see its advantages."

"Its advantages?" questioned Geraldine.

"Yes, its advantages. Is it not an advantage to have every thing provided, every thing thought of, every thing prepared, every thing that the experience and knowledge of age can suggest, done for youth—the thorns removed from their path, the whole business of life arranged, so as to prepare them for the future with the least possible outlay of trouble to themselves—and all required in return being attention and obedience?"

Geraldine's eyes were growing less stony, and she half muttered, in a low tone, "that is true."

"This boy, like many girls, wanted to learn only what he liked; and it would have been difficult to teach him even on these terms, for what he liked this week he did not like next; and such was his spirit of opposition, that if it were wished he should like *this*, he would be sure to rush at the belief that he liked *that*."

"'If you are so contradictory,' said his father, 'no one will love you.'

"'I don't care for being loved,' said the boy.

"'Oh, very well,' said his father.

"The next morning, when he came down stairs, he looked round, and then offered his mother his morning kiss. She turned from him, and he saw she had been weeping."

"'You do not care for being loved,' said his father, 'and so, as you do not care about being loved, you must try to live without love. Love has hitherto toiled for you; love has clothed you, love has fed you, love has educated you, love has had patience with you, love has rewarded you, love has found fault with you, love has wept for you, love has prayed for you—from your cradle you have been ministered to by love; but you do not care for being loved—so, now live without love.'

"The boy's heart was hard, and so he thought he could live without his father's work and his mother's blessing; he thought he could live without love. He had no GENEROSITY in his nature—if he had, he would have curbed his temper: he would have yielded all he had to yield—his will—to the will of those who loved him. He had nothing but *that* to give, in return for the years of love, of labor, of thought, of prayer, he had cost his parents. It never entered into his head to think, or into his heart to feel, that his obedience, his docility, his *curbing himself*, would have been generous."

"Aunt Jane!" exclaimed Geraldine, bursting into a flood of honest tears, "though not a boy, I am *that* boy. Oh, pray with me—pray for me—this New Year's day; pray that I may feel, and practice, and believe, that giving up what we most cherish, is the only true generosity."

THE elder John Adams once, when looking at the bust of Washington in Faneuil Hall, said, "Washington was a great man; he knew how to hold his tongue; I never could." This may be a lesson for some.

RURAL NEW-YORKER

ROCHESTER, APRIL 1, 1854.

SPECIAL NOTICES.

☞ *A new quarter commences next week,—a good time for new single and club subscriptions to begin, and for the renewal of expiring subscriptions.*

☞ *Additions to Clubs are still in order. If back numbers are not wanted, we will send from 1st March or April to end of year for $1—and count an premium.*

☞ *During the season of navigation we can send the Rural to Canada West free of American postage, and hence will furnish clubs for six months from date at lowest rates.*

☞ *Clubs for six or nine months from this date at same proportional rates as for full year—and premiums allowed.*

☞ *Back numbers of the present volume furnished if desired, or subscriptions may commence at any time.*

Quarter-Day Items.

The first quarter of our Fifth Volume terminates with this number, and we are constrained to briefly note a few items pertinent to the occasion,—at the risk of subjecting ourselves to the charge of egotism, in speaking so often of the progress of the Rural.

And first, we would express to its numerous friends the grateful acknowledgements of an appreciating heart, for the unexpectedly large augmentation of support awarded to the Rural during the past three months. The fact that the names of over *Twenty Thousand Subscribers* have been entered upon its books within the period named, awakens most grateful emotions, and proves our indebtedness to the hundreds and thousands of individual Subscribers, Post-Masters, Local Agents, Merchants, Clergymen and Teachers, throughout the land, who have most kindly and efficiently aided in furthering the enterprise. Of this large measure of success, and expression of confidence—unprecedented in the history of any similar publication—we feel justly proud: for it has been attained thro' the influence of right-thinking and discriminating men and women,—and without, on our part, any pandering to pernicious tastes, or other departure from integrity and independence. In return, it will be our earnest and constant endeavor to render the Rural New-Yorker eminently worthy, not only of the continued encouragement of its hosts of zealous friends, but of the approval and support of the hundreds of thousands whose interest and welfare it seeks to promote. Though our efforts have been crowned with remarkable success, we feel none the less desire or obligation to discharge our duty to the public faithfully: on the contrary we realize the fact, which we fear is too often forgotten by journalists, that an increase of circulation and influence, proportionally enhances our responsibility.

The subscriptions of a large number of our friends expire with this number—all who subscribed on the 1st of April last for one year. Those who find "time up" printed on the margins of their papers are informed that we shall be happy to continue the acquaintance, on invitation—and that we will endeavor to make room for the names of as many of their friends as may be induced to subscribe for the Rural. In renewing your subscription, please bear this suggestion in mind,—remembering also that an addition of from two to twenty names will materially reduce the price, benefit community, and aid in sustaining the paper. If any wish the back numbers from January, they will be furnished. Reader, shall we make room for three, six, ten or twenty names from your neighborhood?

Hyperborean.—The weather has been uncommonly cold for the season, ever since the tornado of Saturday, the 18th; and some days were as inclement as at any time during mid-winter. Saturday and Sunday last were snowy and boisterous, and compelled both men and animals to keep shelter. The chill was not especially limited to our locality, for the telegraph announced the thermometer at Detroit on Saturday last, as standing at 10° below zero. Boats, they say, are loading flour for Buffalo and Dunkirk, and are waiting for the ice to open below.

At Buffalo on the same day the weather was very cold, with frost and snow; and there is little prospect of opening navigation for some weeks to come.

The Maine Law.—The law for the suppression of intemperance has finally passed both branches of the Legislature, and is now awaiting the signature or the *veto* of Gov. Seymour. Some say it will receive the one, and some the other; and a good deal of surprise is felt upon the subject. Many of those who are in the greatest state of suspense, will undoubtedly be still higher *suspended* hereafter unless they mend their ways, and walk *straighter* therein. The law is to go into effect on the first of next December. "There's a good time coming."

Disastrous Conflagration.—A terrible fire occurred in New Orleans, March 16, by which thirteen stores were laid in ashes. The fire consumed some of the finest buildings in Natchez and Gravier streets, together with the large stocks of goods contained therein. Total loss $300,000, of which $228,500 is insured.

A Telegraphic Despatch from Washington dated March 25th, says:—"At a Cabinet meeting held to-day, it is said that the Nebraska bill was under consideration, and that a warm discussion arose on the question whether it would be made an Administration test or not. It is generally believed it will be so made."

The Previous Question.

When a majority in a legislative body desires to cut off debate, and bring a matter to a direct vote—or, in other words, to *rush a measure through*—one of the members, usually selected in consequence of being a good debater, gets the floor, and after making a telling speech on that side of the question, winds up by saying—"Mr. Speaker, I move the previous question!" The presiding officer, as in duty bound, then says—"Is it the pleasure of the house that the main question be now put?" &c.; and if a majority say, "aye!" then all debate is cut off, and the main question is taken.

In the U. S. House of Representatives the previous question is not allowed in Committee of the Whole; and, as a consequence, the friends of the Nebraska bill were opposed to its reference to that committee, from a very reasonable fear that it could never be got out again, since debate cannot be there cut off as in the House, by the previous question. On Tuesday, the 21st, however, the bill was referred by a test vote of 110 to 95, much to the joy of its opponents and the chagrin of its friends, many of whom declare that the bill is consigned to the tomb, to see no resurrection.

The Newspaper and Book Business of Rochester, is apparently most prosperous. We recently noted the fact that the *Daily Democrat* had donned a new dress,—and we observe that the *American* appeared in a fine new suit on Monday last. The *Union* announces the purchase of two new steam presses, and seems determined to keep up with the times and its senior contemporaries. Success to our neighbors, all. *Strong* and *Manly*, they are bound to preserve the *Union*.

Our Booksellers and Publishers also exhibit tokens of progress and prosperity. Among the recent changes in this line, we notice that the firm of Sage & Brother has been dissolved, the business being continued by Wm. N. Sage, Esq., a gentlemanly and experienced trader. Darrow's establishment hereafter sails under the colors of E. Darrow & Brother—Mr. Wallace Darrow having become a partner. Hoyt is soon to be located in more commodious quarters—while we believe Fisher, Alling and Dewey are each preparing for extended business.

Steamboat Casualty.—The steamer John S. Avery, bound up from New Orleans, on the 9th of March, struck a snag in the Mississippi below Natchez, and immediately sunk, carrying down with the wreck some seventy of her crew and passengers. Of thirty-two hands belonging to the boat, only fifteen were known to be saved. Of the cabin passengers, about twenty-five were ladies, of whom at least ten were drowned, and in all probability the loss of life among the cabin passengers amounted to thirty-five or forty. Of fourteen negroes on board belonging to passengers, only one, a child five months old, was saved.

The New Hampshire Election.—Both parties claim the victory in the New Hampshire Legislature by a small majority, but, owing to a multiplicity of candidates, probably the actual position of parties cannot be definitely fixed until some test vote is taken in the House in June; such as the election of the U. S. Senators.

It is altogether probable that no man in favor of the Nebraska bill can go to the Senate, but in most other respects the administration will perhaps be sustained. The Democratic governor is elected, as we stated last week, but by a less majority than we estimated at that time.—Nebraska has played the mischief with one of the strongest democratic States in the Union.

The Connecticut Election.—Connecticut is the second State whose election succeeds Congressional action on the Nebraska bill; and as a consequence, now that the smoke and dust of the New Hampshire election has partially subsided, all eyes are turned to Connecticut to see what action she will take in the premises. The choice of a U. S. Senator is depending, to succeed Truman Smith (Whig,) who took strong ground against the bill, while his colleague, Mr. Toucey (Dem.,) supported and voted for the bill.—The election takes place on Monday, April 3.

Steam Ship Golden Age.—The Golden age, an engraving of which was given in the Rural a few weeks since, is said to have had the shortest passage by eight days between Liverpool and Cape Town ever made. Her running time was only twenty-six days, and was made under steam without the use of sails, burning only 32 tons of coal per twenty-four hours.

The *European Times* pays her a merited compliment, and says:—"As the Golden Age is advertised to coal at the Cape, our readers there may inspect one of the finest steamers connected with the trade."

The Green Houses and appurtenances of Messrs. John Donallen & Nephew, at Hanford's Landing, 3½ miles north of this city, were destroyed by fire on Sunday morning last. The buildings contained a valuable collection of plants, glass frames for hot beds, &c., and in an adjoining house several rare and valuable fancy fowls. The intrinsic value of the property may not exceed $2,000, but at this time, just as the trade season is coming on, the real loss cannot be made good. The fire is believed to be accidental, and no insurance on the property.

Great Fire.—An extensive conflagration occurred at Birmingham, opposite Pittsburgh, March 26, in which one hundred dwellings and stores were burned, and over 200 families rendered houseless. Loss about $200,000, of which about one-third is insured.

Our Albany Correspondence.

Albany, March 27, 1854.

THE LEGISLATURE.

The Legislature have done a very good week's work. The Temperance Bill has passed both houses, and is in the hands of the Governor.—There is much anxiety to know what course he will take. It is said that several heavy bets are pending on the question of Veto or no Veto. If he vetoes it, a great effort will be made to pass it by a two-thirds majority, notwithstanding his objections, and there is a possibility of success. The law takes effect the first of December. On the time, there was a disagreement between the Houses—the Assembly voting for May; but a Committee of conference came to the conclusion to adopt December, which was agreed to. Ten days will decide the Governor's course, as it will become a law if he does not return it in that time, without his signature.

STATE SUPERINTENDENT OF PUBLIC INSTRUCTION.

The bill to organize a department of Public Instruction has become a law. It provides for the appointment of a Superintendent by the joint ballot of the Legislature for a term of three years, at a salary of $2,500. The 4th of April is set apart for the first election. Samuel S. Randall will be the man without a doubt.—It is hoped that the vote will be unanimous, as it was for the law itself.

A bill was introduced to-day to lay the question of the prohibitory law before the people.—Coming from Mr. Dickinson, a leading member, there is a prospect of its passing.

THE CANALS.

The Assembly have passed the bill to provide for the enlargement of the canals. The Commissioners of the Canal Fund are empowered to borrow $2,225,000 for the ensuing year, and $1,500,000 to pay for the Canal Revenue Certificates. The Bill also prescribes the mode of letting the work, with regard to which there are several important restrictions. One is that the work is to be let along the line of the canals; and another that no member of the Legislature or State Officer, or any one in the employment of the State, can have an interest in any contract. There are also several other bills relative to the canals, but being subject to much amendment in the Senate, the contents are not worthy of mention.

RAILROADS.

A proposition is before the Legislature to allow the Central railroad to mortgage the road. A resolution has passed the Senate, inquiring of the Canal Board as to the propriety of levying tolls on railroad freight. A resolution has been introduced, inquiring for information as to the Consolidation of the Central Roads.

PLANK ROADS.

A law has passed, authorizing Plank Roads, in certain cases, to throw up parts of their roads. Also to gravel them and charge turnpike toll.

WORLD'S EDUCATIONAL CONVENTION.

A communication has been received from Washington, requesting the co-operation of the State of New York in holding a World's Educational Convention at London. Favorable action is expected on it. Probably no delegate will be sent from our State. A bill has been before the Senate to change the apportionment of School monies, but it was defeated.

OTHER LEGISLATION.

The usual topics of local importance are being discussed. The amount of business before the legislature in an unfinished state is enormous.—Probably the Senate have 600 bills ready for action. They will have to stop talking soon and go to work in earnest. "Owe".

Congressional Proceedings.

March 20.—Senate—Several petitions against the Nebraska Bill were presented by Seward, Wade, Allen and Fessenden. Mr. Wade presented a petition asking the recognition of the independence of the Republic of Liberia.

Mr. Badger, of N. C., made remarks on an expected remonstrance of his own constituents against the Nebraska Bill.

House—The agricultural part of the Patent Office Report was referred to Com. on Patents.

A resolution of the Georgia Legislature was presented in favor of the Nebraska Bill. A similar resolution from Mississippi was presented. Both laid on table and ordered printed.

March 21.—Senate—The Gadsden Treaty was considered.

House—The Senate Bill on the Nebraska Territory was referred to the committee of the whole by a vote of 110 to 95.

March 22.—Senate—The joint resolution as to Naval contracts was passed. Also, bills granting lands to Illinois, and authorizing Wisconsin to select the residue of lands granted her in 1846, were passed. Also, the bill increasing the pay of the rank and file of the army was then taken up and debated.

House—Bills for the relief of settlers on lands reserved for railroad purposes, permitting them to pre-empt other lands at minimum price, was debated and passed.

The Indian Appropriation bill was then taken up in Committee of the Whole.

March 23.—In the Senate, Mr. Sumner presented the Bridgewater & Northampton resolution against the repeal of the Mo. Compromise.

Nothing of interest done in the House.

March 24.—Senate—The whole sitting of the Senate was consumed by Pratt and Bayard.—The former in favor and the latter in opposition to the bill for compensating Rogers and Lousdale for tobacco destroyed by the British during the war of 1812.

House—Various amendments were adopted—among them some for making treaties with the Indians of Oregon, Utah, New Mexico and Washington Territories, and for a grand council with the Blackfeet and other wild tribes. The Committee rose and reported the bill to the House. Adjourned till Monday.

News Paragraphs.

☞ Col. T. B. Lawrence, son of Abbott Lawrence, of Boston, was recently married to Miss Chapman, the daughter of Judge Chapman, of Doylestown, Penn. Mr. Lawrence, it will be recollected, a few years ago married Miss Sallie Ward, the belle of Louisville, and sister to the murderers of Professor Butler, but was afterwards divorced, and she married Dr. Hunter.

☞ A copy of Milton's Minor Poems, an edition of 1646, though by no means a good copy, was sold in London lately for six guineas; and an indifferent copy of the first, or Peter Parker's edition of "Paradise Lost," was considered a bargain at £12 17s. 6d. A few years back three guineas was thought a liberal price for a first "Paradise Lost."

☞ The Keowee (S. C.) Courier states that Fort Hill, the residence of the late John C. Calhoun, has been purchased by Col. A. P. Calhoun, from his mother, Mrs. Floride, relict of the late Hon. J. C. Calhoun, and will be immediately occupied by him. He returns to his native State with an ample fortune, accumulated on the fruitful soil of Alabama.

☞ Gov. (Brigham) Young, of Utah, has just given his "Annual Message." He states the immigration into the territory during the past year at 10,000 souls. Of these, a large number are from the northern European States and the British Isles. The Governor does not state how many wives each emigrant brought among his baggage.

☞ According to a Congressional report recently made, the number of passengers that arrived at the ports of the United States in 1853 was 400,777, which were divided as follows:—New York, 294,818; Louisiana, 43,028; Massachusetts, 25,929; Pennsylvania, 19,211; Maryland, 11,368; other ports, 6,423—total, 400,777.

☞ Dr. O. A. Brownson has been invited by Rev. Dr. Newman, President of the Irish University, to fill one of the principal chairs in the new institution. The Rev. O. A. buried the sectarian compass, and ministered in some half dozen Protestant denominations, before he finally came to rest upon the Roman Catholic meridian.

☞ Rev. W. S. Lloyd, the pastor of two Baptist churches a few miles west of Montgomery, Ala., died recently while performing service.—He had just commenced his discourse, and after speaking a few moments, exclaimed: "I feel, brethren, I am going," and instantaneously sank down and expired.

☞ No less than thirty-three steamboat disasters have occurred on the Western waters since the 1st of January, involving the loss of over 200 lives. In addition to which there have been 128 flatboats and barges lost, chiefly coal boats, making in the aggregate a loss of fully $1,250,000.

☞ Paris, Ky., says the Cincinnati Atlas, is the greatest live-stock market in the West.—The total amount of sales on court day, March 9th, was $105,941 70. The number of mules sold was 830. Many of them were brought from Missouri, Illinois and Indiana.

☞ A house at Havana recently paid on 11 newspapers from the United States *four dollars and twenty cents*, or 12½ cents per ounce. This is the regular rate at present. Of course it is designed to be prohibitory, and such is its effect in most cases.

☞ The Legislature of Massachusetts have authorized the proper committee to inquire what changes are immediately necessary in the Liquor Law to meet the position in which the law has been placed by the late decision of the Supreme Court.

☞ The Massachusetts Legislature have passed a bill to loan the credit of the State to the Troy and Greenfield Railroad Company, to the amount of $3,000,000, for the purpose of tunneling the Hoosac mountain 3 miles through.

☞ A dentist of Philadelphia has succeeded in producing entire sets of teeth—plate and dentals—of India rubber, vulcanized apparently to the hardness of ivory, and retaining the exactest possible adaptation to the mouth.

☞ William T. Barry, formerly Postmaster General and Minister to Spain, died in England, and the Kentucky Legislature have authorized the removal of his remains to Frankfort cemetery, in that State, for interment.

☞ A Washington clergyman, a Sunday or two since, whilst stating a deficiency in the collections, remarked that since the issue of three cent pieces, the revenue of his church had decreased nearly one half.

☞ A Locomotive Works Company has been formed in Detroit. It is composed of staunch men, who commence operations on the first of April, and have already orders for one hundred locomotives.

☞ An editor in New Hampshire offers to bet his head against a sixpence upon some political question. A brother editor accepts the bet; says he thinks it an even one, and asks who shall hold the stakes!

☞ The year 1854, says the Traveller, will probably witness the erection in Boston, of more elegant specimens of architecture in the shape of warehouses, stores, and dwellings, than any previous year.

☞ The excitement in Paris respecting the Eastern question has proved a source of great profit to some of the journals, their sale having enormously increased, that of the Patrie and Presse especially.

☞ The Troy Times says as soon as an addition of the Bridge is completed, (in a few weeks,) there will be an uninterrupted "lightning train" from New York, by way of Troy, to Buffalo.

☞ A movement is to be made by persons connected with the Universalist denomination to raise funds for the purpose of erecting a suitable monument over the grave of the late Rev. Hosea Ballou, in Mount Auburn.

☞ It is reported that General Sam. Houston will leave Washington in the course of a few days, and it is believed that he will resign his seat in the Senate, and retire to his farm.

☞ A clue is said to have been found as to the destroyers of the Pope's block for the Washington Monument. The Grand Jury of the District of Columbia have the matter before them.

☞ Maj. Selah R. Hobbie, for nearly twenty years First Assistant Post Master General at Washington, died on Thursday week. Maj. H. was a native of Delaware county in this State.

☞ An effigy of Senator Douglas was found suspended from a tree on Genesee St., Auburn, March 23d, with the words, "Stephen Arnold Douglas, hung for treason," attached.

News Brevities.

—— The ice business of Albany employs some $50,000.

—— They have raised nearly money enough in Boston for the monument to Dr. Franklin.

—— Ex-Gov. Dural of Florida died in Washington on the 20th of March.

—— There were 21,000,000 lbs. of tea imported into this country last year.

—— Beach, Black & Co., dry goods jobbers of New York, have failed, liabilities $350,000.

—— The Canal Board have agreed to take up the subject of canal lettings April 1st.

—— A court martial is ordered at West Point for the trial of cadet Samuel W. Ferguson.

—— Georgia planters are busy putting in their crops. The weather is exceedingly favorable.

—— A large portion of the colored population of Washington, D. C., are Roman Catholics.

—— The Alabama Legislature, at its late session, refused to abolish imprisonment for debt.

—— The birth-day of Calhoun, the 18th, was celebrated at Charleston in an appropriate manner.

—— The Legislature of Louisiana has appropriated $10,000 for the encouragement of ship building.

—— The owners of the Calorie ship Ericsson state that they intend sending her to Havre in April.

—— The shock of an earthquake was felt at Macon, Ga., March 20, which lasted 40 seconds. No damage done.

—— L. F. Fisher, the native American candidate for Mayor of Camden, N. J. has been elected by 400 maj.

—— Russia came in possession of her territory in North America by right of discovery, in the sixteenth century.

—— There are now completed or under contract, in Canada, fourteen hundred and eighty-seven miles of railroads.

—— The bottom of Lake Huron, where the water is 420 feet deep, is above the level of the Atlantic ocean.

—— According to the French official pamphlet, the combined fleets will soon number eighty ships of the line.

—— Donald G. Mitchell (Ik Marvel) has resigned the Consulate at Vienna. Reason—it don't begin to pay expenses.

—— Ex-President Fillmore, now traveling at the South, recently declined a public reception at New Orleans.

—— The Illinois Canal was opened on the 15th ult. Several boats laden with corn from points on the Illinois river are at La Salle.

—— Twelve passers of counterfeit bills on the Cranston Bank were arrested in New York on Wednesday week.

—— The construction of the Ohio and Mississippi Road has been suspended from Vincennes to the intersection of the Jeffersonville Road.

—— It is said that North Carolina produces within its boundaries the staple of every State in the Union, and is the only one that does it.

—— Brevet Capt. H. D. Shields, of the 3d Artillery, U. S. A., has resigned—it took effect on the 15th ult.

—— The wharf at Portsmouth, Ohio, sunk—damaging $10,000 worth of coffee, and other goods, placed on it by the Union line of steamers.

—— The Governor of Maine has appointed Thursday, the 13th of April, to be observed as a day of public humiliation and prayer.

—— The town of Exeter, N. H., says the Eve. Post, over 200 years old, for the first time, on the 14th ult. elected a Democratic Moderator.

—— A large marine railway is in process of construction at Ogdensburg, of sufficient capacity to take out the largest vessels on the lakes.

—— Watertown has Water Works, which it is said, paid for themselves by their utility in checking the ravages of a single fire.

—— The Michigan Southern Railroad Company have determined to put on a fourth train, to run in connection with steamboats.

—— It is stated that Peter Bosworth, the late reported defaulting postmaster at Troy, has fully satisfied all the demands of Government.

—— Accounts from Galveston to the 17th inst. mention the killing of Col. Stein, late Indian agent, by the Indians near Fort Belknap.

—— The total number of men now actually in arms, or soon to be drawn, as the French term is, ready in France for Turkey, is 45,000 men.

—— Mr. Buchanan, the American Minister in London, lives in a respectable house, for which, with a stable, he pays an annual rent of $3,583,60.

—— Measures are in progress for the erection of a monument to the memory of Winthrop, the founder of Boston and first Governor of Massachusetts.

—— Two thousand seven hundred and eighty-four tons of copper were received at Sault St. Marie from the Lake Superior mines during the year 1853.

—— The schooner Russell, from Boston for Plymouth, sunk off Cape Cod in the late gale, with all on board. The crew consisting of 5, and 4 passengers.

—— There are in the United States 985 banks, including branches; their joint capital stock is $299,724,955, of which $6,688,996 is held by foreigners.

—— While loading at Bremenhaven, a lighter with goods for the Washington, valued at $100,000, was wrecked by the ice in the stream. The goods were ruined.

—— The London Standard has made the discovery that the Turks are the descendants of the lost ten tribes, and predicts their conversion to Christianity.

—— There are now fifteen Roman Catholic Journals in circulation in this country, whose united circulation may be estimated at about 60,000 weekly.

—— The screw steamer Charity, from Liverpool, which arrived at Portland lately, was nine days in the ice. She left Liverpool on the 22d of February.

—— The editor of the Richmond Whig says if he had a couple of good plantations in the South well stocked with negroes, John Mitchel should have one.

—— Daniel Richards has recovered $1,500 of the town of Belchertown, Mass., for injuries sustained by his wife in consequence of a defective highway.

—— The steamer Washington on its last trip brought a pair of Lapland reindeer and a very large ostrich for the Hippodrome. The deer have been trained to the sledge.

Literary Notices.

THE CRUISE OF THE STEAM YACHT NORTH STAR; a Narrative of the Excursion of Mr. VANDERBILT'S Party to England, Russia, Denmark, France, Spain, Italy, Malta, Turkey, Madeira, etc. By the Rev. JOHN OVERTON CHOULES, D. D. Boston: GOULD & LINCOLN.—1854.

This is an exceedingly entertaining volume, embracing a detailed account of one of the most remarkable excursions on record. The excursion of the North Star created a wide sensation, at home and abroad — and foreigners were especially astonished that a private citizen of America — a simple merchant — should surpass the princes of the Old World, by expending half a million of dollars in taking his family and friends on a pleasure-trip to Europe, and "the rest of mankind." The idea was certainly novel, and such as only a member of the "universal Yankee Nation" would be likely to originate and prosecute. Dr. CHOULES'S agreeable narrative will prove a prize to many, and may be read with interest and profit by those who have been satiated with ordinary books of travel.—The volume is elegantly "got up," and illustrated with portraits, views of cities, scenery, &c. For sale by WM. N. SAGE.

ELLIOTT'S FRUIT BOOK; or the American Fruit-Grower's Guide in Orchard and Garden. Being a Compend of the History, Modes of Propagation, Culture, &c., of Fruit Trees and Shrubs, with descriptions of nearly all the varieties of fruits cultivated in this country; notes of their adaptation to localities and soils, and also a complete list of fruits worthy of cultivation. By F. R. ELLIOTT. New York: C. M. SAXTON.—1854.

This is a handsome volume of some 500 pages, profusely illustrated, containing descriptions and lists of fruits worthy of general cultivation, of amateur cultivation, and of such as are *unworthy* of cultivation. The author is a resident of the West, and the book is better adapted to the Western than to the Eastern States. It contains much matter of practical value to fruit growers in the new States, but for general circulation it is inferior to DOWNING'S "Fruits and Fruit Trees," THOMAS'S "Fruit Culturist," or BARRY'S "Fruit Garden." We are sorry Mr. ELLIOTT has not confined his remarks to Western fruits and Western cultivation, — for, in endeavoring to make the work general, he had necessarily to say much which had been said before in a much better style. For sale by D. M. DEWEY.

THE RELIGIONS OF THE WORLD and their Relations to Christianity. By FREDERICK DENISON MAURICE, M. A., Chaplain of Lincoln's Inn, and Prof. of Divinity in King's College, London. Boston: GOULD & LINCOLN.—1854.

This is the title of a volume of 260 pages, reprinted from the third London edition. It comprises the substance of a series of Lectures delivered in one of the London Churches — embracing, among other subjects, Mohometanism; the Hindoo faith; Buddhism; and the old Persian, the Egyptian, Greek, Roman, and Gothian faiths. The concluding lectures discuss the relations of the various religions to Christianity. The work is worthy the attention of the Christian public. For sale by SAGE.

THE CULTURE OF THE GRAPE AND WINE MAKING. By ROBERT BUCHANAN. With an Appendix containing directions for the Cultivation of the Strawberry; by S. LONGWORTH. Cincinnati: MOORE, ANDERSON & Co.—1854.

A fifth edition of this excellent treatise has just been issued. Every one engaged in the cultivation of the Grape, especially for wine making purposes, will find much valuable information, and practical experience, in this pleasant little volume.

DEWEY has received *Chambers' Journal of Popular Literature, &c.*, part 1st of a new series. Every one knows that CHAMBERS' publications heretofore have been very popular and valuable; and the present issue appears not a whit behind any of its predecessors.

California News.

Arrival of the United States.

THE steamer United States arrived at New Orleans March 23d, from Aspinwall. She left Aspinwall on the 13th; the steamer Ohio was to sail for New York on the 20th with $1,000,000, and 200 passengers.

Advices from Walker's expedition are to Feb. 15th. The ships Columbus and Portsmouth reached Ensenada on the 14th. Walker spiked his guns and started for San Thomas with 140 men, and one field-piece, leaving behind the sick and wounded. Many of his troops deserted.—Those remaining were dependent, and had abandoned all hopes of success.

Col. Watkins and Capt. Davidson were arrested at San Francisco on the 23d of February,—charged with treasonable connection with Walker and his expedition. They were held to bail in $10,000 each. A warrant had been issued against Major Baird, who also stands charged with treason.

The mining accounts are exceedingly favorable. The quantity of gold dug was the largest for many months. All the miners were prospering.

An Indian from the interior, at Panama, says a strange party were killed by wild beasts. The story was not believed. It was supposed that a party had been killed by the Indians.

Arrival of the Northern Light.

THE Northern Light, from San Juan, arrived at New-York March 25th, with 350 passengers and $700,000 in gold. She connected with the Sierra Nevada, which left San Francisco on the evening of the 15th. The Northern Light was detained two days, in consequence of the detention of the Steamer Central America on the lake by a severe gale.

In Oregon, a bill had passed ordering a vote on the foundation of a State Government.

Dates from Honolulu are to Feb. 4th. Annexation was still talked of.

Intelligence from Lower California states that the filibusters had nearly all left, and those remaining were suffering for provisions.

The Maine Liquor Law had been introduced to the California Legislature.

SAN FRANCISCO, March 1st.—FLOUR—The cargo of ship Metropolis, of Gallego, sweet, sold at $8.50. Outside brands, sweet, $7.50.

Provisions of all descriptions are extremely dull. Hams 15c; choice butter 23c; lard 10½c; mess pork $17.50.

Foreign Intelligence.

Arrival of the Pacific.

THE Pacific arrived at New York March 23d, with nine week's later dates from Europe.

A third edition of the London Morning Herald of March 8th, announces the arrival of a messenger, who was immediately closeted with the Queen, and brought the announcement that the Russians had carried Kalafat, and massacred all within its walls. No details are given, and it is generally regarded as false; but it is needless to say that the statement, whether true or false, has left the public in the most trembling state of anxiety.

TURKEY.—A camp of 30,000 is forming at Odessa, and considerable additions are being made to the fortifications at Sebastopol.

On the 17th of February, a conflict took place, by mistake, between two columns of the Russian army. For several days a Turkish corps, 4,000 strong had been posted at Cuipercoi. On this corps the Russians determined to make an onslaught during the night of the 16th, and for this purpose two columns were brought up, each from 4,000 to 5,000 strong. Each party mistook the other for hostile Turks, and instantly opened a terrific cannonade, which was returned with deadly effect. Pressing towards each other it came, ere long, to a close fire of small arms. The combat lasted for an hour and a half, until, when day dawned, the combatants saw with horror the error they had committed. The loss of killed and wounded is reckoned by the Russians themselves at several hundred.

The United States Minister has presented his credentials to the Sultan, and made an address assuring the Sultan of the sympathy of the people of the United States.

There is nothing new from the Danube, so far as the relative positions of the two armies are concerned. Operations of magnitude are retarded by the bad weather, but a constant succession of minor encounters are reported.

The Austrian government has published an official document, in which it makes known its views in regard to the differences between Russia and Turkey. In this document the Austrian government expresses regret that the communication sent by the Western Powers to Russia is of such a nature as to leave hardly any hope of a favorable reply. The document proceeds to say that it was never doubted by the Imperial government that the demands of those Powers were just and in accordance with the interests of Europe. Till the last, the Imperial government has obeyed the calls of duty to Europe and those of friendship to its Imperial ally.—Should the war take place, the sole duty of the Austrian government is to maintain the interest of the nations under the sceptre of his Majesty, which interest is not in conflict with any other nation.

THE BALTIC.—The Heela has surveyed the Kiel, and reported it suitable for great fleets.—The Prussian government has rejected the suggestion of Russia to forbid the entrance of the fleets of the Western Powers into Prussian ports.

FRANCE.—The Moniteur publishes in full the Czar's reply to the Emperor Napoleon's letter.

The Legislative Assembly has agreed to the bill authorizing the Minister of Finance to contract a loan of 250,000,000 francs. The bill was agreed to unanimously, without discussion, by the 238 members who were present.

SPAIN.—The London Times correspondent mentions that at a recent concert it was observed that the King and Queen paid marked distinction to the American Minister and lady, and that similar attentions were shown at a grand ball given by the Queen Mother. Court gossipers in it in roundabout way of casting a slight on Napoleon, whose Ambassador Mr. Soule lately wounded in a duel.

RUSSIA.—Direct advices from St. Petersburgh are to February 24th, at which date scarcely anything was doing in produce. Telegraphic accounts represent business as almost suspended, and further stated that an order had been issued totally to stop the exportation of wheat.

The Gazette de la Baltique announces, under date St. Petersburgh, February 27th, that the Russian Government has just prohibited the export of corn and breadstuffs by the Black Sea and the Sea of Azof.

Government is indefatigable in exertions to inflame the minds of the people. Every day processions of priests traverse the streets of St. Petersburgh, exhibiting relics of the saints of the Greek calendar, and the clergy everywhere preach to arms in support of the orthodox faith. These demonstrations dispirit the mercantile and wealthy classes.

SWEDEN.—It was reliably stated that the Russian government having declared that it cannot accept or recognize the announcement of neutrality on the part of Sweden, the Swedish government has replied that no change can be made; further that Sweden was prepared to defend that policy, and has commenced to make defensive preparations accordingly.

Arrival of the Africa.

THE Africa, from Liverpool, at 9 A. M., of the 11th, arrived at New York, March 28.

The statement that Kalafat was captured by the Russians, was an atrocious falsehood, totally unfounded.

No fighting worth notice, has taken place, either on the Danube or in Asia.

A messenger, with France and England's ultimatum to the Czar, left Vienna on the 7th for St. Petersburg. Prussia and Austria have not signed this ultimatum.

The first portion of fourteen British ships, under Admiral Chas. Napier, sailed from Falmouth March 11th, for the Baltic. It is reported that 3000 British troops will go to the Baltic for land service.

The 77th regiment embarked on the 11th for Turkey. The allied fleets were at Bercoz Bay. The bulk of the Russian fleet was at Sebastopol, with some ships at Sezumkale. Both fleets had cruisers in the Black Sea.

Some excitement was created in commercial circles by Lord Clarendon's announcement to Riga merchants, that all Russian produce, to whomsoever belonging, and even in neutral vessels shall be lawful prize in the event of war.

LIVERPOOL BREADSTUFFS.—Liberal arrivals and fine weather had caused dullness in the market. Holders not generally pressing, but in some instances a reduction of 2d@3d on Wheat, and 1s@1s6d on Flour was taken; thus losing the improvement of last week. Indian Corn steady and unchanged.

LIVERPOOL PROVISIONS.—Gardiner & Co. report Beef active and steady. Pork in fair demand, and tending upward. Bacon is just steady, at previous value. Lard dull, small sales 56s.—Cheese in less demand. Tallow 15s. dearer—no sellers at below 65s.

Marriages.

In Buffalo, on the 23d ult., by the Rev. Dr. Thompson, Mr. CHAS. HETTINGER and Miss SARAH E., second daughter of Wm. BOGWELL, Esq., of Chili.

In Sparta, on the 22d ult., by the Rev. Thos. Aitkyn, Mr. JOHN F. GRAY and Miss CATHARINE COLEMAN, both of Cayuga.

Deaths.

In Alabama, N. Y., March 22d, of consumption, SARAH ELINOR, wife of JASPER H. HYATT, aged 21 years.

Mrs. H. was prized and honored by all who knew her, as one who exemplified every womanly virtue. Her illness was protracted and severe; the ties that bound her to earth were of the strongest character, but patiently and meekly she submitted to the stroke, and gave them, as in her previous life, most consoling evidence of her preparation for eternity. Death was to her no terror; it was the messenger of Endless life calling her home to her Savior and her God.

In Franklinville, Cattaraugus Co., N. Y., March 15, 1854, of scarlet fever, WILLIAM HENRY, youngest son of Wm. and SUSAN MCNALL, aged 2 years.

Commercial.

BUSINESS AND FINANCE.

MOVEMENTS in the precious metals have been more active during the past week. The San Juan steamer Northern Light, arrived at New York, March 25th, with $615,000 on freight and $200,000 in the hands of passengers. The Aspinwall steamer is on her way with a million more of gold on board.

The steamer Asia, which sailed on the 22d of March, took out $300,000; and the Washington, on the 25th for Bremen, $201,000 more.

A bill has been introduced into the New York Legislature to empower the Central Railroad Company to mortgage its corporate franchises and property to the amount of $16,000,000. This sum would cover their bonds and other liabilities, and leave some six millions to complete the contemplated improvements of a double track, depots, &c., &c.

The amount of the United States debt redeemed last week, was $335,400, leaving $52,541,372 unpaid. The balance in the New York Sub-Treasury is over 8,000,000.

The total valuation of real and personal property assessed for the taxation of 1853, in Indiana, amounts to the sum of $268,097,014, being an increase of $15,533,805 over the assessed value of the taxable property of the State for the preceding fiscal year.

The *Tribune* says:—The aggregate Imports of last week, although large, were about $1,300,000 less than for the same week of last year. The aggregate of the year thus far, shows a decrease of two and a half millions, as compared with the same period of last year. The aggregate exports of the first eleven weeks of the year are $15,700,000 against $9,100,000 last year during the same time.

Market Intelligence, &c.

RURAL NEW-YORKER OFFICE,
Rochester, March 29, 1854.

THE continuance of tempestuous weather, with "Winter lingering in the lap of Spring," gives no chance for renewed activity; and very little is doing in the Wheat and Flour trade. Prices in grain had a tendency to stiffen a few days past, but the arrival of the Africa yesterday, weakened them again, and no change need therefore be made in quotations. Corn lower, and raised at 68@70c.

Pork is selling at $6@6,25, and little offered.

Butter a penny better, wholesale price 12@16c.

Rochester Wholesale Prices.

NEW YORK MARKET — March 27.

FLOUR—Market for Western and State opened with considerable excitement. Local and eastern demand quite active, and some speculative inquiry prevailed, induced by the diminished stock and light arrivals. Prices advanced 12½c ₩ brl. Better grades in request at improved prices. Canadian quite nominal at $7,02½. We hear of 4,000 brls. going forward from first hands. Sales Western canal 8,200 brls. at $7,02½@7,75 for common to straight State; $7,15@8 taken to straight brands Michigan and common to good Ohio—the latter scarce. At the close less inclination to sell for April delivery.

Rye flour quiet.

Corn meal quiet, $3,50 for Jersey.

GRAIN—Little wheat here, and the extreme prices demanded limits transactions. Sales 6,000 bu. Jersey white at $1,65.

Rye quiet at $1.

Barley nominal at $1,68.

Oats in fair demand and plenty, 44@46½c Jersey; 48@54c State and Western.

Corn less active. Prime yellow better, it being temporarily scarce. Other kinds steady. Sales 25,000 bu. at 82@83½c Jersey yellow; 83c Southern mixed; 84@85c Southern yellow; 83@85½c Southern white.

PROVISIONS—Supply of Pork larger; demand light—prices lower, sales 350 bbl. at $15,25 for mess; $12,62½@12,75 for prime; prime mess dull at $18.

Lard steady and in fair request at 9½@9¾.

Butter firmer and in good demand at 11@14c Ohio; 14@19c State.

ALBANY MARKET — March 27.

THERE is no new feature to notice in Four; the demand is limited and prices steady.

Buckwheat Flour is selling from wagons at $3,25 ₩ cwt.

In the street Rye is selling at 81@83c.

Corn 70c for white and 75@76c for yellow; Oats 47@48; Barley 93@$1.

NEW YORK CATTLE MARKET—March 20.

AT Washington Horse Yard—Offered to-day, 1,600 Beef Cattle; offered during the week 1,625.

Greenwich, Washington Co., N. Y., 1854. 221-11*

DAVIS'S PATENT ADJUSTABLE CHURN AND BUTTER-WORKER COMBINED.

THE above engraving represents a recent and very valuable improvement in Churns, denominated Adjustable Churn and Butter Worker, invented by ROBERT W. DAVIS and DANIEL DAVIS, of Rogersville, Steuben county, N. Y., and secured by letters patent bearing date Feb. 28th, 1854.

Messrs. DAVIS are the inventors of the celebrated "Self-Adjusting Churn," patented April 2d, 1850, which has surpassed all other articles of the kind ever in use, an exact copy of which received the highest premium at the world's fair in London, and also the highest premiums have been awarded it at many State and County Fairs. The Adjustable Churn and Butter-Worker is not merely an improvement on the "Self-Adjusting Churn," as some may suppose, but is entirely different in its construction, accomplishing the same objects in a more complete and perfect manner.

All communications addressed to R. W. DAVIS, Dundee, Yates Co., N. Y., or to DANIEL DAVIS, Rogersville, Steuben Co., N. Y., will receive prompt attention. 221-11t*

FARMERS, LOOK TO YOUR INTERESTS!

BUCHANAN ON GRAPE CULTURE, AND LONGWORTH ON THE STRAWBERRY.

JUST PUBLISHED, the Fifth Edition, Revised, one Volume 12mo. Cloth, 63 cents.

This volume should be in the hands of every cultivator of these delicious fruits, for it embodies, in a compact and available form, the experience of accomplished and practical Horticulturists on subjects which have come directly under their own observation for a long series of years.

Of a former edition of "Buchanan on the Grape," we subjoin a few

Notices of the Press.

Mr. Downing, in his Horticulturist says:—"It deals more with facts, with actual experience and observation, and less with speculation, supposition and belief, than anything on this topic that has yet appeared in the United States.—In other words, a man may take it, and plant a vineyard, and raise grapes with success."

"Furnishes, in a small space, a very great amount of instructive information relative to the culture of the Grape. —*Farmer's and Planter's Encyclopedia.*

"Will be found to convey the most opportune and valuable instruction, to all interested in the subject."—*Hill's Fruit and Flower Garden.*

Those who desire the book sent by mail, will receive it pre-paid, by remitting the price, by letter post-paid, to the Publishers. MOORE, ANDERSON & CO., Cincinnati.

For sale by PHINNEY & Co., Buffalo, and by A. S. BARNES & Co., IVISON & PHINNEY, and C. M. SAXTON, New York. 221-2t

A CHANCE FOR THE MILLION!

$50 to $150 per Month can be easily made in selling the *POPULAR BOOKS* published by MILLER, ORTON & MULLIGAN, successors to Derby & Miller, Auburn, and Derby, Orton & Mulligan, Buffalo.

At no previous time has the demand for good books been so active as at present. The great mass of the People who want, and will have them, are not within the reach of the Local Booksellers, and it has become a well ascertained fact, that of the Publications of merit and real utility, from time to time issuing from the American Press, *a large proportion* must be sold by

Book Agents, Colporteurs and Canvassers,
or not at all.

To all who are desirous to aid in the dissemination of a *Pure and Wholesome Literature*, and none other, we offer great inducements to engage in the sale of our Popular Books for the People. We publish *Good Books, well printed and strongly bound*, and which sell readily wherever offered.

☞ Catalogues of our Publications, containing full particulars, furnished on application (post-paid,) to

MACKENZIE'S WEEKLY MESSAGE, TORONTO.

WM. LYON MACKENZIE, formerly an Inhabitant of Rochester, Albany, and New York, and now, again, of Toronto, in Canada, publishes there a widely circulated weekly newspaper, with the above title, at Two Dollars per annum. For advertising in Upper Canada, *The Message* offers a desirable medium—and to all who desire an insight into Canadian politics, it will be found useful and instructive.
Toronto, March 24, 1854. 221-2t

SUFFOLK PIGS.

TWENTY pairs of purely bred SUFFOLK PIGS, for sale by the subscriber. Also breeding sows.
HENRY HUNTINGTON.
Walpole, N. H., March 21, 1854. 221-3t

PIE PLANT FOR SALE.

CAHOON'S *well known Seedling*, superior in quality and size to any of the varieties of Mammoth, Colossal, or Victoria, and continues to produce new leaf stocks until November, not being affected by the early frosts. This variety was raised by the subscriber 14 years ago from seed, and after being under cultivation that length of time holds good in size, having last year produced stocks weighing five pounds and over.

Testimonials from Agricultural, and Horticultural, and other Papers could be produced in abundance to show that this Pie Plant, is all that is represented. I will only insert one from a paper published in this city, where the Editor has availed himself of opportunities of frequently visiting my garden, for the last ten years. It is as follows:

"But the most remarkable feature of this garden is the *Mammoth Pie Plant*, and certainly any person who is curious to know what Pie Plant is, and how it may be cultivated and developed, would do well to look at it. We state what we witnessed, (and what we should doubt if we had not witnessed it,) that from one root was cut a quantity, which after being trimmed ready for cooking, weighed 43 *pounds*, and certainly as much more was left on the root, uncut; making the product of one root nearly, if not quite *one hundred pounds* of plant. And we are not aware that this was a very unusual growth, for we saw thousands of bunches, which seemed quite as large as the one in question; and all this too, young and tender plant, as delicious as any raised. Of this plant, Mr. Cahoon is raising immense quantities, with which he not only supplies home demand, but ships to other places, furnishing one house in Chicago with a thousand pounds per week."—*Telegraph.*

I am now growing quantities of it for the California and Oregon market. [Dwarfing the roots.] I sent a few roots to Oregon last January, and the growth last season *astonished* the citizens there, notwithstanding they had seen *tall* growths of vegetation at home.

I will securely pack in boxes, and forward according to directions, Ten Roots for $5; Five Roots for $3; or One for $1; the Cash to be sent with the order. A severe frost does not injure the roots, and they can be sent with safety in any part of the Union. B. P. CAHOON.
Kenosha, Wis., March, 1854. 220-4t

SOON IT WILL BE TIME TO PLANT!

AT the Rochester Seed Store, opposite the Arcade, Buffalo Street, I can supply all kinds of Seeds, and the implements usually wanted by the farmer or gardener. I have Seeds of my own growing; also those of my own importation from England, France and Germany, which I will sell at as low rates, as can be had in this country, both at wholesale and retail.

Clover Seed.—Medium from Ohio, and the large kind grown in this county, at market prices.

Timothy Seed—from Wisconsin, at market prices.

Peas.—Large Marrowfat—Early Washington—Early Kents, (the earliest variety)—Early Prince Albert, (imported)—Blue Imperial (imported)—and all the other varieties worth cultivating, by the bushel or quart.

Beans.—Lima—China Red Eye, &c.

Corn.—Stowell's Evergreen Sweet Corn, at 50 cents per quart.

Poland Oats—At $1.25 per bushel.

Mexican Potatoes—of my own raising, at $4 per barrel delivered at the Rail-Road.

Osage Orange.—New seed, just from Texas, at $16 per bushel, or 75 cents per quart.

Orders by mail, enclosing the money, will be promptly attended to. The seeds forwarded without delay, or the money returned. JAMES P. FOGG.
Rochester, March 8, 1854. 218-6t-ow

No. 1 SUPERPHOSPHATE OF LIME.

THIS valuable fertilizer has been used for several years in England and other parts of Europe, and, next to Guano, holds the highest rank in popularity, and the extent to which it is used among farmers. Its introduction to this country has been more recent; but the progress it has made in the estimation of the public has not been less marked or successful than abroad. It is now extensively used throughout the Northern States, after a full trial and investigation of its merits; and it is rapidly becoming, like its predecessor, Guano, a favorite manure at the South and West.

It is composed of crushed or ground bones, decomposed by the addition of about one-fifth their weight of sulphuric acid, diluted with water, to which is added a due proportion of guano and sulphate of ammonia. The latter is the active and one of the most efficient agents in the best Peruvian Guano.

It is suited to any soil in which there is not already a full supply of the phosphates, which is seldom the case — All crops are benefited by its application.

For sale in large or small quantities, in bags of 150 lbs. each. No charge for packages. All bags will be branded "C. R. DOLLIUS, No. 1 Superphosphate of Lime."

PERUVIAN GUANO of best quality.

AGRICULTURAL and HORTICULTURAL IMPLEMENTS of all kinds.

FIELD and GARDEN SEEDS, of various sorts, fresh home-grown and imported.

THE AMERICAN AGRICULTURIST—weekly, $1 per volume—two volumes a year.

For sale at R. L. ALLEN'S Agricultural Warehouse and Seed Store, 189 and 191 Water st., New York. (219-3tow

Poetical.

THE CUP.

There is a cup of life;
The lillie pride that shuns the threshold o'er,
Are of the feet of such as came to drink,
Fresh in their natal hour—whose infant lips
Eschew'd the taste, and perish'd on the brink.

There is a cup of bliss:
It mantles bright, and sends its foam aloft,
And calls for flowers to twine its sparkling brim;
The young, gay, beauteous, happy, dance around,
Nor know the shapes that 'neath its surface swim.

There is a cup of wealth
With worthless dust decked. Th' ignoble crowd
Who cringe about the glittering fallacy,
Ne'er rise so high as taste the current proud,
Yet pine to share its splendid mastery.

Of poverty a cup:
And the pale, rank grass weaves its baleful sward
For earth's best souls thick o'er the sickly brow;
'Tis genius' birth-gift, humble worth's reward,
For them that 'midst its turgid waters flow.

Glory hath, too, her cup,
She lifts it to the skies, and onward rush
Contending throngs, o'er mountain, vale and flood!
She views her flashing hosts each other crush,
Bids them to dust, then fills it with their blood!

There is a cup of tears,
With sobs bound, and poured on the grave;
Thither the 'reft, the desolate repair,
With duteous drops, its pearly fount to lave,
And swell the crystal store that glistens there!

For still round sorrow's cup
'Tis meet the faint and weary should coorene,
To cast the cypress on the waters clear!
Descant on hopes that tripp'd life's fairy green,
And the stern hour that first entomb'd a fear.

Oh, memory! thy cup—
Thy bruis'd yet precious cup, lonesome I sing!
Would I know not to dwell on thy bright beams,
On eyes in dust, smiles fled on misery's wing,
And lips in clay, that talk with all my dreams!

Well—there's a cup of death,
And who so artful as to put it by?
Its mystic edge once kissed, we dream no more!
But wake to-day that knows no sunset sky,
And reach our prow upon a peaceful shore.

THE FEARFUL WARNING.

A Tale for Sabbath Breakers.

BY EDWARD WEBSTER, ESQ.

Men tread many times unconsciously on the brink of destruction, and are turned aside from the danger without any apparent cause. Sometimes they are made aware of it afterwards, when the crisis is past, and then an involuntary shudder, and (if the heart be right,) an emotion of gratitude to God for his mercy follows, the discovery; much oftener, the impending, but happily averted catastrophe is never revealed; and we go on our way rejoicing in fancied security, when a single step in another direction might have sealed our fate.

One person contemplates taking a journey, but is delayed by sickness or what he regards at the time, as some other untoward circumstance, and he is saved thereby, from a shipwreck or a conflagration; another escapes a falling wall, because, from some cause, he is a moment too soon, or a moment too late; a third, without knowing it, is removed from the pathway of a rabid dog—a serpent that lies coiled at his feet—an assassin that lurks in darkness—or the pestilence that walketh at noon-day. Sometimes again, the peril is manifest and apparently unavoidable; and in the agony of the moment, when we deem the death-struggle is upon us, and the last dim spark of hope is extinguished in our bosoms, deliverance comes.

These reflections are suggested by the retrospect of a startling incident, related in my presence several years ago, by a young and conscientious friend. We were in those days laboring at a trade, some of the manipulations of which, although of a very healthy, were not of the most cleanly character; and occasional ablutions were therefore necessary to purity of person, if not to spiritual purity. One pleasant Sabbath morning we were standing in front of our boarding house, when a mutual acquaintance came up and suggested that we should go and bathe, previous to dressing ourselves for church. I assented unhesitatingly, but my friend said, no! he bathed last evening, and was already dressed for church; "besides," said he, "I have made a solemn vow never to go in swimming again on Sunday."

"Why not?" we inquired; "you are not a professor of religion, and pretend to no more piety than the rest of us. We have known you time and again, to write letters on Sunday, and call on a friend on Sunday; either of which acts is as bad as the one proposed."

"That may all be," he answered, "but, it is very bad logic notwithstanding. Because a man breaks one law, is no plea in justification for breaking another law, either human or divine. Because a man is a thief, will not excuse him for committing arson; and because he is addicted to profanity, is no reason why he should also lie! Besides, if I had received the same fearful warning in the cases you mention, as I have in the matter of bathing on the Sabbath, it is altogether probable I should forego their indulgence quite as religiously."—We begged him to explain, which he did, as follows:

The dam of the mill, in which I worked previously to coming here, was built of heavy square timber, laid up like a wall, over which the water plunged perpendicularly, in an unbroken sheet from end to end. There had been originally, an apron below the dam, upon which the water was precipitated from above and then glided off horizontally down the stream; but this had been carried away two or three seasons previously, by a heavy spring freshet, and had not been replaced. Subsequent floods had consequently excavated a very deep hole beneath the dam, into which the water plunged with tremendous force, and then boiled and bubbled up a couple of rods below to the height of two or three feet. At the crest of this boiling ridge, which stretched entirely across the stream, the water divided; one portion passing off down the channel, and the other falling back again under the dam. I have seen a saw-log make the circuit between the descending sheet and the crest of the boiling waters for half a day. It would be driven to the bottom by the force of the descending flood, where its progression would be retarded by the friction of the earth and stones, in consequence of which it would fail quite to reach the dividing ridge in its ascent to the surface, and therefore had no chance of escape. It would rise and foremost out of the water half its length, like a great clumsy fish, and then fall back heavily again under the dam.

One very pleasant Sabbath morning in June, half a dozen young men, myself included, went up to the mill-pond to bathe. There was an uncommon freshet in the stream in consequence of a heavy fall of summer rain, and the vortex below the falls was in great activity. Observing the upward force of the water and air commingled, it occurred to me that if a person could succeed in gaining the dividing ridge, it would be a very pleasant and easy mode of swimming across the stream. I had been familiar with water from a boy, and could swim like a duck; so, without further reflection, I struggled up against the stream, and after great exertion found myself resting idly upon the summit of the wave. The water at that point was in equilibrium, its tendency and motion being only upward, which, with the volume of air rising to the surface, lifted my prostrate body half out of the water. It was really beautiful swimming, and required only a very faint exertion to maintain my position upon the crest of the ridge of water; and in this way I passed entirely across the stream, much to the admiration of some of my companions and the terror of others.

At length I attempted to return; but, rendered somewhat careless by the success of the previous experiment, when about half way across I unconsciously lost my position—and slowly at first—floated inward towards the dam. I struck out to regain the place which I had lost, and with a little extra exertion at the moment, perhaps might have succeeded; but the golden opportunity was allowed to pass, while settling in my own mind whether or not I was really approaching the sheet of falling water. At length, however, there could be no mistake, and the excited gesticulations, and startling call of my friends upon the bank, made me fully aware of my danger. Then indeed, urged on by a sense of my imminent peril, I made desperate efforts to escape. I breasted the waves manfully, and for a time it half appeared successfully; but the current was the stronger, and bore me nearer and nearer towards the sheet of falling water. How long this struggle lasted it is impossible for me to tell. It might have been half a minute, and perhaps longer—it seemed an age! but human endurance could not hold out long in such a fearful and unequal contest. Finding it impossible to overcome the obstacles in that direction, my next effort was directed to swimming along the line of the cataract towards the shore, keeping away from the descending flood, which I could just barely do, with the exertion of all my remaining powers; but to my horror, I found when nearing the shore, that the water also rushed in towards the centre from either bank, thus enclosing me with a barrier as impossible to pass as it was terrible to contemplate. My strength was by this time nearly exhausted, and the little that remained was absorbed solely in the efforts made to keep above water. I kept my feet towards the cataract, and as I looked back at it over my shoulder, the waters seemed to swell and roar as if rejoicing at the idea of hurrying me to my doom. The down rushing current would occasionally strike me upon the back, completely submerging my head; and then with a convulsive effort I would rise again to the surface and gasp for breath. The conviction settled itself fully upon my mind, that my hour was come. I cannot say that I was frightened at the idea of death, but I was horrified at the time, and the occasion. It seemed to me at the moment, that I could have perished cheerfully in the performance of some meritorious deed; that I could have laid down my life without a shudder, if it were permitted me to do so, nobly; but the idea of my fate being regarded as the doom of the Sabbath breaker—of my summons to the judgment being made use of to point a moral in pulpit oratory, and adorn a tale in religious literature, was terrible indeed. I was always extremely sensitive to the good opinions of my fellow men, and the thought of their remarks and reflections upon my fate, outweighed infinitely, all the bitterness of death.

But there was one other prominent idea, more torturing than all others; and that was, what would be the grief and horror of my poor mother and sisters, when they should be made acquainted with the awful truth! They seemed to stand before me in living presence even then, and their shrieks and lamentations were ringing in my ears, and drowning all the roaring of the falls! and the last murmur of an incoherent prayer, which at that moment died away upon my lip, was one for mercy—not to me—but to them! It seems to me now, when I recall to memory that fearful scene, as if every act of my life passed before me in prominent review.

All this took place in a much shorter period of time than it takes me to narrate it, and when at last my strength was gone—when the last faint spark of hope had become extinguished in my bosom, and I was about to give over in despair, an idea flitted through my mind, which proved my salvation. I cannot describe the train of thought as it occurred, for it seemed to pass along like a chain of electric fire!—It flashed across my brain, as near as I can illustrate it, like lightning, athwart the darkness of the midnight sky! It occurred to me that a solid body, if unimpeded in its circuit between the fall and the crest of the boiling ridge, would rise to the surface precisely at the dividing line of the water flowing either way; that any heavy substance, like a log or a human body, being driven to the bottom and moving along in contact with it, would of course lose a portion of its velocity by friction; and as a necessary consequence, when it was borne to the surface by the upward tendency of the tide, it would fall short of the dividing line and be drawn back again under the dam; that if an impetus should be given to it in addition to that imparted by the water, the, body would rise to the surface below the dividing line and then pass off down the stream.

Thought and action were simultaneous, and as I was about to be carried down by the rushing tide, instead of resisting further, I plunged frantically forward in the same direction, and swam along the bottom with all the desperation of expiring energy. Life or death, I was certain, depended upon that effort; and I resisted the upward impulse of the waters to the latest moment, in order to pass as far as possible away from the dam. I was finally borne to the surface at least six feet below the terrible barrier of waters, and I was saved! The current floated me, helpless as an infant, upon a bar of gravel a few rods down the stream, where my associates who had been running frantically and helplessly up and down the banks, rushed to my aid and bore me to the shore, unable to speak or stand. Need I state to you any other reason why, in profound gratitude to God, for my deliverance from such fearful peril, I made a solemn vow upon the spot, never more to go in bathing on the Sabbath day?

SPECULATIVE PHILOSOPHY.

If all mankind could wink at the same moment, the muscular effort exerted would be sufficient to jostle the earth out of its orbit.

If all the oaths uttered in the United States were required to be printed, it would employ all the presses in the country, day and night, to perform the labor; and if a tax was levied on them of one cent each, one year's revenue would be sufficient to transport all the mails, on a double track railroad to the Pacific, and pay the public debt of every state in the Union.

The segars consumed throughout the country in one year, would make a worm fence six feet high around the District of Columbia; and the air expelled in smoking them would drive the Japan squadron round the world, with enough over to do the wind work of all the patent medicines.

If all the ejected tobacco quids were from this time to be dropped on the dome of the Capitol at Washington, the hail of Egypt would be no comparison to the pelting storm, and the edifice would be buried deeper than Nineveh, before the next meeting of Congress.

If all the lies told during the last Presidential campaign, could be boiled together, they would make soap enough to cover the face of Nature.

An Indian on Lying.—The Cattaraugus Whig states that a suit was recently brought before a magistrate in the village of Randolph, and during its progress an Indian was brought forward to testify. His blank, expressionless face, and the general unmeaningness of his whole demeanor, gave rise to a serious doubt in the mind of the "Court" as to the admissibility of the testimony. Accordingly he was told what the consequences would be if he should tell a falsehood while under oath. The countenance of the Indian brightened a little as he replied in a solemn tone, "Well, if I tell a lie, guess I be put in jail—great while, may be. Bimeby I die—and *then I ketch it again.*" The witness was permitted to proceed.

Youth's Corner.

ILLUSTRATED REBUS, NO. 15.

☞ Answer in two weeks.

[Written for Moore's Rural New-Yorker.]

ACROSTICAL ENIGMA.

We are composed of 5 letters.
Our 1, 2, 3, 4, 3, 5, 5 is equal to some of our senses.
Our 2, 4, 4, 2 is obtained from a certain flower.
Our 3, 1, 2, 1, 3, 3 has been made by us only.
Our 4, 2, 1 is not at the bottom of anything.
Our 5, 2, 4 finds no delight in us.
We are as a whole instructive and agreeable companions to all classes of men. S. T.

☞ Answer next week.

ARITHMETICAL PARADOX.

Two Arabians sat down to dinner; one had five loaves, the other three. A stranger passing by, desired permission to eat with them, which they agreed to. The stranger dined, laid down eight pieces of money, and departed. The proprietor of the five loaves took up five pieces and left three for the other, who objected, and insisted upon one-half.

The cause came on before Ali, the magistrate, who gave the following judgment:—"Let the owner of the five loaves have *seven pieces* of the money, and the owner of the three loaves one." Query—the justice of the sentence? Answer. Ali's sentence was just; for supposing each loaf divided into three equal parts, making twenty-four parts in all the eight loaves, and each person to eat an equal or one-third part of the whole; therefore the stranger had seven parts of the person who contributed five loaves or fifteen parts; and only one of him who contributed three loaves, which makes nine parts.

Answer to Miscellaneous Enigma, in No. 12.—*The New York Conference Seminary.*

Wit and Humor.

SPIRITUAL MANIFESTATIONS.

The Lynn *News* tells the following of the incredulous young man, whose father had promised, before death, to hold, "spiritual communication" with him:

The spirit of the old gentleman, (who, by the way, was somewhat severe in matters of discipline,) was called up, and held some conversation with the boy. But the messages were not at all convincing, and the youth would not believe that his father had anything to do with them.

"Well," said the medium, "what can your father do to remove your doubts?"

"If he will perform some act which is characteristic of him, and without any direction as to what it shall be, I shall believe in it."

"Very well," said the medium; "we wait some manifestations from the spirit land."

This was no sooner said, than (as the story goes,) a table walked up to the youth, and without much ceremony *kicked him out of the room!*

"Hold on! stop him!" cried the terrified youth. "That's the old game I believe in the ruppings!"

"What have you done to further human progress?" asked a sententious philosopher the other day of Jenkins. Jenkins' reply was clear and decisive. "I've seven boys and two girls, sir." The philosopher departed, and for the first time in his life—thought.

When a returned ambassador introduced to King James a Spanish noble of mean intellect, but covered with jewelry, Jamie exclaimed:—Hoot, man, and ye 'mind me of Solomon's importation—gold, peacocks and apes."

There is an editor in North Carolina with seven bullets in his body, received in duels and street encounters. His paper ought to be called the "Bulletin," and contain all leaded matter.

The editor of a newspaper down east, has discovered a way to keep eggs from spoiling. His method is to eat them while they are fresh.

A picture looks best surrounded by a frame, and a woman looks best surrounded by her family.

There are two things that modest men should never undertake—to borrow money and study law.

OLD ROCHESTER NURSERY.

Samuel Moulson, at the Old Rochester Nursery, office No. 30 Front street, Rochester, N. Y., is prepared to furnish invoiceries to post paid applicants, of the present extensive stock of Nursery Trees, consisting in part of 10,000 fifty foot Northern Spy Apple Trees, from 5 to 8 feet high, which will be offered by the 1,000 at low prices. Also, a quantity of large sized Trees, such as Scotch Pines, larch Fir, Maples and other ornamental things offered at very cheap rates in order to clear the ground.

90,000 Dwarf and Standard Pear.
20,000 Apple Trees in variety.
20,000 Peach do do
10,000 Plum, Cherry and Apricot.
20,000 Osage Orange of different ages.
Over 100,000 Hardy Evergreens—

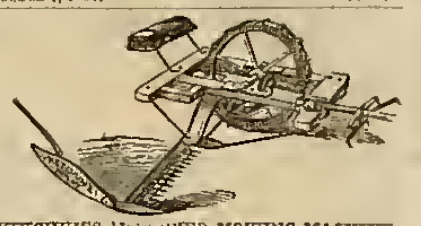
And a fine selection of Weeping Deciduous Trees, Ornamental Shrubs, together with such other articles as may be classed strictly hardy, and a large collection of Dahlias, Tulips and other bulbous roots.

The amateur wishing prior fruits of well established repute, or the Agriculturist needing fine cropping, thoroughly tested varieties, may rely upon the most careful execution of their orders. The ornamental trees are entirely grown in the Nursery, consequently none of the heavy losses are sustained that usually occur to recently imported subjects.

The Evergreens are very robust and admirably furnished to the surface of the ground, none presenting the naked stems usual to imported plants.

Dealers are invited to give a call before making their purchases.

March 1, 1854. 210-6t



KETCHUM'S IMPROVED MOWING MACHINE,

With entire change of Gear, the only Successful Mower Now Known.

Ketchum's *Improved* Machine, which we are building for the harvest of '54, was thoroughly tested last season, and the advantages gained by our change of Gear are in all respects as we designed, viz: *durability, convenience and ease of action.* The shafts now have bearings at both ends, which overcomes all crampling and cutting away of boxing. A counter balance is attached to the crank shaft, which gives it a steady and uniform motion. Each Machine can be thrown out of gear; there is great convenience in getting at each and every nut, all of them being *on upper side of the frame;* oil cups are attached to all the bearings, which, by the use of a wad of cotton, will hold oil for a long time, as well as protect the bearings from dust, grit, &c.; the finger bar is lined with iron its whole width, which protects it from wear.

These and various other additions for strength, durability, &c., makes them the most simple and perfect agricultural implement in use. They weigh about 750 lbs. each, and can easily be carried in a one-horse wagon.

It requires not over ten minutes to get one ready for operation, there being but two bolts, (besides the pole bolts) to be secured to have one ready for use. They will cut *all kinds of grass*, and operate well on uneven or rolling lands, or where there are dead furrows. This Machine took the highest award, with special approbation, at the World's Fair; it also received, during last season, one silver and four gold medals, and various other flattering and substantial testimonials of approval. We have spared neither pains nor money to make this machine deserving of public favor, and hope to be able the coming season to supply the great and increasing demand.

We take this occasion to caution farmers against buying *untried* Mowers; if they do (as was the case with many last year) they will incur loss, vexation and disappointment.

If any parts are wanted to repair any machine we have sold, or may hereafter sell, they will be furnished and only manufacturers' cost for the same be charged.

☞ In all cases where extras are wanted, be sure to give us *the number of your Machine.*

(Warranty:) That said machines are capable of cutting and spreading, with one span of horses and driver, from ten to fifteen acres per day of *any kind of grass*, and do it as well as is done with a scythe by the best of mowers.

The price of the Mower, with two sets of knives and extras, is $110 cash, in Buffalo, delivered on board of boat or cars free of charge.

Office and Shop, corner of Chicago street and Hamburgh Canal, near the Eastern R. R. Depot, Buffalo, N. Y.

HOWARD & Co., Manufacturers and Proprietors.

The Mower is also manufactured by Burgess, Norton, Mason & Co., at Worcester, Mass., for the New England States.

By Seymour, Morgan & Co., Brockport, N. Y., for Illinois, Iowa and Michigan.

By Warner & Brokaw, Springfield, O., for Ohio and Kentucky. 220-4t.

KETCHUM'S MOWING MACHINE.

This machine stands without a successful rival, as *the mowing machine of the age.* The supply will not be equal to the demand. If any person desires one for the coming season, they cannot speak too soon. The uniform price at Buffalo is $110,00. All who will forward us an order accompanied with the cash or satisfactory reference, may depend upon being faithfully served with a machine in good season. H. C. WHITE & CO.,

Buffalo Ag. Warehouse and Seed Store, 17 & 19 West Seneca street, Buffalo, N. Y 211tf.

ATKINS' SELF-RAKING REAPER.

Forty of these machines were used the last harvest in grass or grain or both, with almost uniformly good success, in nine different States and Canada.

Twenty-Six Premiums, including *two at the Crystal Palace*, (silver and bronze medals,) were awarded it at the autumn exhibitions. I am building only 300, which are being rapidly ordered. Mr. Joseph Hall, Rochester, N. Y., will also build a few. ☞ Early orders necessary to insure a Reaper.

Price at Chicago $175—$75 cash with order, note for $50, payable when Reaper works successfully, and another for $50, payable 1st December next, with interest. Or $160 cash in advance. *Warranted to be a good Self-Raking Reaper.*

☞ Agents properly recommended wanted throughout the country. Experienced agents preferred. It is important this year to have the machines widely scattered.

Descriptive circulars with cuts, and giving impartially the difficulties as well as successes of the Reaper, mailed to post-paid applications. J. S. WRIGHT.

"Prairie Farmer" Warehouse, Chicago, Feb., 1854. 215-13t-m3t

MOORE'S RURAL NEW-YORKER,

IS PUBLISHED EVERY SATURDAY,

BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

Subscription—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion. As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 25 cents per copy to the club rates of the Rural,—making the lowest price to Canadian subscribers $1,50 per year.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

*** The postage on the Rural is but 5½ cents per quarter, payable in advance, to any part of the State—and 6½ cents to any part of the United States,—except Monroe County, where it goes free.

Advertising.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance.* The circulation of the Rural New-Yorker is several thousand greater than that of any other Agricultural or similar journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

The Wool Grower and Stock Register is the only American journal devoted to the Wool and Stock Growing Interests. It contains a vast amount of *useful and reliable* information not given in any other work, and should be in the hands of *Every Owner of Domestic Animals*, whether located East or West, North or South.—Published monthly in octavo form, illustrated, at Only Fifty Cents a Year—6 copies for $2; 8 for $3. Vol. 5 commenced July, 1853. Subscriptions can begin with the July or January number. Back volumes furnished.

Address D. D. T. MOORE, Rochester, N. Y.

Progress and Improvement.

MILCH COWS AND CALVES.

IT is impossible to choose a subject of more general interest to the agricultural community than that of milch cows; for, though there is only a portion of American farmers who devote their farms principally to the dairy business, yet every rural homestead has its cows, and every resident in the country should be interested in their management. This is our excuse for so soon, again, referring to milch cows in the RURAL.

The best time for cows to "come in," depends much on circumstances. Usually, where cows are kept for the dairy, in the North Eastern and Western States, about the middle of April, is considered best. Though, where the calves are raised for the butcher, in the neighborhood of cities, where early veal commands a high price, it will be profitable to have them come in earlier.

Of the treatment of cows previous to calving, we have previously written. If the cow is in a healthy condition, little trouble will be experienced in calving. After the cow has calved she should have some warm bran slops, and be carefully attended to. The first milk ought to be drawn out of the bag before the calf is allowed to suck; and afterwards, if the bag should become hard, as very frequently happens, it is advisable to draw out as much of the milk from the bag as possible, *previous to letting the calf suck*. In this way, from the calf butting the udder and drawing the milk out clean, a cure is speedily effected.—If, however, the udder should be much inflamed, it should, in addition to drawing out the milk, be *well rubbed* with buttermilk and castile soap.

In some districts it may be the best economy to sell off the calves when a week or ten days old, or even to cut their throats as soon as they are born—the milk proving more valuable when converted into cheese and butter, than into veal. Such, however, is not the case when good veal sells, as it does here, at from six to ten cents per pound, unless the butter should command an unusually high and exhilirant price.

In fattening calves for the butcher, they should be suckled regularly; be *tied up* in a dark, *clean* stable, and have a little fresh, clean straw thrown under them every day. Much depends on their being kept clean, dry and quiet. In suckling them, let the strap remain round their necks, so that you can manage them more easily. Take them away as soon as they have had their fill, and *do not let them run about* the cow stable or yard. If they are kept clean, they will not be troubled with lice. If they should, give them a little sulphur; it will both purify the blood and rid them of the parasite. The rate of increase in growth, depends much on the breed, and on the food of the cow. When six weeks old, unless the cow be very well kept, the calf seldom gets as much milk as it could assimilate. As a general thing, therefore, it does not pay to keep fatling calves till they are two months old.

For *rearing* calves, of course a different treatment is necessary. Health and the development of muscle, rather than the accumulation of fat, are desired, and more light and exercise should be allowed. If fed by hand, after the first two or three weeks, a little skim milk and linseed tea might be economically substituted for a portion of the fresh milk. But, whatever you do, let them have abundant nourishment. If starved when young, they will never make good animals.

After, as before parturition, the main difficulty with cows is costiveness. A feed of mangel wurtzel, or two pounds of oil-cake meal made into a warm mash, will be found the best preventive. The increase of milk will pay for the oil-cake, while the increased health and strength of the cow will be pure gain, and will tell well in the milk pail during the summer. It is absolutely essential that cows be *milked clean* at all times, but especially is it necessary immediately after calving. STEPHENS, in the Book of the Farm, says:—"For my part, I never see a *man* milking a cow, without being impressed with the idea that he is usurping an office which does not belong to him." Certainly, there are but few "hired men," crusty bachelors, or husbands of strong-minded, but weak-wristed women, that are fit to milk, or have anything to do with a cow. We have known cows that would not suffer a man to milk them without their legs were tied; yet they would be as quiet as a lamb, while a woman, with her soft hands, kind words and pacifying manners, performed the operation.

CULTIVATION OF BARLEY.

THE climate of this country is far superior to the perfect development and elaboration of wheat, to that of Great Britian. Genesee wheat usually weighs from three to six pounds more per bushel than English wheat. It contains less water and more starch, and can be thrashed and made into flour as soon as harvested. This is not the case with English wheat. It has to be stacked *on frames*, so that the air can circulate through it, and kept several months before thrashing, in order that it may be dry and in good condition for grinding. Good English farmers, too, are very particular as to when they thrash, dry frosty weather being preferred. If thrashed in wet weather, the grain is damp and in bad condition, and it is amusing (to an American,) to witness the fluctuations in the price of wheat, in the British market, caused solely by wet or dry weather, and this even, in the winter months. With barley, however, the case is reversed. The long growing season and the cool humid climate of the British Isles, are admirably adapted to the production and elaboration of barley. There is no comparison between the Cheralier barley of this country, one of our best varieties though it be, and the Chevalier barley of England. Usually the barley of England weighs 56 lbs. per bushel; and we may safely say, that it always weighs one-fourth more than the barley of this country. This we attribute to the dry, hot weather, and to the shortness of our growing season. Nevertheless, of late, the cultivation of barley has been considerably on the increase, owing to the large quantity which is used for malting and beer-making, and the comparatively high price paid for it for these purposes. As food for stock, it can never successfully compete with Indian corn, and we should never grow it for that purpose. Oats are a far better crop for our climate, and we believe, contrary to the opinion of many good farmers, that for the quantity raised, they are no more exhausting to the soil.

Barley is usually sown after corn. It seldom does well on a recently inverted soil. It delights in a gravelly, light, warm, sandy loam.—It should be sown as early as possible. The land should be plowed and worked well. It requires very fine tilth. From two to three bushels of seed are usually sown. We think two and a half bushels little enough, and should in most cases prefer three bushels. Many will consider this thick seeding, but it always pays to sow too much, rather than too little seed.—If the soil has been well cultivated with corn the previous year, and is free from weeds, we should seed it down with clover. Instead of this, some good farmers sow wheat after barley; and frequently very good crops of wheat are obtained in this way; but very strong, fertile soil is required, or such a course of cropping will soon impoverish it, and, on the whole, we cannot recommend the practice. The land should always be rolled after the barley is sown. If not in good condition before, it may be rolled when the barley is an inch or two out of the ground. In this case, be particularly careful not to turn too short, or the roller will tear up the young grain.

Remember in the cultivation of barley, that it is advisable not to sow it unless the land can be got ready, in fine mellow condition, early in the season, say by the middle of April in this latitude. On cold, wet, lumpy, heavy soil, you cannot raise a good crop of barley; and it had better be summer fallowed for wheat, or sown with oats, which do much better on heavy soil than barley.

CULTIVATION OF POTATOES.

THE old practice, of hilling up corn and potatoes, is discarded by the best cultivators.—Still, there are some who yet cling to the old ways, that might be of benefit in a wet and humid climate, where a necessity exists for raising the plants up out of a superabundant moisture. But, in a climate like ours, where long continued drouths parch up the earth, as they frequently do in many sections, the flat culture, with planting on or below the surface, is the better plan. Where the soil is well underdrained and subsoiled, potatoes planted below the surface, without any hilling, succeed the best. In such situations, the superabundance of rain passes down through the earth, leaving its ammonia and other fertilizing principles for the benefit of the growing plants, while in the dryest weather the roots of the plants search their food so deeply in the generous soil that they keep in a vigorous condition.

We find in the last volume of the Transactions of the New York State Agricultural Society, some remarks of Prof. CORNOCK, before the Erie County Agricultural Society, that are worthy of consideration. In remarking that we need to husband by deep tillage, &c., all the moisture we can for the sustenance of our plants, he adds:—"Hence we require flat culture and flat or sunken garden beds, with a deep and permeable soil, that shall catch and oblige to pass through it every summer shower."

His method of cultivation he gives as follows: "In the culture of potatoes, after the land is thoroughly plowed, and harrowed smooth, I plant with the spade, thus:—Strain a line, if convenient, north and south; a man puts in his spade spit deep, say seven inches; the first earth he scatters; he then steps back, and at about twenty inches he puts in the spade to the same depth. The soil thus raised, covers the first planted, the third covers the second, etc. A boy to drop the cut potatoes, two eyes to a hole, will attend very well to three lines. Thus you will perceive they are sure to be at equal depth, at equal width, about three feet, and in perfect line. The field planted, a light harrow is passed over it, and again in the course of eight or ten days, disturbing the first growth of weeds, and keeping the surface mellow. After the plants are up, run a cultivator through once in ten days, until they are in blossom, when, after that, they should not be disturbed. With such culture I have had great success, and the cost has not exceeded $6 per acre, exclusive of seed."

The hilling of potatoes, at the time of hoeing, is not only useless, but positively injurious. Injurious in warding off the moisture, but more so in disarranging the economy of the plant. All who have harvested potatoes will have noticed, that different varieties set their tubers differently. While some kinds are huddled together and near the surface, others are deeper in the soil and more scattered in and around the hill. If left to itself, in good and generous soil, the plant sets its tubers at their natural distance from the surface, and in that position where they will receive the elements necessary for their growth to the best advantage. So it is with the roots of the plant that ramble about the soil for sustenance for the whole plant. Hence, when we hill up the plants at hoeing time, we cover the roots and the incipient tubers to an unnatural depth and the plant is obliged to expend a portion of its energies to overcome this unnatural state, forced upon it which of course retards the full development of the tubers, and consequently gives a lighter crop, if it does not indirectly aid in the development of the "rot."

The practice of the writer has been in planting his potatoes, after the ground was plowed and smoothed with a harrow, to drop the potatoes, in pieces or whole, according to size, directly upon the surface, or slightly below the surface, and then to cover, making at once all the hill desired. The after culture is to keep the ground loose and free from weeds. With this method, the labor in the end is less, particularly as the digging is less laborious, while the result has been quite satisfactory. Where the soil is not underdrained and well subsoiled, this method is perhaps preferable, one season with another, to deeper planting. But, with a *deep* soil, deep planting, and perfectly flat culture, is without doubt the best. At all events, those who have such land should give Prof. CORNOCK's plan a trial sufficient to make a satisfactory test. Such a method certainly gives the easiest way to conquer the weeds.

T. E. W.

PRESERVING EGGS.

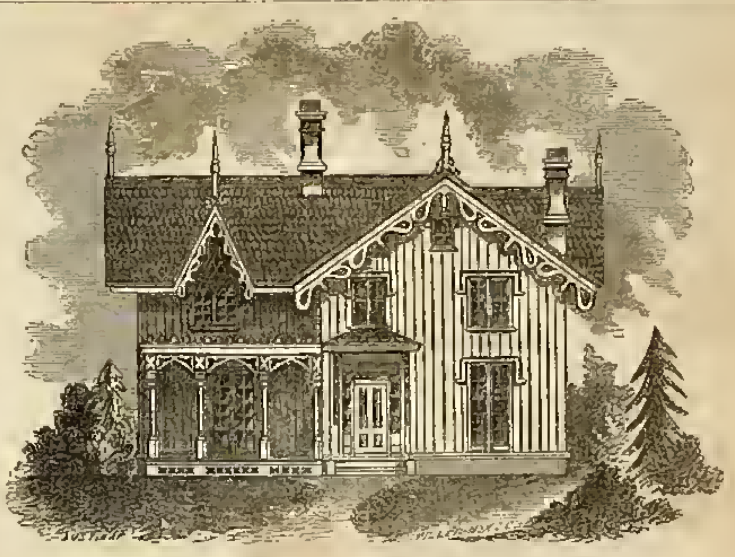
THAT method which shall prevent the air from penetrating the shell and at the same time keep the yolk in the centre of the albumen or white, is the best for keeping eggs for any length of time. The method given in the *Southern Cultivator*, and copied in the last volume of the RURAL, of placing the eggs, small ends downwards, in holes bored in a board, large enough to hold the eggs—is a very good one where the object is not to keep them a great while. By this means the egg is kept on its small end, and the yolk cannot so readily sink to the shell.

The *Farmer's Companion* gives a recipe by which eggs may be kept in good condition for a twelve-month. The eggs are packed carefully away in a water-tight barrel, or in a large earthen-ware jar—earthen-ware being better than wood. They are then covered with lime water, made of *fresh* lime, with sufficient water to make a thin liquid, which should be cold when put to the eggs, and the barrel or jar kept in a cool place. Packing in ashes has been recommended in some quarters, but eggs will soon spoil in ashes—are changed to a thick mucous-like substance, that soon looks as tho' it was badly cooked in smoke. There probably is no better mode than keeping them immersed in lime water. It is cheap and sure.

T. E. W.

ROLLING CLOVER SEED IN PLASTER.—An intelligent friend informs us that he is in the habit of mixing plaster with his clover seed previous to sowing, and that the effect is *decidedly beneficial*. He wets the seed with water and then dry's it with plaster. It is not much trouble and is worth a trial.

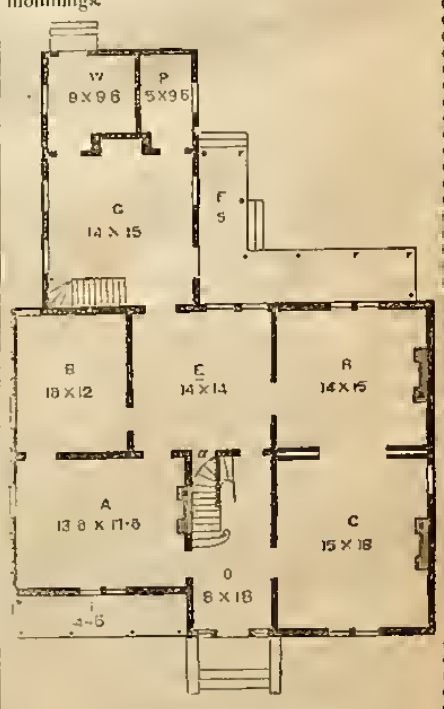
DR. URQUHART has recently examined the fish known as *haddock* and *whiting*, in reference to their value as manure. They contain when fresh 3½ per cent. of nitrogen, when dry 14.



COTTAGE IN THE RURAL POINTED STYLE.

SOME time since we gave in the RURAL, a plan of a cottage in the Swiss style, which we believe was very generally admired. We now give one by the same architect in the Rural Pointed Style, which we think in most situations to be far more beautiful. The following is Mr. AUSTIN's description in the *Horticulturist*:

'This cottage is suitable for a moderate sized farm house, or a residence in the suburbs of a city. Roof projects 3 feet, finished with ornamental verge boards of 1½ inch plank, and rest verandahs with square columns, and a porch over the front door, supported by brackets. The frame is of light timber, and covered with planed and matched boards, from 9 to 11 inches wide, put on vertically and battened over the joints with inch boards 2½ inches wide. The windows are ornamented with hood mouldings.



GROUND PLAN.

The floor plans are arranged as follows:—A, living-room, 13 ft. 6 in. by 17 ft. 6 in.; B, bed-room, 12 by 15; E, dining-room, 14 by 14; R, library, 14 by 15; C, Parlor, 15 by 18, connected with library by sliding doors; D, hall, 8 by 18; G, kitchen, 14 by 15; W, wash room, 9 by 9 ft. 6 in.; P, pantry, 5 by 9 ft. 6 in. Principal story, 9 ft. 6 in. between joists; chamber story, 8 ft.

The cost of this design, with cellar under the whole, will not exceed thirteen hundred dollars when completed.

PLASTER ON PEAS.—In a recent conversation with Mr. A. BEAN, of Gates, Monroe Co., N. Y., he informed us that he had repeatedly used plaster on peas, with decidedly good results. He sows about 100 lbs. per acre, when the peas are an inch or two out of the ground. He thinks it is nearly or quite as beneficial on peas as on clover. It does no good on wheat on his land, but for oats, and especially for buckwheat, he esteems it a valuable manure. We shall be pleased to hear the experience of any of our readers with plaster on these crops.

Communications.

CULTIVATION OF TARES OR VETCHES.

Ens. Rural:—In the 9th No. of your valuable journal, there is a short article on Tares or Vetches, to which, with your permission, I will add a few additional remarks. That tares are a most valuable crop for soiling purposes, and that animals prefer them to eat clover or any other kind of green food, are facts well known to every one in any way acquainted with the properties of this leguminous plant. There are two kinds of tares, the *winter* and *summer*, although by botanists they are considered as merely varieties of the same species. The only way to distinguish the one variety from the other, is by the seed leaf, which, in the summer variety, is of a fresh green color, while the hibernal kinds are distinguished by an elongated seed-leaf, of a brownish hue.

Many failures in raising tares, I am convinced, have arisen from sowing the wrong variety. From an experiment made in 1852-3, on the winter tares, we are convinced that this variety will not withstand the rigor of our northern winters. Having received a small supply of summer tares from Scotland, where only that variety is grown, we intend to test their applicability to the climate and soil of Michigan, and will feel pleasure in reporting to the Rural as to the results. In Scotland and the northern parts of England, the summer tare only is used; while towards the south of England the winter kinds are generally sown for the purpose of raising seed, while the haulms or vines are cured for hay. The seeds of tares are very generally fed out to horses, mixed with oats or other grain, throughout Great Britain. In the north and in Scotland, they are generally fed out in the green state, or, as it is termed, for soiling. When cultivated for this purpose, they should be sown at intervals from the end of March to the end of May, or even later, so as to furnish a succession of cuttings during the season. They are generally sown broad cast, but occasionally in drills, well harrowed in, and it is desirable that the ground should be rolled so as to allow the free use of the scythe. Three bushels of seed per acre, with the addition of one-sixth, or one-eighth of oats, will be sufficient. The oats ought never to be neglected when the tares are used only for soiling purposes, as they not only serve to keep the vines from rotting on the ground, but counteract the violent cholics which stock are liable to, from eating too freely of this enticing food. A little dry fodder along with the tares is also a good preventive.

If tares could be successfully cultivated in this country, they would prove a great boon to the agricultural community. Tares will grow and flourish where peas can be raised; indeed, excellent crops may be raised on very poor land. All creatures devour with singular avidity, this succulent and enticing food, during the hot season of the year. They are worthy of a fair and honest trial, therefore, throughout the various States of the Union, and Agricultural Societies would accelerate this desirable consummation by enumerating tare-growing among the list of their annual prizes. Too great care cannot be taken in order to procure the right kind of seed, as on this, in a great measure, may depend the success or failure of the experiment. N. Davidson Redpath.

Fox P. O., Allegan Co., Michigan.

MEASUREMENT OF HAY.

In answer to a correspondent's inquiry, "How many solid feet of hay in the mow will make a ton?" It is very difficult, on account of the difference in the solidity of the mow, to form a general rule to guide one in measuring hay.—If the mow be pressed quite hard with grain or something of the kind on it, 400 solid feet will weigh a ton. If not pressed by anything except its own weight, it will take 450 feet.—Hay may be pressed so hard as to weigh more than a ton to 400 feet, but it is not a common thing. I have seen a good deal of hay sold in this way, and once helped test a pressed mow, which weighed just a ton to 400 feet.

To preserve eggs through summer. It is a practice with us to take a bucket or keg, and put in a layer of salt; then set up the eggs on the little end, just as close as they can be without touching each other; then another layer of salt, and so on till your tub is filled; then cover them with salt. This way has proved very good with us. If these few words can do any good, use them.—S. A. Collins, *Sodus, Wayne Co., N. Y.*

Preparing Seed Corn.—I wish through the Rural, to inform my brother farmers how I prevent birds and worms from destroying my corn when planted. When my corn is shelled, I pour it into water nearly to a boiling heat, and stir with a stick until the grain is hot; then drain off the water, and put on tar enough to make plaster or ashes stick, and roll it in either. I prefer ashes. The less tar the better, and have the ashes stick. By this mode of treatment, I have lost but very few hills of corn either by birds or worms.—Sidranorum, *Manchester, Ontario Co., N. Y.*, 1854.

THOSE SCOTCH BLACK POTATOES.

The black potato is a very general favorite with all Scotch people. Its outer skin is perfectly black, beneath which there is a liner envelop (as in all potatoes,) of a slight blue tinge; the interior is perfectly white. When grown on good soil, they are mealy and of an agreeable flavor. They are very prolific; in Scotland, they are called "the poor man's potato," from this circumstance. Black potatoes are of two kinds, round and kidney shaped, although the qualities of both kinds are nearly alike. The late Sir Humphrey Davy made an analysis of the black kidney potato, and found that in the aforementioned pound of seven thousand grains it contained:

Of soluble mucilage,	160 grains.
Of pure starch,	705 "
Of fibre,	622 "
In water,	4513 "

Chemists have ascertained that all potatoes contain seventy parts of water and thirty of meal, in every hundred parts; the proportion of water is not greater in this case than in other varieties. They are a good potato, good when newly raised, good in spring, and good in summer. As the best kinds of potatoes are most subject to the "disease," and as those which contain the most farina are predisposed to the "rot"—the black potato, from its excellent qualities, was the first to suffer from what some have been pleased to call the "mysterious dispensation," and consequently it is now seldom planted in Scotland. It grows abundantly, however, in Michigan, and exhibits no symptoms towards disease or tendency towards degeneracy. With us it is both good and prolific. This potato, when good, has a rough black skin, with the eyes deeply set, or sunk in the skin. When they show a tendency towards degeneracy, the skins become smooth and shining, and the eyes are raised to a level with the surface. The seed must then be changed to a different soil, when they will recover themselves; but in localities subject to "blight," the coarser kinds of potatoes, as Merinos, &c., should be planted; as it may be laid down as a general rule, that the less farina a tuber contains, the more likely it is to escape the disease.

N. Davidson Redpath.

Fox P. O., Allegan Co., Michigan.

Remarks.—We are very much inclined to question the accuracy of the general rule, that the more farina or starch a tuber contains, the more liable it is to decay. It is to be presumed, that like wheat and Indian corn, the more perfectly matured the potato is, the more starch it would contain; and it is generally admitted, we believe, that the more perfectly matured or elaborated the potato is, the better likely it is to resist disease of all kinds—"the mysterious dispensation" not excepted. If this view is erroneous, our esteemed correspondent will please correct us.—Eds.

THE VALUE OF CARROTS.

Messrs. Editors:—As much has been said in your paper of late, on the growth and utility of carrots, permit me to express my opinion also. I have grown and fed carrots for a number of years, and have had some experience in this branch of agriculture. I believe carrots to be a profitable crop to feed to sheep, on warm days, two or three times a week during the winter and spring. They are also good to feed horses, say one peck per day. For this purpose they are worth two-thirds the price of oats. I have fed them annually to cattle for the purpose of fattening, and have found that some cattle will take on fat much faster than others fed on carrots and hay. A full-grown creature will readily eat one bushel per day after they become attached to them. For this purpose I consider them worth 12½ cents per bushel. I have frequently fed them to milch cows, and have long since become well satisfied that they will not increase the *quantity* of milk given, while at the same time I think the *quality* of the cream taken from the milk a trifle better. I tried the experiment this spring. As I wished to feed my cows that were coming in, some carrots daily, and having one cow that gave milk, in the same yard, I fed them all alike. About one week after I commenced feeding carrots, my wife asked me if I had not been feeding the milch cow differently from what I had done heretofore; for the milk, after the cream was taken off, looked far inferior to what it had done, while there was no increase in the quantity of the cream. Therefore I consider them of but little or no value to feed to milch cows, for the purpose of increasing the quantity or quality of milk; yet at the same time, I consider them beneficial to the cows.

Much has been said in regard to the raise of the carrot. I am of the opinion that they have been raised too high generally. 12½ cents per bushel is the fair raise of them, when ready to haul to the cellar, and at this price I can well afford to raise them. I generally raise at the rate of from 600 to 800 bushels per acre. I sow the Long Orange Carrot as early as the ground is sufficiently warm and dry, and cover from one to one and a half inches. The White or Yellow Carrot makes a very good substitute for pumpkin pies; the Orange is too strong for pies. W. D. Powers.

Peoria, March 29th, 1854.

CULTIVATION OF POTATOES.

I select, if possible, a gravel or sandy loam to protect from wet, and dry locations to procure an early planting. Manure heavily with coarse barn-yard manure, which, together with a good coating of grass, (clover if possible,) is plowed in, deep of course, the latter part of June. Saw to barb-wheel, which always leaves the ground mellow. The spring following, my ground is plowed as early as possible,—say as early in April as may be, and thoroughly pulverized. Mark the ground both ways 3 feet 2 inches apart. Plant the seed on the top of the ground, with a quantity of dry plaster thereon. As soon as the young plant appears above ground, plow and hoe, with a coat of plaster. In about ten days I go thro' with the same process, hauling but little dirt about the tops, with another coat of plaster.—By so doing, I have not failed, for years past, in obtaining a good crop, and of a good quality,—and that a *paying* crop. I have tried various experiments with the potato; but with the one above, and that only, have I succeeded.

The theory deduced from this experiment is, that atmospheric air, in an undue amount of heat, in the hill, is one great cause of the rot; for I find that manure not thoroughly mixed with the earth, or even heavy sod placed in direct contact with the young plant, produces too much heat, the potato is scalded, and rot ensues, particularly in a hot, showery season. Hence my manure is applied the summer previous, that it may become entirely decomposed, and thoroughly mixed with the soil. Planting early brings them forward before the hot, scalding sun, with frequent showers, can affect them.

Plaster applied often, and keeping the weeds down and ground loose, accelerates the growth of the potato; and the sooner they can be brought to maturity, the less liable they are to rot, and they will be of a better quality. If my ground is strong enough, I sometimes plant the same piece two years in succession with good results. H. B.

Windsor, N. Y., March, 1854.

TOBACCO FOR SHEEP TICKS.

Messrs. Editors:—Through the columns of your valuable journal I wish to speak one word to the readers of the Rural. It is generally supposed by flock-masters, that ticks on sheep are detrimental to the growth and hurtful to the wool of Sheep, which no doubt is the case, and a disease called the *scab* is worse than the ticks. Now for the remedy:—The ticks can be killed, and *scab* cured, by a narcotic poison commonly called Tobacco. Every farmer in the United States can raise it if they have a plot of rich ground. Any readers of the Rural who have a desire to raise Tobacco, for the cure of scab and ticks, and will pre-pay *their own postage* to me, and forward a *pre-paid envelope* with their post-office address, I will send them Tobacco seed to raise all the plants that would be required for one hundred to five hundred sheep, if well cultivated. It is the Northern Tobacco, and called the strongest kind, but smaller than the Virginia. The seed should be sown early in spring, on warm, sandy soil, where the north wind does not strike,—or in other words, not in a bleak, cold place. It is preferable to sow the seed on new land.—But if the farmer has no such plot, he can burn the ground by covering it with straw, and setting fire to it. The seed should be sown thin and brought forward, so that they will do to set by the middle of June, and then transferred to mellow, rich land, two feet apart each way, and kept free from weeds. After they have attained the height of four or five inches let the tips of the tops be cut off, and it will branch out; and the branches, after they are three or four inches in length, should be clipped at the ends on all those that you do not wish to go to seed. Before the ground freezes, or heavy frosts come on, the Tobacco should be cut and hung up to dry in a building; and when well dried, packed down, stocks and all together in a hogshead or barrel for future use.

J. P. Young.

West Rupert, Vt., March 21, 1854.

SALTING CATTLE IN WINTER.

Once or twice a week or as often as my cattle want salt, I throw upon the barn floor a foddering of straw or poor hay, which every farmer has more or less of. I then take a pail of water, and put into it as much salt as I want to feed, and stir it till all is dissolved. Then, with a wisp of straw, I sprinkle it over the fodder, and stir up well with a fork, and then sprinkle over again with the brine, and so on until the brine is exhausted. Then I throw it out in small bunches, and it is as readily devoured as the best hay. My cattle are hearty and in good condition all winter. W. S. C.

Almond, Allegany Co., N. Y. March 25th.

Plaster on Potatoes.—Last year, on a dry sandy soil, I put some plaster on potatoes.—It did much good. The plastered potatoes continued to grow much later than the others, and yielded larger ones and more in a hill.—Have any of the readers of the Rural obtained like results?—B. S. *North Chili, N. Y.*

Agricultural Miscellany.

THE BRITISH CORN TRADE.

The following extract from the London *Mark Lane Express*, of March 13, will be read with interest:

Though war has not as yet been actually declared, matters are fast progressing to a point to render this inevitable; and we appear to be on the eve of events calculated to produce great effects on the corn trade. The mere probability of supplies from the Black Sea being interfered with, was, some months ago, looked upon as a serious affair; but, now that it has become known that further shipments from thence have been prohibited, little or no excitement is produced thereby. Has the effect been anticipated? or is the existing apathy caused by the belief that the Emperor of Russia will, when he finds England and France in earnest, give in? The dullness may perhaps be attributed partly to the high rates already current, and partly to the expectations still cherished that the war (if it should be entered upon) will prove of short duration. Speculation is thus kept in check; and, as supplies continue to reach us on a sufficiently extensive scale to satisfy the consumptive demand, the possible future is for the present lost sight of. Another circumstance—viz., the probability of money becoming tighter—is not without considerable influence; there is a decided unwillingness to encourage speculative investments; and, though there cannot be said to be any immediate pressure, we hear from time to time of forced sales. These have perhaps been more frequent and on a larger scale at Liverpool than elsewhere, owing to the arrivals from America having been heavier there, and importers having been enabled to realize without incurring actual loss, the goods having been purchased on the other side of the Atlantic before the last rise.

After a careful consideration of our present position, we feel inclined to think that, however unwilling buyers may be to act, there is little prospect of any material reduction in quotations; and we should certainly not be surprised to witness a rally earlier than the existing state of things appears to promise.

The millers have for a considerable time past been working out of stock; the bakers have done the same, and the trade generally may be said to have confined themselves strictly to the hand-to-mouth system. This may do very well so long as all goes on smoothly; but, should circumstances occur of a nature to create the least uneasiness, there would be an immediate anxiety to provide for future contingencies; and who can say that—with this country on the eve of war with Russia, with such a deficient harvest as the last, and with consumption as great, if not greater, than was ever before known—uneasiness for the future may not arise?

The returns of the sales made at the towns which furnish the data for compiling the averages, continue to show the same falling off in quantity as for some months past. We have frequently drawn attention to this fact, because it appears to us to afford strong proof that the deficiency in the last crop—which was generally estimated at a fourth to a third—was not over rated. The last return published on Thursday, gives the quantity sold during the week as 61,000 qrs., against 34,000 qrs. in the corresponding week last year.

Sheep Disease in England.—Great complaints are made in various parts of England respecting foot-rot and other sheep diseases.—"The epidemic," as it was termed a few years since, but now more properly "an established foot disease," is making sad havoc in many flocks; the young lambs are also suffering from it to a greater degree than ever before known, and their growth is much retarded in consequence. There is also a very general complaint of lambs coming dead at birth. Many flock-masters have had as many dead as live lambs. The cause is attributed to the hay of last season, which, in consequence of the long-continued wet weather at harvesting, was very much damaged. One of our correspondents informs us that nearly all his hay last season was cut and lay exposed for upwards of three weeks. It was, however, at length "harvested in good condition, and salted, and the cattle eat it freely." We are not surprised that cattle living on such hay should be troubled with a complication of diseases.

Wisconsin State Agricultural Society.—We are indebted to the Secretary, Albert C. Ingham, for the Transactions of the Wisconsin State Agricultural Society for 1852. It is a handsome volume of some 450 pages, and contains the usual variety of interesting matter.—There are quite a number of spirited essays on such subjects as the potato disease, culture of grasses, agricultural fences, the different breeds of neat cattle, relation of crops to soil, rural husbandry in Wisconsin, adaptation of crops to soil and climate, &c., &c. It contains also several portraits of animals, outlines of fruit, &c., and is, on the whole, highly creditable to the state, and to Mr. Ingham.

Buckwheat as a Green Manure.—A correspondent of the *Ohio Cultivator* has thoroughly tested plowing in buckwheat to enrich land for wheat, and can testify that clover is in every way superior to buckwheat for this purpose. He once tried buckwheat two years, and received no benefit, but with clover he got an extraordinary crop. We believe this is the common experience of all who have tested the matter. It is, too, consistent with sound scientific principles.

Squash Bugs.—A correspondent from Canandaigua, N. Y., thinks Scotch snuff a better, easier and pleasanter remedy for the depredations of squash bugs than the one recommended by Mr. Briggs. "When the first small bugs appeared I scattered Scotch snuff upon them, which caused them to beat an instant retreat. Presently the "stink bug" made their appearance in such numbers that I thought my vines were sure to be destroyed.—I went out early in the morning, before the army had risen from their leafy bed, and carefully clipped the leaves which had most bugs on, and burnt them. I then scattered the snuff freely and it made the bugs sneeze themselves to death."

Superphosphate of Lime.—A correspondent of the *Boston Cultivator*, John Jackson, Milton, Conn., has used half a ton of Mapes' Improved Superphosphate of Lime, on corn, potatoes, oats, &c., without any benefit. He says:—"I tried it on wet land, and dry, rich and poor, but its effects were not satisfactory with me on any, and I inquired of my neighbors who used it more extensively than I did; *they say, without an exception, that it is a humbug.* I see again, the same advertisements as last spring, stating its valuable qualities, and some may be deceived by them, but not in this section of the country."

The *Maine Farmer*, speaking of "Mapes improved superphosphate of lime," says:—"The sulphate of ammonia is also decomposed (by the addition of sulphuric acid,) yielding additional quantities of ammonia." We do not wonder that Mapes can so easily humbug farmers, when the scientific editor of the *Maine Farmer* so *unthinkingly* adopts his assertions. The sulphate of ammonia *is not decomposed; nor is any additional ammonia yielded by the mixture.* Indeed there can be no possible advantage in treating sulphate of ammonia with sulphuric acid, and why Mapes should add it to his fertilizers, we can not imagine, for Peruvian guano is a much cheaper source of ammonia.

Sowing too much Land to Grain.—Our esteemed friend, John Johnston, of Geneva, N. Y., writes us that he thinks the editors of agricultural papers are wrong in urging farmers to sow more land to grain the present season in hopes of getting high prices for it next fall. He thinks that as a general thing, farmers plow and sow a great deal too much land, and also keep more stock than they can keep profitably. When the price of grain is low, they sow more land in order to have more to sell, and now there is a prospect of high prices, they are recommended to adopt the same practice. He would have farmers remember that *always* plowing more, will not raise more grain.

Inquiries and Answers.

Brick Cisterns, Guano, &c.—Will you, or some of your subscribers inform me, through the Rural, whether a cistern paved with brick, and two coats of water-lime, is as expedient as one of stone in the same way; and also whether guano is a proper fertilizer on onions in black muck soil?—Chi. K., *Chili, April 1, 1854.*

The expediency of using stone or brick would be determined somewhat by the locality and relative value of stone and brick. We think a brick cistern, properly coated with water-lime, would be as good as one built of stone, but would like to hear the opinion of our more experienced correspondents.

We have used Peruvian guano on light soil for onions with the most beneficial results. In fact, guano applied in the liquid state, is the best manure we have ever used for onions.—A black muck soil is not at all favorable for onions, but we think guano would be the best manure that could be used for them. A rather heavy loam is the best soil for onions. You may use two or three pounds of guano to the square rod, with great profit, for onions.

Guano on Wheat.—I have a piece of wheat, sown rather late last fall, after corn; did not get but a small top last fall, and looks somewhat slim now. I think of seeding to clover, and applying a top dressing of guano and plaster.—Can you, or some correspondent, tell me through the columns of the Rural, how it will do?—Will it pay cost? How much guano should be applied to the acre, &c. Soil, clay loam. The earth has been naked all winter in this section. Wheat looks extremely poor.—New Brunswick, *Reading, Steuben Co., N. Y.*

Good Peruvian Guano, at the rate of from 200 to 300 lbs. per acre, sown broadcast *as early as possible*, will undoubtedly do much good on wheat. If you wish to sow plaster, let it be done separately. Mixed with guano, it has a tendency to liberate the ammonia, and thus to do much harm. Whether it will pay cost, or not, depends on the price of wheat.—See articles in the Rural, of March 25th and April 1st.

Summer-House.—Will you be so kind as to give a plan for a summer-house, to be built of cedar with the bark on; or something similar for a cottage garden,—directions how to build, cost of material, &c., and oblige one of your lady subscribers.—*Macedon, March, 6, 1854?*

Orchard and Garden.

THE AMERICAN TENT CATERPILLAR.

Although there are several species of the caterpillar tribe, that infest our orchards, yet there is no other one of them so universal and so destructive as the American Tent Caterpillar—*Clisiocampa Americana*, of Dr. Harris. And heave no vigilance should be spared to destroy them, wherever and whenever they are found. Where but little attention has been paid to their destruction, they have been found to increase so rapidly that the orchards bear a sorry appearance. Dr. Harris, in his invaluable treatise on "Insects Injurious to Vegetation," remarks that "the tree where they have been suffered to breed for a succession of years, become prematurely old, in consequence of the efforts they are obliged to make to repair, at an unseasonable time, the loss of their foliage, and are rendered unfruitful, and consequently unprofitable."

The wild cherry tree is their natural home, and on these they may generally be seen in abundance. Hence, in our efforts to be rid of them, we should spare none of these; else they will continue to plague us almost as much as though we did nothing. But to be fully successful, it is necessary that *all* should be equally active in the warfare. And it is here as in other things—the careful and provident are forced to suffer and bear the greatly increased labors forced upon them by the indolent and thoughtless.

Now is the best of all times to examine the orchard and garden, to find their eggs, and so destroy them before they are hatched. If a tree is closely scrutinized, they may be seen on the small branches, in the form of a short cylinder encircling the limb, and looking like a brownish ring. This ring is composed of some three to four hundred eggs, set upon their ends, and compressed together, and the whole covered with a good coating of water-proof varnish. Discovering them, now they are readily removed with the thumb-nail and finger.

About the beginning of May, or as soon as the leaves unfold, they are hatched, and the whole brood then make their way to the forks of the branches below them, where they form a web, which is their shelter at all times when not feeding. As they increase in size their tent is enlarged, till at last it becomes of large size, sometimes nearly or quite a foot in diameter. They have their regular feeding hours, which are twice a day—once in the forenoon and once in the afternoon. At all other times, and during foul weather, they are found in their tents and may then be readily destroyed. Especially is this the case when they are young, and their web small. A stick thrust into their nests, twisted about till it is all taken up, and then crushed against some hard substance, or thrust into boiling water, will finish them. If any are chanced to be left behind, they should be sought out. Upon branches beyond reach a brush or swab, or something of the like, may be attached to a pole and used. This should be dipped in soap-suds, strong whitewash, or chop oil. Much pains should be taken to drench them well, for all that take the bath will be killed. Such nests should be looked to frequently, that if any stragglers have been left to form a new nest, they may be routed.—Death and victory should be the watchword, which should be had even at the hazard of cutting away the limb and consuming it with fire. But this need not be if the proper pains are taken at the right time.

The caterpillar remains about seven weeks before it changes to the chrysalis form. Dr. Harris says, "They then begin to leave the trees upon which they have hitherto lived in company, separate from each other, wander about awhile, and finally get into some crevice or other place of shelter, and make their cocoons. These are of a regular long oval form, composed of a thin and very loosely woven web of silk, the meshes of which are filled with a thin paste, that on drying is changed to a yellow powder, like flour of sulphur, in appearance.

From fourteen to seventeen days after the insect has changed to a chrysalis, it bursts its chrysalis-skin, forces its way through the wet and softened end of its cocoon, and appears in the winged or miller form. The moth is of a reddish brown color, more or less mingled with gray on the middle and base of the fore-wings, which, besides, are crossed by two oblique, straight, dirty white lines. It expands from one inch and a quarter to one inch and a half, or a little more. They appear in great numbers in July, flying about and often entering houses by night. At this time they lay their eggs, selecting the wild cherry, in preference to all other trees, and next to these the apple trees." The peach tree is not exempt from them either. Spring is the usual time for the broods to hatch, but the writer has known instances of their hatching in the latter part of summer. Insect depredators are increasing upon our orchards, our fruits and our grains, and the utmost vigilance is necessary to head them off.

T. E. W.

PEACH GRUBS.

Mr. Moore:—Your correspondent K, inquires if there is no other remedy for the peach grub but the knife. From long experience I have never found any other. No Homœopathic treatment is of the least avail after the worm has a fair lodgment under the bark, which is infallibly shown by the exudation of highly-colored gum. Late in the fall and early in the spring is the period to thoroughly eradicate the pest, and it is wise to do it thoroughly, even at the risk of freely cutting the bark; for if you do not, the worms will, and at a period that the bark will not granulate and the trees recover. The prevention of their depredations is so easy, that no one who is willing to take a little trouble ought to complain.

The parent insect is the *Zygæna Persica*, and can hardly be distinguished from the black mud wasp, except that the male has two yellow bands around the abdomen. They are both a dark steel blue. The female is much less in size, and differs a good deal in general appearance. She deposits her eggs about the middle of July in the cracks of the bark, very near the surface of the ground, which very soon hatch and bury themselves in the bark beyond the reach of medicine. Their cocoons will be found on the surface about the first of July in the course of transformation into the perfect insect, when they soon after commence depositing their ova, and continue till the first of September.

The only security is in fencing the miscreants out, and putting a secure barrier between them and their haunts to prevent a *nidus* for their future progeny; and the most handy and convenient process is, to haul up a mound of earth around the bole of the tree, four or five inches in height, and a foot in diameter; this effectually prevents the insect from laying its eggs in the soft and tender bark at the root. After the first frosts the earth should be leveled and the bark examined, and if any interlopers are found, they are readily discovered and destroyed.

A shovel or two of leached ashes used in the same manner is good and safe; so is straw tied round the tree, or thick straw paper; in short any kind of fencing that will deter the insect from following its natural instinct.

All pitching, tarring or other liquid applications are useless, as the bark, in expanding, cracks and exposes the tender surface most convenient for the deposit of eggs.

March, 1854. B. MANLY.

PURPLE CANDY-TUFT. SALPIGLOSSIS ATROPURPUREA.

THE CANDY-TUFT AND SALPIGLOSIS.

The Purple Candy-Tuft (Iberis Umbella,) is a native of Candia, and receives its name partly from this fact, and partly from the form of the flowers. Seeds were taken to England about the year 1590. It soon become a great favorite, and is now found in nearly every flower garden in the United Kingdom. There is much risk in transplanting the Candy Tuft, so that it should be sown where it is intended to remain. It flourishes on all rich, well drained, and well pulverized soils. The *Horticulturist* says:

"When the plants are going into flower, the heads should be examined; and if too numerous, they should be removed. By this treatment, and occasionally loosening the ground around the plants, and keeping it free from weeds, flowers have been grown three inches across, most beautifully colored, being of a very dark purple on the outside, and softening to nearly white in the centre. The great points are, thinning the flowers gradually, as they increase in size, and supplying their roots with abundance of rich food when they are going into flower. By this mode of treatment much finer flowers may be grown than those usually seen in our gardens. The *Lilac* Candy-Tuft is a fine variety, of a beautiful lilac color.

The Rocket Candy-Tuft (I. coronaria) is a splendid species, growing two feet high, branching widely, each plant producing three to five racemes of flowers from six to ten inches long, and the centre one even longer than this, if properly cultivated. Cultivation the same as the Purple.

The Salpiglossis is a native of Chili, and was introduced into Europe in 1824. It bears a strong resemblance to the Petunia. The genus contains many kinds, differing only in color, and are all funnel-shaped, like the Petunia, but not so broad. In our bed, last year, we numbered about a hundred different varieties, many of them distinct and beautiful.—They were sown about the first of May, and early in July were in full bloom, and attracted crowds of admirers. We have found them to flourish best on a light, dry soil. They should have a place in every flower-garden.

The name Salpiglossis, which signifies a tongue in a tube, is supposed to allude to the shape of the stigma, which is plainly seen in the centre of the tube-shaped corolla.

If you would have fruit, lop off every dead bough, and in the spring, immediately after the sap has arisen sufficiently to show where the blossoms will be, cut away all the branches having no indications of blossom, thus concentrating the sap of the tree upon the maturation of its fruits.

THE CONCORD GRAPE.

Mr. E. W. Bull, in *Hovey's Magazine*, describes a new native Seedling Grape that he has produced, which, if it shall come up to the description, and realize what it at present promises, will supply a *desideratum* in the grape family that has long been needed:

"The Concord Grape is a seedling, in the second generation, of our native grape, and fruited for the first time four years since, being at that time the only seedling I had raised which showed a decided improvement on the wild type.

Notwithstanding its unfavorable position, it has proved a great grower and bearer, and very constant to its quality and season. The seedling from which the Concord was raised, grew near to a Catawba, and, it is quite possible, was impregnated by it, it having the flavor of that variety. The parent vine was a good and sweet grape, large, black, and ripe the 20th of August.

The Concord Grape, as I said before, is a strong grower: the wood strong, the foliage large, thick, strongly nerved, with a woolly under surface, and has never mildewed or rusted under any vicissitudes of weather.

The grape is large, frequently an inch in diameter, and the bunches handsome, shouldered, and sometimes weigh a pound. In color it is a ruddy black, covered with a dense blue bloom, the skin very thin, the juice abundant, with a sweet aromatic flavor, and it has very little pulp."

Bayay Plums.—Some three years since, I purchased of Messrs. Ellwanger & Barry, of Rochester, a plum tree of the *Reine Claude De Bavay* variety, paying therefor an extra price, supposing I was purchasing a very superior kind; and took scions from it and grafted other trees which grew vigorously, and bore soon an plentifully, but I have been disappointed in the fruit. It is of good size, but rots on the tree, before it is fully mellow. I have been on the point of cutting them down as cumberers of the ground, but thought I would first inquire of your many correspondents, what *their* experience has been with the same fruit. Is it worthy of a place in a choice collection of plums?—S. C., *Weedsport, N. Y.*

Mr. Justin Chenoweth writes from the Dalles, Oregon, that he is growing in his garden a cabbage which he has carefully measured, and found it to cover a space embraced in a circumference of nearly fourteen feet, being four feet and six inches in diameter. The solid head is twelve inches in diameter. He thinks that the whole would weigh over fifty pounds, and the head will probably attain sixteen inches in diameter.

Every farmer should have a well cultivated kitchen garden; and for the pleasure and comfort of his wife and daughter, a front-yard neatly decorated with flowers and shade-trees. About such premises, on a well cultivated farm, everything looks like thrift and comfort.

Mechanic Arts, &c.

LIST OF PATENT CLAIMS

Issued from the United States Patent Office,

For the week ending March 28, 1854.

Elijah Valentine and Abel Bradway, of Monson, Mass., for improvement in machines for jointing staves.

Elbridge Webber, of Gardiner, Maine, for improvement in ship's blocks.

Ellsworth D. S. Goodyear, of Stapleton, N. Y., assignor to New York Rubber Co., of New York, for improvement in processes for treating India rubber.

Robt. H. Harrison, of Washington, D. C., assignor to Robt. H. Harrison and John S. Gallagher, Jr., of same place, for improvement in churns.

A. J. Cook, of Enon, Ohio, for improvement in the discharging apparatus of harvesters.

H. G. Ellsworth, of Auburn, N. Y., for improvement in belt clasps for machinery.

Benj. G. Fitzhugh, of Frederick, Md., for improvement in harvesters of grain.

Luther B. Fisher, of Coldwater, Michigan, for improvement in seed planters.

Benaiah Tilts, of Worcester, Mass., for improvements in feed water apparatus for steam boilers.

Richard Adams, of the county of Burlington, N. J., for improvement in making zinc white.

Seymour Fetchum, of Lancaster, Ohio, for improvement in stump machines.

Chas. P. Bailey, of Zanesville, O., for portable head-rest for chairs.

Anson Babling, of Olney, Ill., for improvement in submarine scraps.

Thos. W. Chatfield, of Utica, N. Y., for improvement in hot-air furnaces.

Jos. Marks, of Dunkirk, N. Y., assignor to Wm. Whiting, of Roxbury, Mass., for improvement in machinery for operating car-brakes. Patented in England, Nov. 23, 1852.

Jas. Marks, of Boston, Mass., and Jno. Hourarth, of Salem, Mass., assignors to Wm. Whiting, of Roxbury, Mass., for improvement in machinery for operating car-brakes.

Jno. Absterdam and Wm. Merrell, of Boston, Mass., assignors to Jas. A. Woodbury, of Winchester, Mass., and Wm. B. Merrill, of Boston, Mass., for improved device for tonguing and grooving tapering boards.

Richard D. Mott, of Spring Garden, Pa., for improvement in stereotype pans.

Nicholas G. Norcross, of Lowell, Mass., for improvement in feed motion for sawing timber.

David B. Rogers, of Pittsburgh, Pa., for improvement in machines for forming cultivators' teeth.

Wm. H. Seymour, of Brockport, N. Y., for improvement in harvesters.

Jos. Smart, of the Northern Liberties, Pa., for improvement in pumps.

Henry C. Smith, of Cleveland, Ohio, for improved construction of shingle machines.

Thos. G. Stagg, of Jersey city, N. J., for machine for tenoning, &c., blind slats.

Jonathan C. Trotter, of Newark, N. Y., for improvement in furnaces for zinc white.

Geo. Trott, of Pittsburgh, Pa., for improved oil cup for steam engines.

Wm. Webster, of Morrisania, N. Y., for improvement in machines for bending sheet metal.

R. A. Wildyr, of Schuylkill Haven, Pa., for improvement in railroad car wheels.

Edward H. Ashcroft, of Boston, Mass., for improvement in track-chasers for railroads.

Jos. Leeds, of Philadelphia, Pa., for improvements in cooking stoves.

Henry Underhill, of Canandaigua, N. Y., for improved hand printing-press.

Ephraim, Titus & Emerson Sizer, and Amos Halladay, of Westfield, Mass., for improvement in Sacket's braiding machine.

Jas. Baxendale, of Fall River, Mass., assignor to himself, and Jas. Ferguson, of Taunton, Mass., for improved method of operating the doctors of calico-printing cylinders.

RE-ISSUE.

Horace P. Russ, of New York, for improvement in sub-strata for parchments. Patented March 14, 1848. Re-issued March 38, 1854.

SPECTACLES.

Reader, has the rapid railroad of time whirled you past the 50th or 60th degree of the north latitude of age? Then you are in the frigid regions of manhood, and your optical lens are flattened and oblate, and good English is all Greek to you, without the aid of convex assistants. Was you ever in a situation without your *squintacles*, that you would give a dollar to be able to see, read and write, as well as you could in the days of your puppyhood? If so, read the following discovery, and send the money to the printer, for the benefit of any charity you please.

Make a pin hole through a slip of common playing card, or an address card, or even stiff letter paper, and place it close to the eye, shutting the other, and with a good light the vision is as perfect as in youth. It is a device that I have often availed myself of, to my great advantage.

O. O.

Screw Propellers.—Horatio O. Perry, of Buffalo, N. Y., has taken measures to secure a patent for an improvement in propellers. The improvement is more particularly applicable to the submerged propeller. This improved screw is composed of two or more hubs, from each of which radiates a series of arms, to which the blades are attached, they (the blades) extending only a portion of the distance from the exterior towards the axis of the screw.—*Scientific American.*

Experiments have proved that porous sand and other stones when steeped for about 48 hours in hot coal-tar, (160 Reaumur,) acquire a greater degree of hardness and become impermeable to water. Bricks require only 4 hours, and the coal-tar a temperature of 90 degrees Reaumur to become as hard as rock. The latter would answer best for sidewalks.

The power of a water-wheel depends on its construction; but the power of the water is obtained by multiplying the number of pounds which falls in a minute, by the height of the fall, and divide by 33,000.—*Sci. Am.*

THE BAROMETER OUTDONE.

A correspondent of the Philadelphia North American gives an interesting description of an ingenious instrument, contrived by Dr. Merryweather, of Yorkshire, England, the great working principle of which is found on the sensitiveness of leeches to the changes of the weather. It is well known that leeches confined in a bottle partly filled with water, are accustomed, previous to a storm, to rouse from their sluggishness, and exhibit signs of extraordinary perturbation. They will swim in all directions, and rising one after another to the top of the water, commence climbing the side of the bottle. Availing himself of this time-honored custom among the leeches, Dr. Merryweather arranged a number of bottles on a stand, each containing a leech and a metal tube of a particular form, covered with shellac varnish, so that no metal could come in contact with the animal. When a change in the weather was about to take place, the leeches would crawl into this metallic tube, and in so doing displace a small piece of whalebone which was arranged so as to partially close the opening. To this whalebone was attached a wire, which passing upward through the mouth of the bottle, connected with the hammer of a bell, so that whenever the leeches were influenced by the electro-magnetic state of the atmosphere to ascend the tube, notice of the fact would be promptly transmitted to the ears of their master.

But it is not absolutely necessary that every one should have such a finished apparatus as that of Dr. Merryweather. On board of vessels it would only be necessary to keep a few leeches in a bottle, placed in some prominent place where the lookout could occasionally examine their movements, and the necessary warning be conveyed in ample time.

Dr. Merryweather seems to have tested this invention fairly. For an entire year (1850) he wrote to the President of the Philosophical Society of Whitby, accounts of the storm indications of his leeches; and in no instance did they prove incorrect. If these results are verified by other observations, a leech barometer may be deemed an indispensable appendage to every ship and household.

Seed Planters.—Ives McGaffy, of Philadelphia, has taken measures to secure a patent for a useful improvement in Seed Planters. The plow has two wings of peculiar construction, which both open the furrow and cover the seed: a roller passes down the soil on the seed after it is planted. The channel for dropping the seed is so arranged that it serves to conduct both the seed and manure into the furrow at the same time—a good arrangement.—*Scientific American.*

Threshing Machine.—Spencer Moore, of Central Bridge, N. Y., has made an improvement on Threshing Machines. It consists in the employment of grain and dust arresters, arranged in such a manner as to prevent the dust and grain from passing upward in the face of the operator or feeder—these arresters cause all the dust and grain to pass through the machine.

Domestic Economy.

Liquid Glue.—The following recipe, the discovery of a French chemist, is selling about the country as a secret, for various prices from one to five dollars. It is a handy and valuable glue, as it does not gelatinize, nor undergo putrefaction and fermentation and become offensive, and can be used cold for all the ordinary purposes of glue, in making or mending furniture, books, broken vessels, that are not exposed to water, &c.

In a wide-mouthed bottle, dissolve 8 oz. of best glue, in a half pint of water, by setting it in a vessel of water, and heating till dissolved. Then add slowly, constantly stirring, 2½ oz. of strong aquafortis (nitric acid). Keep it well corked, and it will be ready for use.

Keeping Quinces.—A new fact in domestic economy has been communicated to us by Mrs. B. Shurtleff, of Chelsea. At the usual time of gathering quinces, they were put into barrels filled with water and placed in a cellar. A few days since they were opened, and the quinces found perfectly sound—not one had decayed in the least. We are indebted to Mrs. Shurtleff for a specimen of the fruit which has thus been kept through the winter, and had just been prepared with sugar in the usual way. It has the aroma, peculiar flavor, and all the qualities of fresh quince. From Mrs. S.'s experiment, we should think this mode of keeping quinces an important desideratum.—*Boston Cultivator.*

Fire Kindler.—A very convenient material for kindling fires, may be made by melting together, in any iron kettle, a quantity of tar and rosin—putting in rosin enough to render the mixture moderately hard when cold—and while hot stir in a large quantity of charcoal dust, or even saw-dust. When the mass is cold, break it up with a hammer into lumps, of a convenient size, say about as large as a hen's egg. The smaller fragments produced in breaking, can be re-melted, and again broken to the required size. It will facilitate the breaking operation, to pour the mass while hot upon a flat stone or hearth, that it may spread out into a flat cake.

Chapped Hands.—Mix a quarter of a pound of unsalted hog's lard, which should be washed first in water, and then in rose water, with the yolk of a new laid egg and a large spoonful of honey. Add to this as much fine oatmeal or almond paste as will make the whole into a paste, and apply this after washing the hands.

Educational.

[Written for the Rural New-Yorker.]

IT DIED.

LACK OF ENERGY KILLED IT.

"Well, friend Charles, how does the Lyceum flourish, during these rough roads and dark nights? A great amount of energy must be requisite, these dull times, to get up so much interest as I hear is manifested by the members. I will venture that those weekly original articles add much to the entertainment of the spectators, and give an energetic appearance to the society. I must say that I envy you somewhat; for I have long wished for such an opportunity to improve myself in composition and declamation. Yet for your advancement, and all connected with so useful and instructive an institution, I can but wish it a long life and a fruitful old age. For, although a great disparity of talents and experience exhibits itself in the speakers, yet almost every one advances some new thought; or the peculiar and forcible expression of some new idea conveys a useful lesson to the mind of the listener."

After my friend had finished this harangue, or before he had time to commence another similar strain, I broke suddenly, and almost unmanneredly, in upon him, with a "Yes, Sir; there seems to be some prospect at least of our having a flourishing Lyceum this term. Men of talent, old and young, have joined it, and the number is already sufficient to occupy the time that we have for this purpose. Give us a call some session, will you not, B.?"

A few weeks have passed since the above conversation occurred, and I am again met by my friend and critic; who in his numerous questions and anticipations inquires about the Lyceum, at the same time stating his intention of calling at the next meeting. Oh! shade of the past, hover o'er me with your sable wing! A sense of shame and remorse thrills my head and heart, my eyes fall, my face reddens, the blood courses more rapidly through my veins. Not that the guilt rests alone upon me! Yet the truth must be spoken, though to the disgrace of the members of that body; though to the disparagement of the place in which it was born, and upon whose bosom it died; I must say, for some time its interest almost insensibly declined, and, despite the exertions of a few, who labored hard, who struggled nobly to sustain its character, its interests and its prosperity, it gradually wasted away. As that fell disease, Consumption, preys "slowly though surely" upon the vitals of its victim, eating out his very life's core by degrees; so did negligence, love of ease, want of ambition, (that worst of all diseases,) prey upon the vitality of this Lyceum, until at last the members, (except a few,) one by one, like the lingering sands of an hour-glass, fell quietly to sleep in the cradle of carelessness. And the few who for a long time had borne the task of the many, quietly disbanded, feeling keenly the bitter shame that attached itself to this society. And where, in the sterner duties of life, shall we look for those who could not or would not sustain their part in this Lyceum?

From a Member.

Hunt's Hollow, Feb, 1854.

EDUCATIONAL APHORISMS.

BY J. P. WICKERSHAM.

I.

The human mind requires culture. The unobstructed capability is proof of the necessity. Where nature erects no barriers she intends admission. Instinct is perfect and admits no improvement; and, we are all hedged about with pain and diseases when we would enter unforbidden regions. But on the side of mind, all is open—free—unbounded.

II.

The culture of the mind must not be partial, but extend to all its faculties. The argument for the development of one, must be conclusive as to the development of all. The senses, perception, conception, imagination, abstraction, reason, moral sentiment, and whatever other powers the mind may have, all claim due culture. Each is a talent committed to our charge, and we bury it in the earth at our peril.

III.

Mens sana in corpore sano. The body must be healthy in order that the mind be properly trained. The patient's short intervals of rest when his frame is racked by disease, or the maniac's fitful glimmerings of reason, allow at best, but spasmodic mental effort. It may well be doubted whether poverty and hunger are circumstances favorable to mental or moral culture. A mystic philosophy would have us think that the body impedes the growth of the soul, and its believers heavily afflict the former for the good of the latter. But *such* fanaticism needs no serious refutation. We are conscious of the reverse.

IV.

The duty of development argues freedom of condition. If the Creator intended that the mind should be cultivated, all institutions, laws and conditions, which in any wise hinder his wise designs, must be contrary to his will, and therefore wrong.

V.

The mind grows by internal impulse, not by external pressure. Rules, laws and punishments may direct; but the impulse that prompts to a free and generous progress must come from within. Still, our duty as citizens, and the calls of business demand that the mind shall be *instructed*, as well as *educated*, and educational institutions should provide for both.

VI.

Whether the object of government is negative, and intended to protect the weak against the strong, and provide for the security of the rights of life, liberty, and happiness; or whether it is positive, and designed to develop the resources of a country, and stimulate its people to moral and mental exertion, in order to render them more prosperous and happy; or whether it is both, combined;—the duty of making provision for a free and enlarged system of education is alike imperative.

VII.

The key to all proper development, whether mental or physical, is judicious *use*. This is the "faithful servant" who will make the two talents four; or five talents ten. A blacksmith's arm and the mind of a Bacon grow virtually by the same process. We learn to remember, by remembering; to reason, by reasoning; to love, by loving; and in no other way. The whole art of teaching consists in inducing these processes in the minds of others.

VIII.

The educator may affect the mind of his pupil in three ways:—1st, by precept—the rule and its reason. 2nd, by example—for he can create kindness, by being kind; have industry, by being industrious, and induce thought by thinking. 3rd, by circumstances. The rolling thunder, the dashing flood, and the mysterious fossil teach us to reason, as the riddle prompts the reading; and towering mountains, dancing streamlets, and singing birds awaken imagination and tune the soul to melody and music.—*Pennsylvania School Journal.*

PROFESSOR BENJAMIN SILLIMAN, Sen.

The Essayist.

PROFESSOR SILLIMAN.

It is a well known fact, that men of science and literature, men engaged in the peaceful pursuits of the laboratory, the observatory, or the sanctum, pass through life without challenging that attention from the mass of men which is awarded to the brawling politician and noisy demagogue, whose flattering tongue and brazen throat, bray forth discordant notes at street corners, on the platforms of the so-called "Mass Conventions," and in both houses of the National Congress and the State Legislature, where they have too often been sent for other qualifications than sound statesmanship and scholarly attainments. The former class of men are known by their fruits, and are honored not so much by their cotemporaries, as by after generations; the latter obtain a short-lived and clamorous personal popularity, and then sink into an oblivion that knows no resurrection.

Professor Benjamin Silliman, Senior, whose portrait heads these columns, is one of the most distinguished men of science in this country.—Having been connected for many years with Yale College, at New Haven, the influence exerted by him upon the minds of educated Americans, and through them upon the mass of his countrymen at large, cannot be estimated. As the editor of the Journal of Science, and a contributor to the many works of scientific literature, which have been published in our country, his labor and services are invaluable. As a pleasing and instructive, as well as a learned author, his travels in Europe many years ago, as also again in 1851, are read extensively by all classes of society.

Prof. Silliman is one of the solid men; the representative of Old America in the world of science, in contradistinction to those fast young men who study superficially, think crudely, and publish profusely—who deal in words rather than ideas, and set themselves up as priests in the temple of science, when they are only fit to act in the capacity of porters at the outer gate.

The physiognomy of the above head is fully and perfectly an index of the man's character. His massive brain, his penetrating eye, every line and lineament of his face speak out the character of the soul within.

A sententious philosopher once asked a man what he had done to further human progress; and was answered, that he had raised seven sons and two daughters. Professor Silliman cannot boast of a family of that dimension, but the children he has raised are following in the same honorable path trodden by their progenitor. One son, Benjamin Silliman, Jr., is Professor of Chemistry in Yale College, and the author of a valuable text book on that branch of science. A son-in-law, Dr. O. P. Hubbard, is Professor of Chemistry and Mineralogy, in old time-honored Dartmouth, while his wife is at the head of an excellent female school in the same town. While the names of Faraday, in England, and Arago, in France, are identified with the progress of the natural sciences in the nineteenth century, that of Silliman in America, will be recognized as an active and efficient co-worker in the same field.

A man of truly refined feelings and philosophy will not consent to wear apparel that insults the plainer garb of his associates. He will not build a marble palace in the midst of the dilapidated dwellings of the poor. The very luxuries he has, he will try with half guilty consciousness to conceal, lest their sight should painfully affect his neighbor who does not possess them.

Gold and silver are metals quite too heavy for us to carry to Heaven; but, in good hands, they can be made to pave the way to it.

CONSTANTINOPLE.

The storm which has so long been brewing in Europe assumes, every day, a darker and more portentous aspect. While we are writing this, the eyes of two hemispheres turn chiefly to the spot whose history is lost amid the ages of antiquity—a spot where the winds of the four corners of the earth are about to gather. Twenty-five centuries ago, Byzas, a Thracian, is supposed to have laid the foundation of a city which, from his own name, he called Byzantium. The Greeks, ever fond of attributing a divine origin to everything, ascribed the foundation to Apollo, from the seven strings of whose guitar the seven ringing towers of the Oriental city are said to have sprung.

To narrate the events which have transpired in this place, and to describe the various fortunes and misfortunes that have befallen this city, would require volumes. Twenty-four times has this city been besieged, and six times taken; still a change of affairs is impending which must sooner or later be wrought. We are eager to know what will yet be the destiny of a city justly styled the key of both Asia and Europe. He who studies the checkered narrative of her hopes and disappointments, from her infancy to her advanced age, may receive many instructive lessons upon the instability of human affairs. Scarcely had she begun to prattle with her neighbors, when a Persian expedition into Greece almost entirely obliterated her. She was then taken under the care of a Spartan mother, whom the ungrateful nursling forsook in trouble, and sought refuge with the Athenians. She now gained such strength that she could withstand the power of Philip of Macedon. But the all-conquering arms of Rome soon subjected her also. She now struggled violently with intestine commotions, till Constantine the Great resolved to fix the imperial residence at this advantageous point. He changed the name of Byzantium into New Rome, but his people, to honor him, called the city Constantinopolis, or the City of Constantine. From this time she advanced in power and political standing. Strongly protected, alike by nature and by art, she defied the sieges of her enemies. This circumstance was one of the causes which induced Constantine to give a new capital to his empire. A slight glance at the natural advantages of Constantinople will show that the removal of the seat of government was justified by considerations of the soundest policy. The city is in the form of an irregular triangle, whose obtuse point, advancing to the east and toward the Asiatic coast, meets and repels the waters of the Thracian Bosphorus. The northern part is bounded by a winding harbor, known both in ancient and in modern times by the name of the Golden Horn. It is about seven miles in length, with good anchorage through the greater part of its extent. The entrance is only five hundred yards wide, and may be easily defended against a hostile navy.

The southeastern side is washed by the Propontis, or sea of Marmora, and the basis of the triangle is opposed to the west, and terminates the continent of Europe. Thus situated, the city can be supplied with the richest productions of Europe and Asia, through the Euxine Sea on the one side, and the Ægean on the other; while its shape renders it easily defensible against any naval attack.

It is four centuries since Mohammed II. took Constantinople, and made it the capital of the Ottoman Empire. From the warlike and powerful people which then carried conquest and terror wherever their banners were planted, the Turks have gradually fallen to the state in which we see them. But foreign drill-masters and refugees have of late renewed their discipline. The courage of the Turks is already kindled, and is now writing itself out in blood. Much blood must be shed—the death-shriek of the wounded and the dying must arise to heaven from many a field of slaughter. We are, obviously enough, approaching some tremendous crisis in the history of the world, and God's people should be prepared for the coming storm. One thing is certain; that Turkey cannot stand alone, nor, do we think, will the pillars, erected by the envy of her neighbors, stand forever. The powers of Europe grudge one another the possession of the great city, and the rich fields of Turkey. By degrees the crescent will decline, and when, at length, it disappears, we may hope to behold once more the sun of civilization rise above the crescent, dispelling the gloom that rests upon this ancient seat of power and culture, and shedding the light of the Word of God.

University of Rochester, March, 1854. S. T.

Perverseness.—A spirit of perverseness sometimes seizes us, making us act contrary to our own better feelings—making us do little disagreeable things just *because we should not do them.* This furnishes the only satisfactory solution of one-half the quarrels between the best of friends. It rather grates upon our self-love to feel that they possess, however worthily, so much power over us; so we make the attempt in some such way to show off our independence.

THE FIGURE NINE.

This is a peculiar figure, with which numerous tricks may be performed. Not to mention the fact that the fundamental rules of arithmetic are proved by the 9, there are among others the following curiosities connected with the figure:—

Add together as many nines as you please, and the figures indicating the amount, when added together, will be 9, or 9 repeated. The same is true in multiplying any number of times—the sum of the figures in the product will be 9, or a number of nines. For instance:—

Twice 9 are 18—8 and 1 are nine.
Three times 9 are 27—2 and 7 are 9.
Four times 9 are 36—3 and 6 are 9.

And so on, until we come to eleven times 9 are 99; here we have two nines, or 18, but 1 and 8 are 9.

Twelve times 9 are 108—1 and 0 and 8 are 9.

The curious student may carry this on still further for amusement.

Another curiosity is exhibited in these different products of the 9 when multiplied by the digits, as follows, the products being 18, 27, 36, 45, &c., reverse these and we have the remaining products, 54, 63, 72, 81.

The 9 digits, 1, 2, 3, 4, 5, 6, 7, 8, 9, when added, amount to 5 times 9; or instead of adding, multiply the middle figure by the last, and the amount will be the mysterious nines, or 45, and 4 and 5 are 9.

Once more. Let the digits as written be

123456789
987654321

1111111110

and we have 9 ones, and of course 9 once more.

Or let the upper series of numbers be subtracted from the under:

987654321
123456789

864197532

Add the figures of the difference, and once more we have the 5 nines or 45, or 9.

We will now multiply the same figures by 9:

123456789
9

1111111101

and we have 9 ones again, or 9.

THE THREE ANGELS.

BY HORACE S. KEMBEY.

Three angels from the courts above,
Came down to dwell with mortals here;
Our Father sent them in his love,
To guide us to th' Elysian Sphere.
Faith, Hope and Charity their names,
A glorious triad, sacred three;
To bless humanity each aims,
To stay the tide of misery.

Faith openeth God's Holy Tome,
Confiding trusteth in His word,
Which tells us of the Spirit Home,
Where Sorrow's sigh no more is heard.
And with arch angel telescope
Which pierces beyond these mundane skies,
Is seen the world of bliss by Hope—
The radiant fields of Paradise.

And Charity her loving arms
Around humanity entwines;
The hungry feeds, the cold she warms,
Her sun on every people shines.
It never, never will go down,
But blaze through all eternity;
Its light illumes the Christian's crown,
And emanates from Deity.

Elmira Water-Cure, N. Y., March, 1854.

THEODORE PARKER.

Fanny Fern went recently to hear Theodore Parker, who entertains an audience every Sabbath day at the New Music Hall.—Her impressions derived from the occasion are thus stated:

"Do you call *this* a church? Well, I heard a great singer here a few nights ago; and bright eyes sparkled, and waving ringlets kept time to moving fans; and opera glasses and ogling, and fashion and folly reigned for this once triumphant. I can't get up any devotion here, under these latticed balconies, with their fashionable freight. If it was a good old church, with a cracked bell and unhewn rafters, a pine pulpit, with the honest sun staring through the windows, a pitch-pipe in the gallery, and a few bob-nailed rustics scattered around on the uncushioned seats, I should feel aright; but my soul is in fetters here—it won't soar—its wings are earth crippled. Things are all too fine. Nobody can come in at the door, whose hat and coat and bonnet are not fashionably cut. The poor man (minus a Sunday suit,) might lean on his staff in the porch a long while, before he'd dare venture in, to pick up his crumb of the bread of life. But, thank God, the unspoken prayer of penitence may wing its way to the eternal throne, though our mocking church spires point only with *aristocratic fingers to the rich man's heaven.*

That hymn was beautifully read, there is poetry in the preacher's soul. Now he takes his seat by the reading desk—now he crosses the platform and offers his hymn book to a female who has just entered. What right has he to know there is a woman in the house? It isn't clerical. Let the bonnets find their own hymns.

Well, I take a listening attitude, and try to believe I am in a church. I hear a great many original, a great many startling things said. I see the gauntlet thrown at the dear old orthodox Calvinistic sentiments which I nursed in with my mother's milk, and which (please God) I'll cling to till I die. I see the polished blade of satire glittering in the air, followed by curious, eager, youthful eyes, which gladly see the searching 'sword of the Spirit' parried. Meeting glances, smothered smiles, and approving nods, follow the witty clerical rally. The orator pauses to mark the effect, and his face says, 'That stroke *tells!* and so it did, for the 'Athenians' are not all dead, who 'love to see and hear some new thing.' But he has another arrow in his quiver. How his features soften—his voice is low and thrilling, his imagery beautiful and touching. He speaks of human love; touches skilfully a chord to which every heart vibrates, and stern manhood is struggling with his tears, and his smiles are chased away.

O, there's intellect there,—there's poetry there—there's genius there; but I remember Gethsemane—I forget not Calvary! I know the 'rocks were rent,' and 'the heavens darkened,' and 'the stone rolled away,' and a cold chill strikes to my heart when I hear Jesus of Nazareth lightly mentioned.

O, what are intellect, and poetry, and genius, when with Jewish voice they cry, 'Away with Him!'

With 'Mary,' let me bathe his feet with my tears, and wipe them with the hairs of my head.

And so I went away sorrowful that this human preacher, with great intellectual possessions, should yet lack the 'one thing' needful."

Pulpit Oratory.—A theological student once wrote to Mr. Garrack for advice on public speaking, and he gave the following reply: "My dear sir:—You know how you would feel and speak in a parlor to a dear friend, who was in imminent danger of his life; and with what energetic pathos of diction and countenance you would enforce the observance of that which you really thought would be for his preservation. You would be yourself, and the interesting nature of your subject, impressing your heart, would furnish you with the most natural tone of voice, the most proper language, the most engaging features, and the most graceful and suitable gestures. What you would be in the parlor, be in the pulpit, and you will not fail to please, to affect, to profit."

Unconscious Influence.—It may be question which is the wiser, but not the happier—he who strives against every form of wrong, seeking *directly* to destroy error and root out ignorance; or he who quietly, by the force of examples of beauty, unconsciously soothes and harmonizes the perturbed spirits and unhallowed passions of those around him, into unison with his own higher and purer nature.

Miscellaneous.

MIDNIGHT MUSINGS.

BY ZHA.

'Tis midnight's strange mysterious hour,
And many a star is burning bright,
And earth hath many a frosted flower,
To wreathe its brow with silvered light.

The forest wears a garb of snow,
In ermine robe of beauty rare;
And starlight o'er it all doth throw
A softened light, unearthly fair.

And I have tried, yet all in vain,
To still my heart's wild throbbing now;
But memories will come back again,—
And shadows darken o'er my brow.

Oh! there are thoughts of early years,—
Of sleeping ones in churchyards laid,
And bursting forth in bitter tears
My heart has humbly hoping prayed,—

That He, who holds the worlds o'er us,
And clothes them with a gorgeous sheen,
May bless to me each bitter cup,
And my weak heart from sorrow screen.

And light seems bursting from above,
As if an angel's pinions shook
Upon my soul the light of love;
And to himself the burden took.

[For the Rural New-Yorker.]

APRIL.—ITS DERIVATION, &C.

April, the second spring month, is so called from the Latin *aperire*, signifying to open. It is at the beginning of this month, that all nature seems to revive, and burst into living, vernal beauty. The coldness of winter is exchanged for warm sunshine, genial skies, and balmy air, and the sternest season of the year melts gently into the verge of early spring. The frost and snow covering the ground, melts at the breath of the soft south wind. The ice-bound streams are loosened and the glad waters go leaping on in their course, as wild and frolicsome as a thing of life. The primrose, at this early season, is first seen bursting up from the dark ground. The grass and flowers begin to cover the plain, and the buds of the trees to burst into living foliage. Hence its name, the opening month; because, plants and flowers, the animal and vegetable creation, appear to enter upon a new life.

By some the name is supposed to be derived from the Grecian goddess Aphrodite; for this month was consecrated to her. Feasts and games were celebrated in her honor. The joyous peasantry came forth to greet her with dance and choral song. They decked her temple with evergreens, adorned it with floral wreathes, and burned sweet incense, as a votive offering, on her altar. Wherever she passed on the earth, grass grew beneath her feet, and love and desire attended her. The moist-blowing west-wind wafted her in soft foam along the waves of the sea. The golden *filleting* seasons received her, and clothed her in immortal garments. They placed a golden wreath on her head, rings in her ears, golden chains about her neck, and led her to the assembly of the immortals. The swan, the dove, and the sparrow were held sacred to her. The swallow, herald of spring, was also consecrated to this goddess. Her favorite plants were the rose and the myrtle. Thus was named the lovely April, a season of glad sunshine, soft showers, balmy winds, and vernal flowers.

The first day of April is generally denominated "all fools'-day." This is an old custom, and has been transmitted from age to age, with little modification or variation. In the middle ages, it was usual to employ biblical scenes as a source of sportive amusement. In this there was not supposed to be any disrespect shown to the sacred characters and holy representations. The most exalted, pure, and ennobling scenes and incidents of the Scriptures were made the means of passing amusement. From such a practice may be traced the trick of "April Fooling." It originated from a scene in the life of Jesus, where he is sent from Pilate to Herod and back again, and the same day, from Herod to Pilate. This is said to have occurred in the month of the Hebrew calendar corresponding to our month April. It is the custom in Germany to say of those who are thus deceived, "sent from Pilate to Herod."

The Greeks are supposed to have received this game from the East. At one time it was quite common among the Greeks, and by them transmitted to the Romans. It has now become widely disseminated, and though it may be the source of trivial amusement and pleasure, for the time, it is in itself insignificant and contemptible, and, it clearly evinces how prevalent it is to receive and adopt the sentiments and practice of folly. A. J. P.

A Short Sermon on Manliness.—Learn from the earliest days to inure your principles against the peril of ridicule; you can no more exercise your reason if you live in the constant dread of laughter, than you can enjoy your life if you are in constant dread of death. If you think it right to differ from the times, and to make a point of morals, do it however antiquated, however pedantic, it may appear; do it not for insolence, but seriously—as a man who wore a soul of his own in his bosom, and did not wait till it was breathed into him by the breath of fashion.—*Sidney Smith.*

[For the Rural New-Yorker.]

POLITENESS VS. SELFISHNESS.

"Nothing is lost by politeness, or gained by selfishness." I recently had an opportunity of seeing the truth of the latter part of this proverb fully sustained. I was traveling on a route where the railroad cars are generally well filled, and took a seat at the earliest moment, to avoid the hurry and bustle that usually occur just previous to starting. The car was nearly full, when a gentleman (?) entered, with a lady very elaborately dressed leaning on his arm.—After taking a deliberate survey, they appropriated two seats near the middle of the car, reversing one to hold their feet and carpet-bag. One person, then another, would pause at that place as they passed into the car; but finding no inclination on the part of the occupants to relinquish a seat, would pass on and find one elsewhere, but not till they had taken into the mind an impression of a face nearly hid by those hirsute appendages by which we are apt to measure the wearer's mind; a pair of inexpressive eyes, and an air that plainly said, "I am not to be disturbed."

At length, a stalwart Hibernian, who evidently enjoyed an immunity from the "Maine law," entered the car, and without saying "By your leave," plumped himself into the seat, from which the gentleman had scarcely time to jerk his feet, just saving them from the weight of Patrick's pressure. With a motion similar to that of a pen on a hot iron, the exquisite essayed to reverse the seat for Patrick, who was too well pleased as it was, to allow him to "trouble" himself. So there was no alternative but to submit, as it would be too ill-bred to reverse their own seat and intrude on those behind them.

Our exclusive looked as if he would like to knock the fellow over, but probably thought "discretion the better part of valor," and only endeavored to shield his companion's face from the impertinent gaze of their vis-a-vis, and her elegant silk from contact with his brogans; from the aroma of rum and tobacco he could not shield her. Many who had watched them from the beginning, could not suppress a gleam of satisfaction.

When the conductor came round, Patrick protested, in no very choice terms, that he had not money enough to pay his full fare, which was demanded in a peremptory manner, Patrick all the time increasing his vehemence.—You can easily imagine the feelings of the lady in such a proximity, but there was no escape. The conductor at length gave Pat two minutes to decide, either to pay the full fare or be ejected from the car. He chose the former, and indemnified himself by muttering curses "loud and deep," in which the "Saints" held a conspicuous place.

As we approached the next station, the couple made early and active preparations to leave the car, which they did the instant it stopped,—encountering, as they passed, the titterings of the passengers, as Pat expressed his regret with "Arrah, hinny, I'm sorry to part company wid ye." I do not know whether they realized it, but the impression was strong on the minds of others, that "nothing is gained by selfishness," even in small matters. H.

A BEAUTIFUL THOUGHT.

We take the following beautiful passage from an address of Theodore Romeyan, Esq., of Detroit, before the literary societies of Rutger's College, on "our country and her claims."

"As in the light of cultivated reason you look abroad, you see a wealth of beauty a profusion of goodness in the work of Him who has strown flowers in the wilderness, and painted the bird, and enameled the insect. In the simplicity and most universal of his laws you can read this lesson. An uneducated man dreams not of the common sun-light, which now in its splendor floods the firmament and the landscape; he cannot comprehend how much of the loveliness of the world results from the composite character of light and from the reflecting properties of most Physical bodies.—If instead of red, yellow and blue, which the analysis of the prism and experiments of absorption have shown to be its constituents, it had been homogeneous, simple, white, how changed would all have been. The growing corn and the ripe harvest, the blossom and the fruit, the fresh greenness of spring and autumn's robe of many colors, the hues of the violet, the lily, and the rose, the silvery foam of the rivulet, the emerald of the river, and the purple of the ocean, would have been alike unknown.—The rainbow would have been but a pale streak in the grey sky, and dull vapors would have canopied the sun, instead of the clouds, which in the dyes of flaming brilliancy curtain his rising up and going down. Nay, there would have been no distinction between the blood of children, the flush of health, the paleness of decay, the hectic of disease, and the lividness of death. There would have been an unvaried, unmeaning leaden hue, where we now see the changing and expressive countenance, the tinted earth and gorgeous firmament."

Never let us say of any thing whatsoever, that it happeneth by chance: there is nothing that hath not been concerted—nothing that hath not in it its own particular design and end, by which it forms a link in the chain of appointed order. There is no such thing as chance. It is only the blindness of ignorance that talketh of things being strange, and unaccountable, and unlucky.—*St. Basil.*

ASCENT OF MOUNT POPOCATAPETL.

The following is an extract of a letter published in an English paper from the Hon. Gerard Noel, M. P., dated Mexico, Jan. 2, 1854, and describing his successful attempt to ascend Popocatapetl in the depth of winter:

"I returned yesterday from an expedition to Popocatapetl, the highest mountain in North America—17,000 feet above the level of the sea. I believe there is no record of an ascent before at this season of the year, although it has been frequently done in May and June.—The first night of our ascent we slept at a hut at the line where vegetation ceases and perpetual snow commences, and at 5½ the next morning we started for the summit, one of the guides leading. At 8 o' clock I found myself one hundred yards ahead of the rest of the party, (consisting of four,) at 9 out of sight of the party altogether, and at 11 o'clock I reached the crater.

The crater is a vast basin, three miles in circumference and 900 feet deep; in some parts perpendicular; in others great masses of projecting rock form bold and stupendous outlines, with enormous icicles hanging from every point. The volcano itself has long since ceased to show any signs of eruption. I began to feel very much benumbed with the cold, and my eyes suffered a good deal from the glare of the snow. I should have been very glad of something to eat, having had nothing but a cup of coffee and a biscuit before leaving the hut; but the guide who carried the breakfast had remained (the ruffian!) with the others who had not come up. Having examined the crater for about a quarter of an hour, I told the guide, who had persevered with me, to lead the way up to the top. The fellow declared it was impossible; but not intending, as you may imagine, to give it up (having come so far) without any push, I started for the top alone. I was now only able to take three steps at a time without stopping, as my legs began to give way, and I had oppression of the head and chest.

A little after 1 P. M. I reached the top, and enjoyed one of the finest views conceivable of the great valley of Mexico, and looking down on the twin volcano (I forget the Mexican name, but in English it means the White Lady, from its top resembling a woman lying in full length,) seemingly miles below me, but actually only about 2,000 feet. The cold was too intense for me to remain more than ten minutes at the top, and I commenced the descent to the crater. By this time the mountain was enveloped in clouds, and I could see nothing distinctly, so I commenced a further descent, and in a few moments came in sight of the pole of Mr. S——e (one of my *compagnons du voyage*,) and soon after of himself, lying down, black in the face, and wishing to be let alone to die. A little lower down I saw Mr. C——d, rolling about like a drunken man, but still, with undoubted pluck, struggling toward the summit at the rate of about a yard in three minutes. However, after a little rest and encouragement, they both rallied, and I returned with them as far as the crater, but no human effort could get them any higher. I attribute my being able to reach the top to my wind; I never felt want of breath at any time, while the others blew like porpoises.

In our descent from the crater we encountered the only real danger. At first the snow was good walking, but as we came lower, where the sun makes a sheet of ice of the surface of the snow, it became so slippery that we frequently lost our footing, and if, after a slip, you get so much impetus that you can't stop yourself, the certainty is that you arrive at the bottom in much the same condition as the man who jumped off the monument. At one time I almost gave myself up. However, no accident did happen, though it makes me creep to think of the slide I took. At five P. M. with my hands cut to bits, my nails worn to the quick with holding on, I reached the hut and there got my breakfast, glad to think it was over, as hungry as fourteen hour's abstinence and battling with 17,000 feet of mountain snow and ice could make me. One of my eyes is completely 'hunged up,' the other just enables me to see to write this. My face is a mass of raw flesh and blisters; but I have the satisfaction of having perched upon a higher mountain than exists in Europe, and climbed 2500 feet nearer to heaven than Albert Smith."

DARK HOURS.

There are dark hours that mark the history of the brightest year. For not a whole month in any of the millions past has the sun shone brilliantly all the time. And there have been cold and stormy days in every year. And yet the mists and shadows of the darkest hours were dissipated, and flitted heedless away.—The cruelest of ice fetters have been broken and dissolved, and the furious storm loses its power to harm.

And what a parable is this all, of human life, of our inside world, where the heart works at its destined labors. Here, too, we have the overshadowing of dark hours, and many a cold blast chills the heart to its core. But what matters it? Man is born a hero, and it is only by darkness and storm that heroism gains its greatest and best development and illustration—when it kindles the black cloud into a blaze of glory, and the storm bears it more rapidly to its destiny. Despair not, then. Never give up; while one good power is yours, use it.—Disappointment will be realized. Mortifying failure may attend this effort and that one; but only be honest, work on, and all will be well.

Beautiful.—Call not that man wretched, who, whatever else he suffers or pleasure denied, has a child for whom he doats. Poverty may grind him to dust, obscurity may cast its mantle over him, his voice may be unheeded by those among whom he dwells, and his fancy may be unknown by his neighbors—even pain may rack his joints—and sleep fly from his pillow—but he has a gem with which he would not part for the wealth defying computation, for fame filling a world's ear, for the highest power, for the sweetest sleep that ever fell on mortal eye.

Ladies' Department.

CONDUCTED BY A——E.

EACH MOTHER'S LOVE THE BEST.

As I walked over the hills one day,
I listened and heard a mother sheep say:
"In all the green world there is nothing so sweet,
As my little lammie with his nimble feet,
With his eyes so bright,
And his wool so white;
O, he is my darling, my heart's delight.
The robin, he
That sings on the tree,
Dearly may dote on his darling four;
But I love my own little lambkin more."
So the mother sheep and the little one,
Side by side lay down in the sun,
And they went to sleep on the hill-side warm,
While my little lammie lies here on my arm.

I went to the kitchen, and what did I see
But the old gray cat, with her kittens three;
I heard her whispering soft. Said she:—
"My kittens with tails all so cunningly curled,
Are the prettiest things there can be in the world.
The bird in the tree,
And the old ewe she,
May love their babes exceedingly;
But I love my kittens from morn to night;
Which is the prettiest I cannot tell,
Which of the three, for the life of me,
I love them all so well.
So I'll take up the kittens, the kittens I love,
And we'll lie down together beneath the warm stove."
So the kittens lie under the stove so warm,
While my little one lies here on my arm.

I went to the yard and I saw the old hen,
Go clucking around with her chickens ten;
And she clucked, and she scratched, and she bristled away,
And what do you think I heard the hen say?
I heard her say: "The sun never did shine
On anything like to these chickens of mine;
You may haul the full moon and the stars if you please,
But you never will find ten such chickens as these.
The cat loves her kittens, the ewe loves her lamb,
But they do not know what a proud mother I am;
For lambs nor for kittens I won't part with these,
Tho' the sheep and the cat should go down on their knees.
My dear, downy darlings, my sweet little things,
Come nestle now comfy under my wings."
So the hen said,
And the chickens sped,
As fast as they could to their warm feather bed;
And there let them lie, on their feathers so warm,
While my little chick lies here on my arm.

[Written for Moore's Rural New-Yorker.]

A CHAT WITH "KATE."

"Beauty when unadorned, is adorned the most."

Trite as is the proverb, and "barbarous" as was the author, I adopt it as a "text," and thank you, "Kate," for the suggestion.

Am sorry I *frightened* any of your lady friends, but possibly your *defence* has reassured them. You head your article, "Another view;" yes, it is another view, of *another* subject,—entirely a *new* issue—ain't "join issue" with you, either. You call mine, a "wonderfully strong and inexplicable tirade." Now, *why* inexplicable? I confessed ignorance, and asked to be enlightened—asked a few simple questions. Kate, have you answered them?—You say, "yet we girls cannot help thinking that there is no sin or shame in wearing little simple golden trinkets in *our* ears," &c.—"Trinkets," you have it, *not* "ornaments"—and this is all the effort you have made to enlighten me on the subject. Am sorry, and disappointed too, for when I commenced reading your article, I *hoped* to have found an answer to some *one* of my queries. But you say, they are "inexplicable," and that is the conclusion I came to, when I tried to answer them myself—"inexplicable!"

I did not assail your "ring," "band," or "brooch," Kate,—not one word of it. The ring—a token of never-ending friendship—a beautiful emblem!—let it be both graceful and delicate—worn, not as an "*ornament*," but as a remembrancer.

Yes, a "fence block" for a "keepsake" rather than have *my ears* perforated and ornamented with a *glittering gift!*

True, Nature's God, infinite in all His attributes, has adorned, beautified and blessed *all* His works. Yes, He *ornamented* this round, rolling earth! He touched with His artist-pencil both the flower and fruit—coming from His workshop it was pronounced "good!"—And, are not *we* creatures of his creation?—as I said before, "fashioned by a Divine Artist, and made proportionate after a Divine Model?" Has He not "ornamented" us?—both man and woman? This body, the "clay treatment," made beautiful in form and feature, is ornamented with a mind!—an immortal spirit dwells here!—not *ornamented!* Would you increase your attractions? add to your beauty?—cultivate, and enrich the mind. It is *all* we have valuable. It is to live!—live eternally!

Does the suspending of a tawdry "trinket" from the ear, enlarge the capacity for thought, or strengthen the intellect? I say, no! Whether it be "*sin* or shame" to wear them, let each one decide as he, or she pleases, but my opinion is, (immodest as it may be to give it,) they are no *ornament*. The whiskers and moustache are "Nature's gift," whether for protection or ornament. They *may* be given to man as a mark of manliness, to distinguish from, and contrast with, the beauty and delicacy of woman.

I believe you, Kate, when you say, "a refined taste will always keep within bounds, the style of decoration," and that "a woman will show her judgment as well by her dressing, as by her mind." But I would have it, she will show both the strength of her mind, and the soundness of her judgment by her dressing.

"Good bye," Kate, and remember,

Charlie Chestnut.

[For Moore's Rural New-Yorker.]

AN EPISTLE TO CHARLEY FERN.

And so "Charley Fern" advertises for a wife, does he? Hear him—"True-eyed, well-educated, prepossessing appearance," etc., etc. He doubtless supposes that every "country lassie," will set herself to work *instanter*, to see if she will possibly answer the requirement, as it is not often that a chance is offered for "a partner who cannot fail to please;" and probably he is anxiously awaiting the influx of letters, daguerreotypes, &c. We wonder he did not think of stipulating for the color of the hair. Then, in case he be as fortunate in receiving *samples* or tokens (which?) from that article, as his western predecessor, (mentioned in the Rural,) he might perhaps, provide himself with a wig for his old age. We would not accuse the western gentleman of mercenary motives, but it seems his capital has proved to have been remarkably well invested. His course will doubtless recommend itself to persons of small means, desirous of establishing themselves as dealers in fancy articles.

But Charley leaves us in the dark in regard to *his* good qualities. Why don't he say something of himself? 'Tis unnecessary, probably. The girls will scarcely stop to think of that. This shows he has good sense to avoid superfluities. And what else, since we are left to our own conjectures, can we read of him? Of his *personelle*, we can of course judge little, tho' he is doubtless "good looking"—otherwise he would not, if he has the least sensitiveness, (and if he has not, he would "fail to please" most people,) wish for a companion who, with her "comely face," would constantly remind him of his own ugliness. And for a similar reason we judge that he is "well-educated;" it would wound him deeply to have for a partner, his superior in that respect.

He has simple tastes—it may be he is a farmer. He is a progressive individual—at least he does not prefer the *old*. We judge, too, from the Postscript, that he is rather liberal, believing that there *are* women who can keep secrets,—else, considering the character we gave him for avoiding superfluities, a part of that clause would have been omitted. That he has vanity, we infer from the passage already twice quoted, and from that, too, we know he is of a *sanguine* temperament. Vanity? Yes, "Vanitas, vanitatum." Fie, "Charley Fern!" Nevertheless, success to you.

Jessie G.,

"A black-eyed lassie, from the country."

THE PRETTY FORGET-ME-NOT.

The Forget-me-not, that beautiful little flower of memory, with its blue, like the tint of the summer heavens, and its golden eye, bright as the eye of Hope itself, is consecrated not alone to the reminiscences of love, but also to those of love and friendship. The field forget-me-not, or *myosotis arvensis* is often assumed as the token-flower; but the true one is the water forget-me-not, *myosotis palustris*, whose flower is rather larger, and more intensely blue than that of its sister of the fields. The legendary origin of its name proves the claim of the aquatic species to be the real blossom of remembrance.

A German knight and his ladye-love were walking on the banks of the Danube, when the fair one saw a beautiful tuft of the *myosotis palustris* growing in the water, and expressed a wish to have it. The knight, with due chivalrous alacrity plunged at once into the river, in all his array, and gathered his prize; but before he could climb up the steep and slippery bank, he was drawn by a treacherous eddy into a deep pool, and encumbered as he was, finding he could not save himself, just as he sank he threw the flower ashore to his mistress and uttered with his last breath—"*Vergriss mein nicht!*" (forget-me-not!)

DOMESTIC DUTIES.

The accomplished lady Mary Worthly Montague, who figured in the fashionable as well as the literary circles of her time, has said that "the most minute details of household economy become elegant and refined when they are ennobled by sentiment," and they are truly ennobled when we attend to them either from a sense of duty, or consideration for a parent, or love to a husband. "To furnish a room," continues this lady, "is no longer a common-place affair, shared with upholsterers and cabinet-makers: it is decorating the place where I am to meet a friend or lover. To order dinner is not merely arranging a meal with my cook; it is preparing refreshments for him whom I love. These necessary occupations, viewed in this light by a person capable of strong attachments, are so many pleasures, and afford her far more delight than the games and shows which constitute the amusements of the world."

Poetry reveals to us the loveliness of nature, and brings back the freshness of youthful feeling, revives the relish of simple pleasures, keeps unquenched the enthusiasm which warmed the spring-time of our being, refines youthful love, strengthens our interest in human nature by vivid delineations of its tenderest and softest feelings, and, through the brightest prophetic visions, helps faith to lay hold on the future life.—*Channing.*

MOORE'S RURAL NEW-YORKER

ROCHESTER, APRIL 8, 1854.

SPECIAL NOTICES.

☞ *A new quarter commences this week,—a good time for new single and club subscriptions to begin, and for the renewal of expiring subscriptions.*

☞ *Additions to Clubs are still in order. If back numbers are not wanted, we will send from 1st March or April to end of year for $1—and count on premium.*

☞ *During the season of navigation we can send the Rural to Canada West free of American postage, and hence will furnish clubs for six months from date at lowest rates.*

☞ *Clubs for six or nine months from this date at same proportional rates as for full year—and premiums allowed.*

☞ *Back numbers of the present volume furnished if desired, or subscriptions may commence at any time.*

ABOUT ADVERTISING.—Persons who write us inquiring what we will charge to insert certain advertisements, whether we will not do thus and so, on conditions they name, &c., &c., are respectfully referred to our terms for definite information—with the assurance that we cannot consistently deviate therefrom. We believe the circulation of the RURAL NEW-YORKER largely exceeds that of any other Agricultural or similar journal (weekly, semi-monthly or monthly,) published in either America or Europe, and, that it is at least ten thousand (probably 15,000,) greater than that of any such in this State—while its advertising terms are far less in proportion to circulation.—People interested will please make a note of above facts, and excuse us from answering their inquiries by letter.

—In this connection, we beg to remind all advertising friends that we *prefer* brief advertisements, not exceeding thirty lines, or 300 words, and that we do not wish to give any one more than four successive insertions. Our space is limited, and we wish to accommodate and benefit as many applicants as possible, and at the same time interest our readers by presenting something new, weekly.

Noteworthy Events.

THE past week has been fruitful in events worthy of newspaper comment, but limited space permits us only to briefly chronicle the most noteworthy. We here glance at a few matters not particularly noted in other columns.

GOV. SEYMOUR'S VETO of the "Bill to suppress Intemperance"—communicated to the Legislature on Friday week—has naturally produced a great sensation. It fell like a double bolt upon the friends of the Bill throughout the State, while the opponents of the measure were proportionally elated, and manifested their joy in Albany, and elsewhere, by firing cannon and other demonstrations. The Governor's Message is quite lengthy, and denounces the Bill as "unconstitutional, unjust and oppressive"—as dangerous to the rights of citizens, and hostile to the welfare of the State—and repudiates the whole policy of prohibitory laws. The Bill was objectionable in some respects to many friends of Temperance; but a salutary prohibitory law is necessary, and we trust the Legislature will yet pass some wise and practicable measure incorporating the principles of Prohibition.

IN WASHINGTON great excitement prevailed for some days last week, in consequence of a difficulty between Messrs. CUTTING, of N. Y., and BRECKENRIDGE, of Ky., originating in the House, concerning the Nebraska Bill. The blood of each rose to fighting heat, a challenge was given and accepted, and—the principals then kept out of sight for some days, until the matter was "amicably arranged" by friends! Meanwhile, if telegrams are truthful, the most intense excitement prevailed—a great time for reporters and correspondents of the daily journals. Congress accomplished so little during the week that we omit our usual synopsis.

A FEARFUL AND FATAL ACCIDENT occurred on Hudson River Railroad, Friday evening week. As the down Express train was near Tivoli, a rock weighing some five tons fell upon the track. The locomotive and two baggage cars were smashed almost into atoms. Two passenger cars were badly broken; yet none of the inmates were seriously injured, tho' many were lifted from their seats and thrown several feet. One brakeman was killed, and two or three other employees supposed to be fatally injured.

THE FOREIGN NEWS embraces nothing of importance, except noting a decline in the prices of Breadstuffs. See extract from Mark-Lane Express, on second page of this number.

THE WEATHER—always a *seasonable* topic—is improving somewhat in temper and geniality. March, however, maintained its ancient reputation—ending with a roar which reverberated after its demise. But, backward as is the spring hereabouts, it is even more so at the East and South. They have plenty of snow, and et ceteras, "down east"—and even in some sections of this State. On the 30th, a hard snow-storm "prevailed" at New York, Baltimore, Washington and southward. Some of the railroads in Virginia were obstructed. The fruit trees at Charleston, S. C., and Augusta, Ga., have been seriously injured by the frost. The corn is said to have been killed in some sections of South Carolina. So we of the North are not the only witnesses of "Winter lingering in the lap of Spring."

OUR STATE SENATE consists of thirty-two members, the President not included, the youngest of whom is aged 30, and the oldest 67. Ten are lawyers, five farmers, four merchants, three physicians, two editors, one hotel keeper, one tanner, one stone cutter, and five have no occupation. Twenty-six are married, three are widowers, two bachelors, and one single. Twenty-three were born in this State, and the remainder in Eastern States. Their ages, as classed, are as follows:—Between 30 and 40, there are eleven; 40 and 50, ten; 50 and 60, nine; 60 and 70, two.

Destructive Conflagrations.

GREAT FIRE IN DANSVILLE!—The flourishing village of Dansville was visited with a most destructive conflagration on Friday afternoon, March 31. An Extra from the office of the Dansville Herald states, that owing to the high wind prevailing at the time, the fire extended with fearful rapidity, and beyond the power of human agency to stay its progress. The entire business portion of the village, on both sides of Main st., north of the point where the fire originated, is one mass of ruins. The Herald buildings, of brick, narrowly escaped. Among the losses the following are the heaviest:—On the west side, J. G. Sprague, bookstore, $1,200, fully insured; M. Gillman & Bro., hardware, insured $2,000, covering loss; American block, owned by G. Hyland, loss $10,000—insured $6,500; W. C. Bryant, dry goods, mostly saved—insured for $3,000, nearly covering loss—building owned by J. Faulkner, $1,200 loss, half insured. On the east side of the street,—Day's wood block of three stores, insured for $1,200, loss not estimated; H. Jones, carriage shop, loss $3,000 in stock, half insured—buildings owned by L. Brubner; Chas. Shepard's fine brick block, four stores, cost $12,000, insured for $6,000—occupied by Brown & Grant, hardware, loss $6,000, fully insured; Gen. G. Wood, hardware, loss $7,500, half insured; E. Niles, drug store, loss $10,000, insured $6,000; E. S. Palmer & Co., clothing, insured $8,500, covering loss; the First Presbyterian Church was destroyed—the building was old, and policy of insurance had just expired. There were many other losses, varying from $100 to $5,000. Mr. Kennedy was severely injured by falling from the third story of the American Hotel; his recovery is exceedingly doubtful.

The Extra Herald, from which we condense the above, says:—"To sum up the fire, we may count forty buildings destroyed, with a total loss on houses and goods, according to the estimates, of $100,000. Insured $60,000. The heaviest loss by any company is probably by the Ontario and Livingston Mutual—say $20,000.

THREE FIRES occurred, almost simultaneously, in Cleveland, and Ohio City, O., on Saturday night last. The first broke out in Engine House No. 8, on Seneca st., and communicated to all the frame buildings on the same side of the street destroying Sturtevant's large planing mill, several dwelling houses, a carpenter's shop, &c.—Loss $20,000—no insurance. During this fire two more broke out, one on Lake st., consuming three dwellings, and one in Ohio City, destroying four more dwellings—both the work of incendiaries. Twenty families were rendered homeless.

THE BROCKPORT COLLEGIATE INSTITUTE was totally destroyed by fire on Sunday last. The loss of building is estimated at $10,000—insured for $7,000. The property lost in the building was valued at $5,000, upon which there was no insurance. Mr. STANTON, the Principal, lost about $2,000; insured for $700. Many students lost all they had in the building. The Institute was in a flourishing condition. It was owned by a stock company—residents of Brockport.—Means are to be taken for the continuance of the school.

THE NEBRASKA BILL is not so unanimously supported by the People and Press of the South as many suppose. It is opposed by Ex-Senator CLEMENS, of Ala., and in Congress by Messrs. HOUSTON, of Texas, BENTON, of Mo., HUNT, of La., and other prominent Southerners. Among other influential journals which oppose the measure, are the New Orleans Crescent and the Louisville Journal. The latter truthfully, as we believe, remarks:—"Even if the Missouri Compromise, a measure originally pressed by the South and North for more than thirty years, shall be carried through the present Congress by the influences which the administration shall bring to bear upon that body, the repeal will not be allowed to stand. The repeal will itself be repealed in less than two years, and the law of 1820 re-enacted."

SHIP BUILDING.—The ship builders of Williamsburg and Greenpoint, near New York, are now constructing thirty vessels of all classes and dimensions, from a steamer of 2,200 tons to a critter of 160 tons; making in the aggregate a burthen of 23,710 tons, and valued at $1,726,000. These are only two of the thousand localities where our merchant marine is supplied with ships; but they serve as an exponent of our commercial prosperity and progress, unprecedented in the history of the world.

While the naval architects of Europe are engaged night and day in fitting out vessels of war, ours are laboring no less assiduously to prepare for a prosperous and successful trade at the same time.

THE SEASON, &c., IN MAINE.—Under date of Andover, Me., March 27th, a subscriber writes us as follows:—"In New York I suppose you have but little if any snow at present. A very different aspect is presented here; we have 3½ feet upon the level, and indications of more.—On the night of the 23d, about fifteen inches of snow fell. The prospect now is that we shall have a very late spring; probably we shall commence spring work here about the last of April. Such a storm this time of the year makes one feel a little 'blue,' especially if hay is short and high priced, but as a general thing we have hay enough and to spare—prices varying from six to twelve dollars per ton."

—— Sir David Brewster is now busily engaged in writing a new life of Sir Isaac Newton, the great Astronomer.

Our Albany Correspondence.

ALBANY, April 3, 1854.

IN THE LEGISLATURE, excitement has raged high during the past week. The lobby has been crowded with candidates for the State Superintendency of Schools, and their friends and other interested personages. Some rare things may develop themselves in due time.

WOMEN'S RIGHTS.

Mr. ANGLE, of Monroe, from the Select Committee in the Assembly, has brought in a unanimous report. It is adverse to the ultra demands of the "strong-minded," but recommends two changes to existing laws. The following is the bill accompanying the Report:

SEC. 1. Any married woman, whose husband either from drunkenness, profligacy, or any other cause, shall neglect, or refuse, to provide for her support and education, or for the support and education of her children, and any married woman who may be deserted by her husband, shall have the right, in her own name to receive and collect her own earnings, and apply the same for her own support, and the support and education of her children, free from the control and interference of her husband, or of any person claiming to be released from the same, by or through her husband.

§ 2. Hereafter it shall be necessary to the validity of every indenture of apprenticeship executed by the father that the mother of such child, if she be living, shall in writing consent to such indenture, nor shall any appointment of a general guardian of the person of a child by the father be valid, unless the mother of such child, if she be living, shall in writing consent to such appointment.

THE BONE BILL.

The act to promote Medical Science, *alias* the "Bone bill," has become the law of the land. I have referred to the character of the bill in previous letters.

THE LIBEL LAW.

One of the best acts of the session is to protect newspaper publishers in their legitimate business.

It provides that no reporter, editor or proprietor of any newspaper shall be liable to any action or prosecution, civil or criminal, for a fair and true report in such newspaper of any judicial, legislative or other public official proceedings of any statement, speech, argument or debate in the course of the same, except on actual proof of malice in making such report, which shall in no case be implied from the fact of the publication. Nothing in the preceding section contained shall be so construed as to protect any such reporter, editor or proprietor from an action or indictment for any libelous comments or remarks superadded to and interspersed or commingled with such report. This act shall take effect immediately.

THE VETO.

As was anticipated, the Governor vetoed the Temperance Bill. His objections are:

1st. That the Bill violates the right of citizens guaranteed by the Constitution of the United States to be secure from unreasonable searches. Domicils heretofore guarded from all searches except for stolen property, are, by its provisions to be searched merely for evidence of guilt.

2d. That its provisions for the seizure, forfeiture and destruction of liquors are inconsistent with the guarantee in the Constitution of this State, that "private property shall not be taken without compensation, nor without due process of Law."

3d. That it will weaken the cause of Temperance—by associating it with injustice and oppression.

4th. That it is so stringent and oppressive that it cannot be equally executed everywhere, nor fully executed anywhere, and by remaining unexecuted will diminish the popular respect for the Law and its officers.

The Senate made an effort to pass the bill by a two-thirds vote after the Veto, but failed; *so the bill is dead.* An effort will be made to push through the Assembly bill, which was nearly ready, but it is too much to suppose that it can be effected.

THE CAUCUS.

On Friday evening the Whig members held a caucus to nominate a candidate for the office of School Superintendent. I was wrong in saying that Mr. RANDALL would be the man. It was so understood when the law was passed, but Western New York, (usually wide awake,) claimed the officer, consequently VICTOR M. RICE, of Buffalo, was nominated. He has been Superintendent of the Buffalo schools, and is President of the State Teachers' Association.—The election is expected to come off to-morrow.

COATS OFF.

The Assembly have now three sessions per day. More work will be done during the remaining few days than for any six weeks of the session, probably from the quickening influence of spring! Their speeches are cut down to ten minutes, which is a damper on some of the long-winded ones, but they will have to submit.

"OTIS."

WEBSTER'S PROTOTYPE IN ENGLAND.—A somewhat singular circumstance has recently transpired in England, showing the estimate placed there upon the work of the great American Lexicographer:

"An edition of Worcester's Dictionary has recently been published in London, and is advertised as 'WEBSTER'S Critical and Pronouncing Dictionary, &c., enlarged and revised by Worcester.' On the title-page WEBSTER is placed first, in large type, and *Worcester* follows in smaller line, in smaller type, and the book is lettered on the back, 'WEBSTER'S and Worcester's Dictionary!!'"

The London publisher seems quite aware that the English public will only accept, as a genuine article for the Dictionary line, something labeled WEBSTER, and so covers his wooden nutmeg with a coating which has the genuine aroma. This beats Jonathan.

FANNY FERN, in reply to a paragraph stating that the "charming incognita" is one of the Willis family, writes this to the Tribune:

So far as the foregoing statement refers to me, it is incorrect. With due deference to Mrs. Hannah, and Paul Pry, Esq., I beg to state that, several years since, by a sudden reverse of fortune, I was deprived of all my relatives.

Respectfully, FANNY FERN.

News Paragraphs.

☞ The Herald keeps an account current of the deaths and injuries from steamboat and railway accidents. Its resume for last year and this, thus far, show these results. By railroad—Deaths 262; injured 624—number of accidents 190. By steamboat—Deaths 691; injured 225—number of accidents 98. Taking dead and wounded together, the railroads, it will be seen, keep pace very nearly with the steamboats.

☞ The funeral ceremonies on the occasion of the death of the late Mr. Coleman, killed on the railroad near Syracuse, took place at Corinthian Hall, in this city, on Sunday week, A. J. Davis officiating after the manner of the new system of spiritual communication—the dead with the living. The Hall was quite filled, and the ceremonies of a somewhat novel character.

☞ The Evansville (Ind.) Journal states that on one day last week, not less than one thousand tons of corn and other produce were forwarded in points below by commission merchants at that point, and that the store-houses there are still full, while the canal, railroad, Wabash and Green rivers are constantly bringing forward heavy quantities of produce.

☞ The Kentucky Legislature have passed a bill appropriating $20,000 toward the erection of the monument over the grave of Henry Clay; also, a bill to punish the directors of railroad corporations for causing the death of persons traveling on railroads by negligence of their agents, and authorizing a civil suit for damages.

☞ The Lyons Gazette states that the Wayne county jail, in that village, is unoccupied by prisoners. Some time since we chronicled the receipt in one day, of over *five hundred* subscribers to the RURAL, from Wayne county alone.—People of other counties wishing to empty their jails, and save money, will govern themselves accordingly!

☞ The St. Louis, on her last trip down to New Orleans from St. Louis, took the enormous quantity of 1,500 tons of freight, her manifest being $21,955 12. Among two items entered upon her manifest, are 3,000 hogs and 350 emigrants. She is the largest boat ever launched upon the Ohio or Mississippi rivers.

☞ The new ship Lightning, built by Donald McKay, left her wharf in Boston at 2 P. M., the 16th February, and was seen by the Arabia on the 4th March, at 1 P. M., going into the Mersey, making her run in 12 days 18 hours, actual time; said to be the shortest time yet made by a sailing vessel between the two continents.

☞ We notice in the Chicago Democrat that information is wanted of the whereabouts of a man named *Lack*, of Chili, Monroe Co., N. Y., who left home to take charge of a gang of hands on the Sault Ste. Marie Canal; also, of W. E. Bellows, of Seneca Falls, N. Y., who was last seen at Detroit, in 1852.

☞ According to the census of 1850, the slave population of Kentucky amounted to 210,981. By a recent State census it appears that the slaves now number less than 200,000, giving a decrease of about 11,000 within the last 4 years. The above figures indicate a large slave emigration from the State.

☞ A bucket full of copper coins was found recently, in excavating for cellars on land in Atkinson street, Boston. Some specimens bear the dates of 1735 and 1759. They were issued in the reign of George II., and have the phizzes of very jolly-looking individuals. The coin was six feet below the surface.

☞ The total gold and silver coinage by the United States, from the establishment of the Mint in 1792, down to the 31st of October, 1853, a period of sixty years, amounts to $370,008,192 50, says Mr. Guthrie in his last Treasury report. Of this $283,790,565 60 are in gold, and $86,217,926 90 silver.

☞ We have no confirmation of the loss of ten thousand lives by an earthquake in Calabria. If true, our despatch from the Canada at Halifax, ought to have mentioned it. By the great earthquakes in Southern Calabria and Sicily, in 1783, nearly 40,000 people perished.—*Boston Post.*

☞ Charleston papers state that the Court at Havana had decreed that the cotton on board the Black Warrior was forfeited, that a fine of $6,000 should be imposed on the boat—all of which the Captain General remitted, excepting the $6,000 already mentioned.

☞ The deaths in New York last week numbered 513, of which there were of consumption, 171; convulsions, 59; croup, 18; congestion, 23; debility, 13; dropsy, 16; fever, 21; inflammations, 50; hemorrhoids, 25; premature births and still-born, 38; small pox, 123.

☞ The Alexandria Gazette says:—The remains of the late John Howard Payne, (the author of 'Home, Sweet Home,') are to be brought in this country and placed in the Congressional burial ground, and a suitable monument erected to his memory at the expense of the government.

☞ According to the Sentinel, published at Selma, Alabama, during a period of four months, from October last to February, that State lost by emigration, no an average, 500 persons per day, or a total of 75,000; and the property carried out of the State is estimated at 73,670,000.

☞ A lumber trade with France has been opened from Alexandria, Va. It is expected that two ships will be laden every month for Marseilles. The timber is to be cut near Cumberland, Md., and along the Potomac.

☞ A few days since, some workmen in Poughkeepsie engaged in sawing a locust log, which was perfectly sound and probably one hundred years old, found in cavity in the centre, containing a live toad, seven and a half pounds in weight.

☞ The present wife of Santa Anna, Dictator of Mexico, was a Miss Lapaugle, of Westerlo, Albany Co., N. Y., and it is said that he proposes to divorce her if he can negotiate for a daughter of the Queen Dowager of Spain.

☞ The Old Board of Common Council convened on Monday evening last, and surrendered office to the new. Mayor Williams delivered his valedictory, and Mayor Strong pronounced his inaugural.

☞ There are revivals of religion in progress in several towns and villages of the State—in Tunnansburgh, Wyoming, Warsaw, Batavia, Palmyra, Pittsford, Weedsport, Elbridge, and other places.

☞ On the 4th of March last, Mr. John Thomas, of Tangier Island, for the county of Accomac, Va., received an accession of 4 grandchildren, born on that night by three of his daughters.

News Brevities.

—— The Maine Law men of Portland, have renominated Neil Dow for Mayor.

—— England has already expended $25,000,000 in preparing for the war with Russia.

—— It is said that Mrs. Wilkinson, the actress, is about to enter a monastery.

—— Henry R. Selden, Esq., has been re-appointed Reporter of the Court of Appeals.

—— The Territorial Legislature of Minnesota adjourned on the 4th ult.

—— The Welland canal was opened for the passage of vessels on the 1st of April.

—— Snow was falling in Syracuse on the 26th ult., and the sleighing was good.

—— The experiment of a daily newspaper has been attempted at Ogdensburgh.

—— Six new locomotives were placed upon the Great Western (Canada) Railroad last week.

—— The Cashier of one of the Canada railroads (in progress) has absconded with £20,000.

—— Jonathan Harrington, the last survivor of the battle of Lexington, expired on Sunday week.

—— An extensive and valuable copper mine has been discovered in the vicinity of West Fairlee, Vt.

—— Dickens announces a new tale, under the title of "Hard Times," to be published weekly in "Household Words."

—— A Boston House has just made $75,000, on a cargo of Russia Hemp which cost them 25,000.

—— Three hundred persons have joined the Methodist Episcopal Church in Cincinnati recently.

—— The condition of Burmah is rapidly improving, Dacoitism is declining, and there is the promise of an abundant harvest.

—— Mrs. Judith Town, of Marshall, Oneida county, died a few days since, aged 107 years! Her oldest daughter is living, aged 86.

—— Castle Garden, New York, has been leased for five years, at $10,000 per annum. It was formerly rented for $3,000.

—— Hamlin King, of Maine, a clerk in the P. O. department, has been nominated Assistant Postmaster General, vice Hobbie, deceased.

—— The ice was out of the St. Lawrence between Ogdensburgh and Prescott, on the 28th ult.

—— The Senate have confirmed the nomination of Horatio King, as assistant Postmaster General, vice Hobbie, deceased.

—— The Arabia sailed from Boston, March 29, with 28 passengers and $200,000 in specie, for Liverpool.

—— The Senate Committee have reported unanimously in favor of bridging the Hudson at Albany.

—— There was a great excitement at the New Orleans city election on the 27th ult; three men were killed about the polls.

—— The bust of Webster, for Lord Ashburton, by Mr. King, the artist, is finished, and now on exhibition at Boston.

—— Marshal St. Arnaud's pay as Commander of the French force to the East, is to be 500,000 francs, with 300,000 francs outfit.

—— Rev. S. McKinney, of East Bloomfield, has been appointed Agent for the American and Foreign Christian Union for Western N. Y.

—— The clipper barque Grapeshot has sailed from New York for Constantinople, with 280,000 muskets and other fire-arms and ammunition.

—— A pair of bull dogs, trained to draw a carriage, were brought to Auburn from the east last week and sold for $200.

—— I. C. Derby, Esq., of Sandusky, O., has purchased Powers' Greek Slave, at a sum little less than five thousand dollars.

—— The new apprenticeship system has gone into effect in Cuba. Simultaneously, the sentence of political offenders has been commuted.

—— Miss Delia A. Webster, suspected of inticing slaves from Kentucky, has been arrested, and in default of $10,000 bail, is now in prison.

—— The tariff on flour on the N. Y. Central R. R. from this city to Albany has just been reduced 8 cents a barrel, which leaves it 50 cents.

—— Mrs. Joel Willard, of Buffalo, died of hydrophobia on the 28th. She was bitten by a rabid cat about two months previous.

—— The Illinois Central Railroad Company have contracted for one hundred miles of hedging of the Osage Orange.

—— The Chicago Democrat says the farmers of Illinois are actively engaged in plowing and putting in spring wheat.

—— In England, in the six months from Jan. to June, the railways carried 45,630,306 passengers; in the accidents, a hundred and forty-eight persons were killed.

—— The King of Siam, though himself a confirmed Pagan, and for years a member of the national priesthood, has given ample toleration to Christian missionaries.

—— The Church of England, by its separate centralized exertions, raises above £100,000 per annum, for religious objects, of which £20,000 is applied to foreign missionary operations.

—— The Oswego Times says that Geo. Wright is about to freight a vessel for Scotland direct.—She sails from Port Credit, and will take 14,000 bushels of wheat; and 500 barrels of flour.

—— A new first class daily morning newspaper is to appear in Buffalo, on the 15th inst. Its politics are to be Whig, and a son of Gov. Seward is to be assistant editor.

—— The Wayne Sentinel says the dwelling, barn, &c., of F. Bortles, one mile from Palmyra, were destroyed by fire on Wednesday night week.

—— The British government have rewarded Mr. Low, the inventor of the screw propeller in use in the naval service of that power, with the sum of £10,000.

—— At the Methodist conference, recently in session at Baltimore, there was contributed for the general funds of the missions of that church $20,063,01.

—— Green Peas are arriving at New York quite abundantly from Savannah! Steam is a wonderful regulator of the seasons. Strawberries will not be a great while behind.

—— The papers state that Capt. Norton, of Yarmouth, Mass., has 80 hens, which laid in 1853, 637 dozen eggs, which at the average price of eggs would be $1.25 to each hen.

—— There is considerable excitement in Norfolk, in consequence of the sudden and mysterious escape of many slaves. It is supposed that the fugitives have been taken north by vessels.

Literary Notices.

MINNIE HERMON; or, the Night and its Morning. A Tale for the Times. By THURLOW W. BROWN, author of "Temperance Tales and Health-Stone Hercules." Auburn and Buffalo: MILLER, ORTON & MULLIGAN.—1854.

This is a powerfully written and absorbingly interesting volume of nearly 500 pages, from the pen of an able and zealous advocate of the cause of Temperance. The work abounds in plots and counter-plots; and, though most diabolical scenes are portrayed, the style and language used are unexceptionable. The author asserts that "every chapter in the book is *drawn from life*, with the necessary change of names and dates,"—and we can well believe that a certain portion was written, as he remarks, "with a throbbing nib, and its truth sealed with a scalding tear." The volume is superior in externals, and contains several beautiful illustrations. It will accomplish much in promotion of the good cause. For sale by DEWEY.

ORIENTAL AND SACRED SCENES, from Notes of Travel in Egypt, Turkey and Palestine. By FISHER HOWE. New York: M. W. HOOD.—1854.

This narrative of travel in the Bible regions, is apparently from the pen of a close observer, well informed in regard to Oriental customs and localities. The work, judging from the portions we have perused, will prove both interesting and instructive—though we are constrained to believe that it would have proved far more acceptable to the Christian public, as a whole, had the author's sectarian arguments, or suggestions, been omitted. The volume comprises upwards of 400 pages, beautifully printed, and illustrated with several finely-colored portraits of Oriental men and women, in appropriate costume,—a map of Athens, plan of its antiquities, &c. For sale by DARROW & BRO.

THE POETICAL WORKS OF WILLIAM H. C. HOSMER. In two volumes. New York: REDFIELD.—1854.

Many ardent friends and admirers, if not the public generally, will joyfully welcome these volumes—comprising the effusions of our gifted "Bard of Avon," and "Poet of the Genesee." They are issued in the best style, with a life-like portrait of the author. We hope to find time for a more extended notice hereafter.—Meantime it will be safe for all interested to procure the work. For sale by DEWEY.

THE CHRISTIAN WORLD UNMASKED. By JOHN BERRIDGE, A. M.—with the Life of the Author, by Rev. THOS. GRIMSHAW, D. D. Boston: GOULD & LINCOLN.—1854.

This work—re-printed from a recent Edinburg edition—will prove interesting to Christians of all denominations. BERRIDGE was a zealous and powerful revivalist—one of the most energetic and successful promoters of evangelical religion in England in the middle of the last century. For sale by SAGE.

PUTNAM'S MONTHLY, for April, is an unusually rich number. For ability, originality and independence, PUTNAM'S is, beyond dispute, *the* literary monthly of America. It is no piratical craft—never appropriating foreign wares, without credit, and issuing the same in the guise of originality. G. P. PUTNAM & Co., New York. $3.

Foreign Intelligence.

Arrival of the Canada.

THE Canada arrived at Halifax, March 29th, with dates to the 15th.

Cotton dull—sales small.

Breadstuffs—Week's business had been limited, and compared with the quotations per the Africa, flour had further receded 1s. 6d@2s.

Richardson & Bros. quote western canal flour 36s; Philadelphia and Baltimore 36s@36s. 6d; sours 32s. 6d@33s.

Wheat in retail demand only, and 3d@4d. lower on the week. White 11s. 2d@11s. 6d; red 10s. 4d@10s. 10d.

Indian Corn—Difficulty of sale and offered at 6d@1s. reduction. White 44@45s; yellow 44s; mixed 43s.

Weather had been very favorable for agriculture. Large sales in provisions at full prices.—Ashes unchanged.

Political affairs unchanged. No fighting.

The steamship City of Manchester arrived out on the 15th, having met with many icebergs and a field of ice. The steamer Niagara had returned from Malta, and will go out again with more troops. The Cambria had also returned from the same place. The steamer Tarous was to sail with troops for the east on the day the Canada left. Ships were filling out at Liverpool to convey troops.

The steamship Baltic, from New York on the 4th inst., had not arrived when our dispatch was closed, and as she was on her 14th day out, much anxiety was felt. The report by the City of Manchester of extensive ice fields, conveys apprehensions that she may have received some damage therein.

As regards hostilities, affairs remain nearly as they were. On the Danube we hear of no movements of importance; and from Asia there is nothing new. Public expectation looks now to the Baltic for the next move.

Kalafat continued to be strengthened.

The allied fleets were still at Bicos Bay on the 6th of March, and the Russian fleet remained at Sebastopol on the 22d ult.

It is reported that the first operations of the Anglo-French army will be to attack Crimea.

VIENNA, March 15.—The Gazette Les Pas says that the treaty between the Western Powers and the Porte, is concluded on the terms already known.

BERLIN.—The Grand Duke Constantine has inspected the fleet at Helsingfors, and it was expected there in a fortnight.

The Swedish papers report that 30,000 Russians are employed in cutting a channel from Cronstadt to Sweeborn.

GREAT BRITAIN.—The coasting trade bill was read a second time in the Lords.

The Bank of England had declared a half yearly dividend of 4½ per cent. due on income tax—equal to 9 per cent. per annum.

The troops will land at Bala Kalaba to attack Sebastopol by land, while the fleets attack it by sea.

The Russians were fortifying places on the Black Sea and the Baltic and interior cities.

LATEST.—The Czar's reply could not arrive from St. Petersburg till the 18th of March.

In the House of Commons, Mr. Milner Gibson moved an address praying that in the event of a war, the Queen would give immediate directions to abstain from interference with neutral flags, not covering munitions of war. He also suggested the policy of entering into a similar treaty with the U. States and other countries.

Messrs. Norwick & Co., of Cheapside of London, and Gladstown, Bond & Co., of Glasgow, have failed.

The Australian screw steamer Sydney, homeward at St. Vincent disabled. She had £500,000 sterling in gold on board, and Sydney advices to December 4th, and Port Phillip to the 7th. The Australian markets continued dull and overstocked.

Arrival of the Franklin.

THE steamship Franklin arrived at New York, March 29, 4 P. M.,—bringing 82 passengers.

No change in the Eastern question.

It is rumored in Paris that the Czar had given orders for the army to pass the Danube forthwith.

The first division of the British fleet, under Sir Charles Napier, sailed Saturday—destination Wingoe—will not, at present, enter Russian waters.

Prussia has sent a confidential mission to Napoleon.

A terrible earthquake occurred at Calabria—2,000 persons killed.

Cotton unchanged—small sales.

Flour declined. Wheat 6d—Corn unchanged. Provisions steady. Money getting tighter.—Consols 94½.

News from manufacturing districts favorable. Overland mail had arrived at Trieste.

Shanghai was expected to fall into the hands of the Imperialists. Exports from China large.

SEVEN CHILDREN BURNED TO DEATH.—On Tuesday evening; week, a dwelling was burned near the railroad station in Lawrence, St. Lawrence Co., in which *seven children* perished. The house was occupied by John Tyler, who, with his wife, left the house about half-past seven in the evening to visit a neighbor, having put the children in bed and secured the house. At half-past 9, the alarm was given, when on bursting in the door, the house was found so filled with flame that entrance was impossible. The children were in the chamber, and it is supposed the fire originated from the stove-pipe passing through the floor. The eldest of the children was eight years of age. Mr. Taylor, being a widower with 5 children, married a widow having 2 children, in September, and all the children of both parents perished in the flames.—*Alb. Journal.*

Marriages.

AT Brockort, March 27, 1854, by Rev. A. Palmer, JOSEPH GARDENER, of Clarendon, and MARGARET SUMNER, of the former place.

How oft the faithful culture is entirely lost,
By the rough touch of winter's chilling frost;
But will not buds, and flowers, and fruit appear,
If the *Gardener* has a *Summer* all the year?

On the 27th inst., in Alabama, N. Y., by Rev. J. Hagar, MR. H. THOMAS, Jun., of Penfield, N. Y., and MARY E. PEIRCE, of Allen, Mich.

In Buffalo, on the 23d ult., by the Rev. Dr. Thompson, Mr. CHAS. RETTINGER and Miss SARAH E., second daughter of Wm. BOSWELL, Esq., of Chili.

Market Intelligence, &c.

RURAL NEW-YORKER OFFICE,
Rochester, April 5, 1854.

THE weather is becoming fine and spring-like—creating more activity in business. There has been some increase of transactions in the produce market, but no material change in prices. In some instances holders of Flour have yielded a trifle, but not sufficient to change our quotations.

Wheat is in demand to supply the wants of mills. Several hundred bushels sold on Monday at $1,87½. Barley is scarce and in demand at 80 cents for prime.

In Provisions there is no change worthy of note.

As usual at this season, Money is scarce and in demand—causing many significant inquiries for "any thing over to-day."

Rochester Wholesale Prices.

NEW YORK MARKET—April 4.

ASHES—Market firm for both sorts. Sales pots $5,04@5, pearls $8,02½@6,8¾.

COTTON—Market dull.

FLOUR—A better demand for State, for the east and home trade. Common brands more saleable and firm. Good brands scarce and in request at improving prices. Much of the flour selling at $7 is very ordinary—not as good as No. 2 Super. was last year. Our flour inspectors must be looked after. Canadian firm but quiet, $7,25 in bond. Sales Western Canal 4,400 bbls. $7@7,25 for common to good State; $7,50@7,75 for mixed to small Michigan, and common to good Ohio. There is a good demand for State flour for May and June delivery.

Rye flour quiet, $4,00@4,56 for fine.

Corn meal rather lower. Sales 500 bbls. $3,31@3,37 for Jersey.

GRAIN—A better demand for wheat, in part for milling, and prices are firmer. Sales 2,860 bu. mixed Duchess Co. $1,78; 500 bu. mixed Genesee $1,85. Rye quiet at 95c.—Barley heavy at 93@$1,08. Oats plenty, 48@55c State and Western. Corn very dull and heavy; demand only for the home trade. Sales 8,000 bush.; 75c mixed Southern; 76@78c white do.; 79@80c Jersey yellow.

PORK—Demand limited, and prices favor the buyer. Sales mess $14; prime $12@12,12.

BEEF—Buoyant. Sales re-packed Chicago $14; $9,50@12 country mess; $6,50@8 prime.

LARD—Plenty, 8¾@9¼c. Butter and Cheese unchanged.

ALBANY MARKET—April 3.

There is an improving demand for Flour in part for the river towns and for the East. The inquiry, however, is mainly confined to the better grades of State, and we can hear of nothing doing in Western. The sales of the morning aggregate 600 bbls at $7,25@7,44 for common to good State, and $8,60@9 for fancy to extra Genesee. Buckwheat Flour is selling in the street at $2,37 per cwt.

Grain—We notice a sale of 1,100 bushels of Oats from store at 50c.; and 1,000 bush. part two and four rowed Barley to arrive by Canal at $1. In the street Rye brings $1. Corn 76 for yellow. Oats 38@39. Barley 97@$1,03.

Seed—There is some inquiry for Seeds, and we notice small sales of Timothy at $4, and small Clover at 9½.

NEW YORK CATTLE MARKET—March 27.

AT Washington Drove Yard—Beef Cattle are selling scarce, and prices, as might be expected, have further advanced, our quotations to-day being fully $1 per cwt. higher than last week. The inclement state of the weather lately has undoubtedly had some influence in keeping back supplies, but an impression prevails among many of the trade that there is an actual scarcity of cattle in the interior. Quotations:—Beef Cattle $9@11,50. Cows and Calves $30 to $60. Veal Calves 4@6½c. per lb. Sheep—$4 to $7. Swine—(gross weight) 5½ a 6c.

AT Browning's—Market active with an advance in prices of Beeves. Sales at $8,50@11. Cows and Calves $30@60. Sheep and Lambs scarce, and in good demand at from $3,-50@8. A few extra brought from $9 to $11.

AT Chamberlain's—The Beef Cattle sold at from 8 to 9½c. Cows and Calves at from $25 to 35@50. Sheep from $4 to 6,67. Veal Calves from 5½c to 7½c.

AT O'Hiden's—Beef Cattle $7@10—the latter an improvement of 50c upon highest prices last week. Cows and Calves—$30 to 45 per head. Veal Calves—4c to 6c.

ALBANY CATTLE MARKET—April 3.

AT H. Woodruff's Hull's Head, Washington street.—Beef Cattle—160 at market. Prices—Extra $8,25; 1st quality $7,50; 2d do. $7,00; 3d, $6@6,50.

Cows and Calves—15 in market. Prices range from $25 to $50. Some very extra sold for $60.

Sheep and Lambs—800 in market. Prices $5,50@6,75.

Swine—130 in market. Prices $4,50@5,50.

Remarks—The market was well supplied with Beef Cattle and very well with the rest of the stock. The majority of the Cattle were sold for the New York market; some for Brighton market.

CAMBRIDGE CATTLE MARKET—March 29.

AT market 700 Beeves 67 Stores; consisting of Working Oxen, Cows and Calves, yearlings, two and three years old.

There is but a trifling variation from last week. Extra $8,50@8,75 ₩ cwt. Hides, Tallow, Pelts, Calf Skins and Veal Calves, no change.

STORES—Working Oxen—$112, 116, 124 132, 136@175. Cows and Calves—$24, 31, 40, 47@58. Two years old—$32, 41, 50@60. Three years old—$50, 58, 65@80.

SHEEP AND LAMBS—2,669 at market. Prices—Extra $6,75 @9 By lot—$3, 3,75, 4,50@5,75.

SWINE—None.

BRIGHTON CATTLE MARKET—March 30.

AT market 850 Beef Cattle, 40 Working Oxen, 30 Cows and Calves, 2 400 Sheep, and 3,000 Swine.

PRICES—Beef Cattle—about the same as last week.—Working Oxen—in demand, $90, 108, 140@160. Cows and Calves—$25, 33 46@55. Sheep—$3,25, 4,20, 5,75@6,50.—Swine—No material change in prices for wholesale trade. At retail from 5 to 7½c.

Advertisements.

ADVERTISEMENTS.—Brief and appropriate advertisements will be inserted in this paper at $1,50 pr. square, (ten lines, or 100 words,) or 15 cents a line—*to be paid in advance.*

Those who send advertisements without payment will understand from the above *why* they are not inserted.

TO NURSERYMEN.—I have on hand a few bushels of Apple Seeds for sale. SAMUEL JAYNE.
Benton, Yates Co., N. Y., March, 1854. 222-4t*

FARM AND NURSERY FOR SALE.

PLEASANTLY located on the Ridge Road, in Greece, near Rochester,—containing 55 acres of superior land. Has good buildings, and other improvements—including 300 bearing peach trees, and a variety of other fruits. The Nursery contains about 140,000 grafted apple trees, from one to four years' growth. Will sell 40 acres, with the buildings and nursery, or the whole together, or the nursery trees separate, or any part, at a bargain. Address or apply to the subscriber on the premises. Z. COLBY.
Greece, N. Y., April, 1854. 222-4t*

NURSERY FOR SALE, CHEAP.

THE Subscriber wishing to dispose of his interest in the Nursery business, offers for sale, at a great bargain, one-half of what is known as the Commercial Nurseries in the city of Syracuse. Said Nurseries embrace everything desirable in the trade. Has been established for the last 12 years, is doing a good business, and will be sold very low, if applied for soon. For particulars please address
222-4t* O. S. FOLLD, Syracuse, N. Y.

N. B.—The whole Nursery can be had if a person wishes the same. O. S. F.

BROOKSIDE FAMILY SCHOOL FOR BOYS.
Berkshire, N. Y., 18 miles from the Otsego Depot of New York & Erie Railroad.

THIS Institution enters on its 14th semi-annual Term on Tuesday, the 16th day of May next, with entirely new and very superior accommodations. A large additional building has been erected expressly for school conveniences, and other great improvements made. Its location is retired and beautiful, and the region proverbially healthy. Its aim is

1st. To secure the comfort and health of its pupils.
2d. Their thorough Instruction and mental discipline.
3d. To exert the strongest moral and Christian influences on them.

Terms.—For those pursuing the ordinary English branches, $150 a year. For those pursuing the Classics, Higher Mathematics, &c., $200 a year,—or $90, and $100 a term of 22 weeks—one-half always in advance. The above terms include use of Reading Room, Gymnasium, and Stationery for all school exercises without additional charge.

Applications for admission or for circulars containing full particulars, testimonials, &c., should be addressed to
FRED'K F. JUDD, A. M., Principal and Proprietor.
Berkshire, April 1, 1854. 222-4t

6,000 ACRES NOW LOCATED!!

ASA C. BOWEN, *General Agent for locating Bounty Land Warrants, buying, selling and transferring Real and Personal Estate, and transacting all other kindred business.*

☞ Communications directed to me at Bowens' Prairie, Jones Co., Iowa, will receive immediate attention.

N. B. Unexceptionable references from various parts of the United States given to strangers who may desire them. 222-3t.

HOP ROOTS.

THE subscriber, at Waterville, Oneida Co., N. Y., is prepared to supply all orders for Hop Roots of the best known varieties, at prices ranging from $2 to $3 per bushel, according to quality. They will be put up in good order, in packages to suit purchasers, and forwarded free of charge, to the Railway at Utica. A printed circular, containing complete instructions regarding the culture of hops, together with a necessary supply of *male roots* will accompany every order, free of charge. The quantity required to set one acre is from four to five bushels.
222-3t* D. CONGAR.

PREMIUM SWINE.

SUFFOLKS from Morton's Piggery, have taken the highest premiums, as may be seen by the published Transactions of the Massachusetts State and Norfolk County Agricultural Societies. The stock now for sale is large and well assorted, embracing the purest and best blood of this unequalled breed. Pigs properly paired for breeding, $30 a pair. For prices of Boars and Sows, see catalogue, which will be sent by mail on application. Animals purchased forwarded by express or vessel from Boston, with pedigree. Orders must be accompanied by a remittance.
JAMES MORTON, West Needham, or
G. H. P. FLAGG, Boston, Mass.
Boston, April 3, 1854. 222-2w-Hm*

FARM FOR SALE.

1½ MILES south from Lockport, N. Y., containing 100 acres, in a good state of cultivation, a spacious frame house, a bank barn, 90 by 40 feet, with a wing 25 by 35—two good houses for tenants—necessary out-buildings—abundance of fruit of all kinds—20 acres timber, 10 of which is a beautiful grove of sugar maple—well watered, and bordering on two plank roads. Price 90 dollars per acre—one-third down, the remainder may run several years. Lockport contains 12,000 inhabitants, and improving rapidly; good schools and an excellent market.

Inquire of I. W. REED, Lockport, or JOSEPH TREVOR, on the premises. 222-2t*

FARM FOR SALE.

THE Homestead of the late G. C. LEE, situated near the village of Howell, Livingston Co., Michigan, will be sold at a *bargain* to close the estate. Said Farm is pleasantly situated, half a mile from the flourishing village of Howell, the County Seat of said county, on the plank road leading from Detroit to the State Capital, and contains 170 acres, about 100 under improvement, the balance well timbered. Has a good two-story brick house, large barn, and other out-buildings—bearing orchard of choice fruit, and soil well adapted to the growth of *grass or grain.*

Is near location to the village, which contains four Churches, a Court House, an excellent Union School, mills, mechanic shops of most descriptions, together with all the conveniences which a thriving western village presents—in addition to the fact of being in one of the healthiest towns in the west, will make a very desirable situation for a person emigrating who would wish to avoid the inconvenience of locating in an unsettled neighborhood.

For further particulars refer to ELIJO. W. LEE or E. J. LEE, at Howell. 222-2t* March 20, 1854.

SEEDS OF FINE FRENCH ANNUALS.

THE Subscriber, publisher of the "*Horticulturist,*" has procured from VILMORIN, ANDRIEUX & Co., Paris, a fine collection of Flower Seeds. A collection will be forwarded by mail, free of postage, to any person remitting one dollar. Plates of some of these have been given in the *Rural.*
JAMES VICK, Jr.
Rochester, April 1, 1854. 222-2t

FORBUSH'S MOWING AND REAPING MACHINE.
Patented July 20, 1852.

THE AMERICAN MOWING AND REAPING MACHINE Co. have purchased the Patent Right for the above Machine for the United States, England and Canada, and are now manufacturing a large number to supply the demands of the coming season. The advantages which this machine possesses over all others are obvious, and will readily be acknowledged by all disinterested persons. Being a *combined machine*, and working equally well in grain or grass, it enables the farmer of moderate means to procure a valuable *Reaper and Mower* in one, which will do the work of both, and at less than half the usual cost. As a Mower it has no superior; it was thoroughly *tested* the past season in every variety of grass, and in many different sections of the country, and in every case where it was properly made, it gave perfect satisfaction. It will cut and spread from 10 to 15 acres of any kind of grass per day. As a Reaper it has never been excelled, and has no rival that can in all respects successfully compete with it. The patent for this machine covers many points of excellence which have heretofore been unknown, and which (of course) can be used in no other. In the construction and arrangement of these machines great pains have been taken to ensure the necessary strength, simplicity and durability. They are easily kept in order, and it requires but a few moments to change the machine from a Mower to a Reaper, and in either form it is equally strong and substantial. It is not liable to get out of order, and of any accident should happen it could be readily repaired by any ordinary mechanic. In the construction of the machines no expense has been spared to render them both perfect and durable. The Mower weighs but 731 lbs.—the Mower and Reaper combined 930 lbs. To any person desirous of purchasing, or of understanding the machine more fully, illustrated circulars will be sent with full descriptions, references, &c., &c.

Price of the Mower,.....$110 00
" " " and Reaper,..... 130 00

Terms—Cash in Buffalo. Delivered on boats or cars, free of charge.

VAN HEUSEN & CHARLES,
China Depot, No. 62 and 64 State street, Albany, N. Y.

TO THE PUBLIC—Your attention is respectfully solicited to the assortment of *China, Glass, Earthen Ware, &c.* kept at this establishment, unequaled in variety and extent by any in the United States. Our importations for this season will comprise the new and desirable styles—selected by one of the firm while in Europe. Particular mention can not be made of all the pretty things; we can only say that assortors will feel amply repaid, and find a large assortment at *lower prices* than can be found elsewhere. Those who may want Dinner or Tea Sets, or any other article of a peculiar design in China or Earthen ware, can depend on receiving it promptly, as we have an agent at the Potteries who will give attention to such matters. Housekeepers will find here many articles not usually kept by dealers in our trade; this enables us to furnish complete outfits to those commencing; to this branch we pay particular attention.

The patronage heretofore extended to us, is evidence that our system of Large Sales at Small Profits, is appreciated; and we doubt not will continue to be. Among the new articles deserving special notice, are—

Parian China—Tea Sets and separate pieces, Statuettes, Busts, Images, &c. This is a new material, and very beautiful.

English and French China—Plain and Decorated Sets or Pieces, Harlequin Sets or Pieces, Vases, Images, &c., &c.

Britannia and Silver Plated Ware—Wilson's (English) and American, all kinds, some patterns very rich.

Cutlery—Rogers' (English) and American, in sets or separate; also, Silver Plated Knives, &c.

Papier Mache and Japan Ware—Tables, Trays, Boxes, &c., from the celebrated factory of Jennings & Kelthidge.

Silver Plated Glass Ware—Very elegant—richest made.

Gas Fixtures, (a large stock selling at cost,) Girandoles, Lamps, Chandeliers, &c., new patterns, at unusually low prices.

☞ Ware packed so as to ensure its safe carriage any distance. 222-3t

SCIENTIFIC AMERICAN OFFICE,
American and Foreign Patent Agency, 128 Fulton Street, New York City.

THE SCIENTIFIC AMERICAN is a *weekly journal of Art, Science and Mechanics.* It was established in 1845, and has now a larger and more influential circulation than any other journal of its class in the world. Each number contains from 5 to 10 original engravings of new mechanical devices and machines; an official report of the claims of all the Patents, besides a great amount of valuable information, concerning the progress of science and discovery throughout the world. *Mechanics* and *Chemistry* are thoroughly discussed by those practically acquainted with each subject, every thing so clearly popularized as to reach the humblest capacity. Connected with the publication of the Scientific American, the Proprietors conduct the most *extensive Patent Agency* in the *World.* Nearly one-half of all the American and Foreign Patents applied for in this country pass through its agency. So long established and having their own special agents and corps of Examiners, they have facilities which cannot be surpassed by any existing agency. Inventors who desire to procure advice, have only to lay their case before Messrs. Munn & Co., who will, without charge, give an opinion in regard to the results of an alleged improvement, and furnish circulars of advice, giving necessary instructions how to proceed. Our charges for preparing cases are as low as they can be made by any other respectable concern. Our experience is not of a few weeks, but of years, and therefore our knowledge of inventions is not limited to a narrow range of subjects.

Terms of the Scientific American $2 a year—$1 for six months. All letters should be addressed (post-paid) to
222-1t MUNN & Co., New York City.

FARM FOR SALE.—Two miles south of Spencerport, in Ogden, Monroe Co., N. Y., containing 84 acres of good land, in a good state of cultivation. Large Peach and Apple orchards, three barns, good house, well watered, and other improvements. Terms easy; possession given first of May. For further particulars address or apply to
222-3t* CALEB K. ADAMS, Spencerport, N. Y.

POLAND OATS.

THOSE wishing Poland Oats for seed, can yet be supplied at one dollar per bushel, at my house, or one dollar twenty-five cents at the Railroad, including new bags.
Marion, Wayne Co., N. Y. 222-1t I. A. CLARK.

FRUIT AND ORNAMENTAL TREES,
AT REDUCED PRICES FOR CASH.—The subscriber wishing to dispose of his present stock of Trees, will sell them at the following rates for cash:

Apple Trees, one shilling each; *Cherry Trees*, two shillings each; *Pear Trees*, two shillings each; *Mountain Ash*, two shillings; *Peach Trees*, nine cents.

Also, a quantity of young improved trees of suitable size to remove to other Nurseries, at reduced prices.

All of the above varieties are of the best quality, having been tested and adapted to this climate—and are warranted to be as represented.

Letters addressed to the undersigned at Olcott Post-office, Niagara Co., N. Y., will receive prompt attention.

Residence on the Nursery—three miles east of Olcott.
N. FAHNUM.
Olcott, Niagara Co., N. Y., March, 1854. 221-4t*

FARMERS, LOOK TO YOUR INTERESTS!

J. RAPALJE & Co., of the Genesee Seed Store, Rochester, having received their Spring supply of Seeds, &c., offer for sale, at the lowest cash price—

500 bushels Scotch Fife Seed Wheat, Canada growth.
500 " Canada Club do. do.
500 " Spring Rye.

200 " Clover Seed.
500 " A No. 1, Timothy.
1,000 " Early and late Field Peas.
300 " Pure Early Kent Peas.
300 " Early Washington Peas.
200 " Early Warwick Peas.
100 " Dwarf Blue Imperial Peas.
500 " Marrowfat Peas—and more coming.

13 casks of English Seeds, viz:—Turnip, Cabbage, Rutbh, Cauliflower, &c., &c. Several varieties of superb Garden Peas, imported from London.

J. RAPALJE & Co. are also sole Agents for the sale of Ketchum's Mowing Machine in Rochester, and for the vicinity. 221-6t

DEVON BULL.

FOR sale, a pure blood Devon Bull, one year old this Spring—a fine animal. A full pedigree will be given to any person desiring it. Price, $35. J. W. COLLINS.
Sodus Ridge, Wayne Co., N. Y., 1854. 221-2t*

SUFFOLK PIGS.

TWENTY pairs of purely bred SUFFOLK PIGS, for sale by the subscriber. Also breeding sows.
GEORGE HUNTINGTON.
Walpole, N. H., March 21, 1854. 221-3t

MEXICAN POTATOES—For sale at $1 per bushel, at Walworth, Wayne county, N. Y., by
221-3t* T. G. YEOMANS.

A CHANCE FOR THE MILLION!

$50 to $150 per Month can be easily made in selling the *POPULAR BOOKS* published by MILLER, ORTON & MULLIGAN, successors to Derby & Miller, Auburn, and Derby, Orton & Mulligan, Buffalo.

At no previous time has the demand for good books been so active as at present. The great mass of the People who want, and will have them, are too willing the result of the Local Bookstores, and it has become a well ascertained fact, that of the Publications of merit and celebrity, from time to time issuing from the American Press, a *large proportion* must be sold by

Book Agents, Colporteurs and Canvassers,
or not at all.

To all who are desirous to aid in the dissemination of a *Pure and Wholesome Literature*, and none other, we offer great inducements to engage in the sale of our Popular Books for the People. We publish *Good Books, well printed and strongly bound*, and which sell readily wherever offered.

☞ Catalogues of our Publications, containing full particulars, furnished on application (post-paid,) to
MILLER, ORTON & MULLIGAN,
1864. Publishers of Popular Books,
221-4t Auburn and Buffalo, N. Y.

BUCHANAN ON GRAPE CULTURE, AND LONGWORTH ON THE STRAWBERRY.

JUST PUBLISHED, the Field Edition, Revised, one Volume 12mo. Cloth. 63 cents.

This volume should be in the hands of every cultivator of these delicious fruits, for it embodies, in a compact and available form, the experience of accomplished and practical Horticulturists on subjects which have connected really under their own observation for a long series of years.

Of a former edition of "Buchanan on the Grape," we subjoin a few

Notices of the Press.

Mr. Downing, in his Horticultural says:—"It deals more with facts, with actual experience and observation, and less with speculation, supposition and belief, than anything on this topic that has yet appeared in the United States—In other words, a man may take it, and plant a vineyard, and raise grapes with success."

"Furnishes, in a small space, a very great amount of instructive information relative to the culture of the Grape.—*Farmer's and Planter's Encyclopedia.*

"Will be found to convey the most opportune and valuable instruction, to all interested in the subject."—*Neill's Fruit and Flower Garden.*

Those who do not find the book sent by mail, will receive it prepaid, by remitting the price, by letter post-paid, to the Publishers. MOORE, ANDERSON & CO., Cincinnati.

For sale by PHINNEY & Co., Buffalo, and by A. S. BARNES & Co., IVISON & PHINNEY, and C. M. SAXTON, New York. 221-2t

CHOICE EGGS FOR HATCHING.

A FEW superior Brahma Pootra eggs for sale, at $3 per dozen. Also, of Pea Combs, Buff, and other Asiatic Fowls, of the superior Springfield imported stock. The stock can be seen at my place, and are unsurpassed for size, beauty and purity. T. PROTHINGHAM.
221-3t 18 No. Fitzhugh st., Rochester, N. Y.

3,500 ACRES OF LAND, WITH STEAM SAW-MILL FOR SALE,

IN Scioto Valley, Ohio, and lying on the Ohio Canal.—Properly as desirable as this, is seldom to be met with, and will be sold at a bargain, and on accommodating terms.—Persons desirous of purchasing, by calling upon, or addressing the subscriber, at Chillicothe, Ohio, will be promptly attended to, and full description of premises given. H. H. HOAG.
Chillicothe, O., March 22d, 1854. 221-tf

PIE PLANT FOR SALE.

CAHOON'S *well known Seedling*, superior in quality and size to any of the varieties of Mammoth, Colossal, or Victoria, and continues to produce new leaf stocks until November, not being affected by the early frosts. This variety was raised by the subscriber 14 years ago from seed, and after being under cultivation that length of time holds good in size, having last year produced stocks weighing FIVE pounds and over.

Testimonials from Agricultural, and Horticultural, and other Papers could be produced in abundance to show that this Pie Plant, is all that is represented. I will only insert one from a paper published in this city, where the Editor has availed himself of opportunities of frequently visiting my garden, for the last ten years. It is as follows:

"But the most remarkable feature of this garden is the *Mammoth Pie Plant*, and certainly any person who is curious to know what Pie Plant is, and how it may be cultivated and developed, would do well to look at it. We state what we witnessed, (and what we should doubt if we had not witnessed it,) that from one root was cut a quantity, which after being trimmed ready for cooking, weighed 48 *pounds*, and certainly as much more was left on the root, meant; making the product of one root nearly, if not quite *one hundred pounds* of plant. And we are not aware that this was a very unusual growth, for we saw thousands of bunches, which seemed quite as large as the one in question; and all this too, young and tender plant, as delicious as any raised. Of this plant, Mr. Cahoon is raising immense quantities, with which he not only supplies home demand, but ships to other places, furnishing one house in Chicago with a thousand pounds per week."—*Telegraph.*

I am now growing quantities of it for the California and Oregon market. [Hearing the roots.] I send a few roots to Oregon last January, and the growth last season *astonished* the citizens there, notwithstanding they had seen *tall* growths of vegetation at home.

I will securely pack in boxes, and forward according to directions, Ten Roots for $5; Five Roots for $3; or One for $1; the Cash to be sent with the order. A severe frost does not injure the roots, and they can be sent with safety to any part of the Union. G. P. CAHOON.
Kenosha, Wis., March, 1854. 220-4t

EARLY EXCELSIOR POTATO.

THIS is a new and very superior sort. They are as early as the June potato, grow above the average size, are mealy and palatable, and have kept better than any other variety. The rot has never been known among them.
D. L. ALLEN,
220-3t-eow 189 and 191 Water St., New York.

ASIATIC FOWLS.

FOR sale at auction prices, a choice lot of Asiatic Fowls, consisting of the Brahma Pootra, Chittagong, Grey Shanghai, and Cochin China varieties, all young fowls and warranted to be of pure blood, and of the large breeds. Per pair, $10. Two pullets and a cock, $15. Coops found and sent by express, to any part of the United States, promptly, on receipt of the money. The above prices are extremely low, the ordinary charge for the same birds being $20 to $30 per pair. ALFRED E. BEACH.
58 Nassau street, New York.
Reference—P. T. BARNUM, Esq., President of the National Poultry Society. 219-4tw-4tm

LIVE STOCK AGENCY.

IN compliance with repeated solicitation, the subscriber offers his services for the purchase of Horses, Cattle, Sheep, Swine and Poultry. His long acquaintance with different breeds and *breeders* of these animals, gives him superior facilities for procuring the best. SANFORD HOWARD.
{ Office of the Boston Cultivator,
{ Boston, Mass., March 1, 1854. 218-6tw-3tm

ATKINS' SELF-RAKING REAPER.

FORTY of these machines were used the last harvest in grass or grain or both, with almost uniformly good success, in nine different States and Canada.

Twenty-Six Premiums, including *two at the Crystal Palace*, (silver and bronze medals,) were awarded it at the autumn exhibitions. Has building only 300, which are being rapidly ordered. Mr. Joseph Hall, Rochester, N. Y., will also build a few. ☞ Early orders necessary to insure a Reaper.

Price at Chicago $175—$75 cash with order, note for $50, payable when Reaper works successfully, and another for $50, payable 1st December next, with interest. Or $160 cash in advance. *Warranted to be a good Self-Raking Reaper.*

☞ Agents properly recommended wanted throughout the country. Experienced agents preferred. It is important this year to have the machines widely scattered.

Descriptive circulars with cuts, and giving impartially the difficulties as well as successes of the Reaper, mailed to post-paid applications. J. S. WRIGHT.
"Prairie Farmer" Warehouse, Chicago, Feb., 1854.
218-13t-m38

FARM FOR SALE,

SITUATED in the town of Conquest, 4 miles north west of Weedsport, and 3½ from the Rochester and Syracuse direct railroad. Said farm contains 163 acres, 140 improved, and in a good state of cultivation, and well adapted for all kinds of produce, and well situated for two farms if desirable, as there are two houses, two barns, two orchards of a good variety of fruit trees, and a wood lot on each end of the farm; 30 acres of wheat on the ground, and 50 is seeded to clover and timothy. Half the purchase money to be paid when possession is given, the remainder on bond and mortgage to suit the purchaser. Price, $55. For further particulars inquire of

Poetical.

THE OLD CHIMNEY-PLACE.

A stack of stones, a dingy wall,
O'er which the brambles cling and creep,
A path on which no shadows fall,
A door-step where long dock-leaves sleep,
A broken rafter in the grass,
A sunken hearth-stone, stained and cold,
Naught left but these, fair home, alas!
And the dear memories of old.

Around this hearth, this sacred place,
All humble household virtues grew—
The grandsire's love, the maiden's grace,
The matron's instincts deep and true.
Here first sweet words were lisped; here broke
Life's morning dream, and yet more dear,
The love that life's best impulse woke,
Grew warmer, gentler, year by year.

How cheerful, while the storm without
Muffled the earth and iced the night,
The eddy glow gushed laughing out
On merry groups and faces bright;
How chimed the crackling, freakish flame
With rosy mirth or thoughtful ease,
Or, may be, syllabled the name
Of one rocked o'er the shivering seas.

What fairy scenes, what golden lands,
What pageants of romantic pride,
In the weird deep of glowing brands,
Saw the fair boy, the dreamy-eyed,
Till musing here, his spirit drew
Strong inspiration, and his years,
By beauty's subtle mentor, knew
The paths of Nature's inner spheres.

Here, as the swooning embers sent
A faint flush through the quiet gloom,
In the warm hush have lovers blent
The fragrance of their hearts' fresh bloom;
And, veiling in soft-dooming eyes
Her tremulous joy, here blushed the bride;
Here, o'er pale forms in funeral guise,
Farewells from broken hearts were sighed.

This spot the pilgrim, 'neath strange skies,
Saw in his wayside dream; here stood
Old friends with gladness in their eyes;
Here grew the beautiful and good—
Sweet friendships—faith serene and sure—
Manhood's strong purpose, warm and bold—
Courage to labor and endure,
The household feelings never cold.

Here, leaning in the twilight dim,
All round me seems a hallowed air;
I hear the old familiar hymn,
My heart goes upward in the prayer
That made the night so full of peace:
Kind lips are on my brow—my ear
Hums with sweet sounds—they faint—they cease,
And night o'er all broods calm and clear.

N. Y. Evening Post.

Rural Sketch Book.

[From the Baltimore Weekly Sun.]

BIRDIE LAURENCE;
OR, THE SCHOOL-MASTER'S PET.

BY FAN FEATHERLIE.

Chapter I.

"Master! Master Fletcher, *do* hear me; oh, *do* come back," and Birdie Laurence flung herself down by the brook-side with a gesture of impatience, as the hill echo, alone, gave her answer.

"You can run like a deer, Birdie—why don't you run after him?" asked one from amongst the group of school-girls, who, with dinner baskets and books, loitered in Maple Glen.

"Yes! *do, do*, Birdie," urged one another, and thus persuaded, the little maiden sprang to her feet.

"I will have a long run, I think," said she, quietly, "so I may as well pull off my shoes, for I can see him just crossing the log bridge."

The well scuffed shoes were tossed down, the dinner basket, books and sun bonnet left with the school-girls, and throwing back her dark brown curls, like an arrow from a bow Birdie Laurence darted down the long lane. When the thick wood hid the last glimpse of her pink dress from their eyes, the little girls in the glen returned to the school house-steps.

"We will wait here until she comes back, girls," said Lucy Whyte. "I am *certain* Master Fletcher *can't* refuse Birdie, she is *such* a sweet coaxer. Any way, it will be very unjust if he does." All the little girls agreeing with Lucy in this, we will leave them in the glen, and follow Birdie Laurence.

Charles Fletcher was walking slowly thro' Maple-Mere woods when the quick, step of Birdie caught his ear, and he turned his head. Seeing his pretty pupil straining every nerve to overtake him, Master Fletcher seated himself upon a log fence to await her.—In a few moments, breathless and glowing with violent exercise, Birdie Laurence stood before him. She blushed and trembled; why should she? A young and handsome face looked upon her; no old or forbidding one, and yet the little maiden felt very uncomfortable, as the calm, dark eye of Master Fletcher rested upon her bare feet and torn dress. "I have been running very hard, Master Fletcher, and——"

"So I perceive, Miss Laurence," was the abrupt rejoinder, and if the look had troubled Birdie, this haughty answer certainly frightened her. The tongue of the "sweet coaxer" forgot its winning art, and with quivering lip and crimsoned cheek, she stood abashed in the august presence of Charles Fletcher, master of Maple-Mere school. Yet that personage possessed a kind heart notwithstanding his haughtiness, and pitying Birdie's confusion, sprang down from the fence to her side. "I am very sorry I spoke so sternly," he said, gently, "but do not be afraid; look up and tell me what you wish."

Birdie was encouraged—she raised her eyes. "You are going to give the boys a holiday tomorrow afternoon?"

"I am. Well?"

"And, Master Fletcher, we girls want a holiday too. We think it *very hard* to sit in the school-room and study while the boys are out playing."

"You forget, Miss Laurence, I award a holiday to those who deserve it. The boys connected with my school *do*, the girls *do not*."

"Dear Master Fletcher, *don't* say *no*. *Please* say yes."

Young Fletcher answered kindly, but firmly, "I cannot, Miss Laurence, your conduct is undeserving of it."

"But we——"

"Say no more. I would advise you to return home and appear in a dress more becoming a young lady."

But this direct allusion to her torn dress and bare feet fell harmlessly upon Birdie. She did not care for her appearance *now*—all shame was lost in anger. Gathering up the tatters of her unfortunate pink dress, and placing her little white foot firmly, she exclaimed:

"We *are* as good, and better than the boys, and have *more* right to a holiday than they."

"I am the best judge of that myself," replied young Fletcher, and haughtily turning away, wished his pupil good evening.

"Master Fletcher," screamed Birdie, her whole face flushing with passion, "*You* are very unjust, but Master Brooks *never* was. I wish *he* was back again.

A dignified bow was the only answer she received, and in a moment after her young teacher's slight form was lost to her view.

Birdie Laurence walked slowly back to the girls in the glen. She *was* very angry.—Master Fletcher had refused her request, and treated her haughtily, and this the proud spirited girl could not brook, and as she hurried along she planned dire schemes of revenge. The school-girls listened with frowning brows to Birdie's story, and when she paused for breath, with one voice they pronounced Charles Fletcher a tyrant. Master Brooks was never so stern, never *so* unjust, and they wished for him back again. Now, Master Brooks, be it known unto you, dear reader, ranked among the *most* cruel "knights of the birch;" in short, was a very "old ogre," and the day he relinquished his school in Maple-Mere his pupils declared to be the *brightest* in their lives.

We moralize not upon this instance of the inconsistency of human nature, for beneath their boddices of calico and gingham, the hearts of the Maple-Mere girls beat too stormily to allow of reason, and as Master Fletcher *had* been *very cross*, we will pass it by.—With clouded brows, pouting lips, and muttering angry words, the little group left the school-house steps, and when the shades of evening fell upon the glen, all was hushed there.

On a "cheerie May morn," Charles Fletcher first assumed his duties in Maple-Mere school. Rosy June had scarcely smiled upon the fair little village ere this cloud darkened the young teacher's sky. A quarrel, so soon, and with the *fairer* portion of the school, seemed threatening indeed, but Charles Fletcher was too haughty to permit *such a trifle* to ruffle *his* composure. Birdie Laurence's altered manner, however, caused him more uneasiness than he would have cared to avow. She had forgiven, but not forgotten his haughty refusal, and when in a few days her schoolmates unbent their frowning brows and smiled upon the master, she was coolly polite, no longer frank or social. A tacit perception of some obstacle in the way of *their* friendship seemed to have sprung up in the minds of teacher and pupil, and both apparently contented with this knowledge, the matter rested.

Bertha Laurence was an orphan, the only child of a young artist, who with his wife and mother lived in Maple-Mere. Pierre Laurence had married a young and beautiful woman whose family ranked amongst the wealthiest and proudest of the Empire State. Deeply displeased with their daughter's marriage, the Allans refused to acknowledge her as their child, and forbade her sister from any intercourse with her. Bertha Allan had as proud a spirit as her friends, and knowing that she loved not only well but wisely one who was her inferior in wealth alone, sought not by letter or message to alter their determination. Happy in the society of her noble young husband and his excellent mother, the pretty little cottage in Maple-Mere became dearer to her than the gorgeous home of her early years. Bertha Laurence was young when the life-light left her eye. Twenty-three summers only had kissed her brow, and her little daughter was just beginning to lisp her name when the sleep of death stole over her. In one year from that time Pierre Laurence laid down by his young wife in Maple-Mere church-yard, and the little Bertha was left an orphan. In the small yet beautiful home her son and daughter had so loved, Mrs. Laurence remained with her grand-daughter. Bertha, (or to give her the pretty pet name by which she was known in Maple-Mere, Birdie,) inherited the haughty, sensitive nature of her parents. Generous, frank and confiding in disposition, her temper was lofty, and Birdie Laurence was not one to bear reproof meekly. Gleeful as any fairy, she was the light of the little cottage; the sunbeam which shone on Mrs. Laurence's woe-darkened heart.

Many years had gone by since Birdie Laurence had parted from her parents, and their memory to her was as a half-forgotten, yet sweet dream. She never wearied of hearing Mrs. Laurence talk of them, and oftentimes would steal into her father's studio. There the paintings yet remained as Pierre Laurence had last placed them, and his child loved to linger among the fair creations of his art, and gazing upon them hope that a portion of his genius might rest upon her. Poetical, and keenly alive to aught that was beautiful, Birdie Laurence's earnest prayer seemed granted, and she daily grew more like her parents—a blended likeness of both, in mind and feature. For this she had yearned. They were her ideal of all that was good and fair, and her love for them deepened into a holy reverence. She inherited the fine features and earnest glance of her father, and the hazel eyes, brilliant complexion, and rich dark curls of Bertha Laurence lived again in her fair young daughter.

Birdie Laurence was quite sixteen ere her grandmother thought of sending her away to school. "She was growing up so fast, it was time her education should be more attended to," and Master Brooks leaving at that time, the old lady began seriously to think of parting with her darling. But Birdie coaxed and plead so earnestly to stay at home, and Mrs. Laurence shrinking from her assurance that she *would not* be happy away from Maple-Mere, gave her consent to her remaining at home a year longer. Shortly after this, Charles Fletcher arrived in Maple-Mere, and although very young, came so well recommended as to induce the villagers to offer him the village school. This offer was accepted for a year, and Charles Fletcher found himself the preceptor of some forty boys and girls from the village and country near. To the new master went Birdie Laurence, and he had been but one short month her teacher when his haughty refusal lost him a place in the good graces of his pretty pupil. Charles Fletcher was quite young, strikingly handsome and very haughty. The people of Maple-Mere knew but little about him. That he was poor, and taught to enable himself to prosecute his law studies, was all he chose to inform them, and with this scanty piece of knowledge they were obliged to rest content. When not in school Charles Fletcher spent most of his time in solitary walks, or alone in his room at the little inn.—So the villagers disliked him, as he was unsocial; his scholars disliked him, as he was sometimes stern and always reserved towards them, and Birdie Laurence had certainly closed her warm heart against him. She knew he disliked her, for he never smiled on her, and his really musical voice always deepened to a stern undertone when he addressed her. Birdie Laurence could not bear this. She had always been the school-master's pet. Since she sat on the "A B C" bench in the old school-house, one pedagogue after another had given her a place in his affections, and handed her down to his successor as a sort of sweet, living heir-loom.—Even that "cross old ogre," Master Brooks had petted her. Master Fletcher alone was stern, cross. She would leave his school; but no, she would remain and tease him; and Birdie grew provokingly mischievous.

Chapter II.

The summer had fleeted by, and the warm golden haze of early autumn rested upon Maple-Mere. Charles Fletcher's pupils were beginning to like him better. He was no longer stern and cold, and in proportion as his hauteur vanished, their shyness fled. To his scholars he was changed—to all except Birdie Laurence, less chilling, more cordial. Birdie felt the exception. She disliked him more and more, and like a willful child, as she was, lost no opportunity of displaying her feelings. Dear reader, don't think Birdie spiteful. Remember she had been the school master's pet from earliest childhood, much caressed, much loved: and now flaxen-headed, snub-nosed little boys received kind words and pleasant looks, but there was none for her. Charles Fletcher was never harsh to Birdie; always gravely, coldly polite, he listened to her recitations with patient attention and calm courtesy. In his penetrating eye she read no sympathy. She knew he was faithful in his labors for her progress, yet she also knew that those labors were void of interest to him. The proud girl stood far aloof from her teacher. She sought not his aid. She toiled alone, but for this she cared not. In herself she was sufficient unto the toil, yet how truly could she have prized sympathy. Master of Maple-Mere School, a wide gulf yawns between you and your pretty pupil! Shall it ever be crossed? Birdie grew more mischievous and tormenting. She hesitated not to play tricks which annoyed and seriously provoked Charles Fletcher. Her cunning baffled his vigilance, yet he suspected, although he never blamed her. Birdie was beautiful. Did Charles Fletcher think so?—Twice she had caught his eye resting upon her with an earnest expression, perhaps admiration, but the next instant he met her gaze, and a cold, mocking smile played around his handsome mouth, and, somewhat puzzled, the young beauty shook back her silken tresses and pouted her coral lip. The old clock which had ticked for years behind the school-room door no longer kept faithful note of time. Sometimes it was too fast, and the village children hurried home an hour too soon for dinner; again, too slow, and that "goodlie meal" grew cold upon the table ere the occupants of Maple-Mere School were released. Some one had been tampering with the clock. Charles Fletcher knew this, and after ineffectual efforts to discover the culprit, resolved to visit the sins of one upon the heads of many. It was past the hour of dismissal. The long evening shadows were stretching upon the grass. The scholars were moving listlessly in their seats, and gazing wearily toward the door. Charles Fletcher arose from his chair. "As some one has been meddling again with the clock, regardless of my express commands," he gently said, "I have resolved to detain the whole school this evening, an hour beyond the usual time."

"But, Master Fletcher——" began several voices.

"Silence! Not until the culprit confesses his or her guilt, will I release you."

A buzz of dismay ran through the school-room at these words, and then a silence followed, anxious and profound. Birdie Laurence was the first to break in; leaving her seat, and advancing to the centre of the room, she very calmly said:

"I don't choose the whole school to suffer for my fault, Master Fletcher. I only am to blame. I have meddled with the clock every time, and to me be the punishment."

Charles Fletcher became deadly pale as Birdie finished speaking, and for a moment trembled visibly. That was no time or place for emotion, and the young man soon recalled his firmness and replied haughtily:

"I admire your frankness, Miss Laurence; yet you must be aware some punishment is due this fault."

"I am. Use your ferule, if you choose.—Here is my hand;" and Birdie coolly extended her little rosy palm.

Again a deadly pallor came over Charles Fletcher. "Strike her! I would die first!" he muttered through his closed teeth; but his pupil viewed him with unmoved eye. That haughty glance seemed to nerve Charles Fletcher, and lightly he addressed Birdie:

"I am not barbarian enough, Miss Laurence to strike a weak, defenceless girl, but your behavior calls for some punishment. Stand upon this bench, in the presence of the school, until I send you to your seat."

Birdie Laurence mutely obeyed. She returned the glances of her companions with silent scorn, and sought with haughty eye her teacher. But he was not looking at her. His head was bowed down. He might be reading—he might be writing. Birdie knew not, but there was that in his position mutely expressive of grief, of spirit-pain. It was a silent appeal to Birdie's kind feelings, and she acknowledged it. She recalled his agitation when she confessed her delinquency, and a something, not vanity, told her he had never towards other pupils shown so much feeling. She stood before a mental tribunal, as it were, not upon the low bench in the old school-house. Conscience accused her of haughty looks, scornful words, and unjust behavior. Mercy and Forgiveness mournfully laid their crushed and withered blossoms before her—blossoms which in her pride she had cast from her and roughly trampled on.

"You can return to your seat, Miss Laurence," and the vision fled.

Birdie walked slowly home through Maple-Mere woods. Her conduct towards her young teacher seemed to flash upon her in a new light. He was to blame in few things—she in many. It was not his place to apologize, but hers, and she resolved to do this. If he refused her apology, the blame would no longer rest upon her. But he will not refuse it, Birdie Laurence. He will receive it gladly, gratefully. Courage then, already the gulf between Master Fletcher and yourself is narrowing.

When Charles Fletcher walked a short time later through the same wood, he was unconscious that bright eyes from a leafy covert gazed with earnest interest upon his pale, troubled face. A moment after, and his fair, willful pupil was before him, those eyes, dim now with tears, looked up to him, and the coral lip quivered with the words, "Forgive me!"—Charles Fletcher, though haughty, had a noble heart, and he freely and cordially forgave Birdie her past willfulness; then, in his turn, with manly dignity, sought forgiveness. Frank of speech, Birdie told her young teacher her harsh opinion of him, and then begged to hear his of her.

Do tell me if you have not always disliked me?" she said; "but I am almost sure you have, and I need scarcely ask."

"You are wrong, Miss Laurence. Cold and stern as I have been towards you, I have ever liked you. Of all my pupils you have indeed been my favorite."

A joyous peal of girlish laughter answered these words.

"Oh, Master Fletcher, I your favorite?—Think again? Why even ugly little Tom Whyte had more kind smiles, and he is the worst boy in the school. But why were you so stern and cross if you really liked me?"

"Not now—not *now*—I cannot answer that question, Miss Laurence," hurriedly returned Charles Fletcher; "but some day later, some time when I no longer stand in the position of a teacher to you, I will tell you. Till then be satisfied."

"I will try; and now, Master Fletcher, we are friends?"

"Yes! for a life-time; but remember, you must not judge me harshly should I ever seem stern again."

"Never, now that I know you like me."

"And you wont touch the clock again, Birdie? Promise that," said young Fletcher, playfully. His voice sounded very sweet. No stern undertone about it now, and Birdie gayly promised. *(Concluded next week.)*

Youth's Corner.

ILLUSTRATED REBUS, NO. 16.

☞ Answer in two weeks.

[Written for the Rural New-Yorker.]

CHARADE.

My first in foreign churches you may greet,
At home 'tis seldom found in church or street:
My second oft is used by household care,
To make old clothing suitable to wear;
My whole may well describe ill-humored folks,
Who knit their brows at puns, charades, and jokes.

N. G.

Cave Vincent, N. Y., March, 1854.

Answer to Illustrated Rebus No. 14.—*Secure your tools with care, and in a proper manner.*

Answer to Acrostical Enigma, in No. 13.—*Pods.*

THE PEOPLE'S PATENT OFFICE.

This well known establishment is still carried on under the personal superintendence of its founder, ALFRED E. BEACH, by whom all the necessary drawings, specifications, and documents, for Patents, Caveats, Designs, Foreign Patents, &c., are prepared with the utmost fidelity and dispatch, on very moderate terms.

Persons wishing for advice relative to Patents or Inventions, may at all times consult the undersigned *without charge*, either personally at his office, or by letter. To those living at a distance, he would state, that all the needful steps necessary to secure a Patent, can be arranged by letter, just as well as if the party were present, and the expense of a journey be thus saved. When parties wish to be informed as to the probability of being enabled to obtain Patents, it will be necessary for them to forward by mail a rough outline sketch and description of the invention. *No fee* is charged for such examinations.

All consultations and business strictly private and confidential.

Models from a distance may be sent by express or otherwise.

For further information apply to or address, post-paid,

ALFRED E. BEACH,
[210-4t] Solicitor of American and Foreign Patents.
People's Patent Office, 80 Nassau street, New York.

OLD ROCHESTER NURSERY.

SAMUEL MOULSON, at the Old Rochester Nursery, office No. 36 Front street, Rochester, N. Y., is prepared to furnish Inventories to post paid applicants, of his present extensive stock of Nursery Items, consisting in part of 10,000 very fine Northern Spy Apple Trees, from 7 to 8 feet high, which will be offered by Mr 1,000 at low prices. Also, a quantity of large sized Trees, such as Scotch Pines, Larch Fir, Maples and other ornamental things offered at very cheap rates in order to clear the ground.

90,000 Dwarf and Standard Pear.
20,000 Apple Trees in variety.
20,000 Peach do do
15,000 Plum, Cherry and Apricot.
20,000 Osage Orange of different ages.
Over 100,000 Hardy Evergreens—

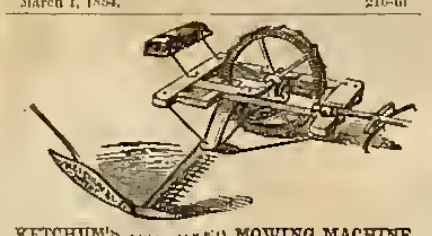
And a fine selection of Weeping Deciduous Trees, Ornamental Shrubs, together with such novelties as may be classed strictly hardy, and a large collection of Dahlias, Tulips and other bulbous roots.

The amateur wishing prime fruits of well established repute, or the Agricultural needing fine cropping, thoroughly tested varieties, may rely upon the most careful execution of their orders. The ornamental Items are entirely grown in the Nursery, consequently none of the heavy losses are sustained that usually occur to recently imported subjects.

The Evergreens are very robust and admirably furnished to the surface of the ground, none presenting the naked stems usual to imported plants.

Dealers are invited to give a call before making their purchases.

March 1, 1854. 210-6t



KETCHUM'S IMPROVED MOWING MACHINE.

WITH ENTIRE CHANGE OF GEAR, THE ONLY SUCCESSFUL MOWER NOW KNOWN.

Ketchum's *Improved* Machine, which we are building for the harvest of '54, was thoroughly tested last season, and the advantages gained by one change of Gear are in all respects as we designed, viz: *durability, convenience and ease of action.* The shafts now have bearings at both ends, which overcomes all cramping and cutting away of boxing. A counter balance is attached to the crank shaft, which gives it a steady and uniform motion. Each Machine can be thrown out of gear; there is great convenience in getting it each and every out, all of them being *on upper side of the frame;* all cups are attached to all the bearings, which, by the use of a wad of cotton, will hold oil for a long time, as well as protect the bearings from dust, grit, &c; the finger bar is lined with iron its whole width, which protects it from wear.

These and various other additions for strength, durability, &c.; makes them the most simple and perfect agricultural implement in use. They weigh about 750 lbs. each, and can easily be carried in a one-horse wagon.

It requires not over ten minutes to get one ready for operation, there being but two bolts, (besides the pole bolts) to be secured to have one ready for use. They will cut *all kinds of grass*, and operate well on uneven or rolling lands, or where there are dead furrows. This Machine took the highest award, with special approbation, at the World's Fair; it also received, during last season, one silver and four gold medals, and various other flattering and substantial testimonials of approval. We have spared neither pains nor money to make this machine deserving of public favor, and hope to be able the coming season to supply the great and increasing demand.

We take this occasion to caution farmers against buying *untried* Mowers; if they do (as was the case with many last year) they will incur loss, vexation and disappointment.

If any parts are wanted to repair any machine we have sold, or may hereafter sell, they will be furnished and only manufacturers' cost for the same be charged.

☞ In all cases where extras are wanted, be sure to give us *the number of your Machine.*

(WARRANTY:) That said machines are capable of cutting and spreading, with one span of horses and driver, from ten to fifteen acres per day of *any kind of grass*, and do it as well as is done with a scythe by the best of mowers.

The price of the Mower, with two sets of knives and extras, is $110 cash, in Buffalo, delivered on board of boat or cars free of charge.

Office and Shop, corner of Chicago street and Hamburgh Canal, near the Exchange R. R. Depot, Buffalo, N. Y.

HOWARD & Co., Manufacturers and Proprietors.

The Mower is also manufactured by REQUELS, NOURSE, MASON & Co., at Worcester, Mass., for the New England States.

By SEYMOUR, MORGAN & Co., Brockport, N. Y., for Illinois, Iowa and Michigan.

By WARDER & BROKAW, Springfield, O., for Ohio and Kentucky. 220-4t.

KETCHUM'S MOWING MACHINE.

This machine stands without a successful rival, as *the mowing machine of the age.* The supply will not be equal to the demand. If any person desires one for the coming season, they cannot speak too soon. The uniform price at Buffalo is $110,00. All who will forward us an order accompanied with the cash or satisfactory reference, may depend upon being faithfully served with a machine in good season. H. C. WHITE & CO.,

Buffalo Ag. Warehouse and Seed Store, 11 & 13 West Seneca street, Buffalo, N. Y 211tf.

MOORE'S RURAL NEW-YORKER,

IS PUBLISHED EVERY SATURDAY,

BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

SUBSCRIPTIONS—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion. As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian Agents and friends must add 2½ cents per copy to the club rates of the RURAL,—making the lowest price to Canadian subscribers $1,50 per year.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

☞ The postage on the RURAL is but 3½ cents per quarter, payable in advance, to any part of the State—and 6½ cents to any part of the United States,—except Monroe County, where it goes free.

ADVERTISING.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance.* The circulation of the RURAL NEW-YORKER is several thousand greater than that of any other Agricultural or similar journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

The Wool Grower and Stock Register is the only American journal devoted to the WOOL and STOCK GROWING INTEREST. It contains a vast amount of *useful* and *reliable* information not given in any other work, and should be in the hands of *Every Owner of Domestic Animals*, whether located East or West, North or South.—Published monthly in octavo form, illustrated, at ONLY FIFTY CENTS A YEAR—5 copies for $2; 8 for $3. Vol. 5 commenced July, 1853. Subscriptions can begin with the July or January number. Back volumes furnished.

Address D. D. T. MOORE, Rochester, N. Y.

Progress and Improvement.

SEED-TIME AND ITS LABORS.—No. I.

THE icy hand of winter has at length been forced to unloose its iron gripe; joyous spring and genial weather vivifying the bare, dreary landscape, and clothing it with living green and a beauty which neither Indies know, have at length arrived. But it is not a poetical season to the farmer. It is his seed-time; as he plows, harrows, rolls, manures and sows now, so shall he also reap. We are not in favor of wide furrows, but the shortness of our sowing season renders it necessary to turn over considerable land in a day. Nevertheless, many of our best farmers begin to think it is better to plow less, and do the work well, than to put in a large breadth of land in a half-worked condition. In a new country, with very rich land, worth only four or five dollars per acre, this skimming system, perhaps, is the only one practical or profitable. But where land, as here, ranges in price from $50 to $150 per acre, we are well satisfied that the only way to farm profitably, is to sow less land and put on more labor, making up in increased acreage yield what you lose in having fewer acres sown.

The object of plowing, is principally to pulverize the soil, to render the particles of the soil as fine as possible, thus increasing their solubility and furnishing what Father TULL quaintly termed "a good pasture for plants." One of the most practically valuable results of soil analysis, is that of Dr. WELLS, who found that the soils of the Scioto Valley, in Ohio, of unsurpassed fertility, were nearly identical in ultimate chemical composition, with the sterile soils of Massachusetts,—the only difference being in the *fineness of the particles*. We should take a lesson from this fact, and pulverize our soils, especially for spring crops, as much as possible. It is for this reason we so earnestly urge our implement makers to manufacture a clod crusher, somewhat similar to the celebrated English "Croskill's Patent Clod-Crusher," as figured in the RURAL of January 21st, current volume.

We plow much deeper and much wider than the best Scotch and English farmers. Indeed, in their climate it would be impossible to get such furrows to pieces as we are in the habit of turning over. But, though we possess a much superior climate for the amelioration and pulverization of soil than British farmers, we are not sure but we are in danger *of plowing too deep* and too wide. Would it not be better to *subsoil* rather than plow so deep? It is better to plow six inches deep, and have it well pulverized, than to plow twelve inches and leave it in a half-worked state! But the advocates of deep plowing (and we claim to be one of them,) will say, would it not be better to plow and well pulverize twelve inches? It would; but do you, can you do it?

After barley, of which we wrote last week, the next crop to be sown is oats. They will grow on all soils, from a stiff clay to a black muck. The heavy land yields the heaviest oats, while the rich mucky soil, abounding in organic matter, produces the most straw, but which frequently falls down, and the crop is much damaged. Two bushels per acre is the usual quantity sown here. As a general thing, we prefer three bushels.

Clover is sometimes sown with oats, but it is a bad practice, as the oats grow so thick at the bottom that the clover seldom takes well. We prefer to sow clover with wheat, early in the spring, but, if the soil is clean, it does well sown with barley. The barley ground should be well dragged before sowing the clover seed, which may be covered with a light harrow or roller. Be careful not to cover the seed too deeply. Much seed is lost from this cause.—Raise your own clover seed and do not spare it. Twelve pounds per acre is none too much. On a wheat farm you cannot sow too much clover. We admit, the direct profit is rather small, but the ultimate gain is considerable.—At least one-fourth of the arable land should be sown with clover each year.

Harrowing wheat on heavy soils, with a light drag, as soon as the ground is dry enough, has frequently been recommended. It is quite a common practice in many parts of England, and is attended with good results. It must be done before, or at the time of sowing clover seed, as it would injure young clover plants.—Many think it would injure the wheat, but it does not. We have seen hundreds of acres of wheat harrowed without any material injury to the wheat plants, but with great benefit to the crop. It is the next best thing to hoeing wheat. Try a portion of a field, and report the result.

If cattle and sheep have been allowed to run in the meadows or clover fields, which you intend to mow, they should be immediately taken out. If you have not already done so, sow a bushel of plaster per acre on the clovers and on dry upland meadows.

The preparation of ground for carrots and other root crops, must not be forgotten, and of which we will speak next week.

THE WINTER, &c., IN KENT CO., MICH.

OUR winter has been a most excellent one for all kinds of business, especially for those engaged in lumbering. Our greatest depth of snow was about one foot, and good sleighing from the 20th of December to the last of February. January, for once, passed over without a thaw worthy the name, and when it came at last, the snow wasted away so gradually under the genial weather, that the streams did not rise to their ordinary freshet limits.—Soon after our first permanent fall of snow, a light crust was given to it by a freezing rain, which insured a fine covering to the fields from the effects of winds, &c. The consequence is, the wheat crop comes out looking more than usually fresh and vigorous. The clover plants also present a better look than usual at this time of the year.

The average temperature of December was 29° 3′ with a range of the thermometer from 1° to 53°. This is 2° lower than the average temperature of the previous December, and 4° higher than December, 1851. The fall of rain and melted snow is 1.95 inches. Fair days 6½, cloudy without storm 17 days, of which 1½ were foggy—rainy 1, and snowy 6½. Prevailing winds light and S. W.

January averaged 21° 73′ with a range of 16° below zero to 50°. This is 8° lower than in 1853, and 1½° lower than in 1852. The coldest day was the 28th, when in the morning the thermometer was —16°, which is 6° lower than it was in 1852, which was the lowest I had observed it here. The day averaged 4° 33′. In '52 the coldest day averaged 2° 66′ below zero. The fall of rain and melted snow is 2.14 inches. Fair days 4½; cloudy without storm 17; rain and sleet 2½; snowy 7.—Prevailing winds light, S. E. and S. W.

February averaged 25° 94′ with a range of 8° below zero to 56°. This is one degree lower than in '53, and nearly two lower than in '52. The amount of rain and melted snow is 79-100 of an inch. Fair days 11½; cloudy without storm 12; rainy 1, snowy 3½. Prevailing winds light and moderate S. W. and S. E. A robin made his appearance on the 1st day of this month, but the poor bird was quite too premature in his arrival.

There were observed in the above months 3 Lunar halos, 6 Solar halos and 4 Parhelia.

March has thus far been very fine—but two days of storm. Thermometer ranging from 16° to 68°. The first thunder and lightning of the season was on the evening of the 8th.—Blue-birds appeared on the 4th, and since then robins, sparrows, larks, &c., are making the fields and groves vocal with their vernal songs. The snow has all disappeared, the roads are getting dry, and in many places dusty, and our lighter soils are in fine condition for the plow. The writer started the plow in such soil 3 days since, and has already planted out some of the earlier and hardier vegetables, &c. But we cannot expect that spring is really coming upon us thus early. We fear we shall have a draw-back upon it in April or May. At the present writing, the air is bland, and with that smoky-like aspect peculiar to the Indian summer, the sky cloudless, and the "signs" indicative of an indefinite continuance.

In all respects, the winter now passed has been decidedly the best the writer has seen in the four years he has resided here, and in many respects our winters are preferable to those usually witnessed in Western New York.

To the young man in the east, or him with small means,—in fact to all that propose to try the west-seeking to better their condition, the valley of the Grand River holds out, the writer believes, as good inducements for investment, as any portion of the west. A railroad communication is soon to be completed across this portion of the State, which will open this region more effectually to the rest of the world. The only bed of Gypsum known north-west of Lake Erie is found at Grand Rapids. The plaster manufactured from it has no superior in the country, and the quantity is enough to supply the whole United States for an indefinite period of time. Lime and other minerals abound. Mills, both grist and saw, are of frequent occurrence. Lumber plenty and cheap, and the privileges of a good community, in fact superior to many situations in an older country. Any taste can be suited in soil, timber or location; for all the varieties abound, from the heaviest timbered and clay soils to plains and light sand. A few miles north, a large supply of government land still lays in its richness for the hardy pioneer. Let those who wish for a new home in a new country, look at these lands and this region before locating, for they may easily go farther and fare much worse.

T. E. W.

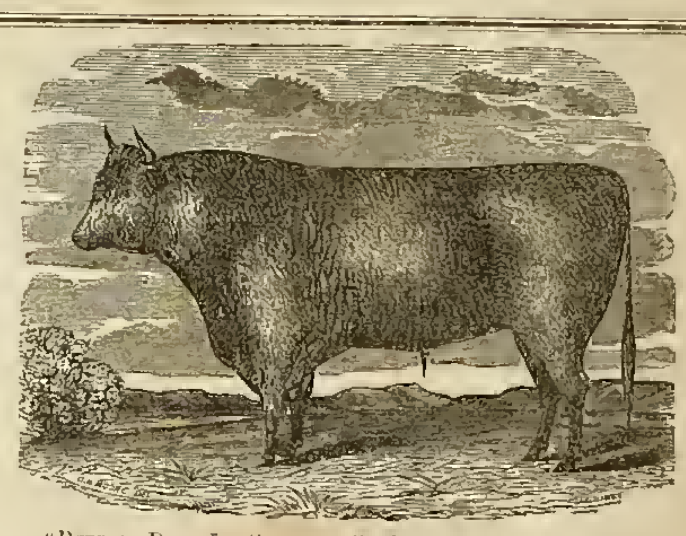
North Cannon, Mich., March 17, 1854.

WOOLEN RAGS AS MANURE.

OLD woolen rags are extensively used in England as a manure for hops, and also on heavy lands as a manure for wheat. They contain about 17 per cent. of nitrogen, and are therefore a more valuable fertilizer in this respect, than the best Peruvian guano. But they are decomposed with great difficulty, and hence their immediate benefit is not so great as from guano. If they were torn to pieces and ground quite fine, they would decompose more readily, and therefore be more effective and valuable. Soaking them in the wash of the barn-yard, also aids decomposition. We prefer to make them into a compost with soil from old headlands, horse manure, &c., watering it as it may require with the wash of the stables, &c. Lime and ashes have been recommended, but as they drive off the ammonia they should on no account be used.

CORN AND THE WIRE-WORM.

A CORRESPONDENT of the *Michigan Farmer* speaks highly of the practice of placing corn cobs in the hill of corn as a preventive of the injuries of wire-worms, as given in the RURAL, of April 1st. The worms eat into the cob and leave the young corn alone. The editor has found this remedy an excellent one, and suggests that, at the time of hoeing, one of the boys gather up the cobs and burn them, wire-worms and all. If left in the cob they would wax fat, and increase there just as rapidly as they would if left alone altogether. It would be some trouble to stick corn cobs round each hill of corn in a large field, but where wire-worms are destructive, if it prove as certain a preventive of injury as is claimed, it would *pay*. Try it and report the result.

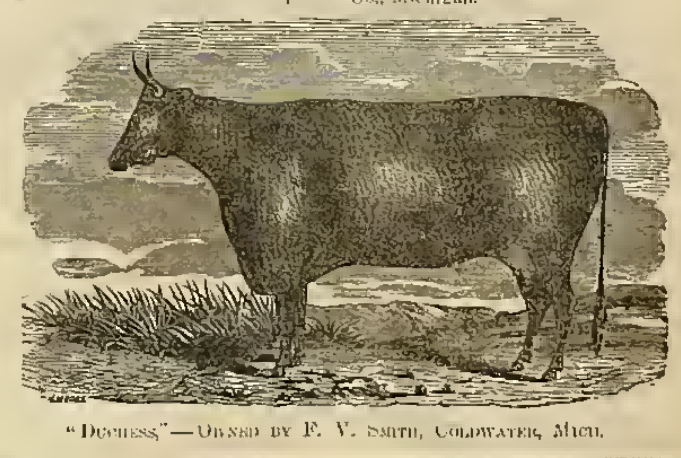


"DUKE OF DEVON,"—OWNED BY F. V. SMITH, COLDWATER, MICH.

DEVON CATTLE AT THE WEST.

ONE of the most distinguishing characteristics of the "*universal* Yankee nation," is the rapidity with which everything valuable is diffused throughout the length and breadth of this vast continent. Is a labor-saving implement invented—in a few weeks, by the aid of cuts, diagrams, descriptions, and the *press*, it is known from Maine to California. Does a new seedling prove valuable—in a few years it is in the garden or field of every intelligent horticulturist and farmer in the land. And so it is with improved stock. They are confined to no particular locality or State. Durhams are not now found only in the county of Durham, or Devons confined to Devonshire, Ayrshires to the county of Ayr or Herefords to Herefordshire, as was the case in the good old times, in the good old country we feel proud to call our fatherland. There is hardly a State in the Union, scarcely a county, in which these improved breeds of cattle, in greater or less purity and perfection, are not to be found. The good folk "out west" are already in possession of large numbers of animals of all the improved breeds, and what speaks still louder in praise of their enterprise and liberality, is the fact that they are making strenuous efforts, by purchasing the best that money will buy, and by judicious and careful breeding, to still more improve their stock, till it shall be second to none in the world.

Except in rich grazing valleys, where cattle are kept solely for beef, the Devons are the favorite breed of the West. Our engravings represent, in some degree, what Michigan is doing in this line. The bull, "Duke of Devon," is five years old this spring, and was imported from England in 1851. The engraving is a pretty correct portrait of him, and it will therefore be seen that he is a very superior animal. The cow, "Duchess," is also five years old this spring, and was imported in 1850. She was awarded the first premium by the New York State Agricultural Society, in 1851, as the best Devon calf; and also the first premium by the Michigan State Soc'y as the best two year old Devon heifer. In our opinion, the engraving hardly does her justice. They are the property of Mr. F. V. SMITH, of Coldwater, Branch Co., Michigan.



"DUCHESS,"—OWNED BY F. V. SMITH, COLDWATER, MICH.

THE PROGRESS OF INCUBATION.

THE progress of the incubation of the chicken in the natural way, is a subject curious and interesting. The hen has scarcely sat on the egg twelve hours before some lineaments of the head and body of the chicken appear. The heart may be seen to beat at the end of the second day; it has, at that time, somewhat the form of a horse-shoe, but no blood yet appears. At the end of two days, two vesicles of blood are to be distinguished, the pulsation of which is very visible; one of them is the left ventricle, and the other the great artery. At the fiftieth hour, the auricle of the heart appears, resembling a noose folded down upon itself. The beating of the heart is first observed in the auricle, and afterwards in the ventricle. At the end of seventy hours the wings are distinguishable; and on the head two bubbles are seen for the brain, one for the bill, and two others for the fore and hind part of the head. Towards the end of the fourth day, the two auricles, already visible, draw nearer to the heart than before. The liver appears towards the fifth day. At the end of a hundred and thirty-one hours, the first voluntary motion is observed. At the end of seven hours more the lungs and stomach become visible; and four hours after this the intestines, the loins, and the upper jaw. At the hundred and forty-fourth hour, two ventricles are visible, and two drops of blood instead of the single one which was seen before. The seventh day the brain begins to have some consistency. At the hundred and ninetieth hour of incubation, the bill opens, and the flesh appears on the breast; in four hours more the breast-bone is seen; and in six hours after this, the ribs appear forming from the back, and the bill is very visible, as well as the gall-bladder. The bill becomes green at the end of two hundred and thirty-six hours: and if the chicken be taken out of its covering, it evidently moves itself. The feathers begin to shoot out towards the two hundred and fortieth hour, and the skull becomes gritty. At the two hundred and sixty-fourth hour the eyes appear. At the two hundred and eighty-eighth, the ribs are perfect. At the three hundred and thirty-first the spleen draws over the stomach and the lungs to the chest. At the end of three hundred and fifty-five hours the bill frequently opens and shuts; and at the end of the eighteenth day, the first cry of the chicken is heard. It afterwards gets more strength and grows continually, till at length it is enabled to set itself free from its confinement.

In the whole of this process, we must remark that every part appears exactly at its proper time: if, for example, the liver is formed on the fifth day, it is founded on the preceding situation of the chicken, and on the changes that were to follow. No part of the body could possibly appear sooner or later, without the

whole embryo suffering; and each of the limbs become visible at the fit moment. How astonishing must it appear to an observing mind, that in the substance of the egg there should be all the vital principle of an animated being! that all the parts of an animal's body should be concealed in it, and require nothing but heat to unfold and quicken them! that the whole formation of a chicken should be so constant and regular! that exactly at the same time, the same changes will take place in the generality of eggs! *and that the chicken, the moment it is hatched, is heavier than the egg was before!*

THE GRAINS AND GRASSES.—NO. I.

Oats—(Avena Sativa.)

When we consider the importance of the oat crop of the United States, we are surprised at the little care there is taken in procuring the best seed and saving such seed pure for further propagation. This crop, when taken in connection with the grass, is one of the most important that we cultivate. The oat forms not only a superior food for farm stock, but in many parts of Europe is extensively used as food for man. This is especially true of Scotland, and the north of England and Ireland. We know little of its history, but it is known that oats have been cultivated since the days of Pliny, and were then accounted a superior diet for the sick. The most common variety is said to grow wild on the Island of Juan Fernandes.—Oats resembling the common are found growing in California. There are also found in other parts of the world, grasses growing, closely resembling the oat. The oat is said to have been introduced into the North American colonies soon after their settlement by the English. It was sown on the Elizabeth Islands in 1602 by Gosnold. In 1622 it was cultivated in Newfoundland, and in Virginia prior to 1648 by Berkley. The oat is now cultivated extensively in many parts of the world, and in various climates. We find it cultivated in all the inhabited parts of Europe, the northern and central portions of Asia, even as far south as the 25th degree of latitude. It is also cultivated in Australia, southern and northern Africa, in nearly all the cultivated parts of North America, and a large part of South America.

The oat is cultivated principally in the Middle, Western and Northern parts of the United States. The varieties cultivated are the common white, the black, the gray, the imperial, the Hopetown, the Polish, the Egyptian and the potato oats. The yield varies from 20 to 100 bushels per acre. The Egyptian sown in the autumn, and fed off by stock in the winter and spring, and then yields from 10 to 25 bushels per acre. The oat is not much cultivated for malting or distilling, from the fact, I think, that the malting or fermenting is not so easily accomplished as that of barley or other grains. The amount thus consumed is said not to exceed 60 or 70 thousand bushels in the United States. But a small quantity of oats are exported, say from 60 to 100 thousand bushels annually. By the census returns in 1840, the total quantity raised was 123,071,341 bushels, and in 1850 it was 146,678,879 bushels.

I. A. Clark.

Marion, Wayne Co., N. Y., April, 1854.

SOWING CLOVER AND TIMOTHY.

This important part of farm work can now be done, if not already accomplished. The freezing and thawing at this time of the year, is favorable to its vegetation. Wheat fields that were sown with timothy in the fall, should be examined, and if not thick enough, should be resown with from two to four quarts per acre; or, if a large crop of timothy and clover is desired, sow from two to three lbs. of large clover per acre, in preference to the resowing of timothy. I prefer timothy and clover mixed for my own feeding, but for market clean timothy is best, and always commands the highest price. There is another gain besides increase in quantity of hay by sowing in clover, that is, the after feed which will be nearly double.—Some hold it to be poor management to feed meadows, and it may be, but my experience is, that it is not. My meadows that are fed annually in the fall, are better than when not fed. They never should be fed in the spring—and cattle instead of running at large as soon as the snow disappears, as I have often seen, should be kept in the yard till grass has a good start and then turned to pasture.

Wheat fields that are intended to be plowed for next spring crop should now be sown with from ten to twelve lbs. medium clover per acre, and that will, by September, make excellent pasture for cattle, horses, &c. I think the feed is worth double what it costs to seed it. If the land is intended for corn, there will be a heavy crop of clover to plow in by the 20th of May, and it will be next to a good coating of manure for the corn. Naked stubble to me looks very poor in the fall, and I would not have it unless the clover failed to grow.

It is very important that sowing be well and evenly done. I have thought that the hand was the best machine for sowing, until this spring, I was induced to try the timothy and clover seed sower, advertised in the Rural of March 11th, and must say unhesitatingly that it worked to my perfect satisfaction. A man can easily sow twenty-five acres per day, and sow any quantity, from two to sixteen or more quarts per acre. It sows timothy and clover equally well, and distributes it evenly over the surface, by working a small lever with the right hand. E. S. Hayward.

Brighton, N. Y., April 3, 1854.

CALOMEL TO KILL LICE.

Eds. Rural:—I have recently tried a new way of killing lice on cattle by the use of calomel. Part the hair on the top of the head, and drop a little on the skin just back of the horns. This is all there is to be done, and the animal will be totally rid of vermin in a few days. The rule I adopt is, to apply about the bulk or quantity of a barley-corn each for grown cattle, and half as much for calves. I have tried this method repeatedly, and to my satisfaction, (sometimes I have put on a little more than the above, but think that rule is sufficient,) and found it sure to do the work.—It is both cheap and effectual, and its convenience will recommend its adoption, if considered safe, to farmers in general.

Now the question arises, Will it injure the animal, and weaken the constitution? and this I wish to present to the readers of the Rural.

I am no friend to the medicine, having often witnessed its deleterious effects on the human system, and maintain the belief, with many others, that it should be given in small quantities, if ever, and would not think it advisable to dose or feed it to cattle; but whether a little upon the skin will prove injurious, is what I propose for the counsel of your readers. But a small quantity is requisite. I have known physicians to deal more at one dose to a patient than I would use at once on three yoke of oxen; and why it produces such an effect over the entire surface of the skin, is truly remarkable.

There is on the head of most cattle a small hollow place, close to the horns, which furnishes a very neat receptacle, where it will not be liable to rub off or blow away. And here let me add what I forgot in the above rule, that the operation should be repeated three times, five days apart, in order to catch the nits that become lice after the first application.

Will some of the readers of the Rural favor us with their opinion on this subject?

Alex. Daniels, Jr.

McDonough, Chenango Co., March 27, 1854.

SPRING WHEAT.

Eds. Rural:—I notice an inquiry in the last Rural, concerning spring wheat. I have had considerable experience with that crop, and conclude that very much depends on the nature of the soil. What variety should be sown? If the soil is a warm, dry, sandy or gravelly loam, I should sow the *Italian*, or *Canada Chide*; if it is a rich vegetable mould, inclining to be moist, I would sow the *Labrador, Black Sea*, or *Siberian*.

My favorite method of cultivation is to manure a piece of sward land liberally, with long or unfermented manure, and turn it neatly under, about the first of May. Depth of first furrow, 5 inches. Follow with another team, and plow in the same furrow 5 inches deeper. The second plow should be narrower than the first. Perhaps a proper subsoil plow would be better. Then, roll, harrow, cultivate and harrow, and plant to corn; cut the corn up at the root, and the next spring plow, harrow, and re-plow. Wash the seed in strong brine, mix one bushel of slaked lime to two bushels of wheat, and sow as early as possible, and be sure to cut the wheat before the berry is hard. Under this method, my crop has been not less than 25 bushels per acre, and has reached 44½ bushels per acre.—Rufus S. Ranson.

Swallows Kill Bees.—I noticed in last week's Rural, an article purporting that the swallow was a very harmless bird, "one whose cheerful note and glancing wing enliven the rural scenery of all our country dwellings." I wish to say in reply to this, we had a great number of them about here last summer, and as soon as they had hatched their young ones, they commenced their depredations upon the honey-bees by hundreds, and from the fact that we had no swarms last year, we began to think something was the reason. A neighbor happened in, and he said they would catch bees, for he had taken a young swallow from the nest before it could fly, and upon opening its crop, found it crammed full of bees. I think we shall try to keep them away from here this year, for they seem to be quite an annoyance, besides materially disfiguring the face of the buildings.—D. N. Glass, *Pavilion, N. Y., April 3, 1854.*

We have never heard this charge made against swallows before, and even should it be well founded we are inclined to think the good they do in other respects, much more than repay the loss of a few bees.—Eds.

Agricultural Miscellany.

TO BREEDERS OF IMPROVED STOCK.

The editors of the Wool Grower and Stock Register wish to ascertain the name and post office address of every person in this country who breeds improved stock for sale—together with brief description of same. They are frequently in receipt of inquiries from persons in various parts of the United States, and British Provinces, who wish to purchase Horses, Cattle, Sheep, Swine, Poultry, &c., and wish the above information, (which will be carefully booked for reference,) in order to respond properly. As they propose to do this for the mutual benefit of breeders and purchasers, without fee or reward, it is hoped those interested will comply with the above request—addressing "Editors W. G. and S. R., Rochester, N. Y."

Agricultural and other papers will confer a favor, and perhaps benefit many of their readers, by publishing the above.

Jersey Cattle.—The Journal of Agriculture, in an article on the subject, states that the best herds of Alderney cattle are in the hands of R. L. Colt, of Paterson, New Jersey, John A. Taintor, Hartford, Conn., Samuel Henshaw, Boston, Mass, and Thomas Motley, Jr., of Jamaica Plains, Mass. It further states that the animal improves in this country; and that there is no reason why further importations of this or other breeds already among us, should be made.

At the recent National Poultry Show in New York, there were 215 exhibitors, 700 coops and 4,000 fowls. The total number of visitors was 30,000. The Society propose to have another Exhibition next fall, probably in October.

The Silver Medals awarded by the Monroe Co. Ag. Society, at its last Annual Fair, are ready for delivery to those entitled—at the Seed Store of J. Rapalje, & Co. The Treasurer of the Society will be in attendance at the store on Saturday, April 15.

SPRINGFIELD (OHIO) CATTLE SHOW.

In our notice of the action of the Executive Committee of the United States Agricultural Society, upon the application of the citizens of Springfield, we said that it was "*Ordered*, That no junction with other associations be made, except by the recommendation of the State Society where such proposed exhibition is to be held." Dr. Warder informs us that this order was *not* adopted, but that "the Executive Committee did pass an order, that they would accept the invitation to Springfield, if the members of the State Board of Ohio, or its Executive Committee, gave their *assent and approval*."

This does not in our view affect the conditions of the proposition, but we give it publicity. Our Executive Committee were in session last week and gave their "*assent*" to the proposed exhibition, provided it be held after the middle of October. Dr. Warder says the show will go off, "patronage or no patronage. The best patronage is already secured—the *money* to cover all liabilities." We glory in the spunk of the Springfielders, and have no doubt of their success.

A word about *World's* Fairs, *National* Exhibitions, &c. We have seen a tolerable *World's* Fair in Hyde Park, and a very poor speculation of one on Reservoir Square; a *National* Horse Show at Springfield, Mass., made up from Bay State and Hudson River stock, while the best Vermont horses staid at home; a *National* Poultry Show in Barnum's Museum, supplied from Albany, Rhinebeck and the great Metropolis. Now we have propositions for a National Sheep Show in Vermont, a National Horse Race at New Orleans, and a National Cattle Show at Springfield, Ohio; and most of the agricultural papers have published a circular from J. S. Wright, of Illinois, calling for a National Trial of Reapers, "to go through the entire harvest" from South to North. This may all be very harmless verbiage—in keeping with the spirit of the times, and it might be equally harmless and progressive to invite competition from Saturn and adjacent parts; but after all, it does not amount to any particular sum. Let every tub stand on its own bottom.—*Ohio Cultivator.*

AMERICAN WOOL.

The British Commissioners of the Great Exhibition of 1851, have determined to form, in London, a grand universal trade-museum. Mr. Solby, their agent, has applied to Mr. P. A. Browne, of Philadelphia, to ascertain how they will be able to procure for it all the leading varieties of the best American fleece; and Mr. Browne has recommended this direct appeal in their behalf to the sheep-breeders and wool-growers of the United States. Any one disposed to countenance this laudable design will be pleased, with as little delay as possible, to forward specimens to Mr. Browne, post-paid.

Each sample ought to be accompanied with the name and address of the donor, and also of the breeder, where he is not the donor; the name of the species, variety, or breed of both parents or ancestors of the animal from which the specimen is taken; the age, sex, probable weight, and amount and date of last clip, and the number of the flock to which he belongs, &c. All specimens, when practicable, should be *drawn out*, (not cut,) and be taken from the back, six inches in the rear of the neck.

Editors of agricultural periodicals and of newspapers are respectfully requested to insert this notice.

PROFIT OF KEEPING SHEEP.

It has been frequently demonstrated that a farm which will support four to six cattle will support forty to fifty sheep at the same time, with very little increase of labor, when the horned cattle could not be increased with any profit. Sheep eat, both summer and winter, much that neat cattle will not, and it appears to be a settled fact that pastures are improved by them, and their droppings in winter furnish valuable manure, particularly when fed on turnips and grain, as they always should be.

Every man who can keep a cow can also keep half a dozen sheep, for they will eat what cows will not touch. Even hemlock boughs are devoured greedily in winter, and it is thought that an occasional feed conduces to their health.

One flock master in Michigan calculates the income of his sheep in the value of fleece and increase at $2 10 per head. He estimates the cost of wintering at only fifty cents a head. He feeds wheat straw, and wheat bran and shorts. We are satisfied that sheep can be wintered at the west for less than fifty cents each. The great difficulty upon all new farms is the want of suitable shelter. This destroys many valuable animals. Sheep are as subject to colds as the human family, and many die with similar diseases.—*Ohio Farmer.*

MANURE FOR HOPS.

A friend inquires what is the cheapest and best manure for hops? The best manure is undoubtedly good animal manure from the barn, but it is not the cheapest. The cheapest and best is probably a compost made of muck, ashes, leaves, &c. Our reasons for this are these: 1st. We have tried it on a small scale and found it was good for hops. 2nd. This kind of dressing is more natural to the hop.—The hop plant is found native in many of our swamps and low lands. Not in those which are always wet and water bogged, but in those called among us as interrals, and which are made up of loam and occasionally overflowed. In such places are have often seen the hop vine growing with great rigor and luxuriance, and where there was a good supply of vegetable matter, decayed leaves, &c., they exhibited great strength and fruitfulness. Hence, are have inferred that decomposed muck was the *cheapest and best manure* for hops.—*Maine Farmer.*

Value of Acorns.—The editor of *The Advocate*, Claiborne, La., has gone into a minute calculation upon the value of one crop of acorns in that parish—equivalent to our counties. He says that 1,800,000 pounds of pork will be consumed there in the year 1854, by the 12,000 inhabitants, and that the whole of it comes from the crop of acorns, and is worth the snug sum of $90,000. Besides this, he thinks an equal value has been added to the stock hogs. He thinks also that that parish grows $35,000 worth more cotton than it would if all the planters had to depend upon the corn crop for their meat, so that the actual value of a crop of acorns is $215,000.

Singular Stock.—Robert Scott, Esq., of Woodford county, Ky., who owns one of the splendid farms of that region, has a large pond of water upon his domain, by which he has half domesticated a flock of wild geese. He first procured eleven and cropped their wings, which reclaimed them for the season. They migrate northward in the spring, and return in the fall with their full-fledged young.—The flock now numbers two hundred and eighty, and it increases annually.—*Louisville Democrat.*

Longevity of the Game Fowl.—A correspondent of the Pa. Farm Journal states that a neighbor of his had two game hens, which lived to be eighteen years old. It was known that they were of this age, as he raised them from eggs. Both laid during the last year of their life. Game fowls have often been known to live to the age of twelve to fifteen years.—The writer has known at least two, bred by Mr. Deniston, of Albany, one of which was fourteen and the other fifteen years old, and both laid and reared chickens at that age.

Brood Mares in Foal.—Animals in this condition should not be solely fed on hay, straw or fodder, as is too often the case; but should receive at least two feeds of oats daily, in order that the materials may be thereby furnished to keep up the supply of bone, muscle and flesh, in the mothers, and yield the wherewithal to the young to form it out of. Thrice a week the mares should receive one or two ounces of salt or the same quantity of the salt, oyster-shell, lime, and ashes mixture. So recommends the American Farmer.

Foreign Seeds.—Advices have been received by the Agricultural Bureau of the Patent Office from Com. Perry, in command of our East India Squadron, that he has transmitted several varieties of rare and useful seeds, procured in and near Canton and Shanghai. The list comprises spinach, turnip, mustard, Chinese cabbage, large and small peas, hempseed, Chinese rice, Chinese cotton seed, wheat, beans, melons, &c., all of which are expected to arrive in New York very shortly—and will be duly distributed from this bureau.

It is now, we believe, a universally conceded fact, that the agricultural capacities of California are equal to those of any other part of the world. The geniality of her climate is only equaled by the fertility of her soil, and its extraordinary adaptation to nearly every variety of vegetable and farinaceous production.

Seeds.—Prepare seed corn, potatoes, peas, beans, and all other seeds you intend to plant, and make it an invariable rule to select the best of whatever kind you use. Great improvement may be made in the quality of crops, and probably in the quantity too, by the strict observance of this rule.

Inquiries and Answers.

Subsoil Plow, &c.—I am satisfied that my land, which is a heavy clay, lying on the west side of Seneca Lake, needs subsoiling. Can you inform me which is the best subsoil plow, where it can be had, price, &c.? I saw a piece in the Rural, a short time ago, of a farmer using the common plow to subsoil, with a clevis made so as to change, &c. I wish to know more about it,—how it stands, &c. I also wish information in regard to Osage Orange for hedges—where can the seed be obtained, price, and how it should be prepared, &c.? There are many theories respecting the cause of the potato disease. The best remedy I have found is charcoal, ashes and lime. I put about a pound of fine charcoal and a handful of ashes and lime in the hill, and plant the potatoes on the top of it, covering them with soil.—Levi French, *Eddytown, Yates Co., N. Y.*, 1854.

The best subsoil plows now in use are those manufactured by Ruggles, Nourse, Mason & Co., and which may be obtained at any of the Agricultural Warehouses. The No. 2, which is the better size for common farm use, and sufficiently heavy to perform well, sells at about twelve dollars. There is a plow in use known as the Michigan Subsoil or Double Plow, which does well where it is designed to cover sod for planting spring crops. The object of a subsoil plow is to break up the subsoil deeper than can be done by a common plow, and too deep to have it thrown to the surface. It is narrow and strong, and has been used with most excellent success in all tenacious soils where it is desirable to have a better drainage and deeper tilth. Our advice to friend French would be to use one freely.

Osage Orange makes good hedges, if properly trimmed. It is a very free grower,—more so than almost any other hedging shrub known with us. It stands the weather in Western New York well, with some little protection for the first winter. We know some very fine hedges, which have been made within the past three and four years. For information about seed, growth and other matters, see an advertisement upon the subject in this week's Rural.

Council Bluff.—*Information Wanted.*—Will you, or some of your western correspondents, have the goodness to give us through the Rural, a topographical sketch of Council Bluff, Iowa? Please inform us relative to the location, population and growth of this "*ultima thule*" of the western wilds. Is it mostly government land in the vicinity?—and if not, what is the cost of land per acre? What is the quality of the soil, and to what crops best adapted? &c. If by any means you can enlighten me on the above subject, you will greatly oblige.—A Subscriber, *Keuka, N. Y., April*, 1854.

Can our correspondent at Bowen's Prairie, or some other Iowa friend, answer the above?

Clinton Grape, Guano, &c.—Is the Clinton grape more subject to the depredations of the brown rose-bug than other species, and what is a preventive? I have tried various things, and could do nothing with them except by taking a pail of suds in one hand and with the other poking them into it, and this must be done in the cool of the morning or they will fly away.

Is guano to be had in Rochester, and at what price?—W. B., *West Bloomfield, N. Y.*

Peruvian Guano, we believe, can not be had in Rochester. We have just purchased two tons from Longett & Griffin, 25 Cliff St., New York, at $50 per ton.

Planting Corn with a Machine.—Will some of your correspondents, who have used the machine for planting corn, inform me whether it does as well as that planted by hand in the ordinary way? Also what distance apart should it be dropped in the rows.—P. Parks, *Victor, Ont. Co., N. Y.*

Bone Dust on Corn.—Several correspondents ask if bone dust is a good manure for corn, applied in the hill. We have never so used it, and should be glad to hear from any who have.

(D. B. W., Springwater.) You will obtain all the information desired about the machine you want—a combined reaper and mower—by addressing H. C. White & Co., at the Buffalo Agricultural Warehouse, Buffalo, N. Y.

(T. Ripley, Conesus Liv. Co., N. Y.) Brown's or Miner's Poultry Book would furnish you the best information on the management of poultry, &c.

Hop Vines.—Our correspondents who have written us about hop vines, are referred to the advertisement of W. D. Congar, in last week's Rural.

(I. T. C., Chappaqua.) You will find Ketchum's Mowing Machine to be all they are represented. They may be obtained as above.

Dung without tillage can do little; with some tillage it does something, but with much tillage it pulverizes the soil in less time than tillage alone can do: but tillage alone with more time, can pulverize as well.—*Tull.*

Forty thousand hogs' bladders were sold a few days since at Louisville, at 2½ cents each, to fill an order from Europe. They are used to hold snuff, and for other purposes.

Orchard and Garden.

SEEDLING FRUITS.

The general opinion that fruits deteriorate from the seed, is founded in an imperfect understanding of the principles of nature. In fertilization, whether natural or artificial, nature is always true to her purpose, the seedling fruit will be an admixture of the parent and the fruit, which furnish the pollen, and no more; and when all of these are of good quality, the produce will invariably be so too. One might as well expect plums and grapes from apple seeds, as poor fruit from such an admixture.—Nature is as true in one instance as in the other. The fruit blossoms are often impregnated with the bad and foreign sorts, by the pollen which bees carry on their legs from flower to flower; and the cultivator will often be surprised with fruits so crossed, when no such are in the immediate vicinity.

I planted some seed from an isolated Siberian crab tree, which fairly swarmed with bees, when in blossom, and of six seedling trees only one resembled the parent. I also raised fifty trees from the seed of good fruit, growing in an orchard of that class, and the produce were mostly fine sorts. I set out 200 trees, which were raised from the seed procured at a cider-press (doubtless poor varieties,) and but one proved worthy of cultivation. My custom to prove the quality of seedlings, has been to leave a limb or two on each tree, and graft the rest; when fruited, if the seedling proves of inferior quality, a few moments, use of the saw removes the incumbrance. In this way I have produced many new sorts, which do not suffer when compared with the best sorts at present cultivated, which grow near them. From the seed of the Seckel pear I raised the delicious little pear, which was figured in your paper, and called "Hampton's Cluster," which partakes of the good qualities of its parent, without its musky flavor, and is much earlier.—From the seed of the Virgalen, probably crossed with the Seckel, I obtained another fruit nearly as good, and much larger. I have several other seedling pears which promise well, and that were superior to the White Doyenne and Flemish Beauty in flavor the past year, and numerous varieties of apples of like good quality.

This, and much more, has occurred under my observation, in the natural way of cross fertilization, and when conducted properly, in an artificial manner, the results are much more certain of success. By these methods, many new and valuable fruits are coming yearly into notice. Of this class, are the Bailey Sweet, Broadwell, Fort Miami, and Wagener, among apples; and Dearborn's Seedling, Dix, Summer Doyenne, Lewis, and many more among pears; Coe's Golden Drop, among plums; and a vast array of other fruits. The method of cross fertilization has been so frequently described that it is not necessary to introduce it here.—Let the fruit raiser try his hand at this and he will find that my assertions above are true, and that nature, with proper care, will not retrograde, but is still as susceptible of improvement as ever. If this had not been, and is not now the case, the crab might still have been our standard of excellence among apples. Do not be content with the assertions of a few, who recommend a select list for all localities, a movement unworthy the spirit of the age. In this land of progress, of railroads, and telegraphs, it will not do to let Horticulture stand still. Every locality must have its particular varieties of fruit suited to its climate and soil.

Dudley, Hardin Co., Ohio, 1854. W. C. H.

HUBBARDSTON NONSUCH APPLE.

The Hubbardston Nonsuch is a favorite fruit, adapted to very general cultivation.—Downing describes it as "a fine, large, early winter fruit, of first rate quality. The tree is a vigorous grower, forming a handsome branching head, and bears very large crops. It is worthy of extensive orchard culture." In his recent work, Elliott pronounces it "a superior fruit, succeeding even better when grown west, than in its northern locality."

The late S. W. Cole, Esq., of Boston, thus describes this variety:—"Fruit, from large to very large; roundish, tapering moderately and roundly to the top; skin, smooth, fair, rich, yellow ground, mostly covered with bright red, dark and unbroken in the sun, striped in the shade, generally russet around the stem, and sometimes a very few large prominent russet specks on other parts; stem, medial length, rather slender, in a rather broad, deep, regular cavity; eye, large, open, in a shallow basin; flesh, yellowish-white, tolerably fine, crisp, juicy, of a mild, pleasant, aromatic flavor, inclining to saccharine. In use from the latter part of October into December. It should be used as soon as it is in its prime, as it grows dry and spiritless very soon. It is hardy; we have had it growing several years in Maine, without injury in the winters. The growth is good, but not great, about the same as that of the Porter or Jewett's Red. The new wood is long and slim, and covered with a whitish, woolly or furzy substance, which distinguishes it from a spurious and worthless kind, that has a stout, naked scion, resembling that of the Baldwin.—It is a good bearer, and bears about two-thirds of its produce in alternate years, and generally in even years, as '46, '48, &c.

HUBBARDSTON NONSUCH APPLE.

The Hubbardston Nonsuch is one of our best late fall apples, particularly for the market, where it is very popular, bringing the highest price. Some say that this fruit has been overrated, but those who give it good culture, get large, fair crops, and sell the fruit from three to four dollars a barrel, make no such complaint. Yet as the fruit is rather transient, it is not adapted to extensive culture. Origin, Hubbardston, Mass."

ON GRAFTING.

Eds. Rural:—In answer to one of your correspondents, I offer the following:

Why is it, taking our country through, that so few of our farmers can do their own grafting? It takes but a few moments and a little patience to learn, and only ordinary aptness is required. It is well worth every farmer's while to know how to do his own, and when thrifty trees producing only indifferent apples may just as well be made to bear Newton Pippins, Spitzenbergs, or Northern Spies,—why are those trees allowed to waste the soil? In selecting scions, I look for the largest, *no matter how large, and never* cut them longer than to contain two buds, and if the buds are healthy and over an inch apart, one bud is better than two, as the longer the scions the more apt are they to dry up and die. I always wax the ends of the scions, as it saves them from drying. I have set more or less for 8 or 10 years past, and my opinion is, that scions of two years' growth bear sooner than those of one, though they grow much less rapidly. To make healthy and hardy trees, the limbs should be cut as close to the body as possible, and if rather large, the grafts grow the better for it.

Where I have wanted the scion to grow before the limb was taken off, I have forced the corner of my grafting knife into the side of the limb, making a crevice into which I have driven a large, short and bluntly pointed scion, and waxing carefully around it, have left the limb on a year or more. I have had scions set in this way do extremely well. If you have a small, crooked tree which you wish to straighten, you may force a branch in this way to good advantage. For cherries I use as hard a wax as I can manage,—for apples and pears it is of less consequence. I have noticed that cherries will often grow in young trees when the whole top is taken off, more readily than when a portion of the branches remain.

The earlier the scions are set the more liable they are to take, and the longer will be the season growth, and cherries *must* be set before the buds are in the least swelled. W. B.

West Bloomfield, N. Y., April, 1854.

Cranberry Vines.—Having noticed repeated inquiries where the cranberry vine can be procured, I will say, they can be had in any quantities from the marshy lands owned by John Neiman and others, convenient to the Ridge Road, in the town of Murray, about 1½ miles west of Sandy Creek Village in Orleans County. What is charged for them, I cannot say; probably not much. Mr. N. said I could gather at any time as many as I wished.—O. M. Barber, *East Gaines, March* 19, 1854.

We are indebted to Mr. B. P. Cahoon, of Kenosha, Wis., for some roots of his Giant Rhubarb.

Another monster exhibition is to be held at Cheltenham, Eng., in June of 1854, which, in addition to all kinds of Horticultural productions, will comprehend every description of implement or article manufactured, designed, taken from, or in any way connected with horticultore. A building is now erecting at Cheltenham, containing twenty thousand superficial feet of glass to hold it in.

SAW-DUST FOR ORCHARDS.

A year last fall I hauled a load of old rotten saw-dust and threw it around my young apple trees. My neighbor over the way, is one of those characters who plods on in the same old track that his father and grandfather did, believing that they knew all, and more too. My neighbor said if I put saw-dust around my trees, I would surely kill them.—He said he put manure around some of his trees, and killed them. I told him I would risk it, "any how."

I put fresh stable manure around one row and sawdust around the next; around another row I put leached ashes; and the remainder of the orchard I manured with well-rotted barn-yard manure, and in the spring spread it well, and planted the ground with corn and potatoes. The result was, many trees grew very luxuriantly, but the trees where the saw-dust was, grew the best, the bark being smoother and the trees had a healthier appearance. I will also state, that part of the orchard planted in potatoes, grew much better than that part planted to corn. The soil was clay loam.—*Farmer and Visitor.*

Time for Grafting the Apple.—The *Country Gentleman* says that the best time for this operation is in the spring, when the buds begin to swell, the scions for grafting having been cut a few weeks previously and kept in a moist cool place, or in a box of damp moss in a cool cellar, so as to be neither shriveled or water-soaked. Grafts may be cut and inserted the same day, if the buds are not swollen much.

Horticultural Advertisements.

OSAGE ORANGE SEED.—We will supply new crop Osage Orange Seed, at *Seventy-five cents* per quart, neatly put up, and with each package full directions for cultivation. Address orders to H. C. WHITE & CO., Buffalo Ag'l Warehouse and Seed Store, Buffalo, N. Y. 223-tf

GARDEN SEEDS.—We have a full and fresh supply of imported and best Shaker Garden and Field Seeds.—Merchants and dealers supplied on the most favorable terms. Catalogues gratis. Orders solicited at the Buffalo Ag'l Warehouse. [223tf] H. C. WHITE & CO.

SEEDS OF FINE FRENCH ANNUALS.

The Subscriber, publisher of the "*Horticulturist*," has procured from Vilmorin, Andrieux & Co., Paris, a fine collection of Flower Seeds. A collection will be forwarded by mail, free of postage, to any person remitting one dollar. Plates of some of these have been given in the *Rural*.

JAMES VICK, Jr.

Rochester, April 1, 1854. 222-2t

FARM AND NURSERY FOR SALE.

Pleasantly located on the Ridge Road, in Greece, near Rochester,—containing 55 acres of superior land. Has good buildings, and other improvements—including 300 bearing peach trees, and a variety of other fruits. The Nursery contains about 140,000 grafted apple trees, from one to four years' growth. Will sell 40 acres, with the buildings and nursery, or the whole together, or the nursery trees separate, or any part, at a bargain. Address or apply to the subscriber on the premises. Z. COLBY.

Greece, N. Y., April, 1854. 222-4t*

FRUIT AND ORNAMENTAL TREES,

At Reduced Prices for Cash.—The subscriber wishing to dispose of his present stock of Trees, will sell them at the following rates for cash:

Apple Trees, one shilling each; *Cherry Trees*, two shillings each; *Pear Trees*, two shillings each; *Mountain Ash*, two shillings; *Peach Trees*, nine cents.

Also, a quantity of young improved trees of suitable size to remove to other Nurseries, at reduced prices.

All of the above varieties are of the best quality, having been tested and adapted to this climate—and are warranted to be as represented.

Letters addressed to the undersigned at Olcott Post-office, Niagara Co., N. Y., will receive prompt attention.

Residence on the Nursery—three miles east of Olcott.

N. FARNUM.

Olcott, Niagara Co., N. Y., March, 1854. 221-4t*

PIE PLANT FOR SALE.

Cahoon's *well known Seedling*, superior in quality and size to any of the varieties of Mammoth, Colossal, or Victoria, and continues to produce new leaf stocks until November, not being affected by the early frosts. This variety was raised by the subscriber 14 years ago from seed, and after being under cultivation that length of time holds good in size, having last year produced stocks weighing five pounds and over.

Testimonials from Agricultural, and Horticultural, and other Papers could be produced in abundance to show that this Pie Plant, is all that is represented. I will only insert one from a paper published in this city, where the Editor has availed himself of opportunities of frequently visiting my garden, for the last ten years. It is as follows:

"But the most remarkable feature of this garden is the *Mammoth Pie Plant*, and certainly any person who is curious to know what Pie Plant is, and how it may be cultivated and developed, would do well to look at it. We state what we witnessed, (and what we should doubt if we had not witnessed it,) that from one root was cut a quantity, which after being trimmed ready for cooking, weighed 48 *pounds*, and certainly as much more was left on the root, uncut; making the product of one root nearly, if not quite *one hundred pounds* of plant. And we are not aware that this was a very unusual growth, for we saw thousands of bunches, which seemed quite as large as the one in question; and all this too, young and tender plant, as delicious as any raised. Of this plant, Mr. Cahoon is raising immense quantities, with which he not only supplies home demand, but ships to other places, furnishing one house in Chicago with a thousand pounds per week."—*Telegraph.*

I am now growing quantities of it for the California and Oregon market. [Dwarfing the roots.] I sent a few roots to Oregon last January, and the growth last season *astonished* the citizens there, notwithstanding they had seen *tall* growths of vegetation at home.

I will securely pack in boxes, and forward according to directions, Ten Roots for $5; Five Roots for $3; or One for $1; the Cash to be sent with the order. A severe frost does not injure the roots, and they can be sent with safety to any part of the Union. B. P. CAHOON.

Kenosha, Wis., March, 1854. 220-4t

Mechanic Arts, &c.

THE PLAIN WHY AND BECAUSE.

Why is muriatic acid recommended for cleaning old books and prints? Because, tho' it removes the stains of common ink, it does not affect printer's ink. For the latter use, add half an ounce of red lead to three ounces of common muriatic acid. Where writings have been effaced for fraudulent purposes with this acid, sulphuret of ammonia, and prussiate of potash, will revive the writing and discover the artifice. Very old writing may be revived in this way. If indigo and oxide of magnese be added to common ink, it will prevent its being effaced by chlorine. With various bases, muriatic acid forms the salts called muriates; and muriates, when in a state of dryness, are actually chlorides.

Why are certain metals malleable, or reducible into thin plates or leaves by hammering? Because their atoms cohere equally in whatever relative situation they happen to be, and therefore yield to force, and shift about among each other almost like the atoms of a fluid, without fracture or change of property.

Why are some metals called native? Because they occur pure or unalloyed, and have but a feeble attraction for oxygen: such as platinum, gold, silver, mercury and copper.—Metals are also found combined with simple supporters of combustion; the chief of these are metallic oxides. Metals combined with simple inflammables, include native metallic sulphurets. Metals in combination with acids, include metallic salts.

Why is lead employed in refining the precious metals? Because when mixed with them in a great heat, it rises to the surface combined with all the heterogeneous matter. Lead is employed to cover buildings, to form water pipes, (though Vitruvius, the Roman architect, in the time of Augustus, condemned this practice,) and to make a great variety of vessels for economical purposes. Its oxides are used for dyeing and calico printing, and in the manufacture of glass, earthen ware and porcelain; and lead is capable of forming various alloys. There is also a large consumption of lead in making shot.

Why are light-houses built in a circular form? Because, partaking of the properties of the arch, it best enables them to withstand the fury of the tempests, from every quarter.—The Eddystone light-house, built by Mr. Smeaton, the English engineer, is a splendid triumph of this principle.

Why are brimstone matches used in phosphoric fire-boxes? Because the sulphur of the match readily combines with the phosphorus in the bottle, by friction against cork or wood, and inflames: indeed, phosphurus and sulphur combined are more inflammable than phosphorus.

Why is it difficult to light paper by the flame of phosphorus? Because the paper becomes covered and protected by the acid formed by the combustion of the phosphorus. When perfectly dry, phosphorus inflames at a temperature of 60 degrees.

Why is electricity beneficial to plants? Because electrified seeds pass more rapidly through the first periods of vegetation, than such as are not electrified, and electrified roses flower more rapidly and abundantly. Plants with pointed leaves and spines attract electricity.

A NEW ERA IN NAVIGATION.

We have already noticed the project of building a monster steamer, in regard to which occasional brief paragraphs have appeared in the English journals from time to time, during the past year; and we now learn that the scheme is in process of actual execution. The constructors are Messrs. Russell, Scott & Co.; Mr. Brunel, the eminent engineer who built the Thames tunnel, is the designer; and the Eastern Steam Navigation Company are to own the ship, which is intended to run from England to Calcutta. It is to be built on a principle similar to that of the Britannia bridge, with double sides—in fact, one ship enclosed in another—with the space between them partitioned into air-tight cells. The frame will be stiffened internally by two bulkheads running the entire length of the hull, and dividing the vessel lengthwise into three compartments. Twelve similar water-tight partitions will cut her crosswise, adding to her strength as well as safety, for a leak would thus only affect the compartment in which it occurred, which might be filled with water without seriously diminishing the buoyancy of the ship.

The keel is to be 680 feet in length, beam 83 feet, depth of hold 58 feet. From these figures we estimate the real capacity of the vessel to be at least 20,000 tons. There is to be stowage for 10,000 tons of coal—enough for about forty days' steaming without stoppage—and 5,000 tons of cargo. The motive power is to be composed of sails, paddle-wheels and a screw. The engines are to be of 2,800 horse-power in the aggregate, weighing about 3,000 tons, leaving 2,000 tons for passengers, stores, and other matters.

But while in respect of speed there seems to be no other point of superiority in the new steamer than her bulk, we may find in her enormous stowage an advantage sufficient to justify the risking of the vast amount of capital which she must cost. No other vessel can transport such a quantity of coal, or other lading. In round numbers one horse-power consumes a ton of coal in ten days. A Collins steamer crossing the Atlantic in that time, and having a propelling power of 800 horses, requires consequently stowage for 800 tons of coal, besides the surplus for unexpected emergencies. But the case is quite different with a steamship going to Calcutta, a distance of 12,000 miles, instead of 3,000, requiring, at the same speed, for forty days' steaming, four tons of coal for every horse-power. This, a steamer of ordinary size could not carry. Half the weight would sink such a steamer, but the Leviathan can bear it easily. The force of 2,800 horses would require 11,200 tons of coal; the new steamer has accommodations for 10,000; and as for the difference, they will either do without it, on account of the superior speed of a large ship, or they can stow on deck a few hundred tons to be burned at the commencement of the voyage, before the passengers have got over their sea-sickness, if indeed the magnitude of the hull does not dispense with that malady.—*N. Y. Tribune.*

Gas or Coal Tar.—Gas or coal tar is the refuse tar from the gas-works. Two or three coats, well dried, act as a powerful preservative of all wooden substances to which it is applied; and from the experiments we have made, with woollen surfaces constantly exposed to moisture, we have no doubt it would be valuable on fence-posts—certainly more so than *charring*, which, after all, admits moisture through the charcoal—this would not admit it. Gas-tar, under soil, is said to be gradually decomposed; but if dried previously, the process would certainly be very slow.—*Albany Cultivator.*

Improved Wrench.—P. Smith, of Bridgeport, Ct., has invented an improved wrench, on which an application has been made for a patent. The nature of the invention consists in having the lower jaw of the wrench stationary and secured to the handle by a hollow shaft, while the other jaw is made movable by a combination of a rack and pinion.—*Scientific American.*

Domestic Economy.

Lemon Drops.—3 heaping table-spoonfuls of fine sugar; 1 table-spoonful sifted flour; the grated rind of 3 lemons; the white of one egg well beaten; all mixed; drop on buttered paper; bake in a moderate oven.

Hard Gingerbread.—2 cups of molasses or sugar; ½ cup of butter; ½ cup of milk; 4 eggs; 1½ table-spoonfuls of ginger; saleratus; flour enough to roll.

Sponge Cake.—1 lb. pulverized white sugar; 12 eggs, yolks and whites beat separately; the weight of 6 eggs in flour. Flavor with lemon; stir quick, and bake immediately.

Washington Cake.—1 lb. of sugar; ½ lb. butter; 1 lb. flour; ½ pint sweet milk; 5 eggs; 1 tea-spoonful cream tartar; ½ tea-spoonful soda.

FAMILY SOAP.

The making of soft soap is not now so much a matter of *luck* or chance, as it was some forty years ago. The chemical principles connected with the union of an alkali and oils, or fat, is now better understood. Caustic lye and oil, or fat, will readily combine, forming soap. Acids and oil will not unite. Lye that is strong enough to float an egg may contain so large a quantity of carbonic, or sulphuric acid, as not to combine with the fat, oil, or grease, even when boiled for a long while.

Pearlash is a compound of potash and carbonic acid. In 70 lbs. of pearlash there are 22 lbs. of carbonic acid. Saleratus has double the quantity of carbonic acid; in 92 lbs. of saleratus there are 48 lbs. of caustic potash combined with 44 lbs. of carbonic acid; it is this acid that causes the effervescence when cider or vinegar is poured in to a vessel containing saleratus. The potash having a stronger affinity for the acid of the vinegar, than it has for the carbonic acid, it escapes from the liquid in a gaseous form; the potash is changed from a carbonate, to the acetate of potash. Pearlash and saleratus can be dissolved into a lye strong enough to float an egg, yet from the quantity of acid the lye would contain, it would not unite with the grease to form soap. But if newly burned lime was to be added to the lye, the carbonic acid would leave the potash and combine with the lime, resulting in *caustic* lye, and carbonate of lime.—The caustic lye would then readily unite with the grease and form soap.

The ashes of beech, hemlock, and some other kinds of wood, contain so much carbonic and sulphuric acid in combination with the potash, that the lye, without adding lime to the leach-tub, will contain so much acid as to prevent its union with the grease. Dr. Dana in his muck manual says the soap-boilers add about one peck of lime to every bushel of ashes they leach; the lime takes up the acid, and they obtain *caustic* lye. About one peck of fresh burnt lime to five or six bushels of ashes, is about as much as is thought necessary in the country, where most families make their own soap. The ash of beach or any other kind of wood, if the lye is strong enough and made caustic, will by the addition of good soap-grease make soap. We should prefer soft, to hard water, in leaching ashes for soap making. Snow, or rain water, is soft, and can generally be obtained in the country about soap making time. The water in many wells is termed *hard* from the fact of its decomposing soap—that is, separating the lye and grease, this, rising upon the surface of the water like curds, and the potash of the lye uniting with some acid (contained in the water, for which it) has a stronger affinity than for the grease.

It is said, that hard water may be rendered soft for the purpose of washing clothes, by adding a small quantity of carbonate of soda, or pearlash, to the water some twenty-four hours before using it.—*Granite Farmer.*

To clean White Veils.—Put the veil in a solution of white soap, and let it simmer a quarter of an hour; squeeze it in some water and soap till quite clean. Rinse it from soap, and then in clean cold water, in which is a drop of liquid blue; then pour boiling water on a tea-spoonful of starch, run the veil through this, and clear it well by clapping it. Afterwards pin it out, keeping the edges straight and even.

Educational.

THE SUMMER VACATIONS.

Winter Schools, especially in the country, have for the most part, been brought to a conclusion. Young ——, (we will not tell his name, since the blank can be supplied in most schools with half a dozen names at least,) who sat in the Parsing or the Arithmetic class beside that bright-eyed, merry, and mischief-loving girl, and who quite lost his heart in addition to being teazed, and tortured, and made to suffer half a dozen reprimands during the winter, because his gallantry and the glory of martyrdom forbade him to declare that it was she who made the class laugh while the master's back was turned, must forego at least for the summer, his morning greetings and his evening good nights.

The budding forest and the teeming field must now command his earnest and undivided attention. Seed time and harvest, will succeed each other during the next six months of the rolling year; and healthful but wearying labor will send him to his bed at night, in fit condition to sleep soundly. In the midst of his toils, too many a young man is neglectful of his intellectual culture. He lays aside his books and slate upon the shelf as he lays aside his Sunday coat, but with this difference, that the latter is donned once a week, while the former are neglected for half a year. The consequence is, that at the commencement of the next winter's school he must commence all his studies again, at the beginning; and the term is nearly or quite ended before he arrives at the point where he left off, and is ready to make any further progress. Some, for instance, will manage during the winter to progress as far in arithmetic as vulgar fractions, proportion, the solution of installment payments in interest, or it may be the roots, and with only a partial understanding of the subject at that. During the interval of summer the whole is neglected and forgotten, and when school begins again next winter, they begin again also; and then proceed to tread the same unvarying round, like a horse in a mill, or the earth in its orbit around the sun.

All this is wrong. A little energy and determination, even during the months of summer toil, will serve to keep his studies fresh in the recollection of the scholar, and prepare him to take up the intellectual march the coming winter, at the precise point where he halted the winter before. Imperfect recitations can be reviewed and perfected; half forgotten lessons can be revived and recommitted, and the mind kept cleared from the rust, which, like the rust on polished steel, is sure to accumulate in consequence of neglect. God never assigned to the human mind a fixed position. Progression or recession is its concomitant, and it depends in a great measure upon the possessor, whether the one direction or the other is taken. It is not the most brilliant intellect that rises highest in the end. Slow but sure advancement is far preferable to rapid, but inconstant flights. Æsop's fable of the race between the hare and the tortoise, is an apt illustration.

What we would impress upon the minds of our readers, and especially the young men who at this season of the year leave the school for the labors of the farm, is this; not to lay aside their books as they do an implement of husbandry when the season for its use is past, but at hours of leisure and recreation—and there are many such, even in the busiest times—review the studies of the past winter; clear up cloudy and uncertain points; solve completely a heretofore half solved problem; learn to go thro' a dark passage alone, where before you leaned upon the arm of your teacher or a schoolmate; trace the chain of mathematical reasoning as certainly as the electric fluid traces the isolated wire, and do not leap and dart along from point to point like the fluid upon a broken or imperfect circuit. If you keep your mind fresh upon the subject of your studies—even if you make no farther progress, which you ought certainly to do—you will at least be prepared to resume them where you laid them down, and not be obliged to toil again up the same hill you had previously surmounted. It is a wise man, who, after rowing up against a current the livelong day, fastens his canoe to a tree, when he lies down to rest at night; while a fool leaves his afloat and is drifted back during the night to the point from whence he started.

Value of a School-master.—There is no office higher than that of a teacher of youth, for there is nothing on earth so precious as the mind, soul, and character of the child. No office should be regarded with greater respect. The first minds in a community should be encouraged to assume it. Parents should do all but impoverish themselves, to induce such to become the guardians of their children.—They should never have the least anxiety to accumulate property for their children, provided they can place them under influences which will awaken their faculties, inspire them with higher principles, and fit them to bear a manly, useful and honorable part in the world. No language can express the folly of that economy, which, to leave a fortune to a child, starves his intellect and impoverishes his heart.

METEOROLOGICAL OBSERVATIONS,

MADE AT ROCHESTER, STATE OF NEW YORK.

Useful Olio.

HOW INDIA RUBBER SHOES ARE MADE.

The *N. Y. Journal of Commerce*, in an interesting article on the manufactures of Connecticut, gives the following account of the manner in which India Rubber shoes are made:

"Contrary to the general impression, India Rubber, in the process of manufacturing, is not melted, but is passed through heated iron rollers, the heaviest of which weigh 20 tons, and thus worked or kneaded, as dough is at a bakery. The rubber is nearly all procured from the mouth of the Amazon, in Brazil, to which point it is sent from the interior. Its form upon arrival, is generally that of a jug or pouch, as the natives use clay moulds of that shape, which they repeatedly dip into the liquid caoutchouc, until a coating of the desired thickness accumulates, when the clay is broken and emptied out.

The rubber, after being washed, chopped fine and rolled to a putty-like consistency, is mixed with a compound of metallic substances, principally white lead and sulphur, to give it body or firmness. Those sheets designed for the soles of shoes are passed under rollers having a diamond figured surface. From these the soles are cut by hand, and the several pieces required to perfect the shoe are put together by females on a last. The natural adhesion of the rubber joins the seams. The shoes are next varnished and baked in an oven capable of holding about 2000 pairs, and heated to about 300 degrees, where they remain seven or eight hours.—This is called the vulcanizing process, by which the rubber is hardened.

A large quantity of cotton cloth and cotton flannel is used to line shoes, and is applied to the surface of the rubber while it is yet in sheets. Not a particle of any of these materials is lost. The scraps of rubber are re-melted, and the bits of cloth are chopped up with a small quantity of rubber, and rolled out into a substance resembling pasteboard, to form the inner sole. The profits of this business have been somewhat curtailed, of late, by the prevailing high price of rubber, which has varied within a year from twenty to sixty cents per pound. The demand, however, is very large. A species of rubber shoe lined with flannel, is extensively used in some parts of the country as a substitute for the leather shoe."

SINEWS OF IRON.

We wandered into a machine shop yesterday. Everywhere, up stairs and down stairs, *intelligent* machines were doing the work once done by thinking and toiling men. In one place a chuckle-headed affair, looking like an elephant's frontispiece, was quietly biting bars of cold iron in two, as if they had been so many oaten straws.

In another place, a fierce little thing, with a spindle-shaped weapon—a sort of mechanical "Devil's Darning Needle"—was boring *square* holes through solid wooden wheels, three inches or more in thickness.

Away there, in a corner, a device, about as large and as noisy as a humming-bird, was amusing itself in cutting out pieces of steel from solid plates, as easily as children puncture paper patterns with a pin.

All by itself in another place, was a machine that whistled like a boatswain, and rough boards came forth, planed, grooved, finished, ready for a place in something, somewhere, for somebody.

Everywhere these queer machines were busy, doing all sorts of things in all sorts of ways; boring and planing, and grooving and mortising, turning, and sharpening, and sawing.

Down stairs, in a room by itself, as if it would be alone, we found the grand mover of all these machines.

In a corner, some distance from the genius we write of, a fire was burning, perhaps to keep it "just comfortable," and *perhaps* not.

It was very busy—the thing was—moving an arm of polished steel, backward and forward over a frame equally polished and glittering; as one in thought sitting by a table passes his fingers to and fro along the smooth surface of the mahogany.

We said it was busy, and so it *was*; busy doing nothing. It went nowhere, it hummered nothing, planed nothing, ground nothing, but just passed its ponderous arm backward and forward. It neither ate nor spoke, but there, from "early morn to dewy eve," it *timed* the toil going on, everywhere around and above it.

There were, indeed, a few men made of flesh, sixty or so, here and there, about the establishment, *furnishing* rather than *doing* the work.

That thing with the iron arm works the wonders. It will work more.—*N. Y. Trib.*

THE AUSTRALIAN GOLD MINES.

The discovery of the Australian gold mines appears to be a subject of much controversy. The honor is disputed by a German Count, an English Knight, a Californian miner, a Botany Bay convict, and an orthodox divine of the Church of England. The first of these in the order of time was the convict, who declared that he discovered a gold placer, and attempted to sell a piece of what he called native gold. It was gold, but the authorities took it to be a battered guinea; and because he could not or would not point out the locality of his discovery, he was punished severely.

In the year 1839, the distinguished German traveler, Count Strzlecki undoubtedly discovered gold in the Wellington district, and exhibited specimens of it. He maintained that an extensive gold field existed in the Bathurst district, but at the request of the governor he kept his discovery secret, as the making it known in the penal condition of the colony in those times might have been attended with serious consequences. In the year 1841, the Rev. Mr. Clarke, without any knowledge of these facts, again made the discovery, but kept quiet for the same reason as the German Count.

In 1844, Sir Roderick Murchison discovered the existence of the gold mines by an investigation into the geological structure of the country, and he and the Rev. Mr. Clarke continued their discoveries and writings on the subject during a series of years. Subsequently, a Mr. Smith placed in the hands of the colonial secretary a three-ounce nugget of gold, and claimed a reward, but as this was refused until he should first prove the commercial value of his discovery, he declined, and so the matter was dropped.

In all these cases, the discovery claimed seems rather uncertain, and consisted either in theoretical allegations, or the finding of isolated specimens. The real discovery was made by Mr. Hargraves, a California miner, who found the gold placer, tested the specimens, and proved their value, called a public meeting, and made known the fact, instead of going to the colonial authorities. Then commenced the great rush, as the proceedings of Mr. Hargraves put it beyond the power of the authorities to suppress the information. He is to be rewarded with a donation of £10,000 by the British government for his achievement.

Intermarriage of Blood Relations.—The *Fredericksburg News* says:—In the country in which we were raised, for twenty generations back, a certain family of wealth and respectability have intermarried, until there cannot be found in three of them, a sound man or woman. One has sore eyes, another scrofula, a third is idiotic, a fourth blind, a fifth bandy-legged, a sixth with a head about the size of a turnip, with not one out of the number exempt from physical or mental effects of some kind. Yet this family persevere to intermarry with each other, with these living monuments constantly before them.

Though reading and conversation may furnish us with many ideas of men and things, yet it is our own meditations that must form our judgment.

Youth's Corner.

ILLUSTRATED REBUS, NO. 17.

MISCELLANEOUS ENIGMA.

I am composed of 26 letters, and seven words.

My 1, 13, 8, 21, 19, 20 is a kind of weapon.
My 8, 18, 7, 4 is a person that is scorned.
My 14, 7, 18, 9 is a thing indispensable.
My 26, 5, 23, 10 is what the writer would not like to be.
My 2, 20, 17, 22, 25 is an animal.
My 11, 3, 7, 22, 24, 8 is an animal.
My 12, 20, 15, 16 is a useful article.
My 6, 13, 26, 21 is a noted city.
My 19, 7, 1, 25 is a kind of fruit.
My whole is the truth.

Wild Oats.—We once saw a young man bravely turning up the glass—he was a free-hearted, glorious fellow—and was, he said, sowing his wild oats. We afterwards saw a policeman hauling a miserable drunkard from the gutter to the watch-house. The wild oats were being harvested.

Close not a letter without reading it, or drink water without seeing it.

GOD'S WATCHFUL CARE.

The insect, that with puny wing
Just shoots along one summer ray,
The flower which the breath of spring
Wakes into life for half a day,
The smallest mote, the tenderest hair,
All feel a Heavenly Father's care.

E'en from the glories of His throne
He bends to view this earthly ball;
Sees all as if that all were all,
Loves one as if that one were one;
Rolls the swift planets in their spheres,
And counts the sinner's lonely tears.

Cunningham.

[Translated from the German for the Rural New-Yorker.]

THE WAYS OF PROVIDENCE.

One evening before falling asleep, I was reflecting on the ways of Providence, and in the night I had the following dream: I had gone astray in a dark wood, and could find no exit. I called for help; whereupon an angel offered himself to be my companion, and to show me the ways of Providence.

He led me to an inn where we were kindly received by the landlord. He (the landlord) said that he was full of joy to-day, because his only enemy had just become reconciled to him, and as a pledge of his fidelity he had received a silver cup. As we left the inn, the angel stole the cup. I was angry with him, but he said: Be silent, and venerate the ways of Providence.

We proceeded on our journey, till we arrived at the house of an exceedingly wicked man, who did us great wrongs. We soon made haste to leave, and before our departure, the angel presented the infamous man with the silver cup. I disapproved his conduct, but again he said: Be silent, and venerate the ways of Providence. We next entered a cottage where poverty and want prevailed. The inhabitants had once been rich, but by some misfortune had lost all, except the little cottage. They were very poor but honest people, and welcomed us. But the angel set fire to the cottage, and then hurried away with me. I was enraged, and the third time the angel said: Be silent, and venerate the ways of Providence. Finally we entered a house inhabited by a family, consisting of a father and mother, and what was their greatest and only joy, a fair and blooming son. The angel said that we had gone astray, and desired some one to direct his path. The generous parents offered their only son for a guide, but, before we had proceeded far, the angel — drowned the youth in a stream that flowed across our path. I could bear it no longer. No, cried I, not another step with you. You may be a devil, not an angel.

Then heavenly glory shone around the angel, and he called aloud: Fools only censure the Eternal! Know then, that the cup was poisoned; therefore it was taken away from the good man, for his salvation, and given to the wicked one to his destruction. The unfortunate man will find a treasure beneath the ashes of his burnt house. The youth was a spoiled son, and had he lived longer would have murdered both father and mother. His death was indispensable to the safety of his parents, and to the cause of humanity. Silent! ye mortals, and venerate the ways of Providence.

S. T.

RELIGIOUS CULTURE.

Our senses are educated by use. The experienced sailor will not only see a ship in the haze of the distant horizon, where the landsman recognizes nothing, but he will tell to what class of ships it belongs. The intellect is educated by use, and the experienced thinker will recognize relations and analogies where, to the uneducated mind, there is nothing but confusion. Our moral perceptions are educated by use. He whose moral nature is kept alive by looking always to moral relations, and by fidelity to the moral convictions, recognizes, as by instinct, a decided right or wrong in actions which to others seem wholly indifferent, and through this moral intuition he is fitted to pass judgment on the final result of such actions. So our religious nature is educated by use. Habits of prayer, of devout meditation, of referring all things in our devotions to the will of God, habits of communion with Christ till his words have become spirit and life to us, and our thoughts move in unison with his, must quicken our spiritual perceptions, deepen our religious consciousness, and give to us the power of recognizing as realities spiritual objects and relations of which others are, and from their want of religious culture must be, entirely ignorant. Through this Christian culture, the education of our highest faculties by intercourse with the highest subjects which they can act upon, are we to enter into our highest life, and experience the purest joy that the soul can know. We cannot open our hearts in prayer with intense yearning for intercourse with God without some accession of spiritual life and peace, and we cannot throughout the day carry out the experience of that moment without having it in some measure confirmed and established within us a permanent part of our religious being. So should we go on, growing always in our spiritual gifts and perceptions, till our highest experience on earth is a foretaste of heaven.—*Ladies' Repository.*

A firm faith is the best divinity; a good life is the best philosophy; a clear conscience the best law; honesty the best policy; and temperance the best physic.

Miscellaneous.

THE AGED COUPLE.

Together we have traversed them
The days of good and ill;
And yet, like sun-light on a gem,
Those days seem dawning still.
Then to my ark, oh, gentle dove,
Thy branch of promise bring,
And scatter thoughts of home and love
From thy unfolded wing.

Together from love's cup of rose
We drank, in life's sweet spring;
Inspired by thee, at life's dull close,
My soul shall plume its wing,
What though our days of youth are o'er,
And youthful joys are flown!
Thy tears, like dew-drops on the flower,
Still mingle with my own.

[Written for the Rural New-Yorker.]

REMINISCENCE OF ECONOMY, Pa.

THE HOME OF THE RAPPITES.

BY MRS. M. W. H.

On the left bank of the Ohio river, as you ascend from Wheeling to Pittsburg, about 14 miles below the latter place, stands Economy, the home of a community of Germans called Rappites, from the name of Rapp, its founder. At the time of my visit to this interesting place and people, fourteen years ago, the community numbered about five hundred individuals, many of them then in the decline of life, a *few* young and middle aged, and here and there a child.

Ascending a flight of nearly a hundred steps from the river, you find yourself on a level of hundreds of luxuriant acres, reaching back to the foot of a broad range of hills that shelter it from bleak winds and blighting frosts, rendering vegetation a week earlier in spring, than in many other contiguous localities. This domain was laid out and fenced in the neatest manner, and under a high state of cultivation.

The village is near the river, and is laid out with wide streets at right angles; the houses are built of wood, uniform in appearance, two stories high, with the ends standing towards the streets. There is a vegetable and flower garden to every house, which is cultivated principally by the females of the family, which consists of a certain number of each sex. No marriages are allowed among them. Each individual is interested in, and owns a share of the property. The work for the whole establishment was so divided and apportioned that none need to labor very hard. Every thing I found had been arranged with direct reference to comfort, independence, utility and economy. They have an established principle, not to *wear* anything they cannot produce among themselves, importing as little as possible, and exporting all they do not need. They have various manufactures, that for wool being supplied from their own flocks. They had made considerable advances in the manufacture of silks, having looms employed in weaving various kinds of silks, ribbons, satins, velvets, &c. The streets were lined with white mulberry trees, which not only afforded early food for the silk-worms, but gave beauty and shade to the quiet scene.

The Hotel, which was designed for a home to strangers visiting their place, was kept by four females and two men. The parlor was furnished with a piano, and the floors throughout the house, covered with nice clean rag carpets; beds, dressed with the whitest home-spun linen, and all the appliances kept in the neatest manner. Every thing, in short, was spotlessly clean.

One extensive laundry, supplied with every thing that could facilitate the business, afforded a place where all the families performed their washing with ease and neatness. I yet consider it a model for a public laundry. Adjoining this, was a soap and candle manufactory; and not far distant was a stable, where were some of the finest oxen and cows I ever saw; so nicely kept, that a lady's kid glove need not be soiled by rubbing their coats.

At that time the Patriarch of the community, Mr. RAPP, was still alive, and in the full enjoyment of absolute sway. Though upwards of 80 years of age, he was abroad on horseback, superintending the agriculture of the domain, from the morning till night, of a busy April day. His house, garden, and furniture, was in rather different style from the rest of the habitations. The walls of his parlor were hung with paintings and other evidences of cultivated taste, while the garden was laid out and managed in a style of luxury and expense rarely equaled, even at this time.

Having an introduction to Miss RAPP, the grand daughter of the Patriarch, who presided over his household, we were received with the greatest kindness, and enjoyed attentions not generally bestowed on strangers who visit them from motives of mere curiosity. Pleasing recollections forbid my leaving this part of my subject, without a passing tribute to this young lady. She had at that time the supervision of the silk manufacture, from the feeding of the worms to the completion of the fabrics, rising during the feeding season, at four o'clock every morning, with her assistants, to minister to the wants of those voracious little laborers. She was highly educated, with just enough of the German accent in her conversation to enhance the effect of a sweet musical voice, and a peculiarly pleasant and animated countenance.—I confess to a feeling of sadness in the idea, that one so gifted in all that constitutes the true woman, as she appeared to be, should doom herself to perpetual celibacy. I shall never forget the pleasing grace with which she doomed her coarse straw hat, and led us to all the places of interest, and kindly explained their plans and arrangements. She dressed in the homespun linsey in which all the females were clad, yet on her person it lost the coarseness of its texture, and the overstrained plainness of its form.

The village is abundantly supplied with water, which is raised from the river by steam power. At the corners, where the streets cross each other, are placed large tanks into which the limpid stream is constantly flowing, imparting a sensation of Oriental luxury to the quiet scene—for though a *village*, such a stillness pervaded the place, that to this day I instinctively hush my breathing when I think of that bubbling water, as it fell into the crystal pools.

They had a museum of choice curiosities very nicely arranged, under the care of the general Agent, who was likewise Physician to the community. A more finished gentleman in exterior, is not often to be met. I hope I shall be forgiven for creating in my mind a little romance, in which he and my young friend were to be actors, when the Patriarch should rest with his fathers. But, alas for the baseless fabric! if living, they are doubtless still following the parallel paths of their destiny.—His labors as physician, must have been slight, as they had never lost more than three or four of their number in any one year.

In their museum I saw a painting of "Moses in the Mount, receiving the Law." Its size, if my memory serves me correctly, was about ten feet by twelve. It was painted in the room where it stood, by the same unfortunate German artist who executed the fine copies of "The Last Supper," and "Christ healing the Sick," which adorned the walls in Mr. RAPP's dwelling. This artist was a long time charitably employed on these paintings. As the eye first rested on the picture, each figure in the vast multitude surrounding the foot of the Mount, seemed to stand out in such relief, that one could scarcely for the moment, resist the idea that he was himself one of the great assemblage, and involuntary expect to see Moses actually descend from the Mount.

They have a church, a respectable edifice in point of size, but with an exterior not quite in keeping with the rigid plainness of the prevailing style of buildings. Their religion is said to be Lutheran—but I presume there are some peculiarities pertaining to their worship, not observed by Lutherans generally. They do not admit strangers to witness their devotions, but it being "Good Friday," I had an opportunity of seeing the different families go to church. The females all wore linsey skirts of a dark color, black jackets or spencers, a white handkerchief or ruffle around the neck, and a high stiff-crowned black cap of peculiar form, that gave the wearer a very singular appearance. They walked separate from the males, with eyes bent on the ground, the hands crossed in a particular manner, with a solemn measured pace, that gave them to my mind, the appearance of mutes in a funeral procession, of which we frequently have pictures.

The most perfect neatness prevailed throughout every department, and if goodness could be attained by absence of temptation to do wrong, then might they be a sinless people. But cupidity and other human passions no doubt enter this little community, and create heart-burnings, which are concomitants of our imperfect state. With all the quiet, beauty, and temporal comfort that exist in this spot, that they have striven to make a miniature Eden, I cannot resist the thought, that after a generation or two, the institution will crumble into dust; there is nothing to attract the *young*, and as marriage is forbidden, they must depend on those who voluntarily join them to keep up the numbers necessary to carry on their operations. It would seem by the closing sentence of the following quotation, from a recent Christian American, that they *feel* that they "are getting old."

"This community have recently remitted to this city $260,000 for the purchase of various Western railroad stocks. This sum was in English sovereigns, which had been hoarded in their vaults since the disastrous times of '37. If it had been safely invested then, it would now, of course, have been considerably more than doubled. The Central Christian Herald says that it appeared, at a late trial before the Pittsburg Courts, that the Community for the last fifteen years have at all times had not less than half a million of specie on hand.—The Rappites are Lutherans, and meet regularly for worship, and have certain festivals and anniversaries, when they assemble in a large hall to dine, to refresh their memories with reminiscences of their fatherland, and to discuss their future plans. Since Mr. RAPP's death, which occurred seven years ago, they have had a government of eight or nine directors, with power to choose their successors. They have a hotel strictly for the accommodation of strangers, where they refuse to allow them to remain more than two or three days, giving as a reason, 'that they are getting old, and do not wish to be disturbed by visitors; that money to them is no object, and they desire to spend the remainder of their lives in peace and quietness.'"

The community formerly met with heavy losses, by the failure of banks, and various other causes, which has no doubt rendered them extremely cautious, hence the accumulation of specie mentioned above.

Early spring flowers are always to me doubly sweet and beautiful, for the pleasant memories they bring of that visit to the "Rappites."

THE LOFTY AND THE LOWLY.

The Washington Union indulges in the following sensible remarks:

Who is he, no matter how exalted his position, who has no relatives in the humblest?—The writer has himself seen members of the immediate families of two Presidents of this Republic toiling for their support in the severest of employments; and it is probable that no man has occupied the White House who has not been aware that many of its kindred, unless relieved by himself, were reckoned among the poor if not the honest of the land? The only brother of Clay was a cabinet maker; Webster, the giant of statesmen, and the ornament of his country, had a brother-in-law who never learned to read until after completing the period of three-score and ten, and a majority of the first statesmen of the present time are the energetic and ambitious sons of "poor but honest parents." Everett (who will never blush to hear it) was discovered in his younger days in the pursuit of knowledge under difficulties—the difficulties of poverty—though they presented to him but slight impediments on the road to renown."

No Place Like Home.—"Pick out," writes Mr. Wallace, the naturalist, who has just spent four years in collecting specimens on the banks of the Amazon, "pick out the loveliest spots where the most gorgeous flowers of the tropics expand their glowing petals, and for every scene of this kind we may find *another at home* of equal beauty, and with an equal amount of brilliant color. Look at a field of buttercups and daisies—a hill-side covered with gorse and broom—a mountain rich with purple heather—or a forest-glade azure with a carpet of wild hyacinths, and they will bear comparison with any scene the tropics can produce. I have never seen anything more glorious than an old crab-tree in full blossom; and the horse chestnut, lilac, and laburnum, will vie with the choicest tropical trees and shrubs. In the tropical waters are no more beautiful plants than our white and yellow water-lilies, our iris, and flowering rush."

Unmerited Remembrance.—Oblivion blindly scattereth her poppy, and deals with the memory of men without distinction as to merit of perpetuity. Who can but pity the founder of the pyramids? Herostratus lives that burnt the temple of Diana; he is almost lost that built it. Time hath spared the epitaph of Adrian's horse—confounded that of himself.—In vain we compute our felicities by the advantage of our good names, since bad ones have equal durations; and Thirsites is likely to live as long as Agamemnon, without the favor of the Everlasting Register.

Variety.--Grave and Gay.

Charles Lamb sat next to some chattering woman at dinner; observing he didn't attend to her, "You don't seem," said she "to be at all the better for what I have been saying to you."

"No ma'am, (he answered,) but this gentleman at the other side of me must, for it all came in at one ear and went out at the other."

We have no desire to be acquainted with the bachelor who perpetrated the following:

"Nature, impartial to her ends,
Where she made man the strongest,
In justice then to make amends,
Made woman's tongue the longest."

Never joke with ladies on matrimony or bread-making. It is very wrong. They are both sacred. One refers to the highest interests of the heart, and the other to those of the stomach. Young men will please chalk it down in their hats.

Matches differ. That sort that is got up at the parson's is apt to have the most flame before it is struck; while those made at the factory, the most after it.

Franklin says, "A poor man must work to find meat for his stomach; a rich one, to find a stomach for his meat."

Men of the noblest disposition think themselves happiest when others share their happiness with them.

The passion of acquiring riches in order to support a vain expense, corrupts the purest souls.

Practice flows from principle; for as a man thinks, so will he act.

The thinking man has wings; the acting man has only feet and hands.

Happiness is promised not to the learned, but to the good.

The greatest pleasure of life is love; the greatest treasure, contentment.

Ladies' Department.

LINES,

TO LIZZIE, ON HER WEDDING-DAY.

BY MRS. M. WEBSTER HUDNUTT.

Lizzie, are you happy now?
Sleeps no shadow in your eyes?
Flits no shade across your brow,
As the past's dead forms arise?
Comes there not upon your ears,
Wailings from departed hours,
Waking memory's bitter tears,
At the thought of faded flowers?

Is the future free from care?
Shines Hope's star upon your way,
Lighting every prospect there;
With its bright and cheerful ray?
Know you not that hopes deceive,
That the brightest soonest fade?
That we're always called to grieve
O'er the idols we have made?

Could my earnest wishes give
Peace and happiness to thee,
Lizzie, thou should'st ever live
From the touch of sorrow free.
Friends should ever cluster round,
With their love thy heart to bless;
And each scene of life be found
Fraught with unmarred happiness.

LETTERS TO THE READER.

No. II—Spring.

Dear Reader.—Do you not rejoice that Spring has again returned—that the chilling winds of gloomy Winter have sighed their parting requiem, and the balmy breezes and sunny hours so long anticipated, yet long deferred, have again dawned upon our paths?—How the heart warms with lively emotions at the coming of its genial air, laden with the sweet perfume of early blossoms—and we are thrilled with rapture at the melody of the winged minstrels, chanting at "dewey morn" thanksgiving lays for their safe return and pleasant homes mid the opening bloom. All the finer sensibilities are awakened by the world of life and beauty with which we are surrounded. The barren, leafless branches, bursting forth in rich and abundant foliage—budding flowerets opening their petals of varied tints to the bright azure above—insects of every form dancing in the sunbeams—music gushing from the rills and brooklets, as, unfettered from icy bondage, they ripple down from mountain homes to join the valley streams:—all these scenes of lovely Nature must fill the heart with unutterable pleasure, and acknowledgments of the wondrous power of the Creator of such changes,—and we cannot repress feelings of ardent gratitude to that invisible source of refreshing variety to mind and frame, from piercing winds and sunless days, to soft gales and skies of cloudless blue.

Had you, dear reader, like myself, been an invalid through the dreary months gone,—confined within doors for days and weeks in succession,—you would perhaps feel a delight as enthusiastic, as my own, at the approach of mild atmosphere, and the hope of enjoying again its freshness. You would, like me, be struck with every feature of the landscape as something new and beautiful—as if it ne'er before had greeted your vision. Unlike you, however, I possess not the enlarged space for fine scenery that (perhaps) you have; for I am encompassed by brick walls and pavements, with only a small grass plat—a few flower beds, and an occasional shrub and ornamental tree. But by-gone memories steal o'er me, of green fields and shady groves—of mossy dells o'er spread with wild-wood blossoms, fragrant with sweet scented honeysuckles—of pleasant paths near a winding river whose banks were dotted o'er with hepaticas—of large and spreading branches where the thrush had built its nest, and from whence the whippoorwill's plaintive song was heard at twilight hour. There comes also, a remembrance of the freshness and purity that fanned my brow in woodland rambles, the odor of the clover-covered meadows, and the pastures of new-mown hay, with the natural accompaniments of buoyant spirits and vigorous limbs.

These beauties of opening Spring, affording especial pleasure (if appreciated,) to the rustic, beam not upon the city resident,—but those who have ever enjoyed them, associate with their remembrance some of the brightest and happiest hours of their experience.

Rochester, April, 1854. A——E.

MR. FERN WILL PLEASE SPECIFY.

From the Rural, of March 25, I learn that Mr. Fern wishes a partner, and I would not object having one, provided he was worthy of my respect and esteem. As to age I am not particular; any where between 23 and 30, for there are few younger that are competent to manage the secular concerns of life. As to stature it matters but little, provided he is capable of energetic action.

But from the qualities that he wishes his partner to possess, I am fearful that he values the shape of his mustache, and the appearance of his dress, more than the rectitude of his actions. I wish to know if he possesses a kind, generous, and noble disposition — whether he has been generous, kind and accommodating to his mother and sisters, thus far through life,—whether he spends the evenings and leisure hours at home, or at the tavern, the store, or the blacksmith shop,—whether he is a regular attendant at church on the Sabbath, or spends that day in hunting, fishing or playing cards,—whether he uses tobacco, or alcoholic drinks, for their perfume is very annoying to me, and it would make home a purgatory to live amongst those noxious fumes. Lastly, but not least, I wish to know what vocation he follows, and whether he is competent and willing to provide for the wants and comforts of domestic life.

Kate Prudence.

SECRETS BETWEEN HUSBAND AND WIFE.

There should be no secrets between husband and wife; for since the wife has been taken into partnership, she, of course, has an equal interest in the "concern," and has a right to put such questions to her husband in relation to the "standing affairs" as she desire; and if the husband is what he ought to be, satisfactory answers will be given. This is one of the principal causes why there is disunity and unpleasantness between husband and wife—the latter is kept from knowing that which she has a right to know. The husband who is not willing to make a confident of a faithful and deserving wife, is not entitled to the name of husband.—For who, more than she, is deserving of confidence? Did the husband more generally consult with his interested and care-taking companion, and ask her advice in matters pertaining to the management of a family, there is sufficient reason to believe that a greater degree of prosperity and happiness would attend the married pair in their connubial journey.

It is necessary that there should be unity of feeling between husband and wife, and that there should be confidence reposed in each other,—for the journey of life cannot otherwise be made pleasant and cheerful. Long years are passed by many, in the connubial state, who do not, in reality, know what the real, solid enjoyments of a wedded life are—do not know what they may be. And why? Because there seems to be a barrier between the two joined together, which neither will condescend to step over or break down; hence the common age of man is often lived out by many of our fellow creatures without having experienced the *sweets* of domestic felicity.

CLOTHING OF CHILDREN.

The editor of that well-conducted paper, "The Connecticut Courant," gives the following sensible advice to mothers, which in the main we think to be both sensible and opportune:

We wish the mothers in our city would reflect a moment upon the evils resulting from the exposure of the limbs of their children to the cold. We really pity the poor girls who are sent to school with but a single covering over the lower extremities as far as the knees, while their mothers could not possibly endure the same weather without at least three or four thicknesses of protection. The continued influence of cold and of our sudden changes, day after day, on the arms, shoulders and legs of young children, must in time produce its effect on the circulation. It may in time harden the constitution, but, in nine cases out of ten, the little sufferer falls a victim to the process.—What mother would choose that her child should run the risk of such hardening in such a ratio? What mother, for the pride of exhibiting the beautiful proportions of the lower limbs, on the preposterously foolish idea of hardening the girl, will hazard the development of tubercles in the lungs, of dropsy of the brain, of all the evils of bronchial colds and catarrh? There is no better method of bringing on croup, or lung fever, than allowing the legs to become so intensely cold as must be the result of this fashionable mode of dressing.

A Beautiful Simile.—The pious Jonathan Edwards describes a Christian as being "like such a little flower as we see in the spring of the year, low and humble on the ground; opening its bosom to receive the pleasant beams of the sun's glory; rejoicing, as it were, in a calm rapture; diffusing around a sweet fragrance, standing peacefully and lowly in the midst of other flowers." The world may think nothing of the little flower—they may not even notice it; but nevertheless, it will be diffusing around a sweet fragrance, upon all who dwell within its lowly sphere.

Married Life.—Miss Cary has just published a book of poems, among which is the following parody on Longfellow:

"Tell me not in idle jingle
Marriage is an empty dream,
For the girl is dead that's single,
And things are not what they seem.
Married life is real earnest,
Single blessedness a fib;
Taken from man, back returnest,
Has been spoken of the rib."

Beautiful Extract.—The velvet moss grows on the sterile rock, the mistletoe flourishes on the naked branches, the ivy clings to the mouldering ruins, the pine and cedar remain fresh and fadeless amid the vegetations of the preceding year; and, Heaven be praised, something green, something beautiful to see and grateful to the soul, will, in the darkest hour of fate, still twine its tendrils around the crumbling altars and broken arches of the desolate temples of the human heart.

A Fine Thought.—The most beautiful flowers are those which are double, such as double pinks, double roses and double dahlias. What an argument is this against the chilling deformity of single blessedness! "Go marry," is written upon everything beautiful that the eye rests upon, beginning with birds of paradise, and leaving off with apple blossoms.

RURAL NEW-YORKER

ROCHESTER, APRIL 15, 1854.

SPECIAL NOTICES.

☞ *A new quarter commenced last week,—a good time for new single and club subscriptions to begin; and the renewal of expiring subscriptions is now in order.*

☞ *Additions to Clubs are still in order. If back numbers are not wanted, we will send from 1st March or April to end of year for $1—and count on premium.*

☞ *During the season of navigation we can send the Rural to Canada West free of American postage, and hence will furnish clubs for six months from date at lowest rates.*

☞ *Clubs for six or nine months from this date at same proportional rates as for full year—and premiums allowed.*

☞ *Back numbers of the present volume furnished if desired, or subscriptions may commence at any time.*

New and Interesting Feature.—The literary department of our next number will be enriched by the publication of the first of a series of most piquant and interesting Trans-Atlantic Letters, from the pen of a lady well qualified to speak of the places, people, customs, &c., of Belgium, Spain, France, Italy, and other countries she purposes to visit. The series were engaged upon *merit* alone — after an examination of several numbers—and unless we greatly misjudge, will prove superior to the foreign letters, by well known writers and authors, usually given (with a great sounding of trumpets,) in eastern literary periodicals.

Showing Up.

When men, who have heretofore been fast friends, fall out, they are quite apt to show each other up in no very enviable light before the world. The same may be said of nations; and the proposition is just now being demonstrated by England and Russia. First, the Autocrat's organ at St. Petersburgh publishes an article under official sanction, glorifying its master, and casting severe reflections on the British Government and Queen. As a set-off, the latter have given to the world a list of letters and communications passing between the two governments, through the British Minister, resident at the Russian court, by which it appears that the Czar has been for a long time plotting the dismemberment of the Turkish Empire, and a division of the spoils with England. The proposition was to give the latter, Egypt and some of the islands of the Mediterranean, and take Constantinople and the provinces of European Turkey (of course the lion's share) to herself.

England rejected the proposition with disdain, whether from motives of policy, or justice, or both, remains to be seen, and opportunity to judge is likely soon to be afforded, as Nicholas, in revenge for the publication of his confidential overtures, is about to give to the world a batch of English confidential letters on the Oriental question, including, it is said, several from Prince Albert.

The radical journals of England have heretofore charged the Prince Consort with entertaining feelings of sympathy for the Continental despotisms, and he was actually hissed by the people on his way with the Queen to open Parliament on the first of February. The Ministry stoutly denied the allegations, but if Nicholas in "*disclosing the disclosures*" proves the charges to have been correct, it will be no matter of surprise if his Consortship is placed in a very unenviable position.

State Elections.

Connecticut and Rhode Island have both held State elections within a few days, and both have spoken out decisively and unmistakably against the repeal of the Missouri Compromise.

In the former State the Senate stands 17 whigs to 4 Democrats, and in the House there are elected 132 whigs and free soilers to 94 Democrats. Last year the Senate stood 15 democrats, 5 whigs and 1 free soiler; House 145 democrats, 68 whigs and 11 free soil. Last year the democratic Governor was elected by a majority of 1,200 over both the other candidates. This year he is in minority more than five thousand.

Rhode Island, which has been democratic for three years past, has now elected a whig Governor and Legislature. Some one has been inquiring whether these elections are the "actual settlers" to whom the slave question in Nebraska is to be submitted.

Testimonial.— The Boston people have subscribed a large sum for the purpose of purchasing a service of plate to present to Senator Houston of Texas, as a token of their approbation of the Senator's course in defending the New England Clergymen against the attacks of Senator Douglas of Illinois.

The occasion of the remarks by the Senators arose from the presentation in the Senate of a remonstrance from three thousand New England Clergymen, against the repeal of the Missouri Compromise.

Railroads in America.— There are completed, and in process of construction in the United States, over 30,000 miles of railroad; in Canada about 2,000; and also short lines in Cuba, Central America, and a few other localities. The progress of railroad enterprises, especially at the West, is beyond all precedent, and tends to develop the resources of the country more than any other single cause. Produce that would otherwise not pay for transportation is made by them to yield a golden harvest to the husbandman.

Congressional Proceedings.

Washington, April 3.—Senate—Remonstrances from the States of Indiana and Massachusetts against the introduction of slavery into any territory from which it is excluded by the Missouri Compromise, were presented.

Mr. Cass presented a petition that freedom be secured to American citizens in foreign countries, and gave notice that he would, three weeks from to-day, speak on the subject. It was his intention to reply to some strictures made by a distinguished prelate.

The Senate then went into executive session.

House — Mr. Cutting (dem.) of N. Y., appeared in his seat for the first time since last Monday.

The Committee on Post Offices reported a bill, which passed, regulating the pay of deputy post-masters.

A resolution was adopted requesting the President to transmit to the House copies of the correspondence, not now communicated, of the U. S. legation at Constantinople and the U. S. consulate at Smyrna with Capt. Ingraham, and with the government of Austria and this government, together with the instructions from this government touching the seizure and rescue of Martin Koszta and the conditions on which he was liberated.

Mr. Campbell (whig) of Ohio, asked leave to introduce the following:

Resolved, That the President be requested to cause negotiations to be opened with the government of Great Britain, with the view of ascertaining upon what conditions that government will consent to the annexation of the Canadas to the U. S. Objection was made to its reception under the rules.

Mr. Campbell moved a suspension which was refused, yeas 28, nays 119.

April 4.—Senate—The Senate was in executive session on the Gadsden treaty.

The doors were temporarily opened to receive a message from the House, announcing the passage of the Steam Frigate Bill. The Senate took it up and passed it forthwith.

House — Considered the bill to reduce and graduate the price of public lands, and postponed for one week.

Mr. Bennett reported a bill to equalize grants of lands to the several States for certain purposes. The bill is the same as Mr. B. before reported, with an amendment.

April 5.—Senate—After an executive session the Senate adjourned.

It is understood that Mr. Clayton made a strong speech against the Gadsden treaty.

House—Mr. Gadsden of Penn., spoke against the Nebraska bill. Mr. Smith of Tenn., and Mr. Nichols of Ohio, also spoke on the same subject. The former in favor, and the latter in opposition. Adjourned.

April 6.—Senate—Several petitions against the Nebraska bill were presented. Bills granting a pension to the widow of Gen. Leavenworth, and for extending the Collection District of Milwaukie, were passed.

The correspondence relative to the Koszta affair was received and tabled.

House—Mr. Churchill's bill, authorizing contracts for carrying the mail between N. Orleans and San Francisco, was taken up. It provides that the service shall be paid for at prices ranging from $10,000 per annum for 23 days' up to $1,600,000 for ten days' passages.

April 7.—Senate—The bill establishing additional land districts in Minnesota was passed.

Thirty-six Senate bills and six House bills were passed, when Mr. Badger moved that as the Senate had done a glorious day's work, it do adjourn till Monday. Carried.

House — Mr. Latham, of California, spoke in favor of the mail contract bill, expressing his belief that the mails would eventually be carried between the two points, in fifteen days.—Pending consideration of bill, the morning hour expired.

A message was received from the President, stating that he had signed the bill authorizing the construction of six steam frigates.

The House went into Committee on the General Appropriation bill, when Mr. Caruthers spoke in support of the Nebraska bill, and Mr. Washburn of Maine, spoke in opposition. Adjourned to Monday.

The Hulsemann Letter.

According to the *New York Evening Post*, Edward Everett has written a letter to Fletcher Webster claiming the paternity of the celebrated letter from the State Department to Chevalier Hulsemann, the Austrian minister at Washington, during a portion of Mr. Fillmore's administration. Mr. Everett states that Daniel Webster was sick at the time, and he, (Everett) made the original draft of the letter at the request of the Secretary of State.

It is also stated that Mr. F. Webster has found the original draft among his father's papers in Mr. Everett's hand-writing, and has returned it to him; and that the same has been published for private circulation with Mr. Webster's emendations and alterations appended. Much excitement is produced in certain quarters by this development.

Now and Then.—A correspondent of *The Brantford* (C. W.) *Herald*, in speaking of the progress of the age, and the benefits of railroads, says:

"In the year 1807 it was advertised in Detroit that a vessel would leave that port for Buffalo. Spring opened and navigation was resumed.—But lo! in this solitary craft there was but one passenger—and on reaching Buffalo there were but two shanty taverns. He asked for a stage to go on to Canandaigua. He was told there was but one stage a week, and that had just gone. This was a common wagon. What mighty changes has time effected by the instrumentality of inventive genius in modes of travel!"

Our Albany Correspondence.

Albany, April 10, 1854.

The number of bills passed by both houses during the past week is about sixty, embracing all kinds of subjects, some personal, some political, and some for the public good. One of the second class provides that the Governor cannot as heretofore remove an officer during the recess of the Senate. This is supposed to apply particularly to the Sup't of the Bank Department, whose office expires soon. But being a Whig, the governor would not of course re-nominate him. Hence the passage of a law by which he can retain his office till next winter, in the hopes that a Whig Governor may be elected. Thus do Politicians plan. Another is an act to designate a State Paper. This is for the benefit of the *Evening Journal*; and it provides for the payment of thirty cents for every hundred words for the first insertion, of citations, necessarily published in the State paper, and twenty cents for each subsequent insertion. Such advertising has been done gratuitously since the adoption of the last constitution, and plenty of papers offer now to do it for nothing, and glad of the chance.

STATE IMPROVEMENTS.

Ten thousand dollars have been appropriated for the improvement of Rackett River and its tributaries. A bill has also passed appropriating $22,000 for the erection of forges, &c., to carry on the iron works at the Clinton prison. The Saconiaga river improvement receives $5,000.

CITY AND VILLAGE LAWS.

An act to authorize Syracuse to fund its debt. It provides for the raising of $70,000. The laws of Kingston are consolidated. Also those of Hudson. Salem is authorized to borrow $650. New York city has power to raise $3,000,000 by tax for the expenses of the ensuing year.—The trustees of Lockport are further empowered to act. No railroads can be laid down in any city hereafter, without consent of a majority of persons residing in the street through which they pass. Ogdensburgh laws have been revised. The pilot laws of New York are also renewed and improved; and their stage routes are regulated.

THE COUNTRY.

A law has been passed to prevent the destruction of timber among the Tuscarora Indians. It also regulates their highway labor.—The plank road laws have been farther amended for particular roads. Particular roads and bridges are provided for in various localities.—An act has passed providing for the election of but one Superintendent of the Poor yearly for each county. The bill to prevent the re-issue of the notes of Banks whose charters have expired, has become a law.

STATE SUP'T OF PUBLIC INSTRUCTION.

As indicated in my last, Victor M. Rice, of Buffalo, was duly elected to this office, by a large majority over all others. He has appointed S. S. Randall, his deputy, by which act he evinces much good judgment. Mr. Chambers, of Peekskill, is his first clerk.

UNFINISHED BUSINESS.

The Senate have passed about 60 bills which are now on the Assembly files, and the Assembly have sent up 100 for their action. A few days of hard work will follow.

VISIT TO NEW YORK.

The members accepted the invitation of the New Yorkers (I mean the city New Yorkers) to visit the great metropolis. They left Friday evening, and have not yet been seen. They will probably be on hand to-morrow, which is their last day. Indications favor a prolongation of the session for a few days—and *but a few*, for it must be at the expense of the members themselves. Their patriotism will not last long under such circumstances.

PROSPECTS OF THE MAINE LAW.

There is now some probability that a law will be passed submitting the question of a Prohibition Liquor Law to the People. One week will decide that and many other momentous questions.

AGRICULTURAL COLLEGE.

A business meeting of the trustees was held last week, and a public gathering on Wednesday evening, at which Horace Greeley, Mr. Miller and Mr. Evans spoke on the subject of Education in general, and Agricultural Education in particular. But few attended. Albany is a cold place for such an enterprise. "Ohio."

Emancipation.— The *Cincinnati Times* states that Mr. Christy, agent of the Colonization Society, has been offered a group of slaves in one of the Southern States, valued at $15,000. The owner cannot emancipate them where he lives, and must remove them to some other State to effect this purpose.

In view of the uncertainties attending the execution of wills, in reference to slave property and the liability of his slaves being scattered after his death, he thus closes his appeal to Mr. Christy:—"I abhor the thought of their being sold after my death. My reason for wishing to emancipate now is, I don't wish the devil to get my soul, and the lawyers my money. Pity me, for Jesus's sake, and give me good counsel.—Your brother in Christ."

Law Against the Use of Camphene.—The Albany State Register of the 1st instant, says: "Mr. Clinton had unanimous permission to introduce to the Assembly yesterday, a bill 'to prohibit the use of camphene, spirit gas, and all preparations of alcohol or spirits of turpentine, for the purposes of illumination in stages, omnibuses, railroad cars and steamboats.' Any person or persons, or incorporated company violating the provisions of the act, to be deemed guilty of a misdemeanor; the act to take effect on the first of May, 1854. The bill was referred to the Committee on Railroads."

News Paragraphs.

☞ The Secretary of the Treasury has written a letter to Mr. Gwin, United States Senator from California, in favor of the future issue of gold coins of the denominations of $100, $50 and $25 each, by the Branch Mint at San Francisco. He proposes that the new pieces shall be named the Union, half Union and quarter Union, and that only the half Union be struck for the present.

☞ The annual election in Connecticut took place on Monday last. The candidates for Governor were Henry Dutton, Whig, and Samuel Ingham, Democrat. In Rhode Island the State election was held on Tuesday. Wm. W. Pappin was the Whig candidate, and Americus Vesputius Potter the Democratic candidate for Governor.

☞ The King of Siam has purchased, for the Protestants residing at his capital, a spacious and convenient place of business, the want of which has long been felt as a great inconvenience. The parties on whom this obligation has been conferred, acknowledged his Majesty's generosity and kindness in suitable terms.

☞ The accounts of Mr. Hugh Maxwell, Ex-Collector of New York, has been examined, settled and closed at Washington, to the entire satisfaction of the government. The amount received by Mr. Maxwell, during his term of office, exceeded one hundred and seventeen millions of dollars.

☞ The State Superintendent of Common Schools in Louisiana recommends that two out of every three of the school directors should know how to read and write. In one parish, the warrant of the teacher on file, instead of the signatures, contained the mark of twelve different directors.

☞ The ship Star of the West, at Boston from Liverpool, reports large quantities of field ice in the Atlantic. On the 11th of March, in lat. 43 20, lon. 49 15, she passed close to several small icebergs, from ten to twenty feet above the water.

☞ The Sunday School children of the Methodist Episcopal Church, in Philadelphia city and county, have had prepared and sent on to Washington a beautiful block of marble, suitably sculptured, for the Washington National Monument.

☞ The ceremony of breaking ground on the Grand Trunk Canada Railroad, took place at Kingston, on Saturday week. The British Whig says:—"A fair young lady removed the first sod, *and the contractor bought half a dozen barrels of beer, with beef and bread to match!*"

☞ The steamships North Star and Northern Light, which sailed a few days since for California, discharged at Sandy Hook, with their pilots, nineteen persons who had stowed themselves away, as is supposed, among the freight. They were endeavoring to *dead-head* a passage.

☞ Sir James Wylie, for so long a time the chief physician at the Russian Court, has just died at St. Petersburgh. He is reported to have bequeathed the entire of his very large fortune, to the Emperor of Russia. Sir James Wylie was a Scotchman.

☞ The heaviest drain on the pipes of the Fairmount water-works, Philadelphia, was in the month of August. The watering of streets, gardens, side-walks, &c., in addition to the regular demand, run up the average demand to 7,933,612 gallons daily throughout the month.

☞ The Toronto Colonist laughs at the notion of an invasion of Canada by an Irish army from this side of the line, led by John Mitchell, and promises that their dread onset shall be repelled by an equal force of fugitives from Slavery, now living in the province.

☞ A ukase has been issued by the Russian government forbidding Jewish women in Poland to wear any kind of head-dress under their bonnets. The rabbis are forbidden to marry any woman who refuses to obey the new law.

☞ The Court of Appeals, by a vote of five to three, has affirmed the decision of the Supreme Court denying a new trial in the matter of the application of Hendricksen, of Albany, convicted of the murder of his wife.

☞ A young man who has been missing for three or four months from Cattaraugus county, and whom a whole cordon of humbug spirit-rappers had consigned to the wolves, is engaged in chopping cord-wood near Pittsburgh!

☞ A bill is before the Legislature for the suppression of Lotteries, Lottery Dealing, Gift Concerts, Raffles, &c. The proposed penalty for connection with either of these, is confinement in the State Prison.

☞ A southern paper says:—Upon the plantation of Col. John B. Lamar, in Lee county, Ga., a log was split open, a few days since, and 28 full grown rattlesnakes found within. The item is headed, "Sum Smix."

☞ Five prisoners lately escaped from the jail at New Albany, Ind., by blowing out one side of the building with gunpowder. This filibustering operation was under the command of *General Jail Delivery*.

☞ The Syracuse Republican announces the safe return to that city of John Haben, whose detention by the Prussian authorities some time since, while on a visit to that country, caused some excitement.

☞ The Lutheran population in the world is estimated at 12,250,000, of which 25,000,000 are found in the land of Luther, 5,000,000 in Prussia, 3,000,000 in Sweden, and 1,000,000 in the United States.

☞ The tolls on the Illinois and Michigan Canal have been reduced 35 per cent. This will attract a large trade from the Illinois and Mississippi rivers to Chicago, and thence to the Erie Canal.

☞ The British ship "Three Bells," Capt. Creighton, which left New York on 22d Feb. arrived at Glasgow, on March 10th, thus making the passage in 16 days—the quickest trip ever made.

☞ A boat containing three dead men was found on the Lake shore, eight miles west of Michigan City. They are supposed to have been fishermen from Milwaukee, and died from exposure.

☞ The Canal Board has appointed the following First Assistant Engineers, viz:—John Bisgood, William H. B. Gore, O. H. Bogardus, Daniel R. Hartwell, Ezekiel H. Butler, and Sylvanus H. Grant.

☞ Geo. W. Clinton and Isaac A. Verplank, the unsuccessful candidates for Secretary of State at the last election, were elected on the 4th inst. as Judges of the Buffalo Superior Court.

News Brevities.

— Galveston and Houston, Texas, are now united by telegraphic wires.

— Gov. Robinson, of Vermont, has appointed Friday, the 15th instant, as the annual Fast Day.

— John C. Dore, a teacher of Boston, has been elected Superintendent of Schools in Chicago.

— During 1853 there were exported from Rome 664 works of art, valued at 1,350,000 francs.

—The Legislature in convention, has selected Victor M. Rice, Esq., as State Superintendent of Public Instruction.

— The third regiment of U. S. Artillery are to embark from New York before the 20th inst., for California.

— Nimian W. Edwards, of Springfield, has been appointed State Superintendent of Public Instruction in Illinois.

— Prof. McCulloch, of N. J., has been elected Professor in Natural and Experimental Philosophy, in Columbia College.

—A salute of one hundred guns was fired in the New York Park, in honor of the veto of Gov. Seymour on the Maine Law.

— Some fifteen or twenty men left Chicago last week, by the Rock Island Railroad, for Nebraska, via St. Louis.

— A planter named Argudin failed at Havana lately. His indebtedness is said to exceed a million and a half of dollars.

— The Edinburgh Review is just 50 years old, the Quarterly, 61; the New Monthly Magazine, 33; Blackwood, 38; and Fraser, 21.

— The Court of Appeals has granted a new trial to Wm. Darby, who was to have been hung for murder on Friday last, in Buffalo.

— About 2,000 persons, men, women and children, says the Post, left New York on Wednesday of last week, for California.

— The Board of Education of Cleveland, O., have resolved to pay female teachers as follows: 1st. grade, $300 per annum; 2d, $275; 3d, $250.

—A proposition to abolish corporeal punishment in the schools of New York, is being considered by the Board of Education of that city.

—J. D. Holbrook, late City Treasurer of Williamsburg, has been arrested on a charge of embezzling city funds to amount of about $135,000.

— Lake navigation is open to Dunkirk.—The propeller G. R. Taylor, has arrived with 4,000 bbls. flour, and three more propellers will soon be in.

— A single lady died lately at St. Malo, France, worth four millions of francs, and leaving *twenty-two wills* for the judicial authorities to examine.

— One hundred and nine hogsheads of tobacco were sold in Louisville on the 28th ult., at an average of $70 per hogshead, equal to $7,630.

—The Spanish war steamer Pizarro, which figured conspicuously in chasing the Lopez expedition, was wrecked on the coast of Cuba recently.

— The small pox is raging among the Chippewa Indians on the South shore of Lake Superior, and the head-waters of the Chippewa rivers. It is very fatal.

— The Syracuse papers state that the opponents of the Liquor Law testified their joy on the reception of the veto, by firing cannon and burning tar barrels.

— Col. Rowland G. Tomlinson, of Philadelphia, has been appointed mail agent between this city and California, and leaves in the Illinois on the 5th of April.

— Nicholas P. Trist, so well known as a special agent to Mexico, during the late war, is said to be now engaged in selling patent rights for a washing machine.

— The entire cost of Cochituate (Boston) Waterworks to Jan. 1, 1854, was $5,574,328,15. The amount of water drawn for the year 1853 was 3,117,930,500 gallons!

— Neal Dow, the author of the Maine Law, and the Temperance candidate for Mayor of Portland, was defeated on Tuesday of last week, at the Municipal Election, by 81 votes.

— W. W. Corcoran and Elisha Riggs, the eminent bankers of Washington, have retired from business. Geo. W. Riggs, Jr., and A. T. Kickhoefer are their successors.

— The Washington Monument Association offer a reward of $500 for the detection of the parties who destroyed the block of marble presented by the Pope of Rome.

— An Association of 50 families has been formed in Cleveland, O., for emigration to Iowa during the present season, or as soon as the Homestead bill shall become a law.

— Arrangements have been perfected to have the western mails carried over the Canada Railroad, and Col. Munger of Detroit, (a printer,) is appointed agent for that purpose.

— The steamer Monroe was snagged in the Mississippi, near Natchez, on the 27th of March. There were no passengers on board, but 11 of the crew were drowned.

— Edgar Garth and David Flourney had a set to with bowie-knives and pistols at Charlottesville, Va., on the 3d inst. The latter was killed and the former dangerously injured.

— It is said that Walker, the noted Utah chief, is about to commence war against the Mormons, because they will not permit him to own as many wives as Brigham Young.

— The citizens of Norwich, Ct., have subscribed the large sum of "seventy-five thousand dollars" for the building and equipment of a Free High School in that city.

— During the last fifty years the Episcopal clergy in this country have increased in number from about 200 to 1,700, and their communicants from 10,000 to 103,000.

— The Hon. Thos. D. Elliot, Anti-Nebraska Whig, has been elected to Congress from the First District of Massachusetts, to fill the vacancy occasioned by the resignation of Mr. Scudder.

— Amos Brown, of Granville, N. Y., undertook to cure himself of the habit of chewing tobacco, by using cloves as a substitute. The cloves produced convulsions, of which he died.

—The Ohio Legislature have adopted a resolution requesting the Legislature of Pennsylvania to enact such laws as will secure to the people of the United States a right to pass thro' that State unmolested.

— The Detroit Daily Democrat of the 29th says:—"To-day the types in our office will be set by lady fingers. We experience no little gratification at initiating this movement into our city."

Literary Notices.

THE LADIES' NEW BOOK OF COOKERY:—A Practical System for Private Families in Town and Country; with directions for Carving, and Arranging the Table for Parties, etc. Also, preparations of Food for Invalids and Children. By SARAH JOSEPHA HALE. Illustrated with numerous Engravings. New York: H. LONG & BROTHERS.

THE NEW HOUSEHOLD RECEIPT-BOOK: Containing Maxims, Directions and Specifics for promoting Health, Comfort and Improvement in the Homes of the People. Compiled from the best authorities, with many Receipts never before published. By SARAH J. HALE. New York: H. LONG & BRO.

THE contents of these volumes are well indicated in the titles. The first named comprises 474, and the last 394 closely printed pages.—They have been submitted to the careful examination of one competent to judge in the premises, and the report is unqualifiedly favorable to their commendation as indispensible auxiliaries in the home department. Greater attention to the matters discussed in these excellent volumes, would materially augment the happiness, comfort and prosperity of the people generally. For sale by WANZER, BEARDSLEY & Co.

THE RUSSIAN SHORES OF THE BLACK SEA, in the Autumn of 1852—with a Voyage down the Volga, and a Tour through the country of the Don Cossacks. By LAURENCE OLIPHANT. New York: REDFIELD.—1854.

THIS is a very interesting volume—embracing reliable information concerning regions and people about which the world at large has hitherto known but little. The work is the more interesting from the fact that the countries described are about to become the theatre of stupendous warfare. The work is well written, and quite entertaining. It has already passed through three English editions. For sale by MCMAHON and DEWEY.

THE DIVINE CHARACTER VINDICATED. A Review of Dr. E. BEECHER'S recent work entitled "The Conflict of Ages." By Rev. MOSES BALLOU. New York: REDFIELD.—1854.

THE design of this work is to review and respond to some of the principal features of Dr. BEECHER'S remarkable work—the author maintaining the doctrine of universal salvation. For sale by DEWEY and MCMAHON.

THE KNICKERBOCKER for April offers an unusually rich repast. The leading papers are able, and comprise an excellent variety, while the "Editor's Table" is spread with most delectable viands. MCMAHON, agent.

GRAHAM'S April issue comprises some articles of sterling merit. It is altogether a good number. —GODEY'S "Book" for the month was rather late, but quite attractive in appearance. —The NATIONAL, always good, is unusually beautiful and readable—a gem number of a favorite monthly. DEWEY and MCMAHON.

THE NEW YORK RECORDER, an able organ of the Baptist denomination, commences a new volume in a new dress and in quarto form. It is an excellent weekly, and we are glad to note its prosperity,—cordially welcoming it to the "quarto" fraternity. See advertisement.

Foreign Intelligence.

Arrival of the Baltic.

THE steamer Baltic arrived at New York, April 4. She left Liverpool 22d ult.

THE BALTIC.—Sir Charles Napier's fleet arrived at Wingo Sound on the 15th March, all well. It was stated that the frigates and vessels of the second-class will enter the Baltic by the Sound, and the larger vessels by the Great Belt. The English ships have applied to engage sixty Prussian pilots at Swinemunde (Stettin.)

The Swedish papers report that 30,000 Russians are employed in cutting a channel in the ice from Cronstadt to Sweaborg. On the 2d March the Grand Duke Constantine inspected the fleet at Helsingfors. The Gulfs of Bothnia and Finland were still covered with ice.

A force of 27,000 Russians is on the way to strengthen the garrison at Revel. The commander of the troops at Revel had proclaimed that probably the town will be bombarded by the English and French. Women and children were therefore advised to quit the city.

THE BLACK SEA.—The British steamer Furious and French steamer Vauban had been near enough to Sebastopol to see a boom extended across the harbor, and to count six ships-of-the-line guarding the entrance, with four more in the creek, beside several frigates and brigs—The Russians are preparing to block up the mouths of the Danube, by stretching chains across the river.

Since the prohibition of the export of corn from Odessa, the price had fallen from 9 to 3 silver roubles. Failures were feared at Odessa.

The allied fleets were still at Beicos Bay, but would shortly re-enter the Black Sea. Two Austrian ships-of-war were also at Beicos, and three others were expected.

ON THE DANUBE.—To the present time the Russians have made no formal attempt to take Kalafat, and so far as appearances indicate, will not at present do so. Their plan of operation now seems to be to throw a force into the mountainous part of Bulgaria, and to endeavor to raise the Rayah population, proceeding on the supposition that Kalafat.

In future, foreign officers are to be freely received into the Turkish service, but only in their actual military rank, and at the same rates of pay as Turkish officers of equal grade.

GREAT BRITAIN.—Parliament, on Friday 17th, had under discussion a motion by Mr. Gibson to address the Queen, praying her Majesty to give special instructions to the officers of British cruisers to abstain from interfering with neutral vessels on account of any goods not contraband of war, that they may have on board; and to direct the Ministry to consider the policy of entering into treaty stipulation with foreign countries on the principle that free ships shall make free goods, and the neutral flag give neutrality to the cargo. Mr. Gibson's object was to define the position of Britain with respect to neutrals. He strongly urged the non-exercise of the power of searching neutral ships for enemy's property. The question as to the right of search had already engaged Britain in war.

The newspapers are crowded with reports of the various preparations going on at the various navy yards and garrisons.

FRANCE.—The subscription to the national loan had been much more than taken up. Only 250,000,000 francs were required, and up to 17th over 300,000,000 were taken. The interest on "bons du tresor" is fixed from 20th ult at 4 per cent. for those which have from three to five months to run, 4½ per cent. for those from six to eleven, and 5 per cent. for those which have a year to run. The fall in Corn continues.

PRUSSIA.—From Berlin, Sunday, 19th, they write:

"Baron Manteuffel's speech to the Chambers contained an assurance that the Prussian Government is determined to vindicate the right of Prussia, under all circumstances, to co-operate in the preservation of the peace of Europe, but that Prussia does not feel called upon in the same measure as other nations, from her position or naval resources, to take an active part in protecting the integrity of Turkey.

AUSTRIA.—The *Oest. Correspondent* states that the whole 50,000,000 florins of loan had been taken up.

A private dispatch announces that the Government has determined, now that the whole of the lottery loan has been taken, to send another 30,000 man to the Turkish frontier. The transport of troops and material of war to the south is going forward on the most extensive scale.

SWEDEN AND DENMARK.—From Copenhagen, March 17, it is telegraphed that the King had answered the address, calling on him to dismiss his ministers, by saying that he will consider what is best for the public service and act accordingly.

The Norwegian Diet, following the example of Sweden, has voted the sums demanded by the Government for the national armament.

Arrival of the Europa.

THE Europa arrived at New York April 8. Political affairs in Europe unchanged.

LIVERPOOL BREADSTUFFS.—Market is characterized by increased pressure to sell; wheat had declined 6d on the week, and was neglected.—Flour in moderate consumptive demand, but not sufficient to relieve sellers at 2s decline. Indian corn unsaleable at 39s ex-ship. Quotations of floor vary, but the average would share 33s 6d for Western Canal; 45s for Ohio; Baltimore and Philadelphia 34s; white wheat 10s 6d; red and mixed 10s.

PROVISIONS.—Gardner quotes beef very firm. Pork firm, but rather favors sellers. Bacon dull. Lard sells at 51s., but higher prices asked.

California News.

Arrival of the El Dorado at N. Orleans.

THE Steamship El Dorado, from Aspinwall on the 30th ult., arrived at New Orleans, April 5. She brings the California mails of the 15th of March, 130 passengers, and $40,000 in gold dust.

The mail steamship George Law was to sail from Aspinwall for New York on the 31st ult., with 500 passengers and nearly one million dollars in treasure.

The El Dorado reports the gratifying intelligence that Lieut. Strain and his party of Explorers are safe, and had arrived on the Pacific coast.

From California there is but little news of general interest. The country is reported to have been healthy, but the rainy season had been unusually severe. Provisions continued depressed, and many failures were anticipated.

Messrs. Wells, Fargo & Co. had forwarded from Sacramento for shipment to the Atlantic States nine hundred pounds of gold dust.

The accounts from Walker's Fillibuster expedition were extremely discouraging. They were quartered at San Vincent, and the force was daily dwindling away. Several more had returned to San Francisco.

The mining accounts are still exceedingly favorable.

The San Francisco markets were quite stagnant. Six failures, including two commission merchants, had occurred. Money was stringent, and real estate had largely declined in value.

Col. Fremont had been overtaken in the mountains, going the central route to San Francisco. Several of his party had died of cold and hunger.

Marriages.

ON the 29th ult., by Rev. S. W. Streeter, Mr. HOMER GOUTON, of Le Roy, Genesee Co., and Miss CYNTHIA A. SMITH, of Henrietta.

IN Naples, Jan. 18th, by Rev. Randolph Fennell, Mr. G. W. BUNDY, of Avon, and Miss MARY J. JOHNSON, of Naples. In South Bristol, March 25th, by the same, EZRA DANIELS, of Lima, and Miss MINERVA A. CHANDLER, of the former place. In Bristol, on the 26th ult., by the same, D. D. T. COLE, of Richmond, and HARRIET E. NARACONG, of Bristol. In South Bristol, on the 29th ult., by the same, Mr. HENRY B. DAVIS, of Canandaigua, and Miss NANCY CARPENTER, of the former place.

Deaths.

AT Waterloo, N. Y., on the 7th inst., of brain fever, BURROUGHS PHILLIPS, Esq., of Syracuse, in the 29th year of his age.

Mr. PHILLIPS graduated at Dartmouth College, together with some 8 or 10 other Western New York students, in 1849, and was one of the most estimable of men. A ripe scholar, an accomplished gentleman, and an honorable citizen, he has been cut down in the full vigor of his manhood, leaving a disconsolate wife and a large circle of fast friends (of whom we were one,) to mourn over his untimely end.

IN Ogden, N. Y., March 30th, THANKFUL, wife of CARTER EVANS, aged 61 years.

Commercial.

BUSINESS AND FINANCE.

VERY little of the precious metals have arrived during the past financial week. The El Dorado, at New Orleans, had but $40,000 on board, although some $2,000,000 is reported on the way, and the steamers having it on board are nearly due at New York.

The steamer Africa on the 5th, took out $190,000; the Curlew on the 7th, for Bermuda, $142,000; and the Havre steamer on the 8th, about $300,000 more, making a sum total of export $632,000, or nearly 16 times the amount arrived.

There is no peculiar pressure in the money market here, as yet, but the war question is essentially disturbing the financial affairs of Europe, and its reflex influence will be sure to be felt on this side of the Atlantic in time. Bullion is leaving the vaults of the Bank of England, at the rate of half a million pounds sterling a week, and an increased rate of interest is anticipated. Nearly every government in Europe is making large loans, which will tend to check investments in American securities, and return our stocks and bonds held abroad, upon our own hands. It is a wise pilot who furls sails before a threatened storm, and a wise financier will do so likewise.

P. S. The telegraph announces the arrival of the George Law and the Star of the West, at New York, from Aspinwall and San Juan, with $1,500,000 in gold. No news of special interest in other respects.

Market Intelligence, &c.

RURAL NEW-YORKER OFFICE, Rochester, April 12, 1854.

THE Wheat market remains about the same as last week, but very little is offered in the street. Flour is quoted at $8,50@9, sales principally for home consumption. Corn lower and offered at 65c.

Butter a penny higher than last week.

Owing to short supplies just now in the market, hay is selling a dollar per ton higher than heretofore this season. Prime quality was sold this morning at $11.

Rochester Wholesale Prices.

Address (post-paid,) to S. H. ADDINGTON, Paris Hill, Oneida Co., N. Y.
Paris, April 10, 1854. 223-1t

NEW YORK RECORDER.

TENTH VOLUME ENLARGED, in quarto form. The Largest Baptist Newspaper in the World. Price, in advance, by mail, $2; by carriers, $2,50. LUTHER F. BERCHER & Co., Proprietors, 122 Nassau Street, New York.

In the determination to make their journal a complete repository of general and denominational religious intelligence, and of the news of the day, as well as the earnest advocate of sound Christian doctrine and social progress, the proprietors will summon for these ends every available faculty, whether editorial, as in the way of contributors or correspondents. They have engaged able writers at home, and their correspondence from England and Continental Europe, from Asia and every part of America, they believe to be unsurpassed. By furnishing a paper of the highest grade, from this great commercial centre, they hope to increase the patronage with which they are already favored from every section of the United States and the neighboring British Provinces.

The tenth volume commenced March 29th. Subscriptions are solicited, and the present is suggested as the best time for forwarding names with payments accompanying.

S. S. CUTTING. [223-6twc] L. F. BERCHER.

REJECTED APPLICATIONS, &c.

THE undersigned respectfully gives notice that he is at all times prepared to pay special attention to the prosecution of rejected applications for Patents; also to contested and interfering cases. In some instances he will undertake to prosecute rejected cases, receiving no compensation unless the Patent is granted.

Patent business of every description, whether before the United States Commissioner, or the Circuit and U. States Supreme Courts, promptly attended to.

The undersigned being represented at the seat of government by Wm. P. Elliott, Esq., formerly of the American Patent Office, possesses rare facilities for immediate reference to the patented models, drawings, records, assignments, and other official matters. Examinations for particular inventions at the Patent Office, made on moderate terms.

Persons wishing for information or advice relative to Patents or Inventions, may at all times consult the undersigned *without charge*, either personally at his office, or by letter. To those living at a distance, he would state, that all the needful steps necessary to secure a Patent, can be arranged by letter, just as well as if the party were present, and the expense of a journey be thus saved. All consultations strictly confidential. The whole expense of Patents, in the United States, is small.

BARRY, late Horticultural Editor of the Genesee Farmer, and author of that popular work, "The Fruit Garden." To those who cultivate Fruit and Flowers, this work is indispensable, as it contains full directions for cultivation, as well as every thing new on the subject, either in this country or in Europe.

The Horticulturist is beautifully printed on the best paper, with costly illustrations on wood and stone. It contains 48 pages, without advertisements, and each number has a full page engraving, on stone, of some rare fruit or flower, drawn from nature, by the best living artist in the line.

TERMS.—Two Dollars Per Annum, in Advance. A discount of twenty-five per cent. allowed to agents. Postmasters and others are invited to act as agents, to whom specimen numbers will be sent, free of postage, on application to JAS. VICK, Jr., Publisher, Rochester, N. Y.

P. S.—A new volume commences on the first of January. January 1, 1854.

FORBUSH'S MOWING AND REAPING MACHINE.

Patented July 20, 1852.

THE AMERICAN MOWING AND REAPING MACHINE CO. have purchased the Patent Right for the above Machine for the United States, England and Canada, and are now manufacturing a large number to supply the demands of the coming season. The advantages which this machine possesses over all others are obvious, and will readily be acknowledged by all disinterested persons. Being a *combined machine*, and working equally well in grain or grass, it enables the farmer of moderate means to procure a valuable *Reaper and Mower* in one, which will do the work of both, and at less than half the usual cost. As a Mower it has no superior; it was thoroughly *tested* the past season in every variety of grass, and in many different sections of the country, and in every case where it was properly made, it gave perfect satisfaction. It will cut and spread from 10 to 15 acres of any kind of grass per day. As a Reaper it has never been excelled, and has no rival that can in all respects successfully compete with it. The patent for this machine covers many points of excellence which have heretofore been unknown, and which (of course) can be used in no other. In the construction and arrangement of these machines great pains have been taken to ensure the necessary strength, simplicity and durability. They are easily kept in order, and it requires but a few moments to change the machine from a Mower to a Reaper, and in either form it is equally strong and substantial. It is not liable to get out of order, and if any accident should happen it could be readily repaired by any ordinary mechanic. In the construction of the machines no expense has been spared to render them both perfect and durable. The Mower weighs but 731 lbs.—the Mower and Reaper combined 900 lbs. To any person desirous of purchasing, or of understanding the machine more fully, illustrated circulars will be sent with full descriptions, references, &c., &c.

Price of the Mower, ... $110 00
" " " and Reaper, ... 130 00

Terms—Cash in Buffalo. Delivered on boats or cars, free of charge.

Address orders or communications to the Company, or

LIBERTY TREE.

BY ROBERT TREAT PAINE.

In a chariot of light from the regions of day,
The Goddess of Liberty came;
Ten thousand celestials directed the way,
And hither conducted the dame.
A fair budding branch from the garden above,
Where millions with millions agree,
She brought in her hand, as a pledge of her love,
And the plant she named *Liberty Tree*.

The celestial exotic struck deep in the ground,
Like a native it flourished and bore;
The fame of its fruit drew the nations around,
To seek out this peaceable shore.
Unmindful of names or distinctions they came,
For freemen like brothers agree;
With one spirit endued, they one friendship pursued,
And their temple was *Liberty Tree*.

Beneath this fair tree, like the patriots of old,
Their bread in contentment they ate;
Unvexed with the troubles of silver and gold,
The cares of the grand and the great.
With timber and tar they old England supplied,
And supported her power on the sea;
Her battle they fought, without gelling a groat,
For the honor of *Liberty Tree*.

But hear, oh ye swains, ('tis a tale most profane,)
How all the tyrannical powers,
Kings, commons and lords are uniting amain,
To cut down this guardian of ours!
From the east to the west, blow the trumpet, to arms!
Through the land let the sound of it flee;
Let the far and the near all unite with a cheer,
In defence of our *Liberty Tree*.

Rural Sketch Book.

[From the Baltimore Weekly Sun.]

BIRDIE LAURENCE;
OR, THE SCHOOL-MASTER'S PET.

BY FAN FEATHERLIE.

Chapter III.—Concluded.

The icy barrier between teacher and pupil melted and passed away. The wide chasm closed, and each fully appreciated the other.—Birdie Laurence again was the school-master's pet, but petted in a very different way from that of yore. Then she sat upon the knee of Master Brooks and his grim predecessors; then her long curls swept their shoulders, and they kindly patted her fair cheek, but they were old men and she but a little girl. Now her teacher was young and handsome, and Birdie, no longer a child, felt that she was entitled to a different kind of petting, and she received it.—It consisted of a most encouraging appreciation of her talents, a rigid yet gentle observance of her faults, and a kind and patient attention to her wishes. The school children marked the change, and liked it. Now that Birdie was Master Fletcher's friend they were well pleased. The west wind blew, the dark cloud sailed away, and shining over teacher and pupil was a clear, fair, blue sky.

Three months before Charles Fletcher's year expired, Birdie left his school. She was nearly seventeen, and expecting to go in the spring to a distant seminary, she chose to spend the remainder of her time quite at home. Then ceased the relationship of teacher and pupil; not so their friendship. Charles Fletcher was a welcome visitor at the cottage, Mrs. Laurence liked him, for he was refined and courteous, and finding him to be of an honorable though impoverished family, and seeing his conduct dictated by high and noble principles, she ever treated him cordially. Of course Birdie liked him.

Upon Pierre Laurence's paintings Charles Fletcher gazed with an admiration which delighted the artist's child, and he listened to her mournful, half-forgotten memories of her beloved parents with unwearied interest. In the little green parlor at the cottage, (Birdie playfully called it such, for the carpet was green, and so were the damask covers of the old-fashioned chairs and sofa,) Charles Fletcher often lingered. From her father's choice collection of books Birdie delighted to select a favorite volume from which Charles should read to her as they sat together by the wide old window. Birdie loved sweet strains of poesy, and to her there was such a fascination in the gay romaunts of olden times. It may be so, yet have a care, Birdie Laurence. Doth not the voice of the reader charm more wisely than the pen of the writer? Sitting by the broad old window where they had so often read together, Charles Fletcher breathed to his lovely young pupil the story of his affection for her, a few evenings before he left Maple-Mere.

"And that was the reason," said Birdie, smiling archly, "you treated me so sternly—because you loved me?"

"The very reason, my own Birdie. You were my pupil; I your instructor, and this position forbade me to think of you in so dear a light. I would have torn your image from my heart, but it had strangely and obstinately grown there, and would not depart; and then," continued the young man, "I tried to feel coldly towards you and treat you harshly, but I could not. The spell was mighty on me, and I loved you—yes! worshiped you."

Birdie Laurence listened with smiles and tears to these words, but she spoke not. Her little hand was laid in Charles Fletcher's, and this simple action was eloquent. It said, "Dear Master Fletcher, take your willful pupil. She will love you forever."

Mrs. Laurence frowned not upon the young love of Charles and Birdie, but as they knelt before her, blessed them with a fond affection, and called them both her children. Birdie Laurence promised her hand to Charles Fletcher at the expiration of four years. The "battle of life" lay before him, yet in that time he might fight bravely and win nobly, and as a "golden promise-light" gleamed over their future, the young lovers parted happily—anticipating nothing evil, hoping everything good.

Charles Fletcher went to a distant city to prosecute his law studies, and the haughty young teacher's memory seemed to fade from the villagers' minds as though he had never been. Yet one in Maple-Mere loved and remembered him when others forgot, and that one was Birdie Laurence. Long letters, glowing with hope and love, Birdie received from Charles Fletcher, and no hour was brighter than that which brought them to her, no employment dearer than answering them.

Birdie was on the eve of leaving Maple-Mere when the "angel of death" once more entered her cottage home. A sudden and fatal disease seized Mrs. Laurence, and blessing her darling child with a faithful affection, she passed away; and Birdie was left alone. No fleeting grief rent her heart as she bent over her grand-mother's grave. She felt it to be one which would weigh on her spirit for years.

Chapter IV.

Helen Allan had married in early life a man of immense wealth, a merchant prince of New York. She had not thrown herself away upon a poor artist, as the beautiful Bertha had done, and this match the Allans had well approved. Basil Ridgly was a proud, stern old man, whom Helen never loved, and when he died and left her mistress of his vast estate, she showed no grief. He had always seemed a great shadow between her and life's sunshine. This removed, Helen Ridgly was happier than she had been for years. Helen Ridgly had loved Bertha Laurence well, but when the harsh mandate of their parents separated them she tried to crush that love, and think of her sister as one unworthy of it, unmeriting a remembrance.

With the Allan's death the ban seemed removed, and Helen Ridgly, her sister's memory warm in her heart, childless, unloving and alone, sought Maple-Mere. She had never seen Birdie, and when the fair young creature entered her presence, was painfully moved.—The Bertha she had known in other years, the sister of her childhood, seemed again before her, and the haughty, ambitious woman wept as she gazed upon her niece. With those tears came the resolution to take the lonely girl to her heart and home, to love and cherish her faithfully, and smoothing Birdie's silken curls with a loving hand, Helen Ridgly implored her to be henceforth to her as her own child. Birdie Laurence joyfully accepted this proposal. She had no other relative, and her heart, yet untried, was too young to meet the cares of the world alone, unprotected. So the cottage home and the simple furniture were sold, and retaining nought but the cherished paintings and the little library of her father, Birdie Laurence left Maple-Mere, much regretting, much regretted.

She wrote to Charles Fletcher, giving him a glowing description of her new home, but to that letter no answer ever came. The rude scrawls of the Maple-Mere post-master in answer to her earnest inquiries, told her that no letters ever found their way there for her, and sick at heart, weary of hoping, Birdie Laurence sought in the new scenes around her to forget Charles Fletcher. This was hard at first, but as month after month flew by, and gradually lengthened into years, yet brought no tidings of her lover, Birdie began to think he had forgotten her. Her haughty spirit quivering with this thought, the sweet love of her girlhood she crushed; cast the veil of oblivion over memories once precious, and persuaded herself Charles Fletcher was nought to her. Full of misery was this lesson, and her heart-strings trembled with agony as she conned it.

For the perfecting of her lovely niece's education, Mrs. Ridgly sought the most finished and accomplished teachers; lavished large sums, and left no means untried for the cultivation of that rare genius which she had traced in Birdie. Nor was she disappointed. Superbly educated, her fine mind day by day displaying new powers, Bertha Laurence grew up a brilliant, accomplished beauty. Her loveliness of person was as rare as that of her mind, and her *entree* into society was marked by peerless triumphs. Her "star rose sovereign of the ascendant," nor did it seem likely to wane. She was not born to be the "belle of the season," or an ephemeral beauty, and this the proud girl well knew. Birdie seemed to wear a charmed heart. Some talisman shielded it from love. One by one, calmly and decidedly, she rejected numerous suitors, until divers young men, growing fearful, stood afar off, and gazed upon the peerless Miss Laurence, but durst no longer offer their hearts. Mrs. Ridgly saw this and grew uneasy. She feared her niece had formed some romantic attachment, like the fair Bertha of old. She questioned her, "Was it so?" "No! she was perfectly heart free," and Bertha spoke with strange energy. "Then why refuse such excellent offers? Did she not know that as she had already been some seasons in society, her chances for a brilliant match were fast lessening?" "Yes, she knew it, but none of her suitors pleased her," and then Birdie would throw her arms around her aunt's neck, and with a winning art entreat her to let her stay always with her; she was so happy by her side.

Mrs. Ridgly took Birdie to Europe. They spent a year on the continent, and in Birdie's absence her suitors revenged themselves upon her by their devotion to "lesser stars;" but when Miss Laurence returned, more radiant in beauty, more peerless in grace, the stars waned and finally set. The suitors returned to their allegiance, new ones jewel them, and Birdie Laurence's star no longer shone—it blazed.

Mrs. Ridgly predicted it would become a comet and fade away. Birdie laughed and treated her admirers with the same careless indifference. "The belle of Gotham," the acknowledged heiress of the wealthy Mrs. Ridgly, was it strange that in this whirl of gayety and fashion Birdie had forgotten Charles Fletcher? Dimly, yet most sweetly, even in scenes of gorgeous splendor, a vision would steal before Birdie Laurence. It was that of her far distant cottage home, with its shaded piazza, clustering honey-suckles, and grassy walks; and then the little green parlor and sweet calm face of Mrs. Laurence would rise before her. Sometimes another occupant, with high brow, and earnest eye, would be there. When this was so, Birdie drove the vision from her. There was a dreamy misery in it from which she shrunk.

Mrs. Ridgly and her lovely niece sat alone in the magnificent drawing room. The morning sun shone through the half-parted damask curtains, and fell with a cheerful light upon the costly furniture and rich *bijoutrie* around.

"Do you know, *ma chere*, it is just ten years since I brought you from your village home?" asked Mrs. Ridgly, turning to Birdie. The tiny volume fell from Birdie's hand, and her red lip trembled with strange emotion as she murmured:

"Ten years, Aunt Helen?"

"Ten years, and how old are you, Birdie?"

"Twenty-seven. Now, don't begin to tremble, dear aunt. My heart shall not always be mateless and solitary."

Birdie spoke playfully as Mrs. Ridgly looked anxiously in her face.

"I fear it will, Birdie. You know time brings changes. I am no longer young, and cannot hope to live many years more, and——"

"Don't talk that way," said Bertha, the tears starting to her magnificent eyes as she kissed Mrs. Ridgly; "you know I cannot hear it, and Aunt Helen, I will win a heart before you leave me alone."

Mrs. Ridgly shook her head.

"You doubt my power, then?" and Birdie glanced at the elegant mirror, which reflected her superb face and figure.

"No, not that, but you are so strange, so difficult to please. What answer have you given Horace Evremond?"

"None as yet, dear aunt; he calls this evening, but——"

"Let me beg you not to be so foolish as to refuse him," Mrs. Ridgly spoke with haughty energy, and a crimson flush glowed upon her pale, fine face.

"Must I have him if I don't like him?" asked Birdie, creeping coaxingly to her aunt's side.

"Use your own pleasure, my love, but what more the heart of woman can want than Horace Evremond, I know not."

Birdie Laurence was about to reply, but the drawing-room door being thrown open and visitors announced, she checked the words which trembled on her lips. Horace Evremond was indeed all that a woman's heart could wish. Noble in heart, dauntless in spirit, and strikingly, fascinatingly handsome. Horace Evremond was slightly haughty in his bearing.—This pleased Birdie. It reminded her of one she had fondly loved—of Charles Fletcher.—Moreover, his eye had that mournfully thrilling gaze which Charles alone possessed, and these circumstances induced Birdie to seemingly favor Horace Evremond's suit.

Birdie Laurence was alone. Costly paintings, exquisite statuary, rare gems of art graced the richly furnished boudoir in which she sat. "At eight o'clock, Horace Evremond will be here," she murmured, "and ere then my decision must be made. Courage, weak, wavering Birdie Laurence," and rising from the velvet ottoman, the proud beauty opened her writing desk. She touched a spring in the rose-wood drawer, and a secret recess appeared. From this Bertha Laurence took a packet of letters, worn and old looking, and returned to her low seat. Time flew on: the beauty read, and wept, and as she did so the boudoir grew bright with blessed memories, no longer dim and dreary, but clear and vivid, and in their light appeared Charles Fletcher, loving and beloved as of yore. A noble purpose sprang up in Birdie Laurence's heart, and strong in its strength she hesitated no longer. "I will live on my lonely life. Horace Evremond deserves no divided heart, mine is such, and I cannot, will not give it to him; but I will tell him of my struggle; of my hopeless love: in his noble, manly heart he will take pity on me." Her decision made, Birdie laid aside Charles Fletcher's letters, and with a calm brow, and easy grace, met Horace Evremond. Her visitor, however, seemed embarrassed, painfully so—for a man of thirty, polished and well versed in the world, this confusion was inexplicable.—Horace Evremond did not long remain silent.

"I will not detain you long, Miss Laurence," he said hurriedly; "you promised me a final answer this evening, and I await it."

"It is in a few words. I do not love you, Horace Evremond, and never can."

"Why — wherefore?" eagerly demanded Evremond, his face lighting up with a strange, undefinable expression.

Bertha Laurence was surprised; she had expected this question, but the manner of the questioner startled her.

"If I know my own heart," she answered, mournfully, "I love another; without hope it may be, yet that love is deathless; I almost thought I loved you—a close communion with the past has taught me that was but a fancy."

"Without hope," repeated Evremond; "and can you love unsought?"

An impatient gesture from Bertha checked him. "Mine is not a spirit to love thus; my love was sought, and yet I love hopelessly."

"You are speaking enigmas, Miss Laurence. And pray, may I ask *who* this envied personage may be?"

"One greatly *your* superior—one whom I knew and loved when but a child, far from this cold city." Bertha Laurence's voice was smothered in a sob, and covering her eyes with her hands she wept bitterly.

Horace Evremond glanced for a moment at his beautiful companion; her face was half hidden by the shower of long curls, and through her snow-white, jewel-gemmed fingers the tears were fast falling: he then turned away and strode hastily through the *boudoir*. At last he paused before Birdie.

"It may be I can guess the name of this loved yet unloving knight, Miss Laurence.—Perchance it is Charles Fletcher, some time since master of Maple-Mere school," and Horace Evremond looked searchingly at Bertha.

No start or tremor; the little hands were not withdrawn from the lady's eyes, the long curls still veiled her face, and, baffled, disappointed, Evremond turned away; but again he approached Birdie.

"Will you not answer me, Miss Laurence; is it not so?" he asked, earnestly, and mechanically the lady bowed her head. Had those lovely eyes been uncovered they would have seen a gleam of joy, bright, ecstatic and sudden, light up Horace Evremond's face. "Birdie Laurence, look up," he murmured, and she obeyed—tearfully she looked upon Evremond; the old memories came back to her, and as Horace drew up his fine figure, swept the dark hair from his brow, and met with earnest ere her wondering gaze, the memories grew brighter. "*You won't touch my clock again Birdie*," with a half smile, murmured Horace Evremond, and like the "open sesame" in fairy legend, these well-remembered words unlocked the gates of memory.

With a scream of delight Birdie Laurence sprang to Charles Fletcher's side, and was clasped once again to his breast. Her heart was too full to speak; weeping with happiness, she hid her tears upon his shoulder, and for a while there was silence in the boudoir.

"My pupil, we have long been parted, but we meet to part not again," and Birdie smiled brightly as Charles Fletcher's earnest words fell on her ear.

Two loving, rejoicing hearts have met in the *boudoir*, and, gentle reader, we will leave them alone. Nay, not another word of their conversation can we give you. Search for it in the chronicles of Cupid, if you will, for that little autocrat, we know, has penned it on his fairest page. We had never a fancy for retailing the heart-whispers of lovers; to us it seemed ungenerous, and in obedience to the golden rule and the dictates of our own heart, gentle reader, we will be silent.

"The old story, pride and distrust; and you know, my dear madame, 'the course of true love never did run smooth,'" said Charles Fletcher, laughingly, as he and Birdie sat an hour later in the drawing-room with Mrs. Ridgly. "But I am all amazement," returned Mrs. Ridgly; "Bertha never told me of such a being as Charles Fletcher. I never heard her speak of him."

"I did not, aunt Helen, because I thought he had ceased to think of or love me, and as I was striving to forget him, it was very natural I should never mention his name."

"So it was, my Birdie," said Charles Fletcher, smiling upon the lovely speaker, "for," he continued, addressing Mrs. Ridgly, "the letters I wrote her after her departure from Maple-Mere, never reached her. Ignorant of this, I harshly judged my Bertha, and attributed her silence to a wish to be free from our engagement. With her new position in life, I felt convinced new feelings had sprung up; and proud, haughty of spirit, I resolved to forget the heiress, and remember only the barrier which her wealth had raised between us!"

"But, Charles, you might have sought to have learned this from my own lips."

"No! Mia cara, I was too poor, too haughty to force myself into your presence; you were above me in fortune, and I determined if your hand and heart should be free by the time I won myself a name and fortune, then to sue for them—that time has come, we have met, and I have found you faithful and true, unjustly, harshly judged, but forgiving, loving as ever, my precious, peerless Bertha. Charles Fletcher bowed his head upon the little white hand, and when, after a few moments, he looked up, tears gemmed his dark eyes.

"What if my heart and hand *had not* been free?" playfully asked Bertha.

"I would have gone back to my Southern home a wretched, miserable man; a dark shadow, indeed would have fallen upon me. I knew all this—I felt that I had much at stake yet my pride kept me far from you in my poverty."

Oh that pride, how miserable it might have made us."

"It has not, you see, Birdie, for you were true to your Maple-Mere lover. She did not know me, Mrs. Ridgly, (continued Charles Fletcher,) and I, willing to try her faith, sought to woo her under another name; but it was useless, Birdie was faithful to me."

"In what a mist I have walked, Charles, that I should not know you," replied Bertha; "yet Horace Evremond's gaze ever thrilled me—I knew not why: discovering him to be Charles Fletcher, I marvel no longer."

As Mrs. Laurence had done years before, Helen Ridgly smiled upon and blessed the love of Birdie and Charles; mateless, solitary no longer, Birdie Laurence, radiant in the charms of glorious womanhood, with the sweet frankness of yore, again pledged her hand to Charles Fletcher. This time it was not for years, but months, and the moon had waxed and waned but six times, when Charles Fletcher claimed his bride, and bore her to his sunny Southern home.

Helen Ridgly went with Birdie. It was no home without the child of her affections, and she gave up her magnificent establishment in the city. Birdie Fletcher laughingly declared her heart's history to be the most painfully romantic on "love's chronicles," though its grief-gloom was dispelled by the roseate clouds of after happiness.

A Good Shot.—The best repartee we have lately seen, came from Prentice, the wag of the Louisville Journal. The editor of the Alabama Flag called it out by the following squib:—"Why is the editor of the Louisville Journal's career through life like a celebrated tune? Because it is 'the rogue's march.'" Prentice, who is a "dead shot," loaded his piece, and taking good aim, let the Flag man have it right in his teeth, after the following manner, to wit:—"Why will the editor of the Flag, at the close of his career through life, be like a tune of Paganini's? Because he will be executed on a single string."

Right of Speech.—A Western Justice of the Peace ordered a witness to, "come up and be sworn." He was informed by an individual that the person was deaf and dumb. "I don't care," said the Justice, passionately, "whether he is or not; here is the Constitution of the U. States before me. It guarantees to every man the right of speech, and so long as I have the honor of a seat on the bench, it shall never be violated or invaded."

VAN HEUSEN & CHARLES,

China Depot, No. 62 and 64 State street, Albany, N. Y.

To the Public.—Your attention is respectfully solicited to the assortment of *China, Glass, Earthen Ware, &c.* kept at this establishment, unequalled in variety and cheapness by any in the United States. Our importations for this season will comprise the new and desirable styles—selected by one of the firm while in Europe. Parlor or kitchen outfits can not be made of all the pretty things; we can only say that it will be amply repaid, and find a large assortment at *lower prices* than can be found elsewhere. Those who may want Dinner or Tea Sets, or any other article of a peculiar design in China or Earthen ware, can depend on receiving it promptly, as we have an agent at the Potteries who will give attention to such matters. Hotel keepers will find here many articles not usually kept by dealers in our trade; this enables us to furnish complete outfits to those commencing; to this branch we pay particular attention.

The patronage heretofore extended to us, is evidence that our system of Large Sales at Small Profits, is appreciated; and we humbly hope will continue to be. Among the new articles deserving special notice, are—

Parian China—Tea Sets and separate pieces, Statuettes, Busts, Images, &c. This is a new material, and very beautiful.

English and French China—Plain and Decorated Sets or Pieces, Harlequin Sets or Pieces, Vases, Images, &c., &c.

Britannia and Silver Plated Ware—Rogers's (English) and American, all kinds, some patterns very rich.

Cutlery—Rogers' (English) and American, in sets or separate; also, Silver Plated Knives, &c.

Papier Mache and Japan Ware—Tables, Trays, Boxes, &c., from the celebrated factory of Jennings & Kellridge.

Silver Plated Glass Ware—Very elegant—richly made.

Gas Fixtures, (a large stock selling at cost,) Brandolas, Lamps, Chandeliers, &c., new patterns, at unusually low prices.

☞ Ware packed so as to ensure its safe carriage any distance. 221-3t

A CHANCE FOR THE MILLION!

$30 to $150 per Month can be easily made in selling the *POPULAR BOOKS* published by Dinham, Hitson & Mulligan, successors to Derby & Miller, Auburn, and Derby, Orton & Mulligan, Buffalo.

At no previous time has the demand for good books been so active as at present. The great masses of the People who want, and will have them, are not within the reach of the Local Bookstores, and it has become a well ascertained fact, that of the Publications of merit and real utility, from time to time issuing from the American Press, *a large proportion* must be sold by

Book Agents, Colporteurs and Canvassers,

or not at all.

To all who are desirous to aid in the Dissemination of a *Pure and Wholesome Literature*, and now other, we offer great inducements to engage in the sale of our Popular Books for the People. We publish *Good Books, well printed and strongly bound*, and which sell readily wherever offered.

☞ Catalogues of our Publications, containing full particulars, furnished on application (post-paid,) to

MILLER, ORTON & MULLIGAN,
1854. Publishers of Popular Books,
221-4t Auburn and Buffalo, N. Y.

FARMERS, LOOK TO YOUR INTERESTS!

J. Ratalje & Co., of the Genesee Seed Store, Rochester, having received their Spring supply of Seeds, &c., offer for sale, at the lowest cash price—

600 bushels Scotch Fife Seed Wheat, Canada growth.
500 " Canada Club do. do.
500 " Spring Rye.
200 " Barley, from Canada, premium seed.
200 " Clover Seed.
500 " A No. 1, Timothy.
1,000 " Early and late Field Peas.
300 " Pure Early Kent Peas.
300 " Early Washington Peas.
200 " Early Warwick Peas.
100 " Dwarf Blue Imperial Peas.
500 " Marrowfat Peas—and more coming.

13 casks of English Seeds, viz:—Turnip, Cabbage, Radish, Cauliflower, &c., &c. Several varieties of superb Garden Peas, imported from London.

J. Ratalje & Co. are also sole Agents for the sale of Ketchum's Mowing Machine in Rochester, and for the vicinity. 221-6t

SOON IT WILL BE TIME TO PLANT!

At the Rochester Seed Store, opposite the Arcade, Buffalo Street, I can supply all kinds of Seeds, and the implements usually wanted by the farmer or gardener. I have Seeds of my own growing; also those of my own importation from England, France and Germany, which I will sell at as low rates, as can be had in this country, both at wholesale and retail.

Clover Seed.—Medium from Ohio, and the large kind grown in this county, at market prices.

Timothy Seed—from Wisconsin, at market prices.

Peas.—Large Marrowfat—Early Washington—Early Kents, (the earliest variety)—Early Prince Albert, (imported)—Blue Imperial (imported)—and all the other varieties worth cultivating, by the bushel or quart.

Beans.—Lima—China Red Eye, &c.

Corn.—Stowell's Evergreen Sweet Corn, at 50 cents per quart.

Poland Oats—At $1 25 per bushel.

Mexican Potatoes—of my own raising, at $4 per barrel delivered at the Rail-Road.

Osage Orange.—New seed, just from Texas, at $10 per bushel, or 15 cents per quart.

Orders by mail, enclosing the money, will be promptly attended to. The seeds forwarded without delay, or the money returned. JAMES P. FOGG.
Rochester, March 8, 1854. 218-6t-now

3,500 ACRES OF LAND, WITH STEAM SAW-MILL FOR SALE.

In Scioto Valley, Ohio, and lying on the Ohio Canal.—Property as desirable as this, is seldom to be met with, and will be sold at a bargain, and on accommodating terms.—Persons desirous of purchasing, by calling upon, or addressing the subscriber, at Chillicothe, Ohio, will be promptly attended to, and full description of premises given. H. H. HOAG.
Chillicothe, O., March 22d, 1854. 221-tf

SUFFOLK PIGS.

Twenty pairs of purely bred Suffolk Pigs, for sale by the subscriber. Also breeding sows.
GEORGE HUNTINGTON.
Walpole, N. H., March 21, 1854. 221-3t

LAND PLASTER

At Canandaigua, Victor, and Fisher's Railroad Depots. The subscriber has on hand at each of the above Railroad Stations, 500 tons of pure, fresh ground land Plaster.—Farmers can depend upon getting their Plaster at the above places, of a superior quality and not kiln dried.
221-4m. JARED ROWLEY.

BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

Subscription—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion. As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 25 cents per copy to the club rates of the Rural,—making the lowest price to Canadian subscribers $3,50 per year.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

*** The postage on the Rural is but 3½ cents per quarter, payable in advance, to any part of the State—and 6½ cents to any part of the United States,—except Monroe County, where it goes free.

Advertising.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 16 cents per line—*in advance*. The circulation of the Rural New-Yorker is several thousand greater than that of any other Agricultural or similar journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

The Wool Grower and Stock Register is the only American journal devoted to the Wool and Stock Growing Interests. It contains a vast amount of *useful* and *reliable* information not given in any other work, and should be in the hands of *Every Owner of Domestic Animals*, whether located East or West, North or South.—Published monthly in octavo form, Illustrated, at Only Fifty Cents a Year—6 copies for $2; 8 for $3. Vol. 5 commenced July, 1853. Subscriptions can begin with the July or January number. Back volumes furnished.

Address D. D. T. MOORE, Rochester, N. Y.

Moore's Rural New-Yorker:
A QUARTO WEEKLY
Agricultural, Literary, and Family Newspaper,

CONDUCTED BY D. D. T. MOORE,
ASSISTED BY
JOSEPH HARRIS, in the Practical Departments:
EDWARD WEBSTER, in the Literary and News Dep'ts.

Corresponding Editors:
J. H. Bixby,—H. C. White,—T. E. Wetmore.

The Rural New-Yorker is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the Important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter, interspersed with many appropriate and handsome engravings, than any other paper published in this Country,—rendering it a complete Agricultural, Literary and Family Newspaper.

☞ For Terms, &c., see last page. ☜

Rural New-Yorker.

Progress and Improvement.

HOW TO PAY FOR A FARM.

Do not exclaim "*Eureka*," reader, on glancing at our suggestive heading, for perchance we cannot impart the information thereby indicated. Our attention has been directed to the subject, by the inquiry of a non-subscriber, who, after intimating that he would be a subscriber if free from debt, wishes us to secure the entry of his name on our books, by communicating the knowledge necessary to free his (when paid for) farm from incumbrance.—Though one additional subscriber is no particular object, it has occurred to us, that perhaps a large number of our *readers* are like unpleasantly situated, and possibly a discussion of the subject may prove beneficial to all parties. So thinking, we will offer a few suggestions, without undertaking to give sage advice or definite directions for the accomplishment of an object so generally desirable.

In the first place, would it not be well for our friend, and all others similarly involved, to subscribe for and read at least one of the many well-conducted Agricultural journals? Aside from any personal or pecuniary consideration, this is our first hint, or prescription—for we firmly believe that no man of sense and discrimination can fail of being directly benefited by reading, and properly heeding, the facts, experiments, suggestions, &c., embodied in a volume of any good journal devoted to rural affairs. There is scarcely such a journal in the land, which does not publish, each year, the gist of more experience and observation, by the best farmers, than any one could learn in his individual practice during a whole life-time. In our opinion any one who wishes to pay for a farm, will find the expenditure of from two to twenty dollars a year for agricultural reading a most judicious and profitable investment.

Another aid in freeing the farm from debt, is a good *subsoil plow*. This implement, properly used, will exhibit more valuable riches on their own premises, than many farmers ever dreamed of in their (we will not say *shallow*) philosophy. It will penetrate an almost exhaustless mine of wealth, without a tithe of the "prospecting" required to find a comparatively worthless vein in the far-famed El Dorado of California. By increasing the *depth* and *fertility* of his soil, annually, and judicious management, almost any farmer can, under ordinary circumstances, so increase his income as not only to become free of debt, but *receive*, instead of *pay*, interest money. Hence, purchase a subsoil plow, and commence at the very foundation of the incumbrance.

In many localities an item of equal or greater importance is the *manure heap*. The manufacture, husbanding, and proper use of manures and fertilizers will place almost any farmer in the land, (other things being equal,) on the direct road to competence and wealth. In not a few sections this has, to our own knowledge, proved the farmer's Philosopher's Stone—reclaimed so-called "worn out farms" from barrenness, and rendered their present possessors (whose predecessors gave up in despair, and sought new land in the West or elsewhere,) pecuniarily independent. We might cite many instances in which sterile and almost skinned-to-death farms were purchased *on credit* within the last decade, that have not only been paid for, but many of the owners are so well-to-do they are from year to year adding the small, shallow farms of their neighbors—each apparently possessing both the disposition and means to own "all the land that joins him."—Of course manure is an indispensable requisite to him who desires to pay for a farm.

Next in importance, in many sections, is *underdraining*. Indeed this process is a primary necessity in certain localities,—an indispensable requisite to successful and profitable cultivation. An investment in this branch of improvement is certain to yield ample dividends—better than railroad, bank, or "fancy" stocks, which too often *drain* the purse entirely.—Every rod of underdrain on farms which require it—and many more need it than is generally supposed—will materially increase the products and profits of the farmer. Those interested will please investigate the subject.—The advantages of the process have been fully demonstrated in these pages. From his locality we judge it will essentially aid our friend in paying for his farm, and removing another incumbrance.

There are other matters of more or less moment to all situated like our correspondent, but we have not space to speak of them in this connection. Among these, however, we may mention the personal supervision of the owner—his individual industry, care and attention being essentially requisite to the proper and profitable management of the farm. The eye of the master, and the talismanic words, "come boys,"—accompanied with judicious economy, and a management exhibiting wise "progress and improvement"—will soon relieve the involved farmer from embarrassment, and place him on the high road to prosperity.

SEED-TIME AND ITS LABORS.—No. II.

One of the most encouraging signs of our progress in agriculture, is the increased attention annually paid to the production of root crops. The turnip crop is said to be the sheet-anchor of English agriculture; and though we probably shall never be able to cultivate turnips to the extent she does, yet we believe that there are other root crops which we can raise with equal advantage, and which will greatly aid us in keeping more stock, and thus enable us to enrich the soil and produce more grain crops.

All root crops delight in a rather light soil, deeply and thoroughly pulverized, and enriched with well rotted farm-yard dung, or other quickly acting fertilizers, such as Peruvian Guano or superphosphate of lime.

Carrots.—The value of carrots as an auxiliary food for horses and milch cows, is admitted to be very great. It is admirably adapted to our climate, and though considerable labor is needed to weed them, &c., yet on the whole, we know of no crop in this vicinity which pays better. Our esteemed correspondent, E. S. Hayward, is eminently successful in growing carrots. The following is his method of cultivation:—A yellow chestnut loam well manured, say 20 to 40 loads of rotten yard manure per acre, makes a first rate soil for carrots, but they will grow on any deep rich soil, and produce well. The soil should be thoroughly pulverized with the cultivator and harrow on the top before plowing after the manure is spread.—Then plow deep and follow with rakes, and rake the top of the furrow and the manure, if there is any left in sight, to the bottom of the furrow, and continue in this way till the piece is prepared, which leaves the ground level and clean on the surface. Four hands will follow and rake as fast as a team will plow. The ground should be sown while moist, soon after it is fitted, in rows 12 to 14 inches apart and half an inch deep. The soil should be pressed on the seed by treading or rolling, to ensure its vegetation. If sown by hand, the usual quantity of seed is four pounds per acre; if with a machine, two pounds is sufficient. The seed should be soaked in warm water 48 hours or more before sowing, then mix with plaster till the seed will separate. Sow as early in May as the season will allow. The ground may be marked out with a marker made for the purpose, and the seed covered with a rake. If the weather is favorable, they will be up and ready for the first hoeing in about three weeks. The hoe should then be passed lightly through between the rows to kill the weeds and help the growth of the carrots. In ten days hoe again, weed and thin, leaving one plant in a place; in two weeks hoe deep, weed and thin, leaving the plants four or five inches apart in the rows, and the work will be completed for the season. If weeds grow after the last hoeing, weed them out, for weeds and carrots cannot grow on the same ground at a good advantage.

Mangel Wurzel.—This is another root well adapted to our climate. It is not injured by insects or worms, requires no hand weeding, the tops as well as the bulbs are excellent food for stock, and more nutritious food can be raised from an acre in mangel wurzel than in any other crop we have ever cultivated. They are gross feeders. It is hardly possible to make the soil too rich for them. They should be planted in rows 30 inches apart, and from 12 to 15 inches in the rows. The seed can be dropped and covered with a hoe, just as in planting Indian corn. It is advisable to drop four or five seeds in a hill, so as to secure one good plant. A little sulphate of lime dropped with the seed, will be beneficial in giving the plants a start; but superphosphate of lime, say a quarter to half an ounce in a hill, will do very much better. When placed in close proximity with the seed, it has a remarkable effect in stimulating the growth of turnips, ruta baga, mangel wurzel, &c., and if a good article can be obtained at a reasonable price, it will pay well to use it for these crops. Mangel wurzel should be sown from the middle to the end of May.

Ruta Bagas are much more extensively cultivated in England than mangel wurzel, but they are not so well adapted to our climate as mangels. There are those, however, who assert that ruta bagas can be raised as well here as in Great Britain, and we would be the last to discourage the idea, for we believe that the extensive cultivation of this root would be attended with many advantages; yet we believe the climate of the British Isles is better adapted to the growth of this root, than the dry, hot summer of this country. Ruta bagas can be sown in June, in the way as commended for mangels. Be careful not to cover the seed too deeply. By using superphosphate you may be sure of a crop.

Potatoes, till within the last few years, were considered one of the safest root crops—never being attacked by insects or injured by disease; but the "mysterious dispensation" which has extended to all countries, and affected, more or less, all varieties has rendered the potato a very uncertain crop. A rich, light, rather mucky soil, when well manured, is best calculated to produce a heavy crop; but a dry, gravelly, sandy soil now yields the soundest and most palatable. Good, short hog manure is best for potatoes. A little plaster scattered round the hill, just as they break through the soil, is frequently beneficial. The best artificial manure for potatoes is Peruvian guano, sown broadcast, at the rate of 300 pounds per acre; or what is still better, scattered in the hill, being very careful to place soil between it and the set, for if the guano touches it, the potato will assuredly be injured. Early planting is one of the best preventives of the potato disease. In this latitude, they should always be planted by the first of May. If planted in hills, they are more readily hoed and kept clean; but planted in rows 30 inches apart, and 12 inches between the sets, will probably yield the heaviest crop.

CONVERSATIONS ON AGRICULTURE.—No. I.

BY HUGH T. BROOKS.

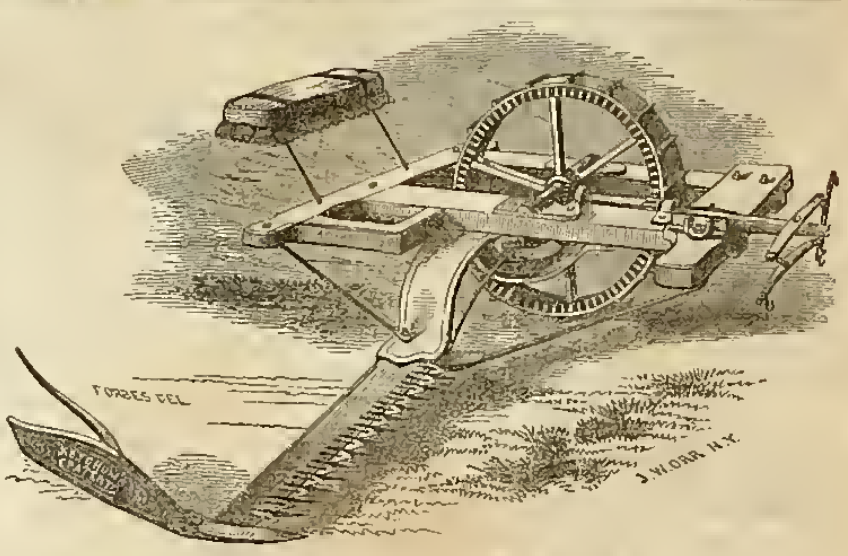
Meeting a farmer friend the other day, we talked about the "rural districts." It was evident something had happened to them—it was probable they had at last got the *news!*—Fences were marching into line—houses, as well as horses, were getting a new coat in the spring—dry land began to appear—domestic animals were assuming a more comely shape—the hungry were entertaining hopes of being fed. Thanks given to Providence, to Science, and to the *Press*. "Aye, the *press*; if a man don't take an agricultural paper he is a good deal of a—fool, (accented softly,) and if he takes one, and learns from the dear-bought experience of others, while he neglects to contribute from his own fund of information whatever may be useful, he is a good deal of a—knave." "Folly and knavery are rather common with us, I am afraid, judging by that rule." "Yes, they are, and I am resolved to root them out as far as I am able." Preface enough.

Speaking of Oxen.—"When I commenced farming I bought two good yoke of oxen; they performed well. The next winter I stabled them, fed plenty of good hay, and worked them very little. My father, who was somewhat older than I, said 'they were too fat.' I was disposed to risk it. In the spring I began to work them; *they laughed me out of countenance.*" (The writer will *explain* for the benefit of *city* readers—the oxen opened their mouths, breathed short, quick and hard, protruded their *tongues*—not venomous at all—perspired freely and looked anxiously for some "deep, umbrageous wood.") "Subsequent experience," continued my friend, who is one of the best and most successful farmers in Wyoming Co., "has taught me that there is little danger of oxen becoming too fat if the flesh is *worked* on.—An ox may be uniformly kept so as to make good beef (if a sudden emergency should require him to be slaughtered,) without detriment to his working qualities. *Be sure and find business during the winter for your oxen*, even if you have to drive them to mill and to meeting, as people did when I was young. No animal can suddenly change its habits without detriment; this should be a warning against idleness to all oxen, and to all *asses*. Regular habits, some labor and some rest, should go through the year. Long intervals of repose, for man or beast, interspersed with great and unusual efforts, are in the highest degree injurious. Leave nothing to be done in the spring which can be done in the winter, and nothing for the summer that can be accomplished in the spring."

My own opinion is, that horses are constitutionally adapted to warm weather in a greater degree than oxen, but one reason why they are preferred for "standing the heat," is that, being admitted to a wider range of duties they are more regularly employed, and better fed and groomed than oxen. Much has been said of the comparative value of horses and oxen.—One man, in my opinion, with *three* good horses, will plow more, and with less expense, than two men can with *two yoke* of oxen, even though one man is a boy. My friend Tyrrel, of Wyoming, very properly remarked, that "grain-growing districts require the most work in hot weather; whereas, in New England, teams can have more rest in dog-days." This may bring horses more in requisition here than there. If men must have horses for all *road* purposes, small farmers will not keep oxen. It is said, that ox teams are driven at the west, twenty miles with a load, and back again the same day, without inconvenience. It must be conceded that horses cannot do much better.

Great care is taken to breed from mares and stallions that have good speed and bottom. A colt from "Black Hawk" costs, I believe, some fifty dollars;—if the owners of the *fast bisons* would only bring forward their animals, and demonstrate their powers of locomotion, perhaps their services would command as high a price, and then intelligent and enterprising breeders could get up road oxen that would amount to something. Devons are generally considered better workers than Durhams, but I recollect to have heard Col. Sherwood call this doctrine in question. I think natives are better than either. Seriously, I think that it would be well to get up a race of animals with special reference to agility and endurance. A worthy female acquaintance says, "I took my wedding tour in an ox cart, and felt proud of my equipage." The fickleness of *fashion* is proverbial; perhaps the "upper ten" will take to oxen. I should certainly think they would if there was not *economy* in it; the fact that oxen can be worked during the best years of their life, and can then be sold to the butcher, is very much in their favor.

Mr. Albert Brisbane, then late from Paris, the head-quarters of all cookery, was to dine with me one day. As I was selecting a piece of beef from a butcher's cart, Mr. Brisbane came along. "Be so kind, sir," said I, "as to pick out a piece of beef that will suit you."—"How old was the animal that furnished this?" inquired Mr. B. "Young and tender," said the butcher. "*Young and tender!* an animal is not fit to kill till it is *seven years* old; it takes all that time for it to mature and become what nature meant it to be." This struck me as correct, and if so, let the slaughter of *young* animals cease. Let our steers be made docile when young, and worked till they get their full size and maturity: after that, there is probably a loss in keeping them unless they have very unusual working qualities. Farmers should make it a principle not to sell their *young* stock, as they probably improve quite as much from three to five, as from one to three.



KETCHUM'S IMPROVED MOWING MACHINE.

We have received several letters of late asking information on the subject of Mowing Machines, and particularly concerning Ketchum's patent. Some inquire about the speed, others the price, and others still wish us to specify which is the *best* machine for mowing now manufactured—while a few ask where they may obtain the most perfect combined mower and reaper. Now, we cannot answer all these queries definitely, for the reason that we have not witnessed the operation of some of the recently invented, and highly recommended machines.

Ketchum's Mower—a good representation of which, as improved, is given above—we know to be a valuable labor-saving machine, and if it is not the very best for the purpose, it has no superior within our knowledge. Those who wish definite information in regard to its capacity, price, &c., are referred to an advertisement in this paper. The machine may be seen at the Agricultural Warehouse of J. Rapalje & Co., agents for Rochester and vicinity.

Of combined reapers and mowers we shall have something to say in a future number.

I have observed that those who work the most at *head* farming, and who intend to make good use of their wits, generally prefer to let somebody else raise the *calves*, and they will buy them in at two or three years of age. I will resume this subject again, as it is my intention to furnish the RURAL, and some other papers, with occasional "Conversations."

Pearl Creek, N. Y., April 5, 1854.

RURAL ARCHITECTURE.—OUT-BUILDINGS.

CASCADE BARN AT GREAT BARRINGTON, MASS.

EDS. RURAL NEW-YORKER:—Inasmuch as the subject of Rural Architecture is receiving a large share of attention at the present time, I purpose briefly, to refer to one of its most important, as well as most neglected features. For, while it is admitted that the erection of convenient, commodious and tasteful cottages, with the appropriate decoration of the surrounding grounds, has very commendably called into exercise some of the best minds of the age, among whom the lamented DOWNING was conspicuous, it is equally true that the erection and appurtenances of the necessary out-buildings on farm estates have not received a corresponding proportion of attention, hence have attained a lesser degree of perfection.

Now, that the latter are equally deserving of consideration, is evident from the reflection, that the profits of an estate are intimately connected with the conveniences and labor-saving appendages that are attached to the out-buildings, and the growth of the domestic animals, which is of course promoted by their comfort. And the evidences of an increasing desire to perfect this hitherto neglected department of architecture, cannot fail of affording gratification to all lovers of progress. Among the recent results of this progressive spirit, is the CASCADE BARN, erected at Brookside, in the town of Great Barrington, Mass., which I have recently had the pleasure of visiting, and cannot refrain from calling the attention of your readers to it, which I do more for the purpose of pointing to it as an object emphatically worthy an examination, than to give it a detailed description, as one it merits would be too copious to claim an insertion. This barn (the term barn is decidedly too incomprehensive, as it embraces every out-building that may be needed, even to a farmer's house,) is located in the fertile and delightful valley of the Housatonic, 2 miles from the village of Great Barrington, and was designed by Mr. J. WILKINSON, for DAVID LEAVITT, Esq., a gentleman of princely fortune, residing in New York, and is unquestionably the most perfect thing of the kind in the world. True, this is a sweeping assertion, yet I believe it to be fully sustained by the facts in the case.

It is 200 feet in length, with a centre wing on the east side, three stories high, with an arched roof covered with tin, and cupola on the centre, and erected at an expense of nearly $20,000. It is based in a ravine which it spans, thus affording an easy entrance into the third story. Through this ravine runs a durable stream, with which is formed a beautiful reservoir of water directly above the barn, that operates upon a wheel twenty feet in diameter, thus forming an excellent motive power, that is used for a great variety of purposes, such as sawing wood and lumber, threshing, cleaning and elevating the grain, cutting straw and stalks, unloading the hay and depositing it in any desired loft, churning, grinding, &c., &c.

The first story is used as a manure vault, the second for stabling, the third for grain, hay and apartments for domestics. The arrangement for feeding the cattle is most ingenious and convenient, the following description of which I give in the language of Mr. WILKINSON, viz: "All the manual labor required in feeding the cattle is to run a car which contains 25 bushels of feed, before the line of cattle, and shovel the food into the feeding boxes, which are of cast iron, quadrant shaped, of about one bushel capacity, and one to each stall. These boxes are placed one on each side of a partition, that divides two stalls, and are each attached at the right angle corner of the box to the front partition stud by hinges, so that the boxes may be swung around into the feeding hall, in front of the cattle, and over the feeding car, that the feed which spills in filling the boxes, may fall into the car, instead of on the floor. After the boxes are filled, they are turned with a slight touch, before the cattle again. In the centre, between the next or adjoining pair of stalls, is an erect cylinder, two feet in diameter at the bottom, and one foot eight inches at the top, which projects equally into each stall, and extends from about a horizontal line with the tops of feed boxes (on the opposite side of the stalls,) to the upper surface of the hay-loft floor, directly over the cattle, that it may be filled from that floor. There is a circular aperture six inches in diameter, in each side of the *hay-tube*, at a convenient height from the floor, so that two animals may eat from the same tube at the same time. Under the tube is a drawer into which all the loose hay seed falls through its latticed bottom, which drawer when full is emptied, and when a large quantity of seed accumulates, it is cleaned for use or market.—The seed obtained is of a superior quality, and the quantity ordinarily saved by this arrangement will pay for all the manual labor required about the building throughout the year.—Across the front of the stalls there is also an ordinary box manger, directly under which, and running the whole length of the stable, is a trough for water, with suitable openings in the bottom of the manger through which the cattle may be watered by removing the iron slides that close them, which is done by means of a lever, opening the line of slides at once and in an instant."

The very great economy and convenience of this arrangement is obvious at a glance, and may be taken as a specimen of the perfection exhibited throughout. Under one of the drive ways, into the third story, is an arched room, well ventilated, and lighted with a glass front, which is used as a milk room, and has a great many conveniences connected with it for diminishing the labor of taking care of the dairy, which can all be performed without the least exposure to the weather, and within the compass of a few feet. The herd is fed with hay, cut feed, and steamed roots that are reduced to a pulp by the revolution of a cylinder in which the roots are placed after steaming, with four cannon balls of ten pounds each; and I believe during the summer season the soiling system is to be practiced in part. The building is well lighted and ventilated, so that no diseases are generated by the confinement of impure air and the deleterious gases—an important feature that is too often overlooked. On the side of the barn facing the Housatonic, which is but a few hundred feet distant, are projections of cut stone, so arranged as to convert the water which falls over them into a sheet of foam, from which it justly derives its name of *Cascade* Barn.

The exterior finish of the building is in a style corresponding with its magnitude and interior perfection, and presents a very pleasing appearance. Everything is constructed, and is to be conducted strictly upon scientific principles, principles that experiment has confirmed; and indeed, true science and enlightened experiment are always in harmony. No one can visit this extensive establishment without pleasure and profit, and cannot fail of being surprised at the fertility of the inventive genius of the architect, whose skill is strikingly exhibited in the innumerable number of original devices for economizing time and labor, that are visible at every point. And Mr. LEAVITT is deserving of high commendation, for his munificence in erecting this model building, for which the patrons of agriculture will feel profoundly grateful; for though few, if any, will copy it as a whole, yet thousands will adopt many of the principles and conveniences therein exhibited and brought to light, to their inexpressible satisfaction and interest. And those who may be fortunate enough to visit it, will have the pleasure of their remembrance heightened by the courtesy extended towards them, both by the architect, and the gentlemanly resident proprietor, a son of Mr. LEAVITT.

Chatham, N. Y., March, 1854. J. R. P.

SPRING WHEAT.—BLACK SEA VARIETY.

EDS. RURAL:—Having read with some degree of interest several articles in recent numbers of the RURAL, on the culture of Spring wheat,—and in view of its importance to farmers, more especially those living in sections where little or no winter wheat is raised, and the prospective high price of wheat, the present season,—I think it a subject of deep interest to cultivators of the soil in such localities.

Having been engaged for the last twelve years in Agricultural pursuits, in the county of Cheonango, in this State, where but little winter wheat is raised, my attention was called to some extent, to the culture of spring wheat.—The red chaff bald was considered the best variety, until the introduction of the Italian, and subsequently, the tea wheat,—all of which did well, until about the year 1846 or '47, when the insect made its appearance, and all of those varieties fell a prey to its ravages. Efforts were made to evade the scourge, but all proved fruitless. Soon after this, the Black Sea wheat was introduced from the northern counties of the State, which proved to be a hardy kind, suffering very little from rust, and by late sowing has almost entirely escaped the ravages of the insect. I have sown as late as the fifth of June, with good success, but would recommend sowing from the 15th to the 20th of May, two bushels to the acre, on a dry soil, plowed deep, and made fine by the use of the harrow; a field planted with corn the year previous is preferable. With such culture I have never failed of a remunerating crop.

Some complaints have been made, and justly too, in regard to the flour, which is somewhat darker than that made of other varieties, and not quite as soft, but that difficulty will be obviated when the miller becomes accustomed to grinding it. It requires somewhat different treatment from other kinds, but the skillful workman will soon be able to make flour that will make bread, that will satisfy the taste even of an epicure. J. W. COLLINS.

Sodus, N. Y., April 10, 1854.

Agricultural Miscellany.

THE "TERRA CULTURE" HUMBUG.

INASMUCH as an attempt is being made to resuscitate this most ridiculous humbug, the following statement, which fully explains itself—and which ought to bury both "Terra culture" and its knavish propagandist beyond the hope of resurrection—is given in order to effectually "head" the operations of an impostor. The "Professor" is now on a "professional tour" in the West. Editors in Michigan, Illinois and Wisconsin will subserve the cause of justice, and aid in protecting the agricultural community from fraud, by publishing this unequivocal expression of opinion.

To the Public.

THE undersigned, citizens of Cayuga county, having attended a lecture in the city of Auburn by Russel Comstock, of Mabbettsville, N. Y., on his pretended new discoveries of greatly beneficial facts in agriculture, and of uniform laws in nature (heretofore unknown or misapplied) regulating the growth and maturity of vegetation, and having been requested by him, in his introduction to said lecture, to draw up, and submit for publication our honest opinions in regard to his theory and condemnatory of the course of certain papers (which though solicited, he declined naming) towards him, upon mature deliberation respectfully submit the following to the public:

On the subject of Agriculture, furnishing employment for so large and meritorious a class of our population, and lying as it does, at the base of all other employments, and all our prosperity, it is natural that great solicitude should be felt in what concerns its improvement; and accordingly we find the farming community, for the last several years, exceedingly sensitive in what regards the least advances in the line of their profession, sparing no pains or expense in experimenting upon plausible theories, or in the practical application of all the numerous worthy, and worthless agricultural implements of the day. In this state of eager credulity, and laudable anxiety to excel, a wide door is opened for imposture, and large fortunes made available to *lecturing pretenders of new discoveries*, especially if they clothe their labors with the charm of "confidential disclosures" and hold their hearers under *penal responsibility for the strictest secrecy for ever after*. The undersigned are well aware that it is scarcely possible for us to estimate too highly the beneficial effects which have resulted, and may continue to result, from organized Agricultural societies, well conducted journals and public addresses of well informed practical agriculturists; and, while we most cordially recommend all these helps to the especial confidence of our brother farmers, *we cannot too strongly condemn* the course pursued by Russel Comstock, of Mabbettsville, N. Y., for the following, among many reasons. 1st. Because he teaches *no new method with which those who read our agricultural works are not already well conversant*, and consequently he has *no secret to disclose*. 2d. Because some parts of his theory are *contradictory and in direct opposition to the well established results of our experience*. And finally we regard the whole so-called "disclosures" as a *most indifferent exhibition of weakness, folly and deception, and hold all honest men morally bound to condemn and repudiate any and every person, who goes about the country extracting a princely fortune from the hard earnings of the laboring classes, without rendering any equivalent therefor*, and binding them to secrecy upon subjects that *are not, and never have been secret*, and upon facts that have been *universally known and practiced upon*, approved by some, condemned by others, and more or less adopted by all, from time immemorial.

In this view the undersigned comply with what they believe to be their duty in warning all persons to beware of this stupendous "Terra Culture" humbug.

EFFECT OF WAR ON BRITISH AGRICULTURE.

THE *Mark Lane Express* is giving a series of excellent articles on this subject, from which we give the following extracts. They are rather long, but we make no apology for transferring them to our columns. With free trade, whatever affects the price of breadstuffs in Great Britain, affects the price here. Our readers, therefore, have as much interest in the matter as British farmers; nay, more, for, while the profits of an increased price of agricultural products to a great extent, find their way, in the shape of higher rents, into the pockets of the landlords, our American landowning farmers not only have the advantage of higher prices for their products, but pocket no small profit from the increasing value of their lands:

After forty years of peace, we are once more entering on war. Will it be short, sharp and decisive? or will it afflict the nations for another twenty years? Will England come out of it, as out of the last, covered with glory and with wounds, and with some four or five hundred millions added to her debt? Is she to triumph, or to fall? Will the Scythian hordes be driven back to their native snows? or will they overrun the fairest regions of Europe, and plunge them in darkness and barbarism, like that which overspread the civilized world when Imperial Rome sank before the swarms which issued from the same northern hive? Will Europe become Republican, or Cossack?

The present war finds us with a population double what it was forty years ago, with greater powers of consumption, and more dependent than ever on foreign supplies of food. The improvements in agriculture have been immense during the last ten or twelve years, and they are still progressive to such an extent, that they may virtually double the area of these islands, and thus stand in the place of the new lands which were brought into cultivation during the last war, and of which we have exhausted the supply. Our importations of foreign grain, during seven years of free trade, have considerably increased, though they have disappointed the hopes of some and the fears of others; and still it is found in practice, that from our own soil and from abroad we receive no more than we can consume. The chief increase has been from the Black Sea and from France. The supply from the countries bordering the Black Sea must cease while they are the seat of war; and that from France was a temporary exception to a general rule. The large exports which took place after the revolution of 1848 arose more from distress occasioned by that revolution, and accompanied perhaps by hard cropping and a cycle of productive crops, than from a superabundant produce caused by an improved system of cultivation. France is again an importing country, and a competitor with us in every market where corn is to be bought.

Our supplies from the Baltic have not materially increased since our ports have been thrown open to the Polish wheat-growers who ship from the coasts of that sea. Neither have Canada and the United States overwhelmed us with their breadstuffs, as many expected. It is to that quarter we look for supplies while the Baltic and the Black Sea are the seats of war. We trust that, between the British provinces and the United States, America may be able to furnish that grain which we want and which we cannot or do not raise at home. We must remember, however, that every year the wheat-producing districts of America are receding further from the coast, under the exhausting system of cultivation prevalent in those new countries; and that States and Provinces which were once celebrated as large growers and exporters of wheat, have become dependent for a portion of their own food on the growth of other districts. The rate of wages, always high in America, is advancing, and thus increasing the cost of production; there are, moreover, indications not to be mistaken, that a certain range of prices here, considerably above that which English farmers have of late been accustomed to consider remunerative, is necessary to draw much wheat from America. War will enhance the cost of transport from all countries; and if the war shall be protracted, we shall have, in all human probability, a long series of high-priced years, followed by low prices on the return of peace.

BARN-YARD MANURES.

THE following questions and answers extracted from the report of the examination at the Royal Agricultural College at Cirencester, England, will be read with interest:

What changes does farm-yard manure undergo in keeping?

Farm-yard manure, by keeping, putrefies; sulphate of ammonia and ammonia are driven off; potash is carried away by the drainage, which is generally imperfect; the organic matter is reduced; carbonic acid and phosphoretted hydrogen are given off, and the mineral matter is more concentrated. It was considered by Liebig that well rotted manure owed its extra fertilizing effects to this excess of mineral matters—a matter doubted by some. The remaining matters are more soluble.

Mention some of the principles which ought to guide the farmer in the management of home-made manure?

The principle ought to be to keep in all fertilizing substances, to procure the manure in the most concentrated form (unless required for clay, or where a mechanical action is required) and as free of water as possible, and allow fermentation to go on as regularly as possible, and by compression to exclude the air. By box-feeding, compression, exclusion of the air, keeping out rain, keeping up regular fermentation, prevention of sweeping winds, no loss by liquid matters, flowing away of alkalies, &c., and a more intimate mixture of the dung and urine with the straw takes place.—When the manure is produced, the heap should be made large—wide at the base and narrow at the top: it should be compressed, drainage furnished at the base, the liquid collected in a tank, and either used as such or again pumped up over the heap. The preserving of ammonia will be touched upon in the next question.

What are the best means of preventing the loss of ammonia in dung-heaps?

1st, Road scrapings, charcoal, clay burnt, unburnt, saw-dust, and peat soil. These act by their powers of absorbing ammonia, by keeping out rain and air, and keeping up regular fermentation. 2nd, Sulphate of iron, sulphate of magnesia, sulphate of lime, chloride of sodium. Sulphate of iron acts as a fixer by forming sulphate of ammonia, and as a deoloriser by forming sulphuret of iron with the sulphuretted hydrogen given off. Sulphate of magnesia acts by forming a double salt of magnesia and ammonia, and by uniting with phosphoric acid. Sulphate of lime is considered to form sulphate of ammonia and carbonate of lime. It only does this when soluble, to which state it is not easily reduced, and reverts again to carbonate of ammonia and sulphate of lime. When dried, its action is doubtful as a fixer of ammonia; it may unite with the phosphoric acid.—Chloride of sodium acts by stopping fermentation. Acid fixers—sulphuric and muriatic acids—act by entering into combination with ammonia; the latter, as it may be procured cheap near soda manufactories, is the cheapest, and quite as effectual.

FIGHTING BEES.—To stop bees from fighting' breaking the comb of the robbers is said to be sufficient, by giving them plenty of business in taking care of their wasting honey at home.—It is said to have succeeded completely.—*New-Haven Register.*

Inquiries and Answers.

MEXICAN GUANO.—Will you be kind enough to give me your opinion of the value of Mexican Guano? I see it advertised and greatly recommended in several agricultural papers. I have some intention of trying it, but thought I would ask the opinion of the RURAL before purchasing. What is its value compared with Peruvian Guano? How should it be applied?—J. D., *Newark, New Jersey, April*, 1854.

Mexican guano may be considered as the insoluble residue of Peruvian guano. If you were to take a few pounds of Peruvian guano, and leach it for several days, the lixiviated mass would be something resembling Mexican, Saldanha Bay, or any guano found on coasts where rain is frequent. The superiority of the Peruvian guano is owing, not to difference in the birds that deposit it, or to a difference in the fish consumed, but to the fact that rain seldom or never falls on the Peruvian coasts, Chincha Islands, &c., and therefore all the soluble matter remains in the guano. But these soluble salts consist principally of ammonia and alkaline phosphates, and are the two ingredients of most value in all manures. In lixiviated Peruvian guano, or Mexican and Saldanha Bay guano, we get little ammonia and soluble phosphates. Its most valuable constituent is the insoluble phosphate of lime, which, to act quickly, needs to be converted into a superphosphate by treating with sulphuric acid. From the fineness of the particles, however, it is more readily dissolved in the soil than any ones mechanically prepared phosphate of lime would be, and hence is more valuable.

It is not an agreeable task to assign the true value of an article exposed to public sale; but as our correspondent asks our opinion, we will say that we should prefer Peruvian guano at $50 per ton, for wheat, corn, potatoes, grass, &c., rather than Mexican at $20. It may be applied in the hill, or sown broadcast. We are sorry to say, it will lose little or nothing by exposure.

HOW TO GET A PATENT.—Will you please inform me, through the RURAL, how I must proceed to get a patent for a machine, without going to Washington?—what it will cost, &c.? and oblige one of your subscribers.—A., *Meadon, N. Y., April*, 1854.

APPLY to some Patent Agent in New York or elsewhere. ALFRED E. BEACH, of New York, (whose advertisement you will find in the RURAL,) will attend to your business.

PATENT IRON SCYTHE-SNATHS.—Please inform me through your paper, where the patent iron scythe-snaths are manufactured. Also the name of the manufacturer.—I. B. T., *Henry, Ill.*,

We believe the article named is manufactured by CHAS. CROW, of Port Byron, Cayuga county, N. Y.

CULTIVATION OF ONIONS.—Will you, or some of your correspondents, be so kind as to inform me through the RURAL, what is the best manner of raising onions?—What kind of seed, soil, and manure is best? With a detailed account of their cultivation and yield, under favorable circumstances?—R. B. E., *East Mahoning, Pa.*

FIFE WHEAT.—In answer to an inquiry in the RURAL of March 25th, respecting Fife Wheat, JAMES IRWINE, Millans Bay, Cape Vincent, N. Y., informs us he has some of good quality, which he sells for $2,00 per bushel.

GET SPRING CROPS IN EARLY.

THERE is a great advantage in sowing and planting early. Taking one season with another, there is less risk from frost than from dry weather in the latter part of spring, or the early part of summer. Some crops can be re-sown, if a chance cold, wet spring should destroy the first sowing.

We sowed a field of marrowfat peas three weeks sooner than usual, and they came forward so early that we sold them green in the pod, for more than $50 an acre over the expense of picking and carrying to market, and in addition had a moderate crop come to maturity.

Early potatoes always bring a good price in any location. A plot of these planted as soon as the frost is out of the ground, will be quite likely to produce a little extra "change" just when it will be very convenient, to say nothing of the luxury of having early new potatoes for home use. Should the first planting happen to be destroyed, the use of the ground need not be lost.—*American Agriculturist.*

CULTURE AND EXPORTATION OF FLAX.—A shrewd manufacturer of flax goods who has just returned to Europe from an extensive tour in the United States, in view of the impending struggle, and the closing of Russian ports, in an able article in an influential commercial paper says—"We are mistaken if, before the lapse of five years, flax be not exported to Great Britain from the United States." And then alluding to the interest now taken in the United States in the growth and preparation of flax, and the probability of the erection of flax manufacturing mills in New England, he argues the necessity of stimulating the growth of flax in the United States for exportation. This is a matter well worthy of the consideration of our farmers.

SEPARATION OF CREAM FROM MILK.—A syphon for dairymen is now in use in Scotland, by means of which the milk is drawn away from the cream, instead of skimming the cream off the milk.

Orchard and Garden.

SEASONABLE HINTS FOR THE GARDEN.

If peas are not already in the ground, they should be sown immediately, on a well drained, deeply pulverized soil. If you intend to pole them, they should be sown in rows at least three feet apart. If not, they may be sown thinly in rows eighteen inches to two feet apart, and as they grow, hoe the soil up on the southern side. This keeps the roots moist, and the vines will fall all one way. A slight sprinkling of plaster just as the peas break through the soil, will be found valuable. The *Prince Albert* and *Marrowfat* are well known and excellent varieties.

Celery should be sown in a warm border, the earlier the better. Transplanting, before putting them in rows, is of great advantage to the plants. There are few, if any, better varieties than the *White Solid*, if it can be obtained genuine.

The *Early York* and *Drum-head* Cabbages should be sown on a light new soil, not too rich in vegetable mould. They, too, are much benefited by transplanting. The same remarks will apply to Broccoli, Cauliflowers, &c. *Purple Cape* Broccoli, and *Walcheren* Cauliflower are good varieties.

Beans are indispensable in every garden. It is an every day dish for the table, nutritious and palatable. It can be served up in endless variety of forms, good in all. The *Mohawk Bush Bean* is a good variety, and stands frost better than any other. Lima beans should be planted in hills like Indian corn. They require a very warm, dry soil, to bring them to maturity in this climate. Many sow them in drills, but they do far better in hills three or four feet apart. Put five or six seeds in a hill; three plants, however, will be sufficient. Unleached wood ashes, thoroughly incorporated with the soil before planting, we have found specially beneficial for beans.

Lettuces delight in rich, light, dry mould. They should be sown in drills, and in dry weather. As they are transplanted with difficulty, they should be sown where they are intended to remain, thinning them out as desired. They should be frequently hoed. Superphosphate of lime, *if good*, is an excellent manure for Lettuce, stimulating their growth in a most surprising manner.

Radishes require very little care in their cultivation. The soil should be light, deep and rich. The radishes may be sown among onions, carrots, beets, &c. They should be thinned out, if too thick, to an inch apart.—They should be eaten when young and crisp. Coal ashes are said to be an excellent dressing for radishes.

Water Melons must not be forgotten; a light, dry soil, well pulverized, and manured with well rotted compost, suits them best. They should be planted in hills, about six feet apart, and four to six seeds in the hill. The *Black Spanish* is considered the best variety in Western New York. The *White Imperial*, if the seed can be obtained pure, is also very fine. The *Long Island* are good early varieties.

Squashes require similar treatment to Water Melons. The *Boston Marrow* is considered the best variety. The *Missouri Cushaw* is very good. The *Valparaiso*, when first introduced here from South America, was very fine, but it is now run out, and is only good for stock.

TO DESTROY THE PEACH GRUB.

Eds. Rural:—I observed in a late number of the Rural, an inquiry for some remedy for destroying the peach grub. I am induced to send you one which I learned upwards of 30 years ago, and which, when properly applied at the right time, I have never known to fail. It is pretty well ascertained, that the eggs are deposited from the middle to the end of the seventh month (July.) About the first of the eighth month, or sooner, take a kettle of boiling water, pour it all around the body of the tree a foot high, and let it run into the ground a gallon to each tree. If the worms have got far into the bark, dig them out, but it will effectually destroy all within reach or near the surface.—Don't spare the water, it will help to give the trees a more vigorous growth. We had trees that were so much affected that a greater part of the bark had to be torn off to get the grub out, yet they have continued to grow thriftily. Try it.—E. H. Prior, *Ledyard*.

Grafting Pears on Mountain Ash.—A correspondent of the *Maine Farmer* says, that five years ago he grafted several Bartlett pears on Mountain Ash stocks. Last year one of them bore very full, more so than is usual on pear stocks. The flavor of the pear was excellent, not at all changed by the stock. He set them the first of May. He has also grafted them on the *white* thorn, and got *some* growth, but they do not do well, nothing like so well as on the Mountain Ash, "which is a very good stock to graft pears upon." He does not say how it compares with the Angers quince stock.

PETUNIA PUNCTATA.

The White Petunia (*P. nyctaginiflora*) is a native of South America, near the mouth of the Rio de la Plata, where it was discovered in 1823. The Purple Petunia (*P. violacea*) was discovered in 1830, growing on the banks of the river Uruguay, Buenos Ayres. As both these plants were readily propagated, both by cuttings and seeds, they soon spread over Europe and America, and now make one of the chief ornaments in all gardens. By hybridization, care in the selection of seeds from the best plants, and general good culture, an innumerable number of good plants have been raised, far superior in size and beauty to the original. When a flower of particular merit is obtained, it is propagated by cuttings, and soon disseminated. Those who grow them as annuals in the open ground, should be careful to save seed from only the best flowers, and it is well to remove all poor flowers from the bed.

Among the best Petunias is the one we figure in this article, *Petunia pautata*, as it is of fair form, and of a remarkable color, approaching to blue, with a sort of variegated stripe of white, which forms a pretty contrast with the ground color.

AMERICAN POMOLOGICAL SOCIETY.

The fifth session of this National Association will be held at Horticultural Hall, in the city of Boston, Mass, commencing on Wednesday, the 13th day of September next, at ten o'clock A. M.

It is intended to make this assemblage one of the most interesting that has ever been held in this country, on the subject of Pomology. All Horticultural, Agricultural, and other kindred Associations, of North America, are therefore requested to send such number of delegates to this Convention, as they may deem expedient.

Pomologists, nurserymen, and all others interested in the cultivation of good fruit, are also invited to attend the coming session.

Among the objects of this Society, are the following:

To ascertain, from practical experience, the relative value of varieties in different parts of our widely extended country. To hear the Reports of the various State Fruit Committees, and from comparison of results, to learn what fruits are adapted to general cultivation; what varieties are suitable for particular localities; what new varieties give promise of being worthy of dissemination; and especially, what varieties are generally inferior or worthless, in all parts of the Union.

In order to facilitate these objects, and to collect and diffuse a knowledge of researches and discoveries in the science of Pomology, members and delegates are requested to contribute specimens of the fruits of their respective districts; also papers descriptive of their art of cultivation; of diseases and insects injurious to vegetation; of remedies for the same, and whatever may add to the interest and utility of the Association.

The Massachusetts Horticultural Society has generously offered to provide accommodations for the Society, and also to publish its proceedings free of expense.

All packages of fruit intended for exhibition, may therefore be addressed as follows:—"For the American Pomological Society, Horticultural Hall, School street, Boston, Mass.;" where a Committee will be in attendance to take charge of the same.

All Societies to be represented, will please forward certificates of their several delegations, to the President of the American Pomological Society, at Boston.

Marshall P. Wilder, *President*.
H. W. S. Cleveland, *Secretary*.
Boston, April 1st, 1854.

Grapes.—According to my experience, the most productive way of growing the American Grape, is to let it climb into a tree. In April, 1839, I planted out some Isabellas, from cuttings of the previous spring, on the south side of a close board fence, and allowed them to run *wild*, for an experiment, into some peach trees on the other or north side of the fence. From that period to the present they have never been touched by a knife, for I liked to see them riot in their native luxuriance. They annually bear in immense profusion; so enormously, indeed, that it must be witnessed to be credited. They have, however, nearly destroyed their supporters, which, of course, I could not prune on account of the grapes; but the latter hide the long, naked branches of the peaches consequent upon the desuetude of the pruning knife. So says a Canada correspondent of the Horticulturist.

CULTURE OF PIE PLANT.

All who have had any experience in the matter, are fully convinced of the luxury and healthfulness of fresh and succulent substances for pies at all times of the year. Yet the idea has never suggested itself to many, or if it has it is not practiced upon, that a cycle of such substances may be had so as to furnish fresh material through the year. The Pie Plant furnishes a beautiful link in this connecting chain, coming as it does, when Apples begin to lose their freshness, or, as they are in many families, not to be found at all, and before Gooseberries which have not yet found place in one garden of twenty in any tolerable extent. Yet how few cultivate the Pie Plant! Why, we know not, for nearly all are fond of it when properly cooked, and it can be raised as easily as the Burdock when once introduced into the soil. Neither of them will grow successfully in poor soils; the Burdock chooses a location for itself, and the Pie Plant is nearly always thrust into some poor corner of the neglected garden, and then blamed excessively if it will not produce large, fine foot stalks where even common weeds would refuse to grow, and where no grass would vegetate, unless it be the ever intrusive Quack. We once planted some miserable, puny roots of the Pie Plant in rich deep soil. The consequence was, the next year the size of the foot stalk increased one-half. The following autumn before the setting in of frost, we covered the bed some three or four inches deep with fresh horse manure. This kept the roots in fine preservation through the winter; and early in the spring, when the ground was fairly settled, the manure was mixed with the earth by a deep and thorough forking. No wonder that the vigor of our plants was increased in a wonderful proportion! As soon as any buds appeared they were taken off — the leaves were cut as often as they became large enough for use. The next autumn we gave the usual protection of manure, and the following spring we hoed it in. This coarse we have followed for four years with some plants we took from neglected grass land. Now mark the result: from the miserable, puny leaves and stalks of the first year's growth, when the stalks were not more than six inches long and proportionally slender, we have now large, broad leaves, and stalks so strong that all who see them are inquiring where we got our new variety of plant, so luxuriant, strong and beautiful. The answer is conclusive: cultivation has done it; and the simple process we have followed if pursued by others, will, on a small piece of land, and with very little labor, furnish them with an abundance of pie material at the season when, with many, there is the greatest dearth in the article. If gypsum is sown on the young leaves when the dew is on, it will push their growth finely by aiding the manure at the roots in giving them nourishment. We have no doubt but this article can be raised in the way we have adopted, so as to furnish it to cultivators at the rate of enough for a pie for half a penny. What a comfort!—*Horticulturist*.

Strawberries.—We ought to say a word at this season about strawberries—a fruit that everybody, who owns or occupies a patch of land, ought to cultivate. The strawberry is a hardy plant and very easily cultivated. We are persuaded, that a great mistake is made in manuring it too much. Give it a fair chance; keep down the weeds; and keep it well moistened—and with a moderate amount of manure, you will be sure to get abundant fruit, without a superfluity of vines.

Tanners' Bark is now understood to be capitally adapted to the strawberry; spread it completely over the soil; it will keep the fruit clean and the soil moist. This is the true mulching for the strawberry.—*Spring. Rep.*

Domestic Economy.

RECIPE FOR HARD SOAP.

Put into a keg or other small vessel, two thirds of a peck of caustic or stone lime, which must be slaked for the purpose. Then stir into it 5 pounds sal soda, (the lump soda, and not the flour.) Set up a leach of one barrel of good wood ashes, and have the ley running at the time the lime and soda are prepared. As fast as the ley is procured, put it into the keg of lime and soda, stirring it thoroughly at the same time. Let it settle from time to time and dip off the clear part carefully into a kettle containing 15 pounds of grease, and keep it boiling with a gentle heat. Continue to dip the running ley first into the lime, and after it has there settled out into the grease kettle until the ashes have become spent and the ley is too weak to be of further value. The soap will by this time undoubtedly be done; but if it should fail from any cause, a little more strong lye passed through the lime, or a little more boiling will perfect the process. The soap can then be poured off into a tub to cool, and afterwards cut up into bars or cakes and dried.

This soap is cheap, and with a little age, all-mirable for all family purposes. Soda can be procured for five cents a pound, and if it is desirable to make the soap harder, more of the soda and less of the ley is to be used, and *vice versa*.

Wash for Sunburn.—Take two drachms of borax, one drachm of Roman alum, one drachm of camphor, half an ounce of sugar-candy, and a pound of ox-gall. Mix, and stir well for ten minutes or so, and repeat this stirring three or four times a day for a fortnight, till it appears clear and transparent. Strain through blotting paper, and bottle up for use.

A correspondent of the *Boston Cultivator* says that camphor gum laid in places infested with pismires will drive them away.

Mechanic Arts, &c.

LIST OF PATENT CLAIMS

Issued from the United States Patent Office,
For the week ending April 4, 1854.

Solomon Andrews, of Perth Amboy, N. J., for improvement in drop and die forging and punching machine. Patented in England, Oct. 7, 1852.

Bernard J. La Mothe, of New York, for improvement in railroad cars.

B. A. Larendet and Henry Lower, of Baltimore, Md., for improvement in treating cane fiber for paper and other purposes.

Rodney Miller, of Middlefield, Ohio, for improvement in carriage tops.

Ohlin Nichols, of Lowell, Mass., for improvement in chain cable stoppers.

Elijah Roberts, of Rochester, N. H., for improvement in gates for water wheels.

David A. Wells, of Cambridge, Mass., for improved preparation of vegetable fibers.

Wm. H. Atkins, (assignor to Samuel J. Parker,) of Ithaca, N. Y., for improvement in cups for sewing machines.

Lorenzo D. Goodwin, of Pennville, N. Y., for improvement in water wheels.

Willis Hunniston, of Troy, N. Y., for improved candle mould apparatus.

E. R. Ball, of Kalamazoo, Mich., for improved bridstead fastenings.

Solomon G. Booth, of New York, for improvement in machines for corrugating sheet metal.

Benj. Eakins, of Spring Garden, Pa., for improvement in valve cocks.

A. K. Eaton, of New York, for improvement in amalgamating gold and silver.

Henry W. Farley, of East Boston, Mass., for improvement in railroad frog guards.

Phanuel Flanders, of Lowell, Mass., for improvement in cranberry winnowers.

Wm. Gates, Jr., of Frankfort, N. Y., and H. J. Harwood, of Utica, N. Y., for improved machine for making friction matches.

Charles Goodyear, of New Haven, Conn., for improvement in treating rubberizing gums.

Carmi Hart, of Bridgeport, Conn., for improvement in machine for cutting veneers.

Stephen Hedges, of New York, for improved combined table and chair.

L. O. F. Meyer, of Newtown, Conn., for improvement in treating caoutchouc and other vulcanizable gums.

Morris Mattson, of Boston, Mass., for improvement in enema syringes.

John Nesmith, of Lowell, Mass., for improvement in machines for making wire netting.

Abiel Pease, of Enfield, Conn., for improved drill for metal drilling.

Joseph Sollenberger, of Higginsport, Ohio, for improvement in training the vine.

Jacob Edson, of Boston, Mass., for improvement in pumps.

Jas. McCarty, of Reading, Pa., for improvement in heating skelps for the manufacture of wrought-iron tubes.

Wm. S. Loughborough, of Victor, N. Y., for improvement in bit fastening for cast iron bench planes.

Geo. W. Livermore, of Cambridgeport, Mass., for improvement in closing the ends of stairs.—Patented in England, Aug. 31, 1853.

T. W. Lafetra, of New York, for improvement in machine for drying tobacco.

John Ogden, of Philadelphia, Pa., assignor to Charles S. Ogden, for improvement in locking railroad chairs.

For the week ending April 11, 1854.

James MacGregor, Jr., of Troy, N. Y., for improved coffee pot.

Elbridge Marshall, of Clinton, N. J., for improvement in seed planters.

Wm. Ball, of Chicopee, for improvement in mills for grinding oats, &c.

Thos. Carter, of Laurens District, S. C., for improvement in seed planters.

Stephen Colwell, of Philadelphia, Pa., for improvement in iron buildings.

Samuel J. Parker, of Ithaca, N. Y., for improvement in sewing machines.

Hiram Stafford, of Mount Pulaski, Ill., for improvement in rat traps.

Thos. E. Seay, of Columbia, Va., for improvement in brick machines.

Wm. A. Shaw and Geo. Parker, of Boston, Mass., for improvement in street gas lamps.

Henry Sigler, of Houston, for improvement in fish hooks.

Chas. Leavitt, of Quincy, Ill., assignor to Sterling B. Cuckill, of Nashville, for improvement in machines for cleaning cotton.

Jas. Harrison, Jr., of Milwaukie, for improvement in sewing machines.

Jase Toll, of Locust Grove, Ohio, for improvement in rat traps.

Geo. W. Thayer, of Springfield, Mass., for improvement in trusses for iron bridges.

Nathan Thompson, jr., of Williamsburg, for improvement in reversible life boats.

John Webster, of New York, for improved lubricator.

Henry Allen, of Norwich, Conn., for improved boring and mortising machine.

Francis Arnold, of Haddam, Conn., for combination of foot-stoves and lanterns.

Stephen P. Brooks, of Boston, Mass., for improved iron frame upright piano forte.

Julio T. Buel, of Whitehall, N. Y., for improved attachment for fish hooks and artificial baits.

Lewis S. Chichester, of Brooklyn, N. Y., for improvement in dressing flax and hemp.

Albert G. Curtis, of Portland, for improved swell-note attachment to piano fortes.

John Elgar, of Baltimore, for improvement in door hinges.

Richard H. Emerson, of Chicago, for improvement in earth cars.

Alex. Hall, of Lloydsville, Ohio, for improvement in piano forte actions.

A New and Delicate Method of Firing Gunpowder Under Water.—At a meeting of the Royal Institution, January 20th, Professor Faraday referred to the following experiment: Some copper wire had been covered with sulphuretted gutta percha, and after some months it was found that a film of sulphuret of copper had formed between the metal and the envelope. When half the gutta percha was cut away in any spot, and then the wire removed for about a quarter of an inch, so that the only conducting medium was the thin film of sulphuret adhering to the remaining gutta percha, it was found that an intensity battery would cause this film to enter into intense ignition and fire gunpowder with the greatest ease. The experiment was shown in the lecture-room of firing gunpowder at the end of eight miles of wire; and Mr. Faraday stated that he had seen it fired by this means through one hundred miles of covered wire immersed in a canal.—*Wash. Star*.

WOOLEN AND COTTON MIXED GOODS.

There are many who think when they have purchased a piece of "cheap woolen goods," they have made a great bargain. There never was a graver mistake committed. Thousands and thousands of pieces of goods are sold in the shape of narrow and broadcloths, as being all wool, while in fact, they are composed of at least twenty per cent. of cotton. The latter is mixed and carded with the wool, and all being dyed with the same color, it is very difficult to detect the imposition. We presume, that many merchants sell such goods under the belief that they are genuine—composed wholly of wool. The manufacturers know all about the deception, and no doubt the great majority of the large merchants are aware of the fact also. Any imposition practiced upon the community in the shape of an article of manufacture, deserves the severest censure. Cotton can easily be detected in any piece of goods, even when mixed in the process of carding, by submitting a small strip of the goods to the action of a little sulphuric acid, mixed with very hot water. The acid will discharge the color from the cotton, while the color of the wool will remain almost unchanged. There are very few colors, in cotton, but what are far more fugitive than those on wool; this is the reason why the warm sulphuric acid solution is a good test for cotton in cloth.

FACTS FOR MECHANICS.

St. Paul was a mechanic, a carpenter. The great architect of the universe, in the mechanism of the heavens and the earth with its productions, displays a power and skill which human hands may attempt to imitate in vain.

Next to farmers, mechanics are the most numerous and important class of community, and have much inducement to become men of science and knowledge. Their operations bring into use scientific principles which it is their interest to understand.

Every apprentice boy who spends a short time daily in useful reading, is likely to become a man of influence and respectability. Character is the best capital that a young man can have in commencing business.

Mechanics, like farmers, make enlightened statesmen. In 1826, a few farmers in a small village in Massachusetts, organized a Lyceum for mental improvement. From that humble origin has risen the general institution of Lyceums in every section of both continents.

It is evident that if the farmers and mechanics throughout the country should enlist in earnest in the great work of self education, they might reform and hand down pure republicanism to posterity.

RECENT FOREIGN INVENTIONS.

Paper from Peat.—J. Lallemand, of Besançon, France, patentee.—The inventor first washes the peat thoroughly to separate all the earthy from the fibrous portions, and then places there latter in a strong caustic lye, where they are suffered to souk for twenty-four hours. They are then removed and placed for about four hours in a bath of weak hydrochloric acid and kept constantly agitated. After this they are washed in clear water and then placed in a weak alum solution. After this they are bleached with chlorine, and mixed with from five to ten per cent. of rag pulp, and then go through the other common processes for making paper.

Copying Bank Bills.—Thomas Moss, of London, patentee.—This invention has for its object the providing of greater security against bank bills being copied by anastatic or other printing processes, and consists in printing the bill in the ordinary manner, and also printing the same surface with a device more or less extensive with transparent ink, after or before the other impression is made.

Machinery in the United States.—The Report of the British Commissioners to the New York Crystal Palace, speaking of the manufacture of machinery in the United States says:—"The comparative fewness of the people is compensated by the eagerness with which they call in the aid of machinery, in almost every department of industry, as a substitute for manual labor. In making their plows, eight men by machinery finish thirty in one day; a shoemaker's last is made in a minute and a half, and one woman, by a machine, does the work of twenty by hand."

Wood and Iron Ships.—A correspondent of the London Artisan, (J. P. Drake, Naval Architect,) has written a long communication, condemning the use of iron ships, and speaks enthusiastically of the superiority of wooden vessels. He alludes to American clippers, and calls them "splendid examples of naval architecture for mercantile purposes." He however criticises the unfortunate San Francisco steamer, and says she was badly constructed, having a preponderance in the after, instead of the fore body. This, he said, destroyed her steering qualities.

Iron Houses.—Mr. A. J. Saxton, of Brooklyn, claims to have invented and patented a new mode of erecting buildings entirely of iron—posts, beams, rafters and everything. The walls are hollow, filled in with composition, which preserves an even temperature, and affords excellent facilities for warming, ventilation, speaking tubes, &c. He says small houses may be made much cheaper of iron than of wood, besides being every way superior when built.

Crystallotypes.—Great progress has lately been made in this beautiful art by Mr. Whipple, the daguerreotypist, and his last specimens have great merits as works of art, resembling fine mezzotint engravings. One great advantage in this art is, that copies can be multiplied from old daguerreotypes. Persons having ordinary sized daguerreotypes of deceased friends, can have them enlarged, and perfect copies taken on paper, for framing.—*Boston Times*.

Educational.

HE NEVER GRADUATED!

No, he never graduated, it is true! He does not shake in your face a roll of parchment, as a commitment of title to be called a scholar, or a deed of warranty that he knows as much as some leathern-headed professor, who obtained a place among the College Faculty, on the ground that his father was a professor before him—and on no other! He did not ride on the backs of his class-mates through a four years' course, and escape expulsion, or at least degradation to a lower class, fast because his venerable paternal ancestor, yclept "the Governor," paid regularly all his college dues. He did not manage just to keep his head above water by means of a square-topped and high-crowned college cap, and the use of a few sonorous Greek and Latin phrases, lugged by the head and shoulders into conversation on all possible occasions. He never made pretence of study until the diploma was in his possession, and after that neither studied nor pretended to do so, and if his abilities were called in question offered as a rebutter a piece of parchment about the size of a Free Mason's apron, covered over with black letter and cabalistic signs, to translate which he himself is obliged to have recourse to a College Freshman!

He has done none of these things, but he has done far better. He would have gone to college if he could, and profited by its advantages but he was too poor; so he did the next best thing which lay within his power. He attended the free public schools until he had mastered all the branches taught in them; then he wrought at a trade, at intervals, and earned a little money, which he spent attending for a few terms at an excellent academy. He has studied intensely, both in school *and out of school*. He is a student still, and far more competent as an instructor than half of the college graduates.

Do the Board of Trustees design to refuse him the vacant place in the high-school just because he has never obtained a diploma, and give it to the other candidate who has one—and that is his chief recommendation? The prestige of an "A. B." title is very well, other things being equal; but it ought to be the last, as it certainly is the least, recommendation. Let boards of trustees and inspectors of schools bear these things in mind, and let the test of competency be a rigid examination, instead of paper or parchment testimonials, and a much less number of failures in the departments of instruction will be likely to occur.

[Written for Moore's Rural New-Yorker.]

"READING DIFFERS FROM TALKING."

In No. 1, of the present volume, page 8, of the Rural, is an article under the above heading, on which I wish to say a few words. I am not sure that I fully understand the writer, but if I do, I must be allowed to dissent somewhat from his views. I have been a teacher of youth for many years, and have done something in the way of making readers; yet I have known little of the "fears, tears and trembling," of which the writer speaks.

Good reading is one of the finest accomplishments; yet it is generally admitted, that good readers are scarce. Fluency in reading, is not necessarily excellence. Many can repeat words rapidly, and pronounce them correctly, who are yet far from being good readers. They read in a singing, whining, or monotonous tone; with little or no regard to inflection, emphasis, or cadence; so that, to a cultivated ear, their reading is anything but agreeable.

The great difficulty in the way of making good readers, is, the early formation of bad habits. If these can be prevented, as they certainly can, with proper and seasonable care, the task of making good readers would be comparatively easy, (I speak from experience,) and then we should see how much, and how little, "reading differs from talking." There *is* a difference between them, but the truth is, common or ordinary reading does not show what it is, or rather, what it should be. Such reading is unnatural, the result of deficient early training; and is both offensive to correct taste, and difficult to be corrected.

Every correct reader is aware of the proper difference, and knows also when to make it.—To read every thing in the "talking" style would be as much out of good taste, as to read every thing in a pompous, or declamatory style. Good sense and correct taste must decide. In talking, or conversation, the voice seems to come only from the mouth; in reading it should often come from the chest or the lungs. Compare, for illustration, "Rienzi's Address to the Romans:"

> "I come not here to talk. You know too well
> The story of our thraldom. We are slaves," &c.,

with the "Downfall of Poland," by Campbell,

> "Oh! sacred Truth! thy triumph ceased awhile,
> And Hope, thy sister, ceased with thee to smile," &c.

The former should be read in a strictly conversational style, varied in some parts, according to the excitement, or earnestness of the speaker. The latter should be read with a greater degree of dignity, and fullness of tone. See also, "Address to a Mummy," the whole of which should be read like talking, except the last two stanzas.

As a general rule, compositions that are strictly narrative, whether prose or poetry, should be read in the style of conversation; while others should vary according to the nature of the subject. Amid all the varieties of composition there is room for every variety of reading, from the plain, familiar style of conversation, to the full, heavy, deep-toned style of the most dignified declamation. H.

Out West, April, 1851.

[Written for Moore's Rural New-Yorker.]

SCHOOL IS OUT.

Yes, school is out; with all its little troubles and vexations; with all its ever-changing, never-ending toils and duties; its hard mathematical questions; its twisted sentences in Young, Pollock, or some other author whose object seems to be, to puzzle the brain with as much senseless trash as possible, with here and there an idea for the purpose of palming it off as poetry! These are all gone; but are there no things of a different nature, that have sunk anew and gone like these forever?

Are there no bright recollections, no memories which are embalmed in the heart? Yes, the four months have brought many a happy hour; many a warm greeting from those on whom I could look, and call them scholars and friends, and place in them my confidence.—School is closed. It seems impossible that it is so! Those kind "good mornings"—those ready compliances with each request—those well conned lessons—those regular recitations in Algebra, Geometry, and other studies of the same kind, are passed; yes, and with me, such things are passed forever! Good bye to one of the most important occupations in which man was ever engaged! Good bye to scholars as such! Good bye to patrons who have so kindly assisted me through my toils! and good bye, forever, to that pleasant though sad day usually called the "Last Day."

READING AND THINKING.

This is emphatically the age of reading.—But is it one of thinking also? Our grandfathers had fewer books, still fewer newspapers, and no system of popular lecturing; yet what they acquired they had time mentally to digest, and so became sounder men. When Bacon said that reading made the correct man, but conversation only a ready one, he meant the reading of a more thorough age than this.—What conversation was then, common reading is now. Men read light and easy books instead of talking with their gossips, and gain very little if any more improvement.

The true end of books, or even of good newspapers, is not merely to gratify curiosity, but to supply facts and principles, which may be laid away in the mind, to be drawn upon subsequently, as the exigencies of life demand. He who reads without digesting, even if he learns how to think, never has a stock of ideas on hand to think about. He is like the Israelites in Egypt, when they had no straw to make bricks. But a careless reader is also a bad thinker. The mind of a thoughtful reader is like the bolting apparatus of a mill, separating the bran from the flour, coincident with the act of reading. The hasty reader neglects this duty. Men forget what they had read, almost as soon as the book or paper is laid down. They never, or rarely, exercise their judgment. They don't think.—*Ledger.*

Self Conceit.—A teacher was sick. One of the larger misses of the school took her place for a few days; and, puffed up with self conceit at the idea of her temporary elevation, she flourished the ferule with great activity, and required the same deference paid to her which was always given cheerfully to the regular teacher.

COURT-HOUSE AND CITY HALL, ROCHESTER.

Useful Olio.

The Court-House and City Hall, erected in Rochester some two years since, and more recently completed, is one of the most beautiful and imposing edifices in Western New York—alike creditable to the County and City. Tho' the above engraving was given in a previous volume of the Rural, it will be new to a great majority of its readers.

This building is located on the corner of Buffalo and Fitzhugh Streets, and is constructed of brick and Lockport granite. It fronts on Buffalo Street, 183 feet 4 inches—extending back on Fitzhugh 87 feet 4 inches. The height to the top of the dome is 165 feet.

One-half is used by the County; the other half by the City. The first story of the City division is occupied by offices for the Mayor, Clerk, Treasurer, Superintendent, Surveyor, &c. The Common Council Chamber, 40 by 53 feet, is in the second story; also the Law Library and County Judges' rooms. The third story is the City Hall, 53 by 80 feet, and 20 feet in height. The first floor of the half occupied by the County contains the County Clerk's Office, 23 by 53 feet; also the Surrogate's, County Treasurer's and Sheriff's Offices. In the second story is the Supervisor's Room, with the Controller's Office, occupying a space of 23 by 53 feet—the Superior Court Room, 30 by 40 feet,—a consulting room, 23 by 15 feet,—and the District Attorney's Office, 23 by 23 feet. In the third story is the Court Room, 52 by 64 feet, with two Jury Rooms adjoining.

The cost of the building was $65,000. The City has furnished a bell, weighing 6,200 lbs., which is hung in the dome and only to be used in case of fires. The observatory in the dome is the most elevated in the city, and presents a fine view of the suburbs and surrounding country, Mt. Hope Cemetery, Lake Ontario, etc.

OLD TIME WINTERS.

In 1564 the cold was so intense that the Thames was covered with ice sixty-one inches thick. Almost all the birds perished.

In 1692 the cold was so excessive that the famished wolves entered Vienna, and attacked beasts and even men. Many people in Germany were frozen to death in 1695, and 1699 was nearly as bad.

In 1709 occurred that famous winter called, by distinction, the cold winter. All the rivers and lakes were frozen, and even the sea for several miles from the shore. The ground was frozen nine feet deep. Birds and beasts were struck dead in the fields, and men perished by thousands in their houses. In the south of France the wine plantations were almost destroyed, nor have they yet recovered from that fatal disaster. The Adriatic sea was frozen, and even the Mediterranean about Genoa, and the citron and orange groves suffered extremely in the finest parts of Italy.

In 1716 the winter was so intense that people traveled across the straits from Copenhagen to the province of Scania, in Sweden.

In 1726, in Scotland, multitudes of cattle and sheep were buried in the snow.

In 1740 the winter was scarcely inferior to that of 1709. The snow lay ten feet deep in Spain and Portugal. The Zoyder Zee was frozen over, and thousands of people went over it. And the lakes in England froze.

In 1744 the winter was very cold. Snow fell in Portugal to the depth of twenty-three feet on a level.

In 1754 and 1755 the winters were very severe and cold. In England, the strongest ale, exposed to the air, in a glass, was covered with ice one-eighth of an inch thick.

In 1771 the Elbe was frozen to the bottom.

In 1776, the Danube bore ice five feet deep, below Vienna. Vast numbers of the feather and finny tribes perished.

The winters of 1774 and 1775 were uncommonly severe. The Little Belt was frozen over.

A Truth.—To be enslaved is to have no will of our own in the making of laws.

THEORY OF ODORS.

So much has been written on our five physical faculties—sight, hearing, taste, touch, and smelling—that it has occupied a large portion of the various published works from the time when printing was invented. The three senses first named have fairly been written out; but not much has yet appeared, relating directly or indirectly to the others. Mr. Septimus Piesse now gives us a theory of the olfactory nerve in distinguishing perfumes. Scents appear to influence the smelling nerve in certain definite degrees. There is, as it were, an octave of odors, like an octave in music. Certain odors blend in unison as the notes of an instrument. For instance, almond, heliotrope, vanilla, and orange blossom, blend together, each producing different degrees of a nearly similar impression. Again, we have citron, lemon, verbena, and orange peel, forming a higher octave of smells, which blend in a similar manner. The figure is completed by what are called semi-odors, such as rose and rose-geranium, for the half-note; petty grain the note; neroly, a black key, or half-note; followed by the fleur d'orange, a full note. Then we have patchouly, sandal-wood, and vitivert, with many others, running into each other. From the perfumes already known, we may produce, by uniting them in proper proportions, the smell of almost any flower. When perfumes are mixed which strike the same key of the olfactory nerve, no idea of a different scent is produced, as the scent dies off from the handkerchief; but when they are not mixed upon this principle, then we hear that such and such a perfume becomes "sickly," or "faint," after it has been in use a short time.—*Bestick's Annals of Pharmacy and Chemistry.*

A NEW MORMON ALPHABET.

They have invented a new alphabet at Salt Lake, of which the following description is given:—The Board of Regents, in company with the Governor and Heads of Departments, have adopted a new alphabet, consisting of thirty-eight characters. After many fruitless attempts to render the common alphabet of the day subservient to their purpose, they found it expedient to invent an entirely new and original set of characters. These characters are much more simple in their structure than the usual alphabetical characters; every superfluous mark supposable is wholly excluded from them. The written and printed hand are substantially merged into one. We may derive a hint of the advantage to orthography from spelling the word eight, which in the new alphabet only requires two letters instead of five to spell it, viz: at. The orthography will be so abridged that an ordinary writer can probably write one hundred words in a minute with ease, and consequently report the speech of an ordinary speaker without much difficulty. In the new alphabet every letter has a fixed and unalterable sound; and every word is spelt with reference to given sounds.

THE RISE OF NEWSPAPERS.

The Boston Post furnishes some interesting facts in regard to the rise and early progress of newspapers. In James 1st's day, in England, news was occasionally circulated in small pamphlets. The earliest one preserved in the British Museum, is entitled "News out of Holland," of the date of 1619, and printed by N. Newbury, and there are others of the date of 1620, 1621, 1622. In 1622, these quarto issues were converted into a regular weekly issue, entitled "News of the present week," edited by Nathaniel Butler—and this was the first weekly newspaper published in England. In Charles 1st's day, these news pamphlets multiplied greatly. In 1622 the "Kingdom's Intelligencer" was commenced in London, which contained a greater variety of matter than had been customary. In a few years the advertisement feature began. It was not until Queen Anne's time, in 1709, that the Londoners had the luxury of a daily journal—"The Daily Courant." Scotland had a newspaper in 1653; Ireland in 1641; Germany in 1612; the American colonies in 1704. The earliest country that had them is supposed to be Italy.

Luther was accustomed to say that three things were requisite to make a divine; namely, prayer, meditation, and temptation.

Sunday Reading.

"YOUTH IS THE TIME."

BY FLORENCE HOWARD.

Go, when the heart is warm with youth;
Go, when the soul is free from care,
Kneel, at the throne of Heav'nly Truth,
And ask for guidance there.

Oh! wait not till the bright days pass,
And cares come thronging round thy way;
This pleasant morn will flee, alas!
And he who finds must seek to-day.

Thrice happy and thrice blest is he
"Who hears religion's warning voice;"
Who seeks, in youth "bright wisdom's tree,"
Whose fruit will make his soul rejoice.

OUR MINISTER.

He is a young man, and one we highly esteem and very much love. His labors are very acceptable to us all, and we should be very loath to part with him, for we might try many, and not be so well satisfied. But there is a serious difficulty with him, and we scarcely know how to get along with it. We have resorted to various expedients, but they are all unavailing—they accomplish nothing. The fact is, our minister has no wife, and we all think he ought to get married, the good of the parish requires it. The good Mrs. *Make-matches*, and that very benevolent and disinterested person, Miss *Tell-more-than-she-knows*, have talked and planned on the subject so much that they are well nigh exhausted, and our minister just pays no attention to them. We all want to know what his intentions are, we think we ought to know, for we are his friends. In truth, we more than half suspect, that he means to get a wife before long, and we all do so want to know who that wife will be. The other day, our minister was seen walking by the side of a young lady who is a member of his church. We *know* it was he; we got up from our seats and went to the window, and looked directly at them. He looked happy—she smiled. We put our bonnets and shawls right on, and going into a neighbor's house, told them all about it. Yes, we did; we said our minister was engaged, we knew it, we saw enough with our own eyes.

He was seen, too, by Miss *Lynx-eyes*, going into that young lady's father's house, the other evening; she perfectly agrees with us that the matter is all arranged. Others think differently; for example, Aunt Deborah, she says she knows our minister has too much wisdom, to marry such a person. She is too short, the parish would not respect her, she wears, too, just one hoop too many on her bonnet, and this shows she is too vain for a minister's wife. Her dress, too, Aunt Deborah thinks, is always too showy, fashionable,—why, said the good old lady, holding up both her hands, after raising her spectacles upon her forehead, in a sort of holy horror, "what would become of the parish if that woman was at the head of it!" She says it will never do for our minister to marry any one here, save Susan *Demure*, or Fanny *Little-thought*. Mrs. *Watch-the-movement-of-things* says the minister goes to see somebody in another parish, and hints with a very wise look, that she has her suspicions who that somebody is. Good Mrs. *Fussy* thinks that the deacons of the church ought to select some suitable person from the congregation, and introduce her to the minister, with some judicious remarks, as one whom God evidently designed from the first, to be his wife.

We are troubled about this thing, we do not believe there will be a revival till this stumbling block is taken out of the way. Our minister should marry some one, and that some one should suit every one in the parish, and we are not sure but he ought to marry some one of us. He has waited long enough. He ought to marry just to stop the speech of the people, if for nothing more. If he would only be frank in telling us about this thing, as he is in preaching, we should be so glad—this *suspense* is dreadful; some writer says it is the "nerves whence agonies are born," and our own experience verifies the assertion. Why only think of it, a few Sabbaths since, he exchanged, and we all thought and said that it was on purpose that he might be published—we, of course, all went to church, and there was not a single word said about it. He went a journey, too, not a great while ago, and we certainly thought he would bring a wife home with him, but don't you think, when he got out of the cars, and a good many of us were looking, he had nothing but his carpet bag. Mrs. *Bear-it-no-longer* says she shall have a right plain talk with him, she shall speak to him just as if he were her own son, she thinks she ought to. We are afraid to talk to him, lest he should think we are anxious either to have him marry some one of our friends, or to marry him ourselves. We do not deny but some of us are marriageable, and if the Providence of God should make a selection from our number, we do not think it would be right for that one to resist the Providence, that is, if the parish could unite in her. We have thought we would write something for the Reflector, so that our minister might see just how we feel. He thinks a great deal of that paper, and when he sees what we have written, we believe he'll be willing to satisfy us, for it will be so easy to please us all. We mean to watch him, for we love him, and we know it would spoil him to get the *wrong* wife. We have almost concluded to ask the postmaster, to whom he writes, and the family where he boards, where he spends his evenings, and to what place he goes when he is absent a week at once.

We do think, if he only knew how badly poor Mrs. *Don't-tell-it-for-the-world* felt because she doesn't know all about his plans, he would at least make a confidant of her, it would be perfectly safe for him to do so, for whenever she tells anything, she charges the listener not to lisp it, for the world, to any one.—*Watchman and Reflector.*

"Unless God," said Dr. Watts, "that I can lie down with comfort at night, not being anxious whether I wake in this world or another."

Miscellaneous.

THE MOTHER'S LAMENT.

And thou art dying now,
My own sweet babe;
Death's hand is on thy brow,
My hopes to shade.
Scarce beats thy little heart,
Thy pulse is low;
Yet beautiful thou art
In life's last throe.

Thy sparkling eyes no more
Emit their light;
Soon to a brighter shore
Thou'll wing thy flight.
Oh! smile once more on me
Ere thou depart;
And may that last smile be
Calm to my heart.

Thy doff'ring spirit tries
Its bonds to break;
To sever earth's cold ties,
Its leave to take.
List! 'tis an angel's voice
Calls thee away;
Say, couldst thou have a choice,
Here would'st thou stay?

Methinks thy spirit-view
Discerns above
Scenes of a holy hue,
Where all is love.
The dew of Death doth rest
On thy fair head;
Still is thy guileless breast,
And thou art dead!

'Tis hard with thee to part
In life's young Spring;
The unchecked tear will start,
Its grief to bring.
Thou wert my all, fair child!
My only one!
Yet pure and undefiled
Death hath thee won.

And now, dear boy, farewell!
I yield thee up,
Though bitterness doth swell
My brimming cup.

[*Boston Transcript.*

DESULTORY PARAGRAPHS.

(Continued from page 91, this volume.)

XXI.

Trifles Reveal the Heart.—There is, after all, something in the fate of those trifles which friends bestow upon each, other that is an unfailing indication of the place the giver holds in the affections. I would believe that one who preserved a lock of hair, a simple flower, or any gift of my bestowing, loved me, though no show was made of it; while all the protestations in the world would not win my confidence in the sincerity of one who set no value on such *little* things. Trifles they may be, but it is in such that character and disposition are oftenest revealed.

XXII.

Occupation Wanted.—The want of "something to do" in which the mind is interested, is one of the deepest wants of our human nature. He who has no occupation, bodily or mental, wherewith to employ himself, is like a dwelling where disquiet and unrest riot, and trample, making that the abode of desolation which would otherwise be the home of peaceful happiness.

XXIII.

The Joy of Joy Giving.—"Imparting pleasure is like putting money at interest,"—it benefits both lender and borrower at once. And no one can be long and truly happy unless others sympathize in and share that happiness. The purest friendship is the most unselfish in its nature. It will labor—aye, suffer alone and uncomplainingly to procure the happiness of the beloved one, "and verily it hath its reward"—its abundant reward.

XXIV.

Judge Not.—Who can unfold, even to his own heart, all the motives that influence and direct his conduct? Who can unravel the mysteries of his own Will,—as well acquainted as he must be with its secret workings,—and say by what he was decided to this course or the other?—what called up that train of thought, or broke it so suddenly for a different one? Yet how much easier it is than to give correct judgment of what dwells in our neighbor's heart! blind as we must be to its hidden impulses, dark as ever are, to mortal eyes, the consequences which are to follow.

XXV.

Indefiniteness and obscurity often make trifling things of vast importance, or seemingly so; for we are awed by what we do not understand.

XXVI.

A Plea for Poetasters.—So much poetry—so many poetasters, male and female—have called forth a mingled strain of ridicule and lamentation in many quarters; but in this age of toiling reality there is little danger that the imaginative faculty will be indulged to any hurtful extent. So let those who can, (and those who *think they can*, will try of course,) "pour the free tide of song;" it will awaken an echo in many a sympathizing heart—and many a silent soul will rejoice in the expression of what it has almost *thought*, but failed to clothe in words. And youth, too, is some excuse for those who

Would coin the heart in words to purchase fame;

for who would then consent to sink away quietly into "dull obscurity," without an effort to be known and honored—one effort, ere the heart becomes hardened and the ambition quelled by repeated failures in the attempt by soaring to attract the attention of the every-day world?

XXVII.

Begin Enjoying Now.—To anticipate is pleasant; but in order to enjoy, we must begin now;—must find, as we pass along, all the flowery places, the happy thoughts, the sunny scenes, we may,—for these constitute the poetry of common life,—these fill the rills of refreshing that murmur along the monotonous plains of life. To enjoy all these, and to anticipate if we may, still higher and purer joys, is the creed and the practice of the happiest.

XXVIII.

Disappointments should teach us to expect little from the uncertain and unknown, and to suspend, as far as practicable, anticipating what time and opportunity alone can reveal.—S.

AN INGENIOUS COMPOSITION.

The following article showing the necessity of punctuation, was picked up a few days since in the street, and handed to us for publication:

Punctuation.—
The Girl is either good or bad,
And which I wish to know;
May quill, with punctilious hand,
My Punctuation show.

She is an experienced one in vice and *wickedness* she is never found in opposing the workers of *iniquity* she can delight in the downfall of her *neighbors* she can never rejoice in the prosperity of her fellow *creatures* she is always pleased when the poor are in *distress* she is always ready to assist in destroying the peace and happiness of *society* she takes no pleasure in serving the *Lord* she is uncommonly diligent in sowing discord among her friends and *acquaintances* she takes no pains in laboring to promote the cause of *Christianity* she has not been negligent in stigmatizing all public *teachers* she makes no exertions to subdue her evil *passions* she strives hard to build up Satan's *Kingdom* she leads many a one for the support of the Gospel among the *Heathen* she contributes largely to the friends of the evil *adversary* she pays no attention to good *advice* she gives great heed to the *devil* she will never go to *heaven* she will go where she will receive a just recompense of reward.

P. S.—If in reading the above, you put a semicolon at the end of every word in small caps, the character of the person will appear to be that of a *good* girl; but if you place the semicolon at the end of every word in *italics*, and leave out one of the first mentioned, you will make her one of the very *worst*.

FIRST AND LAST DUEL IN ILLINOIS.

Ford's "History of Illinois," recently published at Chicago, gives the following reminiscence:

The year 1820 was signalized by the first and last duel which was ever fought in Illinois. This took place in Belleville, St. Clair county, between Alphonso Stewart and William Bennett, two obscure men. The seconds had made it up to be a sham-duel, to throw ridicule upon Bennett, the challenging party. Stewart was in the secret, but Bennett, his adversary, was left to believe it a reality. They were to fight with rifles; the guns were loaded with blank cartridges; and Bennett, somewhat suspecting a trick, rolled a ball into his gun, without the knowledge of the seconds, or of the other party. The word to fire was given, and Stewart fell, mortally wounded. Bennett made his escape; but two years afterward he was arrested in Arkansas, brought back to the state, indicted, tried, and convicted of murder. A great effort was made to procure his pardon, but Governor Bond would yield to no entreaties in his favor, and Bennett suffered the penalty of the law by hanging, in the presence of a great multitude of people. This was the first and last duel ever fought in the state by any of its citizens. The hanging of Bennett made dueling discreditable and unpopular, and laid the foundation for that abhorrence of the practice which has ever since been felt and expressed by the people of Illinois.

OCEAN GRAVES.

The sea is the largest of the cemeteries, and its slumberers sleep without a monument.—All grave-yards, in all other lands, show some symbol of distinction between the great and small, the rich and the poor; but in the ocean cemetery the king and the clown, the prince and the peasant, are all alike undistinguished. The same wave rolls over all—the same requiem sung by the minstrelsy of the ocean sings to their honor. Over their remains the same storm beats, and the same sunshines; and there unmarked, the weak and the powerful, the planned and unhonored, will sleep on, until awakened by the same trump, when the sea will give up its dead. I thought of sailing over the slumbering hut devoted Cookman, who after a brief but brilliant career, perished in the President—over the laughter-loving Power, who went down in the same ill-fated vessel, we may have passed. In that cemetery sleeps the accomplished and pious Fisher; but where he and thousands of others of the noble spirits of the earth lie, no one but God knoweth. No marble rises to point out where their ashes are gathered, or where the lovers of the good or wise can go to shed tears of sympathy. Who can tell where lie the tens of thousands of Africa's sons perished in the "middle passage?" Yet that cemetery hath ornaments of Jehovah. Never can I forget my days and nights, as I passed over the noblest of cemeteries without a single monument.—*Giles.*

Those who have had the most forgiven them should be less addicted to slander.

Duty, faithfully performed, opens the mind to truth.

In difficulties be patient, and overcome them by perseverance.

Ladies' Department.

CONDUCTED BY A——E.

LET THE HEART BE BEAUTIFUL.

So the heart, the heart is beautiful,
I care not for the face,
I ask not what the form may lack
Of dignity or grace;
If the mind be filled with glowing thoughts
And the soul with sympathy,
What matter though the cheek be pale,
Or the eye lack brilliancy.

Though the cheek, the cheek is beautiful,
It soon may lose its bloom,
And the lustre of the eye be quenched
In the darkness of the tomb;
But the glory of the mind will live
Though the bloom of life depart,
And oh! the charm can never die
Of a true and noble heart.

The lips that utter kindly thoughts
Have a beauty all their own—
For gentle words are sweeter far
Than music's softest tone;
And though the voice be harsh or shrill
That bids the oppressed go free,
And soothes the woes of the sorrowing one,
That voice is sweet to me.

A PRETTY THOUGHT.

The night is mother of the day,
The winter of the spring;
And ever upon old decay,
The greenest mosses cling.

Behind the cloud the starlight lurks,
Through shimmers the sunbeams fall;
For God who loveth all his works,
Has left his hope with all.

Trans-Atlantic Epistles,

TO COUSIN KATEY.

Communicated thro' Moore's Rural New-Yorker.

EPISTLE FIRST.

Introduction—European Ideas of Americans; Anecdotes in point—Belgium; The Royal Family, and springs of Nobility; Amusing Incidents—Love and Marriage among Kings, Princes and Princesses—The writer's new home, etc., etc.

Tirlemont, Belgium, Jan., 1854.

Dear Cousin Katey:—I fancy this letter, with its foreign post-mark, will be received with some surprise. Who, think you, is your Belgian correspondent? None other than your humble cousin, Minnie, who has so often expressed her intention to see Europe, and to learn French, and who is at present in a fair way of accomplishing both these designs.—Even so, Katey; we have already flitted across the ocean, rushed through England, railroad speed, steamed over the North Sea, and finally brought up in this little city, where we are delving away at French after the most approved style.

Methinks I hear you exclaim, "What, studying *French* in *Belgium!*" You will perhaps be as much astonished to learn that the Belgians speak French, as some Europeans are to discover that *Americans* speak *English*.—An English gentleman, with whom we fell in company in the cars, on the great railway between Liverpool and London, who appeared very intelligent, and had been quite a traveler, in his own country, on learning that we were Americans, seemed somewhat surprised, and observed—"*But you speak English very well!*"

We met at the hotel here a Belgian gentleman of considerable literary pretensions, who professed extravagant admiration of "Uncle Tom's Cabin," which he had recently been translating from French into Flemish. He was delighted to learn that we were countrymen of Harriet *Beecher* Stowe, as he called her, having never before met a person who could lay claim to that title; but he, too, was quite astonished to learn that Americans spoke English.

Very many people here fancy that America is an uncivilized country, almost out of the habitable world, and by the term American, they understand nothing more or less than an *American Indian*. Only a few days ago, a woman of Tirlemont on being told that I was an American, exclaimed, "What, is she one of the savages? I thought they were all *noirs comme le diable!*" There is a "Pensionnat," or boarding school, here, kept by the Sisters of "Notre Dame," where are two American girls, studying French. One of the principal teachers of this school acknowledged, that before these girls came, she supposed America, with the exceptions of a few towns upon the sea-coast, was an almost unbroken wilderness.—Are not such disparaging ideas of our great Republic enough to reduce any patriotic American to despair? I have sometimes amused myself by imagining a pompous fourth of July orator, when he had finished his bombastic display of eloquence, suddenly transported into the heart of some European country. I fancy that he would soon come to the conclusion that we are not yet at "the top of all creation."—"Mais serieusement nos moutons," as the French ridiculously say, whatever may be the subject upon which they chance to be talking.

If you, cousin Katey, are as ignorant with regard to Belgium, as I was before coming here, you will not object to being enlightened a little. On this charitable supposition, I will proceed. Belgium is a little three-cornered Kingdom, about one quarter as large as the State of New York, wedged in between France and Germany. It has never had an independent existence, until within a few years, having previously served as a sort of ballast or make-weight in the affairs of Europe, being transferred from one power to another, as circumstances might seem to demand. About twenty-five years ago, the Belgians, who had been for some time under the dominion of Holland, revolted and determined to have a king of their own. They first offered their crown to the Duc de Nemours, a son of Louis Philippe. He declined the honor, and they then turned their attention to Leopold, prince of Saxe-Cobourg, at that time residing in England, and widower of the Princess Charlotte, whose untimely death had wrung the heart of the young husband and shrouded a nation in gloom. Their proposals were accepted, and soon after Leopold espoused in a second marriage the oldest daughter of Louis Philippe. This lady died about two years since, leaving Leopold with three children, the Duke of Barbant, heir to the throne, and now about nineteen years old; the Count of Flanders, and the Princess Charlotte, a young lady of 14 or 15. Leopold is uncle to Queen Victoria and to Prince Albert both. He is also connected with the royal family of Portugal, and during the past summer the Duke of Brabant has contracted an alliance with the house of Austria, by marrying the daughter of the Arch-Duchess Sophia. Apropos to this marriage, I must tell you some amusing incidents which have been related to me, and which will gratify your Republican feelings, by showing that Princes and Princesses are but flesh and blood after all, subject to the same infirmities as less favored mortals.

The Duke of Brabant is nineteen years old, as I told you above, while his young wife is but seventeen. She is represented as being an amiable girl, possessing no particular beauty of person, or dignity of carriage, but excelling in horsemanship and in painting flowers. She has also a keen sense of the ludicrous, and her unconquerable propensity to laugh has occasioned some rather ridiculous scenes. The marriage was first celebrated in Austria, and the young Duchess, with her retinue, passed through Tirlemont, on her way to Brussels. The loyal citizens were all assembled at the railroad station to do honor to the bride of their young Prince, and the Burgomaster made her a complimentary speech, and presented her a bouquet. The Duchess had great difficulty to restrain her risibility during the speech, and when it came to the presentation of the bouquet, she grasped it with the greatest precipitation and immediately covered her mouth with her handkerchief, to prevent an explosion of laughter.

"Fetes" were given in all the principal cities of Belgium, in honor of this marriage, and the newly wedded pair were present at these festivities. At Namour, the Archbishop, one of the principal dignitaries of the kingdom, made a speech to which the Duke responded extemporaneously. During his remarks, he found himself at a loss for a word, and was obliged to make quite a pause before he could recover the thread of his discourse. The Duchess, who stood by his side, was so much amused by his embarrassment as to laugh outright. At Liege, after a ball which had lasted till one or two o'clock in the morning, the Mayor commenced reading a long address, which he had prepared for the occasion. The Duchess was standing, with a maid of honor on each side, but a little in the rear. These ladies, fatigued with dancing and with previous ceremonies, began to nod, and the Duchess amused herself by pulling first one and then the other, by the skirt of the dress, while she shook with laughter to see them start. But enough of the childish follies of the Duchess. She has recently been spending some time with Queen Victoria, and it is to be hoped, that her matronly cousin has given her some lessons in the art of maintaining royal dignity, otherwise she will make but a sorry Queen when called upon to fill that station.

There is a rumor that Leopold has some intention of abdicating in favor of his son. It is said that he wishes to marry again, and that his choice has fallen upon a person, whose rank is not sufficient to warrant her being raised to share the throne. If this were true, it would not be the first time that the little blind god has triumphed over all considerations of rank and power; but men are not usually so disinterested in their love affairs at the age of sixty, so we may be permitted to doubt whether this rumor has sufficient foundation. There is also some matrimonial gossip afloat, with regard to the Princess Charlotte. It seems that the young Infanta of Spain has taken a short leave of absence, before assuming the reins of government, for the express purpose of using his own eyes in the selection of a wife. He is now in Brussels, and the loyal Belgians fancy he will not be able to resist the attractions of their young Princess, whom they represent as very beautiful and engaging. Heigh-ho, Katey! so wags the world! Even Princes and Princesses do not seem to find any thing *better* to do than to get married.

But I fancy you have heard enough about royal personages, and would like to be informed of the present situation and prospects of your republican friends, who have crossed the waters. We are very pleasantly domiciled with one of the Professors of the College here, a gentleman whom we find an intelligent and agreeable companion, and under whose instruction we are making rapid progress in French. Every thing around us is new and strange, but I must reserve any further descriptions for another letter, as my sheet is already full.

Believe me, ever your affectionate

Minnie.

MRS. SIGOURNEY ON WOMAN'S RIGHTS.

That intellectual and exemplary lady, Mrs. Sigourney, thus beautifully discourses on Woman's Rights:

There is much clamor in these days of progress, respecting a grant of new rights or an extension of privileges for our sex. A powerful moralist has said, that "in contentions for power, both the philosophy and poetry of life are dropped and trodden down." Would not a still greater loss accrue to domestic happiness, and to the interests of well-balanced society, should the innate delicacy and prerogative of woman, *as woman*, be forfeited or sacrificed?

"I have given her as a help-meet," said the Voice that cannot err, when he spake unto Adam, in the cool of the day, amid the trees of paradise. Not as a toy, a clog, a wrestler, a prize-fighter,—no, a *helpmeet*, such as was fitting for man to desire, and for woman to become.

Since the Creator has assigned different spheres of action for the different sexes, it is to be presumed, in His unerring wisdom, that there is work enough in each department to employ them, and that the faithful performance of that work will be for the benefit of both.—If He has made one the priestess of the inner temple, committing to her charge its unrevealed sanctities, why should she seek to mingle in the warfare that may thunder at its gates or rock its turrets? Need she be again tempted by pride or curiosity, or glowing words, to barter her own Eden?

True nobility of woman is to keep her own sphere, and to adorn it; not like the comet, haunting and perplexing other systems, but as the pure star, which is the first to light the day, and last to leave it. If she share not the fame of the ruler and the blood-shedder, her good works, such as "become those who profess godliness," though they leave no deep "foot-prints on the sands of time," may find record in the "Lamb's Book of Life."

Mothers! are not our rights sufficiently extensive—the sanctuary of love, the throne of the heart, the "moulding of the whole mass of mind and its first formation?" Have we not power enough in all realms of sorrow and suffering—over all forms of ignorance and want—amid all ministrations of love, from the cradle-dream to the sepulchre?

So let us be earnest and diligent, aye, grateful and joyous, making this brief life a hymn of praise, until called to that choir which knows no discord, and whose melody is eternal.

CAN LOVE EXIST WITHOUT JEALOUSY?

The following, by Allie Vernon, is submitted to the criticism of our readers:

Call the meeting to order, Mr. President, and put the question to vote. What is the result? "The 'Noes' have it"—*I thought so.* People may talk about true love being incapable of jealousy, but take my word for it, such talk is all fudge. You might take love and purify and clarify and treble refine it, and it would come out with a spice of jealousy clinging to it, after all. For *my* part, I wouldn't give this shocking bad pen I am trying to write with, for the devotion of a man who wasn't a little jealous of me.

I don't care about his being so exceedingly "tichy" that I'd tremble in my gaiter boots every time a good looking masculine addressed me, but I'd rather not have him so docile as to have him look on with perfect indifference, whilst I flirted with all the interesting individuals who entered the circle of my acquaintance.

Somebody says that "jealous people are people of small intellects." That *somebody* insulted *me.* Not that I mean to say my intellect is astoundingly large, but I do believe it's of the medium size, and *I* am *Jealousy-personified.*

If I should be within seeing distance of my beloved when he was playing the agreeable to some dirmity, my cheek would flush at the very first smile he gave her. The first words he addressed her, would add considerable lustre to my eyes—if he took her hand, my heart would beat a tremendous tattoo—and if he kissed her, it is my private opinion, publicly expressed, that they'd both be saluted with a "smack" little expected, and as little wished for.

What! am I going to treasure up glances that are lavished upon others? Am I going to listen to the music of a voice whose tones are as familiar to other shemales as the strains of a street organ? Am I content to receive kisses from lips that yield their sweets to every passing butterfly?

Not *I!* I believe jealousy is as necessary to love as bread and butter is to the comfort of a three year old child, or a looking glass to a pretty girl. "Them's my sentiments," and the courageous youth who dares to storm the citadel of my affections, must take care not to rouse "the green-eyed monster," or else put up with the terrible consequences.

A Loving heart encloses within itself an unfading and eternal Eden. Hope is like a bad clock, forever striking the hour of happiness, whether it has come or not.

Beauty is a great gift of heaven—not for the purpose of female vanity; but a great gift for one who loves and wishes to be loved.

Govern thy life and thoughts, as if the whole world were to see the one and read the other.

MOORE'S RURAL NEW-YORKER

ROCHESTER, APRIL 22, 1854.

SPECIAL NOTICES.

☞ *A new quarter commenced April 8,—a good time for new single and club subscriptions to begin; and the renewal of expiring subscriptions is now in order.*

☞ *Additions to Clubs are still in order. If back numbers are not wanted, we will send from 1st March or April to end of year for $1—and count on premiums.*

☞ *During the season of navigation we can send the* Rural *to Canada West free of American postage, and hence will furnish clubs for six months from date at lowest rates.*

☞ *Clubs for six or nine months from this date at same proportional rates as for full year—and premiums offered.*

☞ *Back numbers of the present volume furnished if desired, or subscriptions may commence at any time.*

Our Large Premiums, for subscribers obtained previous to 15th inst., will be announced next week. Our liberal offers of *Specific Premiums* are continued until 1st of July ensuing—at which agents, subscribers, and all who wish to aid the Rural, and benefit themselves, will please take cognizance. Thanks to the numerous friends who are continuing their efforts—and the new ones who are forming clubs—in support of the Rural.

Declaration of War.

The long looked for crisis has come at last.—The arrival of the steamers on the 14th, announced the fact that the last faint hope of a reconciliation between the great powers of Europe is at an end. The Queen of England has thrown herself and her cause upon the army and navy of the empire, and an official declaration of war has been publicly promulgated, and the hostile fleets will undoubtedly ere long be brought into collision. Sir Charles Napier is in the Baltic, and troops are also moving from England and France towards the East.

More than fifty thousand Russians are reported to have crossed the Danube and invaded the Turkish territory. Two thousand Russians are reported to have been killed by the Turkish cannon, while the former were attempting to cross a bridge leading to the south side of the Danube; but no other battles are announced.

The present position of the European powers demonstrates the utter futility of contracts and treaties to restrain nations, when their interests or their ambition run counter to each other.—Forty years ago all the rest of Europe was arrayed side by side in hostility to France. The Englishman, the Russian, the Prussian, and the Austrian stood shoulder to shoulder in the terrible struggle which ended only with the downfall of Napoleon. They would then have sworn eternal fidelity to each other, and eternal hostility to France—and then broken the vow at first convenient opportunity. Now the English and the Frenchman join hands, and fraternize like twin brothers nourished at the same breast, and Russia is the sworn and deadly enemy of both. The Christian world have fondly, but illusively, hoped that with the fall of Napoleon an era of peace and good will among the nations was to be ushered in, but the prospect now is, that Europe is about to plunge into a scene of strife and confusion, the like of which has never yet been seen.

Spring has Come Again.

Spring came in, both on the calendar and in the heavens, on the first of March; and the air was for a couple of weeks as balmy and mild as is usual on the first of May. The blue-bird chirped, and the robin warbled for a few brief days in all the joyousness of returned wanderers, but very soon the icy chillness of the previous months returned again, and all things assumed the aspect of winter.

For several weeks past we have experienced a succession of snow storms and freezes, which verified the truth of the expression,

"Winter lingering in the lap of spring."

Now however, there is a reasonable prospect that spring will assert its reasonable and just rights. The sun on Tuesday morning rose in all its cloudless glory, and very soon the vestiges of winter in the shape of snow banks, and ice, hastened to hide themselves in the gutters.—They ran in great haste down the declivities, pursued by the stray and wandering sunbeams, and it is to be hoped they will not cease running until they find a resting place in the bosom of the sea.

Canal Navigation.—The canals of this state, it appears by a notice from the Commissioners, are to be opened for navigation on the first of May. Judging from the activity of boat builders and others whose interests are connected with the forwarding business, there will be an immense amount of freighting done during the season. The foreign demand for American breadstuffs, most of which are in store at the West, awaiting transit, will not fail to enhance the amount of our canal revenues, and thereby benefit the state.

Railroad Accident.—About twelve o'clock on Saturday night last, a train of cars on the Central road, bound east from Buffalo, when within fifteen miles of this city, came in contact with a cow, by which the last car of the train was thrown down an embankment some 5 or 6 feet high. Fifteen of the passengers were more or less injured; some of them; it is feared, fatally. The train was running at the rate of thirty-five miles an hour, and it is almost miraculous that none of the passengers were killed, as the car was crushed to pieces, by the concussion.

"Monsieur Tonson Come Again."

Our attention has been called to the fact that the self-dubbed "*Professor*" *Comstock* has recently exhumed himself and his superlatively asinine theory, and re-commenced "disclosing the disclosures." In starting on his present tour, the "Professor" probably imagined that the people of Western New York and the West had forgotten, in one short year, the exposure of his most silly, yet knavish humbug, in the Rural and other journals.

After a great flourish of trumpets, he lectured a few days since in Canandaigua, in order to "prevent his discoveries from being lost to community at large by his death"—an event not likely to occur from brain fever! Realizing the vast importance of the subject, and resolved to rescue from threatened oblivion, the *only* true knowledge and wisdom of the age, the citizens of Canandaigua and Ontario county—with a philanthropy and self-sacrificing patriotism, eminently worthy the noble cause and auspicious occasion—congregated to the astonishing number of—FIVE! After this let it not be said that Genius, Talent, Wisdom, and Oratory (quite surpassing the feeble efforts of Demosthenes, and our hundred worthies,) are not appreciated, even in the benighted regions of Western New York.

The celebrated "Professor" seemed satisfied with such a hearty and unanimous reception, and soon left for a distant, yet we think scarcely more promising, field of missionary labor. He is "disclosing" his wonderful tidings to the poor, ignorant heathen of Michigan, Illinois, and Wisconsin—to whom we commend him as a fellow of *peculiar* merit. They should not be so uncivil as to *again* arrest him for "obtaining money under false pretences"—but remember that all great men, from Galileo down even as low as the "Professor," have been benefited by persecution. Neither should his raiment be composed of tar and feathers. In short, do not destroy the *goose* that *promises* golden eggs to every one who pays *only a dollar* for the same, verbally delivered, or two dollars in *pamphlet*—when a hundred thousand subscribers are obtained! (We hope to have the pleasure of announcing soon, a *two shilling* edition of the "disclosures"—and exposures—with a portrait of the "Professor" in the act of addressing the immense audience which recently greeted him at Canandaigua!)

In conclusion, we request the attention of our numerous readers in the West to the "first rate notice" of the celebrated "Professor" and his wonderful discovery, given on our second page. Let it be read and pondered by the aged, and its truths be instilled into the minds of the rising generation. Editors will do the "discovery" and the "Professor" ample justice, and benefit community, by giving the statement publicity. It was published in the *Auburn Daily Advertiser* a little over a year ago—soon after which the "Professor" mysteriously disappeared. We have carefully preserved this unequivocal testimonial (among many others of like import,) and now present it as eminently timely.

Missing Steamer.—The steamer City of Glasgow left Liverpool for Philadelphia on the first of March, since which time nothing has been heard of her. Great anxiety is felt on her account, as she has now been nearly fifty days at sea. She has a large number of passengers on board, and a very valuable freight, and it is possible she may have broken some portion of her machinery and been obliged to put back, as was the case with the Atlantic in 1851. The joyful intelligence of the Atlantic's safety did not reach New York until after the lapse of forty-nine days. "So mote it be" with the Glasgow.

Dogs in Penn.—"No dog shall be permitted to run at large in any of the streets, squares, lanes, alleys, or other public places in this city," &c., &c., is posted up at the corner of the streets in this city; and a quarter of a dollar (whether a shin-plaster or otherwise, is not stated,) is offered for dogs' heads, delivered at the hay market. That is more money than ninety-nine out of every hundred dogs are worth alive, and with the body attached to the head. Why a man with a dozen half starved children upon his hands, desires to have an equal number of yelping curs attached to the household, it is impossible to conceive. Hydrophobia will be numbered among the extinct scourges of humanity only when dogs are exterminated, and not before; and it is for the purpose of removing this terrible evil that our city fathers have come to the resolution to enforce the above ordinance.

Pistols and Coffee.—Two New York councilmen, Wild and Seelly, quarreled in the council at one of its meetings last week, and the latter received a challenge from the former to mortal combat, which challenge was accepted. The fight has not yet come off, it is believed, and the police are in search of the belligerents.

It is a state prison offence in this state for a man either to give or accept a challenge; and it is to be hoped these chivalrous characters will get their dues and do the state some service at Sing Sing. A pair of "striped trousers" would much better become such men than robes of office.

P. S. The New York papers of later dates state that the difficulty is settled, and intimate that the parties got up the fracas to serve the purpose of a humbug advertisement of themselves and their business. One of them keeps a porter house and the other manufactures candy.

☞ Songs, ridiculing Nicholas and all the Russians, sanctioned by the Minister of the Interior, are all the rage in the streets of Paris just now.

Our Albany Correspondence.

Albany, April 17, 1854.

The Legislature *has* adjourned, and they will have the thanks of every body in general, and reporters in particular. For the past few days, they spent about eighteen hours a day. Bill after bill has been hurried through, and resolution piled upon resolution. It is a notorious fact that even this Legislature have done up about as much work since their humbug days were out, as they did before in a month. It is impossible to enumerate a tithe of the subjects legislated upon. It will take several days to be able to know what is done and what is undone.

Vetoes.—The Governor having got his hand in, has kept at work in heading legislative action by vetoes. He has returned at least half a dozen bills with his objections. One was the act to provide against executive removals, referred to in my last. The wise law-makers acquiesced in all but one, which was to appoint a Commission to examine into the State Prison affairs of our commonwealth. His Excellency thinks that is a part of his business, and promises to keep the thing straight. But both branches of the legislature thought that he had failed long enough, and they passed the bill, notwithstanding the veto, which is an unusual occurrence.

The Supply Bill.—The greatest item on the programme of the closing exercises of the legislature is the *Supply bill*. This consists of odds and ends. Everything that is of doubtful character goes into this bill. Old claimants for imaginary extra services, those who have failed in every legitimate plan to get their hand into the treasury, make a desperate effort to be incorporated in the Supply bill. The various officers and clerks of the legislature are fully and pressingly represented in the Supply bill. It is the "omnibus" in which all are piled, good, bad and indifferent, and rushed through under the pressure of adjournment. It is a *supply bill* in more senses than one, for the "dear people" will have to supply about $160,000 to pay for its appropriations.

The Close.—On Monday, at about 12 o'clock, the usual complimentary resolutions were passed to the presiding officers, and the usual replies made, when the officers declared the Legislature adjourned *Sine die*. As many bills are yet in the hands of the Governor, and some time is requisite to condense matters properly for your columns, I will defer the other subjects till next week. "Owl"

Legislative Adjournment.—The Legislature adjourned *sine die* on Monday. It is wonderful how rapidly legislation progresses after the pay of the members is cut off by constitutional limitation. While they were receiving three dollars a day, time was found to make excursions half a week at a time, pay going on of course; but the moment the government pap is withdrawn from between their patriotic lips, the body Legislative collapses instanter. The pay of members was stopped on Saturday, in consequence of the time having expired during which they could draw their allowance, and on Monday a large number of bills were rushed through like a flock of frightened sheep through a fence gap; and then the members left the capital as if an avenging Nemesis was at their heels.

Congressional Proceedings.

April 10.—Senate.—Mr. Seward presented numerous petitions on the subject of Slavery and the Nebraska Bill.

Mr. Gwin spoke on the Pacific R. R. Bill, and the Senate then went into executive session.

In the House, after the reference of Mr. Dean's resolution to the Com. on Foreign Affairs, the House went into Com. on the Appropriation Bill, and the discussion on the Nebraska bill was continued.

April 11.—The House went into committee on the Appropriation Bill, when Mr. Collum, of Penn., spoke on the Nebraska Bill, which he denounced as a nefarious project, the work of politicians to strangle the legislation of the country for their own personal aggrandizement.

April 12.—Senate.—the Chair presented a letter from Truman Smith of Conn., resigning his seat in the Senate, to take effect May 24th.

Mr. Foot presented a resolution directing an inquiry by Com. on Commerce into the expediency of making an appropriation for the purchase of a site and the erection of a Custom House at Burlington, Vt., Adopted.

A bill providing for the transportation of mails on Railroads was reported.

House.—Mr. Columbia Lancaster, delegate from Washington Territory, was introduced in the House to-day and was sworn in.

The bill empowering the P. M. General to contract for carrying the mail between New Orleans and San Francisco, according to time, was taken up.

Washington, April 13.—Senate.—Mr. Stewart reported back the House bill establishing a new land district in the Lower Peninsula of Michigan, and it was passed. Senate adjourned until Monday.

House.—Ordered 2,000 additional copies of Lieut. Herndon's and Gibbons' report of the survey of Vasheon River.

Mr. Gray asked leave to present a resolution calling on the Postmaster General to furnish to the House copies of all rules adopted by him, which deny to the members of Com. on Post Office the right of going into the rooms during office hours and examining the public records; and farther, that the Postmaster abolish all such regularities. Agreed to and referred to Com. on Post Office.

April 14.—In the House, to-day, the bill to reduce price of public lands was ordered to be engrossed for 3d reading by a vote of 72 to 68.

The House then went into Committee of the Whole on the Senate's amendments to the West Point Academy Bill, and after a brief discussion the Com. arose and the House adj. till Monday.

☞ John Ward, a soldier of the Revolution, residing in Johnsburgh, Warren county, N. Y., attained the age of 100 years on the 15th day of May, 1853. He still enjoys good health. His memory retains but little except Bible and Revolutionary incidents.

News Paragraphs.

☞ In 1650, a trial took place in Connecticut under the section of the Blue Laws prohibiting kissing. The offenders were Sarah Tuttle and Jacob Newlice. It appears that Sarah dropped her gloves and Jacob found them. When Sarah asked for them Jacob demanded a kiss for his pay, and as the demand did not seem to Sarah extravagant, she adjusted it forthwith. The facts were clearly proved, and the parties were each fined twenty shillings.

☞ The Berkshire Courier, printed in Great Barrington, says in reference to the weather, that on Saturday, April 1st, a young lad discovered something like a bird in a hole in an old tree. On making a more particular examination he found twenty-six blue-birds, who had probably collected together there to keep themselves warm, frozen to death by the severe cold of the previous few days.

☞ According to the Galway Packet, the Celtic race is fast disappearing even in its western stronghold. The editor has just completed a tour through Connaught and Joyce's country, and for miles, he says, the traveler could not see a human habitation—all was utter desolation; not a trace of farm cultivation, and in lieu of houses nothing remained but heaps of stones and unroofed gables.

☞ It is computed, on calculations furnished by the census returns, that 663,000 new houses have been built in the United States in the last six years, which, at an average of $1,000, would add $663,000,000 to the wealth of the country, to say nothing of the furniture necessary to the habitations; the shipping and railroads, however, would increase this amount to over $1,000,000,000.

☞ The Illinois Central Railroad Company have contracted with Jas. Sumpter & Co., of Montgomery county, Ohio, for hedging with osage orange, one hundred miles of the Illinois Central Railway. The contract commences fifty miles south of Chicago near the Kaukakee river. These two hedges, each one hundred miles long, will require about two millions of osage plants.

☞ The deepest hole for mining purposes yet dug in California is in Trinity county. It is 700 feet deep, and the bed rock has not been reached. Gold has been found all the way down, in the boulders, which had to be cut through in the course. The work was commenced in 1851, and has been aided by subscriptions and other aid from the miners of the vicinity.

☞ The use of grapes as an article of food is much recommended in cases of consumption. They contain a large quantity of grape sugar, the kind which most nearly resembles milk sugar in its character and composition, which is also useful for consumptives, it having a great attraction for oxygen, and readily affording material for respiration.

☞ The National Intelligencer publishes a letter from Col. Fremont to Col. Benton. He makes no mention of the loss of but one man.—He says he has had reasonable success in the object of his expedition, and that his explorations thus far have been decidedly favorable to the central route for the Pacific Railroad.

☞ From Western Virginia, it is said, that the promise of fruit next fall is yet good. In many parts of Kentucky, as in Ohio and Indiana, the early peaches have been impaired or cut off, but yet there is reason to believe that there may be peaches and apples enough in these districts for all ordinary purposes.

☞ At a meeting of the Board of Managers of the American Bible Society on Thursday last, a letter was read from Rev. Dr. King, of Greece, in regard to printing 10,000 Testaments in Athens, and stating that the Testament is now permitted to be read in all the common schools in that country.

☞ The Pennsylvania Legislature is considering a proposition to sell their Public Works.—The reasons in favor of the proposition are alike conclusive and startling. The expense of repairs, management, &c., of the Main Line, last year, exceeded the Revenue by the sum of $316,015.

☞ It is reported that rich gold diggings have been found in the Calaparya mountains, near the Williamette. If the reports of the extent and richness of these mines be correct, they will have a great influence in Oregon, being near the centre of the settled portion of the country.

☞ The Steam Marine of England is a sublime feature in the greatness and power of a Nation. She has 250 Ocean Steamers, each one of which is capable of transporting from 500 to 1,000 Troops to any point connected with the present theatre of War, in ten days.

☞ The Syracuse Standard says Miss Chase, aged 16, was terribly and probably fatally burned near that city the other day, while boiling some spruce gum. The bottom of the kettle melted out, and the gum took fire, enveloping the girl in flames.

☞ It is stated that a new plan for a Pacific Railroad is to be submitted to the Southern Commercial Convention. Its estimated cost is $65,000,000; the stock to be subscribed by the southern states; and the right of way to be purchased of Mexico.

☞ Navigation on the lakes may now be considered as fairly open for the season. The ice which is dissolving fast, has been driven up lake Erie, and it will probably not return to prevent vessels entering or departing from Buffalo.

☞ The following advertisement is from a California paper in the interior of the State, the Empire County Argus:—"Sons of New England! Two barrels of your Native rum on tap, and for sale at the Brick Store!"

☞ A large number of mail contractors and agents are at Washington, awaiting the mail lettings for the southern and western states. The lettings are the largest ever held, and much interest is attached from that fact.

☞ On Friday last the Legislature adjourned to meet at 7 o'clock Monday evening. Upon the roll call, at the time appointed, there were but ten members in the Senate, and twenty-nine in the House.

☞ A despatch received from the State Department, states Washington, confirms the statement England has secured to citizens of the United States the rights of neutrals during the coming struggle.

☞ James Brewster, Esq., of New Haven, has generously offered to defray the expense of erecting a new Orphan Asylum in that city, provided the city will furnish a lot on which to erect it.

☞ The Washington Star says: Colonel Colt will realize a stupendous fortune out of the eastern war. The Russians, English and French officers will be armed mostly with his revolvers.

☞ It is stated that the business on the Canada Great Western Road is so large that a double track from Niagara to London is needed, and will be immediately put under contract.

News Brevities.

—— Mr. Thomas Francis Meagher is lecturing at New Orleans.

—— There are 8,473 females and 1,597 males employed in Lowell mills.

—— The area of all the States of Europe is given at 3,634,832 square miles.

—— Franconi's Hippodrome is to be transferred from New York to Washington.

—— Immense quantities of railroad iron are waiting at Albany for shipment westward.

—— Several sail vessels from Tonawanda have passed up the Niagara River, which is clear of ice.

—— Gen. Twiggs has removed from New Orleans and established his head-quarters at St. Louis.

—— In the year 1800, there were 113 Quaker meeting-houses in England. There are now but 317.

—— 900 bags of coffee from bark Francis Watts, sunk at the mouth of the Mississippi, have been saved.

—— A company has been organized in St. Louis for the manufacture of lubricating oil from vegetables.

—— The whole cost of the St. Nicholas Hotel, New York, including the ground, foots up about $2,005,172!

—— Thackeray is at Naples, whence he sends to England his monthly instalments of the "Newcomes."

—— The Odd Fellows of Covington, Ky., are about erecting a magnificent hall in that city at a cost of $75,000.

—— An order for twenty millions of oysters has been given by English dealers to the fishermen of Granville.

—— The Toledo Blade estimates the Indian corn to be shipped from Toledo the coming season at 6,000,000 bushels.

—— Lieut. John Reed, a soldier of the Revolution, died at Bluffton, Ia., on the 4th inst., in the 90th year of his age.

—— The Buffalo and Brantford Railway is now finished to Paris, where it connects with the Great Western Railway.

—— An Irish woman (name unknown) was killed by lightning Apr. 9, while walking upon the railroad near Springfield, Mass.

—— Mrs. Douglas, who was imprisoned at Norfolk for teaching colored children, has been discharged after serving out her term.

—— The first charter election in the city of Poughkeepsie took place on last week Tuesday, and the whig ticket was successful.

—— The town agency of Rutland, (Vt.) sold $3,000 worth of liquor in ten months, all for "medicine." What an unhealthy place!

—— It is reported at Washington, that England has notified our Government that her fleets will blockade all the Russian ports in the Pacific.

—— Mrs. Stowe, it is said, has made a donation of $1,000 in aid of a school established at Washington for the education of colored children.

—— The Journal de Quebec says the Government are going to apply to Parliament for £70,000 for the support of a Provincial army.

—— A case has been lately decided in New York, which establishes the principle that insurers are not liable for goods stolen during a fire.

—— James Hoar, aged 20 years, died of hydrophobia at Boston on Wednesday week, he having been bitten by a rabid dog two months since.

—— At Salt Lake City on the 6th of January the mercury was one degree below zero, at 6 o'clock A. M., and on the 10th, 30 degrees above zero.

—— The National Intelligencer publishes Truman Smith's announcement of his intended resignation as Senator from Conn., to take effect May 24th.

—— The acres of canal boats and barges which have wintered in the Atlantic Dock Basin, N. Y., begin to move about and to prepare for the summer traffic.

—— The Queen of the French stage, Madame Rachel, is said to be about to abdicate the sovereignty of the stage, to become the wife of a Russian Prince.

—— The contributions to the Washington National Monument Fund during March amounted to but $138,67; the expenditures for the same time to $2,980,72.

—— The Philadelphia Ledger is now printed on paper made principally from straw. Much cheaper, though not quite as good looking as that made from rags.

—— The mail party which left Fort Laramie for Salt Lake City, January last, have not been heard of. Fears are entertained that they have perished in the snow.

—— The Republic of Venezuela, on the recommendation of President Monagas, has abolished Slavery, the Government paying a fair value for the Slaves.

—— In New Hampshire, in the lake and mountain region, there is from two to three feet of snow on a level in the fields and woods, and the sleighing is good.

—— Colt's Navy Pistols are in great demand abroad. The British Government has ordered 5,000 for the Baltic fleet—with a notification that more will be wanted.

—— The last annual report of the State Lunatic Asylum, shows that during the year 1853, there were fourteen admissions from the effects of spiritual rapping.

—— The mill dam at Beckett, on the Westfield river, Mass, broke away on Friday week, and the water swept away everything in its course, doing great damage.

—— The public prosecutor of Stockholm has commenced the prosecution of seven women in that city, for having abandoned the Lutheran faith, and embraced that of Rome.

—— The N. Y. Tribune says that Hon. Thomas F. Marshall, Ky., who made such a sensation twelve years ago as a temperance lecturer, has again become a confirmed drunkard.

—— Prof. Agassiz, in a recent lecture before the Lowell Institute, in Boston, stated his belief that the human race existed on the globe a hundred and fifty thousand years ago.

—— We regret to learn, says the Boston Transcript, that Rev. Edward T. Taylor, the well-known seamen's preacher, is lying dangerously ill at his residence, No. 1, Prince st.

—— Gerrit Smith announces that Dr. Beaumont of Ohio has manumitted a family of slaves which he owned, and which lived in Washington. Mr. S. had the pleasure of presenting them with the deed of manumission.

Foreign Intelligence.

Arrival of the Steamship Hermann.

DECLARATION OF WAR!

The Hermann arrived at New York, April 14th, with dates from London to March 29th.

The political intelligence by the steamer is of the highest importance. The Cabinet Courier dispatched with the ultimatum of France and England to the Emperor of Russia, had returned to London, with an official announcement, that no reply to the joint demands of the two powers would be made.

In consequence of this, a message from the Queen was sent down to both Houses of Parliament on the 27th, announcing the failure of all negotiations carried on with Russia, and the consequent necessity of adopting other measures to enforce compliance. The message concluded with a declaration that the Queen relied upon the bravery of her army and navy under the emergency.

The message was to be taken into consideration on the 31st ult. A reply from both Houses of Parliament will be voted in answer to it. In the mean time an official declaration of war appears in the London Gazette of the 28th, and in all the papers of the Hermann.

The British fleet, under Sir Chas. Napier, had passed the Great Belt, and anchored off Kill on the 27th March.

The Tripartite treaty between England, France and Turkey, was signed at Constantinople on the 12th. Telegraphic dispatches from Vienna and Bucharest announce that 18,000 Russians crossed the Danube on the 23d of March, and occupied Geschid. 35,000 Russians had also crossed at Matshin without molestation from the Turks, and a considerable force was assembled between Geschid and Lritschin.

Telegraphic dispatches from Belgrade, state that on the 15th of March, General Gortschakoff wished to depart from the island opposite Tukatai. His troops already occupied the bridge, when they were fired upon by the Turks, the bridge destroyed, and two thousand Russians precipitated into the stream and drowned. The Turks suffered no loss.

The British Cavalry destined for the East was to pass through France, and to embark at Marseilles.

The Emperor Napoleon's announcement was read in both Chambers with extraordinary enthusiasm. All warlike movements in France and England were hastening.

A division of the Russian fleet left Sebastopol to provision Russian fortresses on the Circassian coast.

The overland China mail had reached London with Calcutta dates, February 19th, and dates from Australia to February 4th. Returns from the gold fields increasing. New mines discovered. Trade improving, and brisk demand for goods.

Arrival of the Arctic.

The steamer Arctic arrived at New York, on the 17th instant.

The Arctic brings four days later news, 121 passengers, and full freight.

The news from the lower Danube is interesting. The Russians had seized nearly the whole of the Dobrudska, and about 45,000 of the Czar's troops occupied the territory between the Trajan wall and the Danube.

Omar Pacha with a large force was concentrating at Silistra.

Advices from Odessa, to March 25th, mention that the entire Russian fleet had left Sebastopol, and it was believed, would attack Varna. Sir James Graham stated in Parliament on the 3d inst., that the allied fleet had left the Bosphorus for Varna.

On April 3d, both Houses of Parliament assembled for the purpose of presenting to the Queen an address in reply to her message notifying the state of war with Russia. Two processions were formed—one of Lords and the other of Commoners, and both proceeded to Buckingham Palace to assure the crown of the cordial support of all departments of government.

Liverpool Market, April 3.—Since Friday, the upward tendency of prices in all the leading articles of the breadstuff trade has continued, partly owing to the advance established here and in London before being so fully responded to throughout the United Kingdom.

Wheat and flour may be written fully 2d@3d per 70 lbs. and 1s@1s. 6d. per bbl. dearer since our last report.

Indian corn, on the contrary, with a liberal supply and limited demand, is fully 1s. per quarter cheaper.

Important Declaration.

The Queen of England has caused a declaration to be published, which is of special interest to neutrals. It runs as follows:

Her Majesty, the Queen of the United Kingdom of Great Britain and Ireland, having been compelled to take up arms in support of an ally, is desirous of rendering the war as little onerous as possible, to the Powers with whom she remains at peace.

To preserve the commerce of neutrals from all unnecessary obstruction, Her Majesty is willing, for the present, to waive a part of the belligerent rights appertaining to her by the law of nations.

It is impossible for Her Majesty to forego the exercise of her right of seizing articles contraband of war, and of preventing neutrals from bearing the enemy's dispatches, and she must maintain the right of a belligerent to prevent neutrals from breaking any effective blockade which may be established with an adequate force against the enemy's forts, harbors or coasts.

But Her Majesty will waive the right of seizing the enemy's property laden on board a neutral vessel, unless it be contraband of war.

It is not Her Majesty's intention to claim the confiscation of neutral property, not being contraband of war, found on board an enemy's ships, and Her Majesty further declares that, being anxious to lessen as much as possible the evils of war, and to restrict its operations to the regularly organized forces of the country, it is not her present intention to issue letters of marque for the commissioning of privateers.

Louis Napoleon has also issued a proclamation, which, on being translated into English, proves to be identical with that of the British government. This shows that it was pre-arranged and agreed upon by the allies; and there can be no doubt a special object was to secure the neutrality and good will of the U. States.

Important Decision—Very.

The *Charleston (S. C.) Standard*, under the above caption (minus the "very") says:—"In the trial of a question before the Court of Common Pleas, March 28, in reference to the *status* of an individual, his honor Judge Wardlaw held the doctrine that the grandchild of a negro could not be entitled to the rights and privileges of a citizen of South Carolina; that beyond this degree the *status* became a question of fact, and that if the individual shall have acquired the character of a citizen in the community, it will be accorded to him by the court."

Paraphrasing the learned judge's language, it is this:—A man is a *nigger* until he reaches the quadroon mile-post; after that, if people call him a white man, he *is* a white man, but if they call him a *nigger, he is a nigger still.*

Daring and Successful Escape.—Two State prison convicts, named Hoffman and Thornton, on their way from Troy to their permanent home in the Auburn prison last week, when a short distance from Syracuse, leaped from the cars, which were running at the rate of thirty miles an hour, and escaped. They were chained together and hand-cuffed at the time, and obtained leave of their keeper to step out on the platform, on the pretence that one of them was sick. When they struck the ground they were hurled down and rolled along with terrible force; but strange to say, they were so little injured, that when the motion of the train was arrested and run back they could no where be found.

Camels on the American Deserts.—Much has been said, first and last, within a few years, upon the practicability of introducing the camel upon the plains lying between the Mississippi and the Pacific, which are traversed annually by great caravans of emigrants. A bill has been introduced in the Legislature to incorporate a company to test this matter. "Sentinel," of the Courier and Enquirer, says, "Mr. King, son of Charles King, Mr. Webb, the distinguished author and naturalist, and Mr. Carangray, are named as corporators in the bill to incorporate the American Camel Company—the object of the incorporation being to introduce into this country, to be used between the Atlantic and Pacific, this most useful beast; to give the tinkle of the camel bells to the solitudes of the deserts and the plains. The tune to which they would march, every Scotchman will at once recognize."

The Generals of the British Army.—A writer in a late number of the London Times gives some interesting facts respecting the age of the senior officers of the British army. He says that nine-tenths of the Major Generals are upwards of 60 years. Of the 259 full colonels, 156 are upwards of 60 years of age, a period of life at which an officer in the French army, unless especially exempted, is placed on the retired list; and the remaining 103 full colonels are between the ages of 44 and 60. The writer states that the Duke of Wellington and Napoleon were 45 years of age when they finished their military career in the field at Waterloo. The youngest major general in the British army at present—royalty excepted—is long past that age, and there are only two full colonels who have not attained it.

Russian Soldiery.—According to the *Soldaten Freund*, 412,000 Russians are encamped around Kulafat; 75,000 men are in Great Wallachia under the personal command of Prince Gorchakoff, whose head-quarters are in Bucharest; between the Sereth and the Pruth stands Gen. Luders, with 45,000 men; between the Pruth and the Dniester, Gen. Osten-Sacken, whose corps, as soon as Gen. Tschodaell's division arrives, will amount to 60,000 men. A reserve of 30,000 men is organized in Volhynia, by Gen. Shinclinkoff; 45,000 more are on their march to Odessa and Crimea; while the army of the Caucasus, under Prince Woronzoff, is put down as 182,000 men strong. By this statement, the European army in array against Turkey and her allies, amounts to nearly 500,000 men, and above 500 cannons.

The Salt Springs of Onondaga.—The annual report of the Superintendent of the Onondaga Salt Springs has been presented to the Assembly. The entire quantity of salt manufactured on the salt reservations during the twelve months was 4,104,524 bushels. The revenue received by the Superintendent during the year, for duties, rents, fines and sales of salt logs, was $54,084.44, which was duly deposited in the Salt Spring Bank, to the credit of the State Treasurer. The market for salt opened at nine shillings per bbl., and with the exceptions of a temporary advance in November, remained uniform. The business yielded a fair equivalent for the capital invested.

Counterfeit Gold Dollars.—The *Buffalo Republic* mentions the appearance in that city of counterfeit gold dollars, which proves that the bogus mint is in operation, and its issues are circulating. The metal of which it is made is copper. A very thin covering of gold, which conceals the baser metal, was probably put on by galvanism. The gold had been removed from the edge of this specimen, and the copper stood confessed. The thickness of it is the same as the genuine, but it is a very little too large in diameter to go into the test mould which they have in the Post Office. The gold covering, although thin, is sufficient to resist the action of nitric acid, without scratching.

The Widow of Alexander Hamilton—Has reached the great age of ninety-five, and retains to an astonishing degree her faculties, and converses with much of that ease and brilliancy which lent so peculiar a charm to her younger days. And then the old lady, after passing the compliments and congratulations of the day, insists upon her visitors taking a merry glass from Gen. Washington's punch-bowl, which, with other portions of his table-set, remain in her possession.

☞ The lawyers of Covington, Ohio, have agreed upon a scale of prices, as follows:—Counsel, $5; divorce, $50; ejectment, $100. Suppose the premises recovered are not worth the fee; the wife and husband both a hard bargain at the cost of divorce; and the Counsel given not worth a cent; what then?

Marriages.

At Honeoye Falls, the 13th inst., by Rev. O. C. Beardsley, HORACE W. SHELDON and MARIA C. BICKFORD.

Commercial.

BUSINESS AND FINANCE.

A large portion of the gold brought in by the Geo. Law and the Northern Light was immediately reshipped for Liverpool, or at least its equivalent in the precious metals. The Canada, April 12th, carried out $371,000, and the Atlantic, on Saturday, $750,000 more.

Two arrivals from Sydney and Melbourne are reported at London with $1,600,000 gold, and three others have left Port Phillip with an aggregate amount of 120,000 ounces of gold, equal to about $2,400,000.

The Journal of Commerce publishes a table of imports at New York for three months of the present year. It shows an aggregate value of $18,716,011.

The uncertain condition of the money market by reason of the impending war, is having a depressing influence on stocks. New York Central has gone down to 101¾, which is lower than it has been since the consolidation. Most other railroad stocks and bonds sympathize with this leading solid, and are proportionately depressed, even in the face of a large increase of spring business.

Banking in the United States for several years past, has been eminently profitable. The Commercial Bank of this city, it is stated, will, in addition to their regular dividend divide *fifty per cent.* among the stockholders on the 1st of July next. For four years past this Bank has divided regularly, *twenty per cent. per annum.* But its profits have accumulated to such an extent, notwithstanding that there will be a surplus of fifty per cent. by July. It is difficult to see how any bank, doing legitimate business, can make money at such usurious rates, but seeing is believing.

Market Intelligence, &c.

Rural New-Yorker Office, Rochester, April 19, 1854.

Wheat and Flour under the stimulating influence of foreign advices, have gone up during the week, the former now selling at full $2 per bushel, and the latter at $9,25 a barrel. The decisive news on the war question, coupled with the declarations that the rights of neutrals will be respected by the belligerents, gives assurance of an immense trade in American produce.

Oats are scarce and higher, being quoted at 45c.

Butter and cheese both scarce and higher in the market; quoted, the former at 22@26c, and the latter at 11@12c.

Wood has also been difficult to obtain, the best quality selling readily at $5 a cord.

An extra note may also be put into the scale on hay,—prime lots selling to the lane of $16 per ton.

Rochester Wholesale Prices.

Flour and Grain.		**Fruits and Roots.**

NEW YORK MARKET—April 17.

Flour—Our market for West and State flour is better under the Arctic's news, but not active. The light arrivals and diminished supply render it certain that little can be expected from this point until the latter part of May. Canadian flour and in moderate request. Sales at $7,70.—Sales western canal at $7,75@8 ordinary to good straight State; $8,25@8,50 mixed to good straight Mich. and com. to good Ohio.

Grain—There is a good milling demand for wheat, and prices tend strongly upward, owing to the temporary light stock. Sales com. Genesee at $2,05@2,10. Rye held at $1. Oats in brisk demand at 47@49c for Jersey; 40@53c for State and West. Corn firm. Supply of yellow moderate. Demand mainly for the east. Nothing doing in shipping. Sales at 82@83c south mixed; 83@84c do white; 88½@89c round yellow; 85½@86c south do.

Provisions—Less doing in pork, and market for mess hardly so firm; prime scarce and better; sales at $14,50 for mess, and prime 12,87½@13; clear $16. Lard less buoyant and quiet; sales at 10@10¾c per lb. Butter better; prime very scarce and much wanted; sales Ohio 11@16c; State old 17@23.

NEW YORK CATTLE MARKET—April 10.

At Washington Drove Yard—Offered this week 2,187 Beeves. Quotations:—Heef Cattle $7@9. Cows and Calves $30 to $60. Veal Calves $10@20 each. Sheep—$4@7.—Swine—(gross weight) 5 to 6c.

At Browning's—Market active, with a good demand.—Sales at $5,00@11 for Beeves. Cows and Calves, $35 to 50. Sheep and Lambs at from $3,50@9.

At Chamberlain's—The Beef Cattle sold at from 5c. to 9c. Cows and Calves at from $25 to 35@45. Sheep sold at from $4,50 to $8, as in quality. Veal Calves brought from 5c to 7c. per lb.

At O'Brien's—Sales Beef Cattle at from $7@9. Cows and Calves—$30 to $50 per head.

ALBANY CATTLE MARKET—April 17.

At W. Woolford's Bull's Head, Washington street.—Beef Cattle—160 at market. Prices—Extra $8,00; 1st quality $7,50; 2d do, $7; 3d, $6,50@7.

Cows and Calves—20 in market. Prices range from $25 to $45.

Sheep—600 in market. Prices ranged at from $4 to 6,25.

Swine—Few in market. Prices ranged from $1@4,50 for Stores, and $5 for fat hogs.

CAMBRIDGE CATTLE MARKET,—April 12.

At market 800 Beeves, 55 Stores. Market Beef—Extra, per cwt. $9,00; 1st quality, $8¼@8¾; 2d do, $8,00@8¼; 3d do, $7½; ordinary, $7½. Hides, ₩ cwt. $6@6½.—Tallow, $8¼@8½. Pelts, $1,37@2. Calf Skins, 12c ₩ lb. Veal Calves, $6 to $8.

Stores—Working Oxen—$110, 145, 160@180.

Cows and Calves—$28 to $45@69. Two years old—$36 to $46. Three years old—$50 to $84.

Sheep and Lambs—1,995 at market; sales slow and hard to effect at present quotations. Extra $8 to $8@9. By lot—$4, 4,25, to $6@6,75. Live weight 6½@7½c per lb.

Swine—None.

BRIGHTON CATTLE MARKET—April 12.

At market 720 Beef Cattle, 18 pairs Working Oxen, 40 Cows and Calves, 2,400 Sheep and Lambs, 3,300 Swine.

Prices—Beef Cattle—Extra $8¾@8¾; 1st quality, $7¾@8¼; 2d, $7¼@7¾; 3d, $6¾@7. Working Oxen—$80 to $170. Cows and Calves—$25 to 62. Sheep and Lambs—$3 to $7,25. Swine—At retail, 5½ to 7½c.

To Advertisers.

Breeders of Improved Stock, and all who have Domestic Animals for sale, will find the Wool Grower & Stock Register the best medium of communication with those most interested in Sheep, Cattle, Horses, Swine, Poultry, &c. It is also an excellent medium for general advertisers—all who wish to give their advertisements circulation throughout the country. Its wide and rapidly increasing circulation—coupled with the fact that it is the only stock journal in this country—renders it a most desirable and advantageous channel through which to reach those engaged in wool and stock husbandry, and kindred branches.

Terms:—One Dollar per square (10 lines, or 100 words,) for each insertion. Address

D. D. T. MOORE, Rochester, N. Y.

Moore's Rural New-Yorker has become a giant among its kind. With a subscription verging fast to 30,000, and with a conductor who knows how to polish it with every grace of the art, and how to accomplish it with the best talent of the age—it is not surprising that it is now the leading agricultural paper of the country.—*Christian Adv.*

We have so frequently commended the *Rural New-Yorker* that an attempt to add thereto would be like "lending perfume to the rose." In our opinion it is the best Agricultural, Literary and Family paper extant.—*Pa. Herald & Whig.*

Advertisements.

Advertisements.—Brief and appropriate advertisements will be inserted in this paper at $1,50 pr. square, (ten lines, or 100 words,) or 15 cents a line—*to be paid in advance.*

Those who send advertisements without payment will understand from the above why they are not inserted.

LANGSTROTH'S MOVABLE COMB BEE-HIVE.

Patented Oct. 5th, 1852.

Each Comb in this Hive is attached to a separate movable frame, and in less than five minutes they may be all taken out without culling or injuring them, or at all enraging the bees. Weak stocks may be quickly strengthened by helping them to honey and maturing brood from stronger ones.

Queenless colonies may be rescued from certain ruin by supplying them with the means of obtaining another queen; and the ravages of the moth effectually prevented, as at any time the hive may be readily examined and all the worms, &c., removed from the combs. New colonies may be formed in less time than is usually required to hive a natural swarm, or the hive may be used as a non-swarmer, or managed on the common swarming plan.

The surplus honey may be taken from the interior of the hive on the frames or in upper boxes or glasses in the most convenient, beautiful and saleable forms. Colonies may be safely transferred from any other hive to this, at any season of the year, from April to October, as the brood, combs, honey and all the contents of the hive are transferred with them, securely fastened in the frames.

We are now prepared to sell state, town, county and individual rights, to make, vend and use these hives, on reasonable terms. The price for individual rights, which will entitle the purchaser to make the hives for his own use, is five dollars. We can also furnish hives to all who wish.—Price from two to five dollars. Upon the receipt of nine dollars we will send the right, together with a beautiful hive, with glass on four sides, showing all the combs. For seven dollars the right and a well made hive without glass, which any one can make who can use the simplest tools.

Agents wanted for the sale of the above rights.

All communications addressed to J. Beals, Greenfield, Mass., will meet with prompt attention.

For one dollar, postage paid, Langstroth's book entitled the Hive and Honey Bee, will be sent free by mail.

221-4t J. BEALS.

Attorney for Rev. L. L. Langstroth.

FARM FOR SALE

In the town of Waterloo, four miles north-east from Geneva, containing 100 acres, 15 of which are covered with good thrifty timber. A large portion is a sandy soil with clay subsoil, admirably fitted to the growth of fruits and vegetables. The farm can be conveniently divided into two or three parts if desired. Apply to C. W. NICHOLSON, on the Sodus road, 2 miles north of Geneva, N. Y.

April 12, 1854. 224-2*

PREMIUM FOWLS.

I have for the last few years received the First Premium on my Brahmas and other varieties at the N. Y. State Fairs—also Monroe Co. Fair at Rochester. I now have 23 varieties for sale—and eggs for hatching. My fowls are second to none in America. All warranted to be pure in every particular, and what they are sold for.

Rochester, N. Y. 221-6* D. P. NEWELL.

CHOICE EGGS FOR HATCHING.

The subscriber will furnish eggs of the following kinds, all warranted pure, safely packed for transportation, delivered at Utica.—Brahma Pootra $2 per dozen; Gray Chittagong $2; Black Spanish $2; White, Black, Buff, Red and Speckled Shanghais $1; Cochin China $1; White Java Bantams 50 cents per dozen; Dominique 50 cts.; Bolton Grays 50 cts. Apply to or address

HOWRY B. LAPHAM, Paris, Oneida Co., N. Y.

OAKLAND HENERY.

The Subscriber now offers for sale a choice lot of Asiatic Fowls, consisting of the buff and white Shanghais, Cochin China, and the celebrated Brahma Pootra. Also Eggs at the following prices:—Brahma Pootra $3 per doz. Cochin China, buff and white Shanghai $3 per doz. Not less than one dozen sent to one address. A less number will be sold at the office of

O. H. EVANS,

224-3t 214 Main street, Buffalo.

HOP ROOTS for sale, at 50 cents per bushel, on the farm of the subscriber. Apply to or address

GEORGE FEARON, Jr.,

April 17, 1854. Pratt's Hollow, Mad. Co., N. Y.

OSAGE ORANGE SEED.—We will supply new crop Osage Orange Seed, at *Seventy-five cents* per quart, neatly put up, and with each package full directions for cultivation. Address orders to H. C. WHITE & CO., Buffalo Ag'l Warehouse and Seed Store, Buffalo, N. Y. 223-tf

GARDEN SEEDS.—We have a full and fresh supply of imported and best Shaker Garden and Field Seeds.—Merchants and dealers supplied on the most favorable terms. Catalogues gratis. Orders solicited at the Buffalo Ag'l Warehouse. [223tf] H. C. WHITE & CO.

FARM AND NURSERY FOR SALE.

Pleasantly located on the Ridge Road, in Greece, near Rochester,—containing 55 acres of superior land. Has good buildings, and other improvements—including 300 bearing peach trees, and a variety of other fruits. The Nursery contains about 140,000 grafted apple trees, from one to four years' growth. Will sell 40 acres, with the buildings and nursery, or the whole together, or the nursery trees separate, or any part, at a bargain. Address or apply to the subscriber on the premises. Z. COLBY.

Greece, N. Y., April, 1854. 222-4t*

FRUIT AND ORNAMENTAL TREES,

At Reduced Prices for Cash.—The subscriber wishing to dispose of his present stock of Trees, will sell them at the following rates for cash:

Apple Trees, one shilling each; *Cherry Trees*, two shillings each; *Pear Trees*, two shillings each; *Mountain Ash*, two shillings; *Peach Trees*, nine cents.

Also, a quantity of young Improved trees of suitable size to remove to other Nurseries, at reduced prices.

All of the above varieties are of the best quality, having been tested and adapted to this climate—and are warranted to be as represented.

Letters addressed to the undersigned at Olcott Post-office, Niagara Co., N. Y., will receive prompt attention.

Residence on the Nursery—three miles east of Olcott.

N. PARNUM.

Olcott, Niagara Co., N. Y., March, 1854. 221-4t*

PURE WINE.

The subscriber has on hand between sixty and seventy barrels *Pure Wine*, from one to four years old, made by himself from the grape, which he offers for sale low for cash. Druggists and others, wishing to procure pure wine for medicinal or communion purposes, can be supplied in small or large quantities by calling on him at his residence.

223-2t SAMUEL H. JERREN,

April 4, 1854. York, Livingston Co., N. Y.

A CHANCE FOR THE MILLION!

$50 to $150 per Month can be easily made in selling the *POPULAR BOOKS* published by Miller, Orton & Mulligan, successors to Derby & Miller, Auburn, and Derby, Orton & Mulligan, Buffalo.

At no previous time has the demand for good books been so active as at present. The great masses of the People who want, and will have them, are not within the reach of the Local Booksellers, and it has become a well ascertained fact, that of the Publications of merit and real utility, from time to time issuing from the American Press, a *large proportion* must be sold by

Book Agents, Colporteurs and Canvassers,

or not at all.

To all who are desirous to aid in the dissemination of a *Pure and Wholesome Literature*, and none other, we offer great inducements to engage in the sale of our Popular Books for the People. We publish *Good Books, well printed and strongly bound*, and which sell readily wherever offered.

☞ Catalogues of our Publications, containing full particulars, furnished on application (post-paid,) to

MILLER, ORTON & MULLIGAN,

1854. Publishers of Popular Books,

ATKINS' SELF-RAKING REAPER.

Forty of these machines were used the last harvest in grain or grain or both, with almost uniformly good success, in nine different States and Canada.

Twenty-Six Premiums, including two *at the Crystal Palace*, (silver and bronze medals,) were awarded it at the autumn exhibitions. I am building only 500, which are being rapidly ordered. Mr. Joseph Hall, Rochester, N. Y., will also build a few. ☞ Early orders necessary to insure a Reaper.

Price at Chicago $175—$75 cash with order, note for $50, payable when Reaper works successfully, and another for $50, payable 1st December next, with interest. Or $160 cash in advance. *Warranted to be a good Self-Raking Reaper.*

☞ Agents properly recommended wanted throughout the country. Experienced agents preferred. It is important this year to have the machines widely scattered.

Descriptive circulars with cuts, and giving impartially the difficulties as well as successes of the Reaper, mailed to post-paid applications.

J. S. WRIGHT.

"Prairie Farmer" Warehouse, Chicago, Feb., 1854.

MEXICAN POTATOES.—For sale at $1 per bushel, at Walworth, Wayne county, N. Y., by

221-5t* T. G. YEOMANS.

VAN HEUSEN & CHARLES,

China Depot, No 62 and 64 State street, Albany, N. Y.

To the Public—Your attention is respectfully solicited to the assortment of *China, Glass, Earthen Ware, &c.* kept at this establishment, unequaled in variety and extent by any in the United States. Our importations for this season will comprise the new and desirable styles—selected by one of the firm while in Europe. Particular mention can not be made of all the pretty things; we can only say that at store will feel amply repaid, and find a large assortment at *lower prices* than can be found elsewhere. Those who may want Dinner or Tea Sets, or any other article of a peculiar design in China or Earthen ware, can depend on receiving it promptly, as we have an agent at the Potteries who will give attention to such matters. Housekeepers will find here many articles not usually kept by dealers in our trade; this enables us to furnish complete outfits to those commencing; to this branch we pay particular attention.

The patronage heretofore extended to us, is evidence that our system of Large Sales at Small Profits, is appreciated; and we doubt not will continue to be. Among the new articles deserving special notice, are—

Parian China—Tea Sets and separate pieces, Statuettes, Busts, Images, &c. This is a new material, and very beautiful.

English and French China—Plain and Decorated Sets or Pieces, Harlequin Sets or Pieces, Vases, Images, &c., &c.

Britannia and Silver Plated Ware—Illeson's (English) and American, all kinds, some patterns very rich.

Cutlery—Rogers' (English) and American, in sets or separate; also, Silver Plated Knives, &c.

Papier Mache and Japan Ware—Tables, Trays, Boxes, &c., from the celebrated factory of Jennings & Kelbridge.

Silver Plated Glass Ware—Very elegant—richest made.

Gas Fixtures, (a large stock selling at cost,) Grandoles, Lamps, Chandeliers, &c., new patterns, at unusually low prices.

☞ Ware packed so as to ensure its safe carriage any distance. 222-3t

FARMERS, LOOK TO YOUR INTERESTS!

J. Hapalje & Co., of the Genesee Seed Store, Rochester, having received their Spring supply of Seeds, &c., offer for sale, at the lowest cash price—

500	bushels	Scotch Fife Seed Wheat,	Canada growth.
500	"	Canada Club do.	do.
500	"	Spring Rye.	
200	"	Barley, from Canada,	premium seed.
200	"	Clover Seed.	
500	"	A No. 1, Timothy.	
1,000	"	Early and late Field Peas.	
300	"	Pure Early Kent Peas.	
300	"	Early Washington Peas.	
200	"	Early Warwick Peas.	
100	"	Dwarf Blue Imperial Peas.	
500	"	Marrowfat Peas—and more coming.	

13 casks of English Seeds, viz:—Turnip, Cabbage, Radish, Cauliflower, &c., &c. Several varieties of superb Garden Peas, imported from London. 221-3t

3,500 ACRES OF LAND, WITH STEAM SAW-MILL FOR SALE,

In Scioto Valley, Ohio, and lying on the Ohio Canal.—Property as desirable as this, is seldom to be met with, and will be sold at a bargain, and on accommodating terms.—Persons desirous of purchasing, by calling upon, or addressing the subscriber, at Chillicothe, Ohio, will be promptly attended to, and full description of premises given. H. H. HOLT.

Chillicothe, O., March 23d, 1854. 221-6

FOREBUSH'S MOWING AND REAPING MACHINE.

Patented July 20, 1852.

The American Mowing and Reaping Machine Co. have purchased the Patent Right for the above Machine for the United States, England and Canada, and are now manufacturing a large number to supply the demands of the coming season. The advantages which this machine possesses over all others are obvious, and will readily be acknowledged by all disinterested persons. Being a *combined machine*, and working equally well in grain or grass, it enables the farmer of moderate means to procure a valuable *Reaper and Mower* in one, which will do the work of both, and at less than half the usual cost. As a Mower it has no superior; it was thoroughly *tested* the past season in every variety of grass, and in many different sections of the country, and in every case where it was properly made, it gave perfect satisfaction. It will cut and spread from 10 to 15 acres of any kind of grass per day. As a Reaper it has never been excelled, and has no rival that can in all respects successfully compete with it. The patent for this machine covers many points of excellence which have heretofore been unknown, and which (of course) can be used in no other. In the construction and arrangement of these machines great pains have been taken to ensure the necessary strength, simplicity and durability. They are easily kept in order, and it requires but a few moments to change the machine from a Mower to a Reaper, and in either form it is equally strong and substantial. It is not liable to get out of order, and if any accident should happen it could be readily repaired by any ordinary mechanic. In the construction of the machines no expense has been spared to render them both perfect and durable. The Mower weighs but 750 lbs.—the Mower and Reaper combined 900 lbs. To any person desirous of purchasing, or of understanding the machine more fully, illustrated circulars will be sent with full descriptions, references, &c., &c.

Price of the Mower, $110 00

" " " and Reaper, 130 00

Terms—Cash in Buffalo. Delivered on boats or cars, free of charge.

Address orders or communications to the Company, or

CHAS. M. SMITH, *Sec'y*, Buffalo, N. Y.

C. J. Allen, Sinclairville, Chaut. Co., N. Y. 222-13t

KETCHUM'S IMPROVED MOWING MACHINE,

With entire change of Gear, the only Successful Mower Now Known.

Ketchum's *Improved* Machine, which we are building for the harvest of '54, was thoroughly tested last season, and the advantages gained by our change of Gear are in all respects as we designed, viz: *durability, convenience and ease of action.* The shafts now have bearings at both ends, which overcomes all cramping and cutting away of boxing. A counter balance is attached to the crank shaft, which gives it a steady and uniform motion. Each Machine can be thrown out of gear; there is great convenience in getting at each and every nut, all of them being *on upper side of the frame;* all cups are attached to all the bearings, which, by the use of a wad of cotton, will hold oil for a long time, as well as protect the bearings from dust, grit, &c.; the finger bar is lined with iron its whole width, which protects it from wear.

These and various other additions for strength, durability, &c., makes them the most simple and perfect agricultural implement in use. They weigh about 750 lbs. each, and can easily be carried in a one-horse wagon.

It requires not over ten minutes to get one ready for operation, there being but two bolts, (besides the pole bolts) to be secured to have one ready for use. They will cut *all kinds of grass*, and operate well on uneven or rolling lands, or where there are dead furrows. This Machine took the highest award, with special approbation, at the World's Fair; it also received, during last season, one silver and four gold medals, and various other flattering and substantial testimonials of approval. We have spared neither pains nor money to make this machine deserving of public favor, and hope to be able the coming season to supply the great and increasing demand.

We take this occasion to caution farmers against buying *untried* Mowers; if they do (as was the case with many last year) they will incur loss, vexation and disappointment.

If any parts are wanted to repair any machine we have sold, or may hereafter sell, they will be furnished and only manufacturers' cost for the same be charged.

☞ In all cases where extras are wanted, be sure to give us *the number of your Machine.*

(Warranty:) That said machines are capable of cutting and spreading, with one span of horses and driver, from two to fifteen acres per day of *any kind of grass*, and do it as well as is done with a scythe by the best of mowers.

The price of the Mower, with two sets of knives and extras, is $110 cash, in Buffalo, delivered on board of boat or cars free of charge.

Office and Shop, corner of Chicago street and Hamburgh Canal, near the Eastern R. R. Depot, Buffalo, N. Y.

BOWARD & Co., Manufacturers and Proprietors.

The Mower is also manufactured by Ruggles, Nourse, Mason & Co., at Worcester, Mass., for the New England States.

By Seymour, Morgan & Co., Brockport, N. Y., for Illinois, Iowa and Michigan.

By Warder & Brokaw, Springfield, O., for Ohio and Kentucky. 220-4t

J. Hapalje & Co. are also sole Agents for the sale of Ketchum's Mowing Machine in Rochester, and for the vicinity.

KETCHUM'S MOWING MACHINE.

This machine stands without a successful rival, as the *reaping machine of the age.* The supply will not be equal to the demand. If any person desires one for the coming season, they cannot speak too soon. The uniform price at Buffalo is $110,00. All who will forward us an order accompanied with the cash or satisfactory reference, may depend upon being faithfully served with a machine in good season.

H. C. WHITE & CO.,

Buffalo Ag. Warehouse and Seed Store, 11 & 13 West Seneca street, Buffalo, N. Y 211tf.

THE MORNING OF LIFE.*

BY DELNTHA.

Morning's rosy dawn appearing,
Blushing on the eastern sky;
All the distant leaf-clad hill-tops,
Bathing in a glorious dye;
Nightly shadows homeward flying,
Trembling to the deepest dell;
Vanishing into earth's bosom—
Sinking as the sunbeams fell.

Joy awakening in the valleys,
Warbling rapt'rous songs of praise;
Dew-besprang'ed flowers uplifting,
Smiling in the golden rays;
Murmuring music softly stealing
From the infinite waves' unrest;
Graceful poplars lowly bending,
To the winds a silvery crest.

'Mong the flowers a fair child wandering,
Weaving garlands for her hair;
Listning to the woodlark's trilling,
Light at heart and free of care.
Loud her ringing laugh responded,
Sweet its echoing from the hill;
As she stooping plucked the violets,
Mirrored in the murm'ring rill.

Nature's gentle-breathing voices,
Echoing from her heart of hearts,
Roused her inmost soul to gladness,
Till she seemed of them a part.
Dew-gemmed flowers gaily waver,
'Mong her curling, golden hair;
Round her sweet young face were floating,
As though borne upon the air.

With a smile that beamed like sunshine,
With a heart as fresh as morn,
With a laugh that rang like music,
Roving lightly as a fawn;
Down the streamlet, through the wildwood,
Pausing at the lark'rel's side,
Softly smiling, wondering, dreaming,
Gazing at the slumbering tide.

Little maiden, as you're gazing,
Why this shade upon your brow?
Does the first winged cloud of morning
Fling its shadow on you now?
Of your future are you dreaming?
Seems it like this crystal sea?
Have your thoughts far stretching onward
Reaching, grasped Eternity?

But the shade on life's young morning,
Melts away upon the air,
As the cloud 'mid azure heaven,
Melts before the sunlight glare;
And sad thoughts like flitting shadows,
On the bosom of the sea,
Passing, make the crested tide-waves
Seem more glad, and wild, and free.

Sweet the morning's early dawning,
Sweet, and fresh, and pure, and fair;
'Mid the scorching rays of noon-tide,
Worn with toil and weight of care,
'Mid the gathering shades of evening,
When the work of life is done,
O what visions of life's dawning
At fond memory's bidding come!

Unionsdale, Susquehannah Co., Pa.

* Respectfully inscribed to the author of the "Sunset of Life."

Rural Sketch Book.

TURNING OVER A NEW LEAF.

BY MRS. CAROLINE B. SOULE.

"Well," yawned Mr. Grey, as the clock struck six the last Sunday in the year,—"I suppose it's time to get up—but somehow I don't feel much like it this morning."

"O, lie still and take your comfort," muttered his wife, drawing the bed-clothes yet closer around her; "there's no hurry this morning, it's Sunday, you know."

"Just so you said last Sunday, wife, and yet you know you were in a hurry all the day long. Suppose we turn over a new leaf to-day, and get up at once."

"I'd rather turn and take a new nap—do, pray," and her tone grew quite querulous, "do let one take some comfort on Sunday, if they don't my other day in the week," and she turned her face to the wall and resolutely closed her eyes.

"Comfort! yes, that's what I want to take; but, it's no use trying. Well, if she will go to sleep again, I suppose I may as well;" and he composed himself and dozed another hour.—The clock struck seven.

"There, wife, we most get up now, at any rate. We shall be late again, just as we were last Sunday.

"Well, get up, then, if you want to. I do wish I could take a little comfort. Get up! I get up every other day. Strange a body can't take comfort once a week."

"Well, well, sleep away, then," said her husband, rather crossly as he slammed to the door, "but it's anything but comfort you'll take when you do get up. *We must turn over a new leaf.*"

For more than half an hour did Mrs. Grey continue in bed, striving in vain by the indulgence of "a little more sleep and a little more slumber," to still the quarrel between habit and conscience. Longer would she have tarried, but for a crash in the children's room and a medley of reproaches, sobs and lamentations.

"What, for mercy's sake, have they done now?" exclaimed she, as hurriedly putting on her clothes she ran to the spot whence issued the tomult. "I don't believe there's another such a set of young ones in the world. What have you been about here," she said to the little ones, four in number, who were looking pitifully at the wreck of the Sunday's pastime.

The sight that greeted her was not calculated to compose her troubled mind, or soothe her reproaching heart. The children accustomed to being up, dressed, and having their breakfast before seven, on six days of the week, could not, indeed knew not how to remain quietly in their beds until near eight o' clock. Indeed, they always calculated on a good time Sunday mornings, which good time meant sundry revolutions in the bed, not unlike pranks of a young colt; wrapping up the blankets to represent Indians and squaws; rolling up quilts in mammoth bolsters, and to conclude by a game of ball, in which the pillows flew right merrily. All had gone on as usual, till one "unfortunate" missed the mark, and the ewer tumbled on the floor in ruins, its contents mingling with shoes, stockings, and rumpled sheets, and giving new chills to the little red feet anxiously paddling the wet carpet to save here and there a garment.

"You're a set of wicked boys and girls to carry on so Sunday morning," said the *Christian* mother, in pious indignation. "If it was any other day, I'd whip every one of you. Just see what a pretty piece of work is here."

"If it had been any other day, it wouldn't have happened, mother," said little Frank, who counting only five years, not unfrequently manifested the lore of fifty. "Cause you see, we should have been out eating long afore now, but we get so tired lying abed we can't keep still. Why don't you get up earlier Sundays, just as you do other days? I wish Sunday never came. We can't never have any fun but something or other always will happen—"

"No," interrupted his brother two years older, "every body don't sleep so long on Sunday, 'cause my grandmother gets up real early then and we have a real nice time all day. I always loved to have Sunday come when I was in the country, but these city Sundays ain't a bit good."

"Well," said Frank in his particular, slow, emphatic tone, "I mean to ask father to move into the country then, for if we must have Sundays, we might just as well have good Sundays."

"Well, just at present move into the kitchen, the whole troop of you," cried the mother, now hurried enough in separating wet and dry clothes, the words of the boys coming to her excited feelings, like anything rather than oil on troubled waters.

Thankful to escape so well, they hurried thither to dress. But now was a Babel. Julia's stockings were gone, and Henry had but one shoe, Frank had no pants, and Mary's clothes were all "dripping wet."

"Well, dress yourselves the best way you can. I can't stop to help you now. You're hindered me more than half an hour already."

"But how can I dress myself without pants?" said the philosophic Frank, "and if Julia goes without stockings she'll get the croup again, and if Mary puts on them wet clothes she'll catch her death-cold and die, and then you'll feel very sorry, I guess, and then if Henry—"

"And if I get Julia's stockings, and Mary some dry clothes, what'll happen then I wonder?" and the mother hastened to the bed-room, where between the mattresses of one bed she found the shoes and stockings, and at the bottom of the piled bed-clothes, found the missing pants.

"Anything more wanting by these wicked children?"

"Yes, mother, some breakfast. Do hurry too, 'cause I am so hungry I can't wait.

At another time the mother might have smiled on her boy, but she had no heart for smiles then, on that beauteous Sabbath morning, when the blue heavens and snow-clad earth were radiant with glorious sunshine.—Two hours' "comfort" in the early morn had ruffled her peace and troubled her joy for the day. She needed, indeed, to turn over a new leaf.

A worrying time had Mrs. Grey that morning preparing breakfast; and when ready, which was not till after nine o' clock, it was, as the children said, only half a breakfast. And the children, in what a sad plight did they come to the table! Julia's long braids, loosened by the morning's frolic, hung about her face and neck very much as though a high wind had been sporting with them, while Henry's long ringlets, of which his mother was so proud, were in a snarl that spoke terribly of future retribution, while Frank and Mary's short locks completely veiled their beautiful brows. And their mother's head, instead of its usual neat arrangement, looked in expressive language very much like an oven broom. And the table—a sight! Julia had set it, and her mother not having given directions, she had put on the soiled cloth that had done a weekly duty, and being in a hurry and out of humor had huddled the dishes on with but little regard to proper place. It was not indeed calculated to restore calmness to the sluggard's heart, or promote the cheerfulness of the sinned-against family.

"How's this, wife?" said Mr. Grey as he seated himself, "no meat this morning? I tho't I sent home some steaks yesterday."

"I forgot to bring them from the store-room last night, or rather I thought I should have plenty of time to thaw them this morning, but I haven't and so we must get along without them."

"And we haven't got any pancakes either," said Frank. "Mother, you promised last Sunday that we should have some to-day. Are big folks wicked when they don't do what they said they will? 'cause if—"

The mother's conscience smote her terribly. Her precepts were treasured—what if her example should be followed! As is almost always the case, she found a scape-goat, and interrupted her questioning child with the remark that "children as naughty as her's, did not deserve pancakes."

"Your potatoes are not half done, wife; indeed they are not fit to eat. I am afraid we shall have but a poor breakfast." And the husband's tone was rather sullen, for he had been brought up in the country, and of course, accustomed to good cheer in the morning, and a scant breakfast table always put to flight his good humor. "Can't you give us a bit of your Sunday's roast? We can't make our breakfast unless you do;" and he deliberately gathered the potatoes which he had distributed to the children, and returned them to their dish. This action annoyed his wife seriously, and she hustled into the pantry with little grace, and returned with her spare-rib, which was cooked on Saturday when there was plenty of time, and was very "beautifully done."

"Ah, yes," exclaimed her husband, as he brandished joyfully his carver, this will be done finely."

"And what will become of your dinner meanwhile?" answered his wife.

"Oh, we'll have the steaks; you know there will be plenty of time to thaw them."

Husband and children, half starved, as they said, by long waiting, relished the roast and nice bread and butter, but Mrs. Grey could hardly swallow a morsel, and instead of entering into the lively prattle of the little ones, spoke only to bid them hurry and eat, or they would be late at church.

Breakfast despatched and new trouble commenced. "I can't get you all ready, that's out of the question. Julia and Henry can go, and Mary must wait until afternoon;" at which the two set up a lusty cry, which continued till they were shut up in the bed-room, with the threat of being punished unless they stopped immediately. Finding it useless, they stopped immediately, and knowing from experience that mother did sometimes whip on Sundays, because "she was always cross then," the two children agreed to make the best of it, and agreed that they should go a fishing, which meant lend mother's pins into books, and use her melting cords for lines, and clamber on the bureau and have fine sport, till a bottle of cologne should have been knocked off, and a box of tooth-powder upset.

With the mother and the elder children it was scold and cry, cry and scold, till bells pealed their last tune, when with red faces and sullen hearts, they took their father's hand and started for church. As for Mrs. Grey, she said she never expected to go out again in the forenoon.

"No rest for the wicked," said she, as she drove the little ones out of her bed-room, wound up her curl, picked up the broken bottle, and swept up the rosy powder, and her heart echoed the cry of her lips, and smote her terribly, and in woman's phrase, "she sat down and had a good cry." It would have been better to have gone to work, for while she wept, her fires went out and she had them both to kindle, and then to wait till the water should heat ere the morning's work should begin.—Hasten as she did, church was out ere it was half done, and to finish, as she said, her trouble, two friends returned with her husband.

Very dear friends they were to be sure, and at another time glad enough would she have been to see them, but then—oh! she wished them further! She was obliged to suspend her labors and comb her hair and change her dress ere she could give the greeting, and then only a moment could she tarry, for dinner must be prepared, and as there was company, everything must be in perfect order. It was nice, it was excellent, but somehow no one enjoyed it. The guests felt instinctively that they had intruded. Mr. Grey, knowing the condition of affairs, was ill at ease, while his wife—but all women similarly situated will guess her feelings, and no one can describe them. There was no time after the repast to clear the table and dress the younger children, so leaving both in the care of Julia, she set out for church, not to worship, for she was in no frame of mind to do that, but to perform a Sabbath day duty.—We will pass over the doing the work on her return, the getting tea, and putting children, (cross, not because they in the least wanted to be, but because they could not help it,) into their beds, and see her enter the sitting-room at eight o'clock, throw herself on a lounge and hear her exclaim, "I am tired to death."

"I don't wonder at it, wife," said her husband, compassionately, two hours of quiet with his fire and books having restored his good humor, somewhat, it must be confessed, out of the way of the annoyances of the day. "I was sorry to bring these folks to dinner, but I could not avoid it without being very rude."

"Never mind that—if I had things as they should have been, it would have been well enough, but somehow nothing goes right anymore on Sunday. I actually dread to have it come."

"But it was not always so, wife. Don't you remember how happy you used to be when we were first married? Ah! it was a halcyon day then!"

"Yes, I remember it well," she murmured, and leaning her head on her hand, she grew thoughtful. Memory held up beauteous pictures to her; the happy Sundays of child and girlhood, and of early married life, were lived over again, and indeed it was truly a golden age.

Then in the vile contrast came up the Sundays of the two or three last years, and then spake conscience in a terrible voice, and uttered the cause; and tears hot and many rolled down her cheeks. The only day of the week which her husband could spend with his family was despoiled of comfort by herself; she was bringing her children up to dread and hate even the day sacred to worship and home's purest joy; she was learning herself to look upon it as a day of trial, a day of toil, and why? Because mostly of a "little more sleep and a little more slumber."

No words passed between husband and wife till they rose to retire. Then taking her hand, he said, half seriously, half jocosely, "suppose, Julia, we turn over a new leaf. This is the last Sunday in the year. Shall we begin anew and right on the first of the next?"

"We'll try," was the brief answer, in a voice choked with emotion.

And she did try! Let us see the result. It is a beauteous Sunday morning, a smile upon heaven and earth, and a smile on the countenance of each member of the family, as they gather at half past seven around the neat breakfast-table, covered with a cloth rivaling the snow in whiteness, and set with Shaker-like precision. And the viands, not costly are they, and yet a king might relish them—steaks broiled to a turn, potatoes bursting into flakes, coffee clear as rare old wine, and—pancakes as light as a feather.

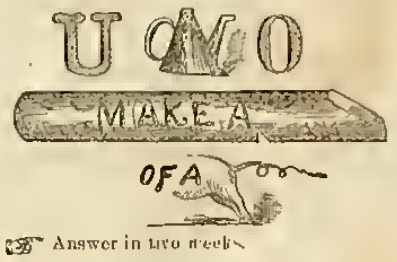
And what a beautiful group discuss the meal, father in his Sunday suit, in the best of humor, mother in a neat morning dress, every braid in place, and children with plaited and curled tresses, and while foreheads open to view, and all in church dress, too—ah, it is a home picture, beautiful to the eye and cheering to the heart.

The day was well begun, and half the race was run. Everything went easy, for there was plenty of time, and every one was good natured in the use of it. The mother *did* get out in the morning, and had the pleasure not only of listening to an eminent preacher she had long yearned to hear, but enjoyed the devotions with a heart in its right place. The old friends long absent from the place, were met, and cordially invited home, and to a seat beside her table, spread ere she had left for church. The ten-table was a joyous place, and the time spent in the sitting-room with the husband and little ones, was in truth as a foretaste to heaven, while the quiet evening was full of bliss.—"My cup is full," was her language as she pressed her pillow, "this has been indeed a blessed day; I thank God that He gave me strength of will to turn over a new leaf."

[An answer to the preceding sketch,—another view of the subject—will be given in the Ladies Department of next week's RURAL.]

Youth's Corner.

ILLUSTRATED REBUS, NO. 18.



☞ Answer in two weeks.

(Written for the Rural New-Yorker.)

MISCELLANEOUS ENIGMA.

I am composed of 36 letters.

My 16, 6, 4, 21, 31, 34, 15, 21, 28 is an ignorant person.

My 9, 34, 10 is a domestic animal often very much petted.

My 21, 11, 18, 3, 11 should be in all houses.

My 21, 9, 5, 34, 17 is a large body of water.

My 8, 15, 15, 34 is a girl's name.

My 32, 21, 21, 25 is always good.

My 2, 34, 23, 13 is a wrong feeling.

My 20, 24, 17, 10, 27, 31 loves my 6, 34, 15, 30.

My 19, 26, 7, 33, 16, 34, 15 is a boy's name.

My 23, 16, 15, 3 is frequently wasted.

My 9, 21, 24, 1, 16, 4 is a relative.

My 11, 5, 30, 18 is what brings forth the harvest.

My 23, 3, 34 is an old woman's beverage.

My 12, 16, 22 is the possessive case of he.

My 6, 34, 36 is used for light.

My 35, 16, 22 is a common name for a little girl.

My 9, 21, 34, 10 is a part of a gentleman's apparel.

My whole is a saying which young ladies should always avoid having truthfully spoken of them.

E. W. J.

(Written for Moore's Rural New-Yorker.)

ALGEBRAICAL PROBLEM.

Answer to Geographical Enigma in No. 15.—*A Railroad to the Pacific Ocean.*

Wit and Humor.

"Morning Relief Train," soliloquized Mrs. Partington, as she sat in one of the railroad cars, and gazed upon the ticket which she had a short time previously purchased at the depot. "Morning Relief Train; I s'pose that must be the train which starts every morning at 7 o'clock, to pick up the poor creturs on the track, that have been mastichated the night previous. Dear me, when will railroad folks learn to use circumlocution and care!" and the old lady sighed in bitterness of spirit.

A Good Joke.—The city authorities of Marysville, California, recently passed an ordinance for the removal of outside stairs in that city. While the Council was in session a few days subsequently, the stairs leading to the Council Chamber were removed, and the dignified members of that body, according to the Herald, were compelled to "shin" down the posts of the building.

The genius who files newspapers, lately broke his instrument while operating on a "hard shell" organ.

It is said that the tea most in favor among unmarried ladies is *beau-he*.

BROOKSIDE FAMILY SCHOOL FOR BOYS,

Berkshire, N. Y., 18 miles from the Owego Depot of New York & Erie Railroad.

This Institution enters on its 14th semi-annual Term on Tuesday, the 10th day of May next, with entirely new and very superior accommodations. A large additional building has been erected expressly for school conveniences, and other great improvements made. Its location is retired and beautiful, and the region proverbially healthy. Its aim is

1st. To secure the comfort and health of its pupils.
2d. Their thorough instruction and mental discipline.
3d. To exert the strongest moral and Christian influence on them.

Terms.—For those pursuing the ordinary English branches, $150 a year. For those pursuing the Classics, Higher Mathematics, &c., $200 a year,—or $90, and $100 a term of 22 weeks—one-half always in advance. The above terms include use of Reading Room, Gymnasium, and Stationery for all school exercises without additional charge.

Applications for admission or for circulars containing full particulars, testimonials, &c., should be addressed to

FREDR'K F. JUDD, A. M., Principal and Proprietor.
Berkshire, April 1, 1854. 222-4t

REJECTED APPLICATIONS, &c.

The undersigned respectfully gives notice that he is at all times prepared to pay special attention to the prosecution of rejected applications for Patents; also to contested and interfering cases. In some instances he will undertake to prosecute rejected cases, receiving no compensation unless the Patent is granted.

Patent business of every description, whether before the United States Commissioner, or the Circuit and U. States Supreme Courts, promptly attended to.

The undersigned being represented at the seat of government by Wm. P. Elliott, Esq., formerly of the American Patent Office, possesses rare facilities for immediate reference to the patented models, drawings, records, assignments, and other official matters. Examinations for particular inventions at the Patent Office, made on moderate terms.

Persons wishing for information or advice relative to Patents or Inventions, may at all times consult the undersigned *without charge*, either personally at his office, or by letter. To those living at a distance, he would state, that all the needful steps necessary to secure a Patent, can be arranged by letter, just as well as if the party were present, and the expense of a journey be thus saved. All consultations strictly confidential. The whole expense of Patents, in the United States, is small.

223-6t ALFRED E. BEACH,
Solicitor of American and Foreign Patents,
People's Patent Office, 80 Nassau-street, New York.

NEW YORK RECORDER.

Tenth Volume Enlarged, in quarto form. The Largest Baptist Newspaper in the World. Price, in advance, by mail, $2; by carriers, $2,50. Luther F. Beecher & Co., Proprietors, 122 Nassau Street, New York.

In the determination to make their journal a complete repository of general and denominational religious intelligence, and of the news of the day, as well as the earnest advocate of sound Christian doctrine and social progress, the proprietors will summon for these ends every available facility, whether editorial, or in the way of contributors or correspondents. They have engaged able writers at home, and their correspondence from England and Continental Europe, from Asia and every part of America, they believe to be unsurpassed. By furnishing a paper of the highest grade, from this great commercial centre, they hope to increase the patronage with which they are already favored from every section of the United States and the neighboring British Provinces.

The 46th volume commenced March 29th. Subscriptions are solicited, and the present is suggested as the best time for forwarding names with payments accompanying.

S. S. CUTTING. [223-6wce] L. F. BEECHER.

BUFFALO AGRICULTURAL WAREHOUSE AND SEED STORE,

196 Main Street, Buffalo.—The subscribers have removed from their late store in West Seneca Street, to the store No. 196 Main Street, opposite to the entrance to the Metropolitan Theatre.

We are prepared to supply all kinds of

Agricultural Implements, Machines and Tools,

of the most improved and reliable kind, and on the most favorable terms. We have also a large and select stock of fresh imported and Shaker *GARDEN, FIELD AND FLOWER SEEDS*, all of which will be warranted good.

Hoe cash, or short notice, fill all orders for the most choice kinds of

Fruit and Ornamental Trees, Shrubs, Plants, &c.

☞ All orders for Brahma Pootra, Shanghai and other choice breeds of Fowls, or their Eggs, filled with care and dispatch, at the most reasonable terms.

Orders from the country will receive prompt attention.

MOORE'S RURAL NEW-YORKER,

IS PUBLISHED EVERY SATURDAY,

BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

Subscription—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion. As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 25 cents per copy to the club rates of the Rural,—making the lowest price to Canadian subscribers $1,50 per year.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

*** The postage on the Rural is but 3½ cents per quarter, payable in advance, to any part of the State—and 6¾ cents to any part of the United States,—except Monroe County, where it goes free.

Advertising.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance*. The circulation of the Rural New-Yorker is several thousand greater than that of any other Agricultural or similar journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

The Wool Grower and Stock Register is the only American journal devoted to the Wool and Stock Growing Interests. It contains a vast amount of *useful* and *reliable* information not given in any other work, and should be in the hands of *Every Owner of Domestic Animals*, whether located East or West, North or South.—Published monthly in octavo form, illustrated, at Only Fifty Cents a Year—5 copies for $2; 8 for $3. Vol. 5 commenced July, 1853. Subscriptions can begin with the July or January number. Back volumes furnished.

Address D. D. T. MOORE, Rochester, N. Y.

Rural New-Yorker.

Progress and Improvement.

CULTIVATION OF INDIAN CORN.

INDIAN CORN is the most important crop raised on this continent; yet on sitting down to write about its cultivation, we are painfully reminded of our lamentable ignorance of its chemical requirements. We know, thanks to European investigations, something of the requirements of wheat, barley, beans, peas, turnips, &c., but no one knows anything respecting the special demands of Indian corn. To raise a crop of wheat, from 15 to 35 bushels per acre, we know the exact quantity of certain constituents of manure that will be required; but who can say the same of Indian corn? Who can tell us, if a soil without manure yields 30 bushels of shelled corn per acre, how much ammonia, phosphoric acid, potash, etc., are must supply in manure to produce 60 bushels per acre? Every one must admit that such knowledge is desirable,—yet we are not aware of a single experiment that has ever been made to ascertain the point.

Mr. LAWES instituted some experiments on his farm at Rothamsted last season, for the purpose of seeing how far Indian corn agreed in its requirements with wheat, barley, etc.—But in a recent letter he informs us that from the coldness of the climate the corn did not come to maturity, and that consequently he could not obtain the desired information. He says, however, that the plots dressed with phosphates and ammonia grew most vigorously.—It is really a pity that some of our State Agricultural Societies cannot make a series of experiments that would throw some light on this interesting subject.

Indian corn is supposed to be indigenous to the New World,; at all events, it flourishes better here than in Europe. It grows on the poorest sands, on the most tenacious clays, on granite rocks and rich alluvial bottoms; in every clime and on all soils in this vast Continent, Indian corn springs up, as it were spontaneously, without the care and attention of the planter. The ease with which it is produced, is probably one of the principal reasons why we have neglected to study its peculiar requirements. Experience, that great teacher in all the practical arts, has taught us all we know of the cultivation of Indian corn. It would appear to teach that corn does not need so compact and calcareous a soil as the wheat plant demands. It delights in a loose, friable, warm, porous, deep soil, abounding in organic matter. It does well on all good wheat soils; yet it often does better on soils which are too light and mucky to produce good wheat. It is a gross feeder. We can easily make land too rich for wheat, but we have never yet seen any too rich for the production of Indian corn. Like all spring crops, corn requires an active soil. The atmosphere should have free access, and decomposition and disintegration should go on with great rapidity. Hence fine tilth is essential. The particles of the soil should be rendered as fine as possible by good plowing, dragging, rolling, cultivating, etc.; and after the plants are up, the hoe and cultivator cannot be used too much for the benefit of the corn crop.

Many of our best Western New York farmers are in the habit of plowing under a clover sod just before planting. By this time the clover has got a good growth, and the soil is in first-rate working condition. The grubs feast on this recently buried matter, and do not attack the corn until it is well started and growing so rapidly as to receive little or no injury.

Plant early—the earlier the better, if the weather is warm and the soil in good order.—More corn is injured from late ripening and early fall frosts than any other cause. It is possible to plant corn too thick. We have seen crops materially injured in this way, more especially in not ripening in proper time. Three feet apart each way, and four plants in a hill, is the usual practice. It is better to plant too much seed in the hills than too little, as it is easy to thin them to the proper number the first hoeing. In preparing the seed it is common in this neighborhood to smear the corn with tar and dry it with plaster; this is said to prevent the crows from injuring it. Several correspondents of the RURAL have certified to the value of flowers of sulphur instead of plaster, as a remedy against the injuries of worms.—We have known several instances where it has been used with great success. Try it.

Be careful not to cover the seed too deep; the shallower all seed is buried, so that *light is excluded*, the better. Mark out the lot both ways, so as to insure straight rows; the corn lot not only looks much better when the rows are straight in all directions, but you can horse-hoe much closer without risk of cutting up the hills.

You, of course, have saved a sufficient quantity of your own pumpkin seeds, selected from the best pumpkins. Do not spare it. Mix, at least, a quart of pumpkin seed with each peck of seed corn, and thin out if you think them too thick. Plant the corn in four feet rows, rather than not have a good crop of pumpkins—if for nothing else, it would pay to grow them to rot on the land for manure, but they are excellent food for hogs and cows in the fall. If plaster is obtainable for five dollars per ton, it will pay, on most soils, to scatter a table-spoonful on each hill, when the corn is just through the soil. The beneficial effects are oftentimes astonishing.

Will our intelligent practical correspondents give us their views on the relative advantages of hilling up corn, or letting it remain as planted, merely keeping it clean by horse and hand hoeing? Hilling up is an almost universal practice; yet many intelligent cultivators contend that it is not only unnecessary, but positively injurious. Reader, what is your experience?

FARMERS, LOOK TO YOUR FORESTS.

THE forests of Western New York, and indeed of all the Western States are disappearing like the morning mist from the hills. The increased rapidity of this destruction is hardly manifest, because the landmarks of the forest disappear after a few years, and give place to fertile fields.

Prominent among the enemies of the forest (although it must be admitted a friend to humanity) is the railroad. The immense amount of timber used in the construction and management of railroads can hardly be conceived.—Bridges, ties, and fuel, create such a demand for the products of the forest, that they disappear before it as they do before a devouring fire. Nothing is spared. The noble tree of a century's growth is called for, to take its place in some gigantic structure over a river or a yawning chasm; the vigorous young oaks are imbedded in the mud every two or three feet apart for hundreds of consecutive miles, there to rot away and perish within five years.—Even the decaying and otherwise worthless tree is cut up into fuel to supply the-never-to-be-satisfied cravings of the iron steed, that thunders in his swift career over the plains.

The demand for fuel, even in this city, to supply the locomotives alone, is perfectly astounding. A railroad train is run regularly every day out of town, over the Lockport road, for the sole and only purpose of bringing in fuel for the locomotives of the Central road. How much longer is this to last? How soon, at this rate will the last stick be cut from all our hills and plains? And yet, the Central is only one of a countless number of the like destroyers of the forest—consuming in a day the product of a century.

Some process ought to be immediately adopted to render railroad ties less perishable, and to substitute coke or some other material for wood as fuel for the locomotive; for unless this is done, a forest tree will live ere long only in history. We would end as we have begun, with the significant warning,—farmers, look to your forests!

CULTIVATION OF BROOM-CORN.

THOUGH unable to reply definitely to all the inquiries of Mr. KNAPP (in RURAL of Jan. 26,) relative to the cultivation of Broom-Corn, we can give a few particulars. Some five years since, while passing through the Mohawk Valley, we saw many considerable fields of this corn, and gleaned the following items in regard to its culture and uses. The Broom-Corn of that region is generally grown upon the flats of the river, which are overflowed every winter or spring, and thus kept in a high state of fertility. The ground is usually drained, at least with open drains, so that the water may pass off readily, and as soon in the spring as the state of the ground will admit, it is plowed and planted. The latter operation is performed with a seed planter, or drill, in rows about three and one-half feet apart. Some seasons, it is delayed by unfavorable weather as late as the first week in June. As soon as the corn is fairly up, it is hoed, and soon after thinned so as to leave the stalks two or three inches apart in the row. If only hoed along the rows, the remaining surface is kept clean by the frequent use of the cultivator, and the working finished by running a shovel or double mouldboard plow rather shallow between the rows.

It was formerly the practice to let the Broom-Corn stand until quite ripe, and also to break down the tops and let them hang for some weeks, so that the brush might straighten evenly. Now the tops are lopped while the brush is quite green and the seed yet in the milk, and then cut down by a second set of hands, while a third loads them into wagons and takes them to the factory, one of which is generally carried on by those who grow much Broom-Corn. There they are parcelled into sorts of equal length and the seed taken off by a hatcheling machine, carried by water, steam or horse power. It is then spread thin on racks under shelter, and will dry in about a week, so that it may be packed in bulk.

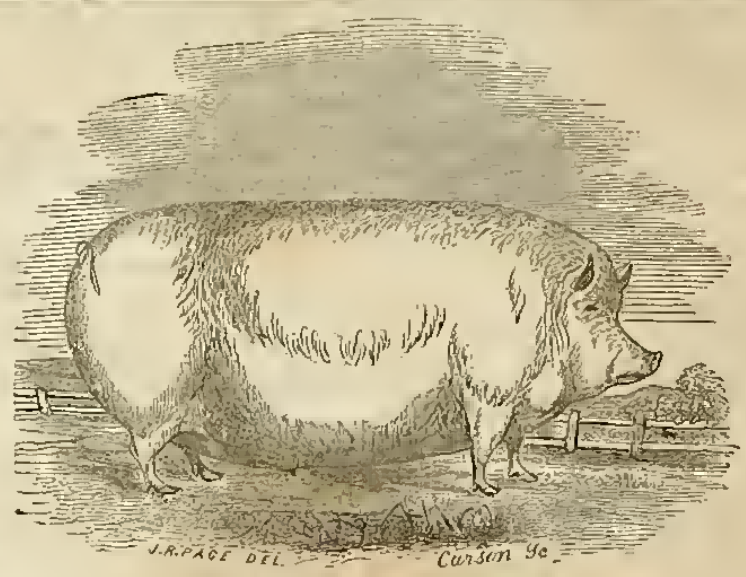
The stalks are five or six feet high after the brush is cut off, and are generally left on the field to be plowed in the succeeding spring.—It is said that the stalks are full of lemes which are very nutritive, and in case of need, would furnish a large amount of good food for cattle. They can be cut and dried for winter, or eaten green by stock on the ground. The seed is used as food for fowls, and sometimes as food for stock.

We hope the call for information will receive full and prompt answer—we have no doubt of the profitable nature of the crop.—R.

SUFFOLK HOGS.

THE Suffolks are attracting more attention, at the present time, in this country than any other breed of hogs. They possess many good qualities. They mature early; the proportion of bone and offal is small; they fatten with great rapidity; they are of a white color, which for fashion's sake, if for no other reason, is very desirable, and they are good breeders. On the other hand there are those who declare that they are too delicate in constitution,—possessing too much Chinese blood, to suit this climate; that its back is narrow, its legs high, its belly pendant, its forehead broad, and though it lays on fat with great rapidity, yet it eats voraciously, and is not an economical feeder. Such discordant opinions can only be attributed to our want of correct information, and until the experiment is fairly tried, we must continue satisfied with guessing which breed of hogs will lay on most fat for the food consumed.

The following letter refers to the accompanying engraving:



PORTRAIT OF A SUFFOLK PIG.

EDS. RURAL:—I send you a cut of a Suffolk Pig which I fattened last fall; also the following account, kept with two litters of pigs from the same sow, by DARIUS CROSSMAN, Esq., of this place. The feed was bought at the prices named.

Pigs.	*Cr.*	
By one sold at 3 months,	$6,50	
" pork of ten pigs slaughtered at 8 months, 2,940 lbs. sold at $7 per hundred,	156,80	
" ten pigs, 1 month old, $2 apiece,	20,00	
Total,	183,30	$183,30
Pigs.	*Dr.*	
For Middlings,	$19,35	
" Corn at 62½c. per bushel,	55,65	
" Barley, 62½c. " "	12,00	
" Apples, 12½c. " "	3,00	
" Pumpkins,	3,00	
Total,	93,00	$93,00
Balance in favor of feed,		$90,30

All these pigs were the get of the Suffolk Boar, "Prince," late the property of the subscriber.

JOHN R. PAGE.

Sennett, Cayuga Co., N. Y., 1854.

BEANS.—CULTURE, PROFIT, &C.

THE cultivation of beans as a field crop, is often highly remunerating. Crops are on record, where the yield has gone from thirty bushels, up as high as sixty bushels to the acre. These large crops are the result of judicious care and from ground rich in the available elements of the plant. The idea that beans will grow on soil too poor for any other crop is a fallacy that none but the shiftless will indulge in. The bean will as well repay generous culture as any other plant, and will likewise dwindle under neglect.

A clay soil in many respects is not so well adapted to the successful cultivation of the bean, as a sandy loam, or gravelly one. Upon the former and all retentive soils, they are much more liable to be affected by heavy rains and long continued drouth, as they are soon affected by a superabundance of moisture, while the pods nearest the ground, are easily injured and rotted when nearly or quite matured. On sandy lands, heavy rains soon pass away. No mould or rot is induced in plant or pod, while the more genial warmth of the soil hastens and advances the period of maturity. Besides, such soils have the advantage of being easier tilled, kept more friable and free from weeds, advantages that tell much in the profits of the crop.

Beans are preferred to follow some hoed crop of the previous year, which was well manured. If the land has been kept free of weeds, easy cultivation is ensured, and the crop may be planted in drills or hills, or sown broadcast. Unless the soil is absolutely clean and loose, the latter course is not so well.—With hills or drills, the crop can be kept clean, which is essential, with less labor. A common practice is, for the rows 3 feet apart, and in hills a foot or a little more apart. Where the rows are nearer, the hills may be further from each other—4 to 6 beans in a hill being sufficient. Where the plow or cultivator is not used in dressing them out, the rows may be advantageously planted nearer—say 20 to 24 inches—the plants then shade the ground more fully. They should not be planted till all danger of frost is over—the last of May or first of June—and hoed at least twice and as much oftener as is necessary to keep the weeds down.

In 1844, Mr. C. LEE, of Orleans Co., N. Y., raised at the rate of 40 bush. to the acre, on a compact clay loam—planted in drills 3 feet 3 inches apart. But what added greatly to the thrift of his beans, was a dressing of charcoal, pulverized and saturated with urine. It was added at the second hoeing, between the rows, and covered with earth. The change was very sudden, producing a much higher color and a very rapid growth, that soon completely covered the ground.

When the pods are yellow, the beans should be pulled and stacked. If the weather is good, an advantage is had by laying them in rows for two or three days, to be partially cured.—They should be pulled before any sharp frosts affect them. To stack them, set a stake firmly in the ground, place something on the ground and keep the beans clear, and if admitting the air all the better. Lay the beans in a circle about the stake with the roots inward, making the diameter of the stack so small that air may readily penetrate the whole—carry it up a few feet, and protect with a good cap of straw to ward off wet. Thus secured, when free from all dampness, and your beans will cure and come to the barn in fine order.

Beans may be planted to advantage in corn and thus be made to pay the expense of the crop without damage to it. We find some experiments by A. WILCOX, of Herkimer Co., N. Y. detailed, touching this point. He first planted in the hill with the corn, and found the yield of both diminished. He then adopted the plan of planting in alternate hills in rows—the hills 20 inches apart. Two acres thus treated, gave 35 bush. beans, whilst the yield of corn per acre, was equal to the rest of the field where no beans were planted. The following year he planted 6 acres and gathered 115 bushels of beans—without any apparent detriment to his corn.

When threshed the straw or vines should be well stored away for winter use. It is equal to the best of hay for sheep, and is greatly relished by them. Many cattle are also very fond of it. We see it stated that a Mr. WM. CLARK, of Green Oak, Mich., raised the past season 40 acres of beans, averaging 17 bushels to the acre; upon the straw of which he has wintered 300 sheep in good condition, without any other feed. Taking it all in all—the bean crop may be made a profitable one, especially where the price rules from a dollar to twelve and sixteen shillings a bushel, as it does in many parts of the country. Those who produce light crops should investigate the matter in a practical, experimental way—not lavishly—until they find the cause, and then govern themselves accordingly. So of all other crops—adopting that course which each one's circumstances point out as the most judicious. T. E. W.

ANIMAL HEAT.—It is well known that edible plants contain a larger proportion of carbon or heat-producing elements than animal matter; and, therefore, herbivorous animals are better supplied with food to sustain the heat of the body than carnivorous animals. Nature has provided for this by giving carnivorous animals a skin destitute of pores, so that they lose much less heat by perspiration than the herbivora.

THE GRAINS AND GRASSES. — NO. II.

Oats—(Avena Sativa.)

No grain that is cultivated will adapt itself to so many soils, different localities or extremes of climate, and pay for cultivation, as the oat. It will thrive on cold, barren soils which will produce no other sort of grain: it will also grow and produce heavy crops on the richest and hottest soils; in fact, there is no soil too poor or none too rich, none too cold or none too hot to mature the oat. The oat has fewer enemies to contend with than any of the grains that we cultivate; and let the season be wet or dry, hot or cold, on well prepared soils we reap a good crop. The worst enemy that they have to contend with is the farmer himself, who gives less attention to the proper preparation of the soil for this than any that he cultivates. On good soils, well cultivated, the yield is almost invariably large, from 60 to 100 bushels per acre. The oat when sown early and thin, tillers more than wheat or barley.

I once tried the experiment of planting single grains, and hoeing them. The number of stalks thrown up from one kernel reached as high as 180, and gave an increase of over 20,000 per cent. that is, from one seed sown I had a yield of over twenty thousand grains. The best soil for oats is a deep, rich, heavy loam, not too dry or too wet. The best time for preparing the soil is in the fall or early in spring. They should be sown as soon as the ground can be worked in the spring and got in fine tilth, for the best crops are those sown first on good soil. The quantity sown per acre varies from 2 to 4 bushels. The best farmers agree that from 2½ to 3 bushels per acre is the right quantity. I have raised good crops from sowing 2 bushels, and have known a large crop to be raised from sowing but 1½ bushels. The black and red oats, being hardier and coarser, may be sown two weeks before the best varieties of white. The red or Egyptian oat is a winter oat, and is sown in the fall in some of the Southern States, and fed off till spring.

The varieties of oats are many. Loudon describes 9 which are well defined and entirely distinct, besides which there are many local and sub-varieties. Lawson describes 37; and 54 varieties are deposited in the Highland Agricultural Society's Museum of Scotland. The natural classification by the ear is obvious.—One kind has its panacles or flowers and branches spreading, and equal and tapering like a cone; another has them unequal and all on one side. An example of the first is the common *white*, and of the second the *Tartarian* or *Horse-mane* oat.

A second classification would be by the color of the grain, such as white, black, gray, blue and red.

A third classification would be by the size and shape of the grain; the one round, plump and shortish, like the *Potato* oat; the other longer and thinner, like the common white or black.

A fourth classification and the most common is by name. The first is the *common white*, and is the most extensively cultivated in Western New York of all the varieties, and is known by its white husk and grain. The *black oat* is known by its black husk and grain; this kind is but little cultivated in this section. The *brown* or *reddish brown* has a red or brownish husk, and a thinner and more flexile stem than the *common white* or *black*, and the grains are firmly attached to the end of the branches.—This variety is well suited to windy locations, and is earlier than the common.

The *Dutch* or *Friziand* oat is known by its plump, thin-skinned, white grain, and I think is the kind that is cultivated and sold here under the name of *Poland* oat, from which it differs in having a thinner skin and grains mostly double, and is a superior variety. This kind weighs from 40 to 56 pounds per bushel. The *Poland* oat is known by its pure white husk, and solitary grains which are short and plump. It has a short stiff straw, and delights in a rich, warm soil. The *Black Poland* resembles the white except in color, and is a valuable oat. The *Poland* oat, in a suitable clime and soil, is a very prolific oat, yielding large crops, and the grain weighing from 40 to 50 pounds per bushel. The *Potato* oat has large, plump, rather thick-skinned, white grains, which are double and often treble. The straw is longer than either of the *Poland* or *Dutch*, and is more liable to lodge, but is a good variety in a suitable soil, and is more extensively raised in some parts of England and Scotland than any other. They are said to have been derived from a single grain found growing among potatoes in England in 1778. The *Black Tartarian* is supposed to be a distinct species.—The *white Siberian* is similar, except in color. They are distinguished by the grains being mostly on one side, and are frequently called *Horse-mane* oat. They yield well but are considered coarse. The *Egyptian* oat is sown in the fall, and requires a warmer climate than Western New York. It tillers well, and produces a large quantity of food for cattle.

Marion, Wayne Co., N. Y. 1854. P. A. CLARK.

GRASS HEAD-LANDS.

Those farmers who contemplate breaking up any of their old meadows the coming season, will do well, I think, to practice a different course than that usually done. Those who calculate to seed any of their fields, will find it to their advantage to be a little more nice in their manner of doing it. And those who have not concluded to seed any portion of their farms, either to Clover or Timothy, will, if the circumstances are favorable, derive a great benefit from the course I am about to describe. If your fences are permanent, in good repair, and free of all obstructions; and the surface of the ground is good, and well seeded; I would not plow nearer than one rod of the fence. In preparing a field for seeding, I would render it as nice as it could possibly be done, for at least a rod from the fence, before seeding; and every field that could be brought within these requirements, I would seed for at least one rod in width from the fence, though the remainder, in the usual rotation of crops, could not be seeded for years.

The benefits to be derived from such a course, commence with, and continue throughout the year. If a field treated in this manner is in wheat, it can suffer but very little from snow drifts; either from depth in winter, or long continuance in spring. If it is to be spring plowed, it can be commenced from three to five days earlier. It can be plowed better, harrowed better, sown better, especially with the drill; it can be rolled better; it can be harvested better, more particularly with the reaper. The meadow border can be used as a road in spring, if the fences need repairing, when it would be almost impossible, to say nothing of the injury, to go on any other portion of the field. It makes an excellent place for horses to turn in plowing, and also the other operations in the culture of the field; but more particularly the drill and reaper, which need such a place for commencement and finishing. The grass can be mown usually twice, and will never need manuring; there being enough on the border to render it an object, whereas were it narrower, it would occasion much trouble to obtain it, and, as a general thing, be lost altogether, and give a good chance for weeds to get a foot-hold, and look very unsightly and slovenly into the bargain.

Grain that grows near the fences, is usually too rank to fill well, even if it does not lodge and rust. Fences will last better in such situations, from reason of less violence by implements, and wood fences of any fashion, by being kept cleaner, will be less liable to rot. There are many other reasons why this system ought to be adopted, which will suggest themselves to those who choose to think. H. D. L. S.

Pompey, N. Y., April, 1854.

Remarks.—In Hertfordshire, and some few other counties of England, the plan recommended by our correspondent, has been adopted from time immemorial. There are some conveniences attending grass head-lands around arable fields, but on the whole, we think they are not sufficient to pay for the loss of land.—In most cases, on these old head-lands, we have observed that the grass was hardly worth the trouble of mowing and gathering. We never met with an intelligent farmer in these counties but would admit that he thought them unnecessary and unprofitable. We shall be glad to hear the views of correspondents.—Eds.

POTATO ROT AND MR. BRIGGS' OPINION.

After advancing a multitude of theories, and after trying numerous experiments, the world is yet left in the dark in relation to the real cause of the *potato rot*. Mr. L. W. Briggs, it would seem, has come out with his theory, and writes this to the *New York Tribune*:—"That the potato disease, so called, is not hereditary, but *entirely dependent* on the nature of the soil and the elements. That a plant, whether from a sound or an unsound potato, will, under circumstances *at all favorable*, produce sound potatoes."

So far as Mr. Briggs' theory goes in reference to the potato rot *not being hereditary*, we agree with him, but cannot conceive what he really means about the *elements*. There are several kinds of elements, and we think that Mr. Briggs should have been a little more explicit in respect to his theory concerning "the elements." And so far as the nature of the soil goes towards producing healthy potatoes, we are of opinion that you about as often get good roots from one kind of soil as you do from another and a different kind of land. We have known potatoes to decay on sandy soil, the very kind of soil which people maintain will produce potatoes freest from the rot; while, on the other hand, loamy and peat soil has been known, through our own observation, to yield as fine and healthy potatoes as the country is capable of producing. We must dissent from Mr. Briggs' theory in respect to soil and the elements, for it does seem that *all kinds of soil* are capable, and *do* produce sound potatoes. Our observation has plainly told us this, while we are of opinion that the *atmosphere and state of the weather*, at certain seasons of the year, have more to do with the potato disease than all other things combined. It is evident that our seasons are different from what they were a few years since, even in Ireland and England, and other parts of the world. Can it be denied that changes do not take place in the atmosphere? Can it be denied that our seasons do not change? Certainly not. And now we conclude that the potato rot is caused by reason of the change in the seasons, and because of a change in the atmosphere, *unless* we acknowledge without legitimate proof, that a *new and poisonous* element has sprung up among us, the nature of which is destructive to the potato. And it would seem that this potato rot is not alone confined to the potato, but makes its appearance in fruit and other esculents. The peach, for instance, rots; so do other things. The rot of the peach seems to be similar to that of the potato, &c. Mr. Briggs would confer a favor on a large class of readers by explaining more definitely in relation to his new theory, either through the Rural, or *Tribune*. W. Tappan.

Baldwinsville, N. Y., April, 1854.

CLEAN CULTURE.

Eds. Rural:—It is a fact, that ground, which is kept from vegetation, will not dry up so much, as that on which a crop is grown.—There are many who doubt this, but if they will make a proper examination, I think their doubts will be removed. Make an experiment: take a piece of ground in your garden, or elsewhere, where it is free from vegetation, and hoe it every day, or often enough to keep all vegetation from starting. Sow another piece adjoining with grass, or some kind of grain.—After a drouth of two or three weeks, examine them by digging into them with a shovel or spade. The earth of the grass or grain plat will be found dry, like ashes, to the depth of a foot or more, while the other plat will be found dry to the depth of only two or three inches.—Below that it will be quite moist. Or if there is a tree in your field, see if the ground is not much dryer near it than on similar ground out of the reach of its roots. The fact is, the roots of vegetation bring the moisture from a far greater depth than could be done by simple evaporation. Now from all this we deduce the following argument in favor of clean culture: that is—a culture which permits no useless vegetation to grow among cultivated crops; the advantage of which would be to give the whole benefit of the moisture and nutriment to the crop, instead of giving a portion to worthless weeds. In a dry time we frequently hear farmers say, it will not do to work my corn or potatoes; they need all the grass and weeds to keep them from drying up. Now as we have shown, this is all a mistake; the grass and weeds make it dry faster and deeper. But it is alleged that corn has been injured by working or plowing in a dry time; we admit that it is true under the following circumstances: If corn has got too large before it is worked, injury is then done. The reason is, the roots are extended and the plow cuts off so large a portion of them that there is not enough left to support it, and it soon withers.

But it is only when the roots have become widely extended, and are torn and mutilated in the operation of working it, that any such consequences follow. If it is worked, as it ought to be, while small, no fears of injury need be entertained. P. K.

LIVERPOOL vs. ONONDAGA SALT.

Eds. Rural:—I noticed some two months ago, in your paper, an article recommending Dairymen to use our State salt instead of Liverpool, &c. I would agree with you providing we could get the right kind; the most of the salt I purchase by the barrel, of State manufacture, is only fit for cattle, hay, and straw. I am under the necessity of paying seven or eight dollars annually, for Liverpool salt, and I would much prefer our State salt, were it made as clean and pure as it might be, for I should expect some little saving of expense, and much less trouble in obtaining it. I have seen as pure salt from Onondaga as I ever saw from Liverpool, but there is no dependence on it for dairy use. I frequently purchase three or four barrels at a time, and I may find part of a barrel clean enough for butter, while quite a portion of it is not fit to salt beef.

If any person will make it a business to manufacture dairy salt by the barrel, and make it acceptable, I have no doubt in a few years it would be the means of driving a great portion, if not all of the imported dairy salt, from our State. There may be establishments that make clean and pure salt. If so, I should like to know it, and who to address, for I have seen but very little of it in Chemung county. I have seen small sacks of 20 to 25 lbs., called Dairy salt, and Table salt, and have used considerable of it for table use, and finishing out my dairy in the fall, (being out of Liverpool,) but they are too small. Most of the dairies in this county want from one to five barrels a year for butter. I might say considerable more on the subject, but am in hopes others interested, will turn their attention to it and make an effort to remedy the deficiency.

Horseheads, Chemung Co., N. Y. S. C. S.

Agricultural Miscellany.

MAPES' SUPERPHOSPHATE OF LIME.

The *Maine Farmer* says we must have taken him for a *goosy* in chemical lore, in supposing him to assert that sulphate of ammonia would be decomposed by the addition of sulphuric acid, and that he *did not say so*. We beg ten thousand pardons for entertaining, even for a moment, the supposition he attributes to us. We certainly had no intention of misquoting him. He said:—"The sulphuric acid combining with the bone dust decomposes the carbonate of lime; * * the sulphate of ammonia is also decomposed, yielding additional quantities of ammonia." We supposed, in our ignorance of language, that the sulphate of ammonia was *also* decomposed by the addition of sulphuric acid, and yielded additional quantities of ammonia in consequence. There is not one word said about any other means being used to decompose it, and we had no other alternative but to believe that the meaning of the sentence was the one we adopted, silly though it was. We are, however, glad to find that we were mistaken, and are especially happy that the *Maine Farmer* agrees with us that there can be nothing gained by mixing sulphate of ammonia with superphosphate of lime—that is to say, that sulphate of ammonia and superphosphate of lime, sown separately, would be just as good as though they were mixed together.

Value of Corn Stalks.—At a recent farmers' Club in New York, Judge Van Wyck speaking of a farmer in Westchester County, said:

Corn stalks, he thought, made an excellent fodder, most kinds of stock are fond of them, especially milch cows; they must be got in good order, and well taken care of. He considered them nearly as valuable as hay. Last year he fed them out rather freely to his stock the first of the winter, and he was afraid he would run short, and about the first of February he put them on hay, and his cows in two or three days fell off full one-third in milk; he put these again on stalks, and they soon recovered a part of their loss.

Planting Corn.—The distance between the rows of corn varies much in different localities. In Canada East, and the Eastern States generally, corn is planted much thicker than in the Western and Southern States. On the first page we say, "three feet apart each way, and four plants in the hill, is the usual practice."—For Western New York, and especially for the Western States, this is unquestionably too thick planting. Three and a half to four feet is a little better and the more usual distance.

Five Calves at a Birth.—The London *Veterinarian* gives a well attested and unprecedented instance of a cow giving birth in one day to *five live healthy calves*, all of which, a few days afterwards, were "alive and vigorous, and have every appearance of continuing so." They are all very nearly of a size, and are larger than could be supposed.

Pulse of Various Animals.—The pulse of several of our domestic animals, as given by Vatel, in his "Veterinary Pathology," is nearly as follows:

Horse, from 32 to 38 pulsations per minute; Ox or Cow, 25 to 42; Ass, 48 to 54; Sheep, 70 to 79; Goat, 72 to 76; Dog, 90 to 100; Cat, 110 to 120; Rabbit, 120; Guinea Pig, 140; Duck, 135; Hen, 140.

"KEEP OFF THE GRASS."

All around the walks of our city parks we see posted up in flaming capitals, "Keep off the grass." We should like to see one of these placards put near every farmer's cattle yard at this season, with a little alteration, so that it would read, "keep the cattle off the grass." It is a pretty sure sign of bad management, if animals are seen running over the fields, before the grass is so forward as to furnish an abundance of food. So long as they are kept entirely away from tasting green food, animals will not lose their relish for dry. But let them out for a few hours, or suffer them to crop by the wayside as they are driven to and from water, and for hours after they will scarcely touch their dry food.

Tramping upon the fields before the ground has been thoroughly settled, is very detrimental to the future growth of grass. The first shoots are tender and are easily killed, while they contain little nourishment compared with an equal weight or bulk of more advanced growth. It is economical to purchase dry food for a week or two longer, and let vegetation get a good start before an animal sets foot upon it.

Feeding Poultry.—Professor Gregory of Aberdeen, in a letter to a friend, observes:—"As I suppose you keep poultry, I may tell you that it has been ascertained that if you mix with their food a sufficient quantity of egg-shells or chalk, which they eat greedily, they will lay thrice or thrice as many eggs as before. A well-fed fowl is disposed to lay a large number of eggs, but cannot do so without the materials of the shells, however nourishing in other respects her food may be; indeed, a fowl fed on food and water, free from carbonate of lime, and not finding any in the soil, or in the shape of mortar, which they often eat on the walls, would lay no eggs at all with the best will in the world."

Inquiries and Answers.

Culture of Flax.—Will you, or some of your correspondents, have the kindness to give us some information in regard to raising flax?—What should be the quality of the soil, whether sod or stubble ground,—what the best kind of manure and the degree of tilth necessary,—the time of sowing, and the number of pounds of seed required per acre, when it is raised principally for the seed; and also, the yield per acre that may be expected, with good ground, tillage and manuring? What other information you may give will be thankfully received.—John L. Mandeville, *Mott's Corners, Tompkins Co., N. Y.*

The soil best adapted for the growth of flax, is a dry, deep loam, with a clay subsoil, and as a general rule, all soils need underdraining for its profitable production. The preparation of the soil is of great importance. Flax requires emphatically clean culture. A wheat stubble, harrowed or cultivated, as soon as the wheat is off, so that all small seeds may germinate, and then plowed in the fall and left rough, exposed to the meliorating effects of frost, is the plan we should recommend. Many good cultivators prefer sod ground plowed deep, very early in the spring, harrowing and cultivating till it is quite mellow. If cultivated for seed alone, one bushel of seed will be sufficient, as thin sowing causes the plant to throw out branches which bear abundance of seed. The more fertile the soil, the less seed should be sown, as the plants will tiller more. If the object be *flax*, two and a half bushels (126 lbs.) is about the proper quantity, varying less or more, according to the richness of the soil. The object of so much seed, is to prevent the plant from branching out, and to obtain a tall and slender stem. In selecting the seed, choose that which is shining and slippery, not too plump and of a brownish red color. The earlier it is sown in April, if the weather and soil are favorable, the better. Ten bushels per acre of seed and 400 pounds of flax, is a good crop. There is no better manure for flax than well rotted barnyard dung. Peruvian guano is also very good, and has the additional advantage of being free from all weeds. Two to four hundred pounds per acre may be sown broadcast and harrowed in. We trust our experienced readers will give us their views on the culture of flax, its comparative profit, &c., &c.

Swamp Land.—As I am a constant reader of your valuable paper, I take great interest in the part assigned to agriculture, and more so, as I am about to commence in that laudable and pleasant occupation; and as there are frequent inquiries through your paper, by farmers, I would like to ask, for my benefit, one or two questions respecting farming. I have a field of some five acres of swamp, black muck land, that I have made dry by drains, so that I can plow it: but a part of it appears to be a decomposition of timber and vegetables, and seems to lack strength to produce a good crop of corn or potatoes. I would like to inquire what kind of a fertilizer would be proper to give life, so as to produce a crop.—J. Abbott, *Portageville, N. Y.*

Lime and unleached, or leached ashes, would probably greatly benefit such a soil. Put one hundred bushels of lime on half an acre of it, and see what effect it has. Apply it as soon as possible, and plow it in, and report the result.

Broom Corn.—Will you, or some one of your correspondents, please give us some information in reference to raising broom corn? We should like to be informed whether it is or is not, when it grows well, a profitable crop?—What soil and what seed shall be employed to insure the best crop? Also, what time should it be planted?—Van, *Sodus, N. Y.*

We would refer our correspondent to the valuable communications we published on this subject, in the current volume of the Rural, and also, to the article on the first page, this week. On proper soil, with proper cultivation and management, there can be no doubt but that broom corn, under favorable circumstances, is one of the most profitable crops grown.

Peach tree Worms.—A correspondent at Perry, Wyoming Co., N. Y., in reply to the inquiry of "K," in the Rural of March 25th, says:—"My father has peach and apple orchards in Indiana. To preserve the roots of the trees, he is in the habit of putting about half a bushel of the stems of tobacco around each tree. He lays the stems around the root of the tree on top of the ground, once in two years. This plan has never failed to protect roots from all insects, &c."

Hydraulic Cement.—I saw a piece in the Rural, last fall, describing a method of laying down water-works with water lime and gravel. I have a spring that I wish to bring to my house. I have heard that there is a patent for hydraulic cement, and would like to know if I should be infringing on that claim by using the water lime, as I have found different opinions on the subject.—A Subscriber. *April*, 1854.

You will infringe no patent by adopting the method referred to in the Rural.

Underdraining.—Will you, or some of your correspondents, inform me through the pages of the Rural, the manner of laying tile—and also, the manner of digging the ditch for tile?—G. W. Irish, *Baldwinsville, N. Y.*, 1854.

Orchard and Garden.

ADDITIONAL HINTS FOR THE SEASON.

Prominent in an American Vegetable garden stands the Tomato plant. A quarter of a century ago it was cultivated in this country, as it is in England at the present time, merely for side-board garniture. Few thought it was fit for man or beast. Ten short years in this *fast* and,—what is better,—this *reading* country of ours, effected a revolution in public taste; so much so that every panacea, warranted to cure all the ills that flesh is heir to, was called Tincture of Tomatoes. Its cultivation is still yearly extending, and we see no reason why it should not become, in a few years, as indispensable a vegetable as the potato itself, to which family indeed it belongs.

It is the object of all good gardeners to get Tomatoes early. For this purpose the seed must be sown in March, or early in April, in a moderately warm hot-bed. The seeds should be scattered thinly on the surface, lightly covered, and kept thoroughly watered. But where hot-beds are not used, the best method of getting early and hardy Tomato plants is to let the ground where the plants grew last season remain untouched. The self-sown seed which has been in the soil all winter, will germinate earlier, and the plants will be hardier than when planted in any other way in the open ground. The plants may be transplanted when they have pushed three or four leaves.—Tomatoes require a warm, dry, rather gravelly soil. It should not be too rich. The plants must be from three to four feet apart.—As soon as the fruit is set, a few inches of the vine should be pinched off. This will produce earlier fruit. The best variety is the Large Smooth Red. The Yellow is a milder variety, and would be grown for its beauty, even had it no other recommendation. The Pear and Cherry Shaped are *fancy* varieties.

Cucumbers.—For early plants the seed must be sown in a hot-bed, but in this climate Cucumbers can be had in good season, and in great perfection, with ordinary open-ground culture. You cannot make soil too rich for cucumbers. We prefer to dig a hole two feet in diameter, and two feet deep, filling it with fermenting horse manure, covering it with very fine, rich, and sandy mould six or eight inches above the ground. In this put a few seeds early in May, cover them on cold nights, and you cannot fail of having Cucumbers. The hills should be six feet apart, and three or four plants in a hill. The Early Frame or Cluster is one of the best varieties. The White Spine is also very fine.

Melons require similar culture and soil to cucumbers, though they are more liable to injury from heavy rains than cucumbers.

Egg Plants must be sown on a rich, light soil, either where they are intended to remain or on a warm border, transplanting them during showery weather in June. They should be planted two feet apart. The Long Purple is a very superior variety for family use. The Large Prickly-Stemmed Purple is one of the largest varieties. The White Egg Plant is the variety from which the species took its name; when in a half-grown state it resembles in size, shape and color, a hen's egg.

Salsify or Vegetable Oyster needs similar cultivation to the carrot. The seed may be sown in drills, a foot apart, and the plants thinned out to six inches in the rows. They like a rich, deep soil.

Turnips may now be sown for early use. A dry, light, gravelly soil, not too rich, is best.—We prefer to sow them in drills, 12 or 14 inches apart, as they are much more easily kept clean and thinned out than when sown broadcast. The Early White Dutch, Red-Top Dutch, and Yellow Dutch are excellent early varieties.

The Vegetable Marrow is a connecting link between the Pumpkin and Squash, and needs similar soil and cultivation. Plant the seed in hills, six feet apart, about the first or second week of May.

Parsley should be sown in drills, either in a bed by itself, or as a border around other beds or walks. The earlier it is sown, the better, as it is very slow in germinating. It is a biennial. The plant must be thinned out in the rows, 4 to 6 inches apart. The Curled variety is the one most generally admired.

Okra.—This is a vegetable introduced quite recently into this country from the West Indies. In the Southern States it is already cultivated to a great extent. Its chief value is in the green pods, which are used in various ways, but are especially valued for flavoring soups, &c. The culture is somewhat similar to that of Lima Beans. The seed should be sown in drills, about two feet distant. When the plants are up, they must be thinned out about nine inches apart. They require very clean culture, and should be earthed up a little as the plants grow. They do best on a dry, warm soil. The pods must be gathered when about an inch and a half long, and quite green.—When ripe, they are useless for the kitchen.

DWARF CONVOLVULUS.

DWARF LUPIN.

The Convolvulus is a good illustration of the fact, that the commonest of weeds, by judicious cultivation, may become the prettiest of flowers, worthy a place in every lady's parlor. Our engraving represents the dwarf Convolvulus, (*Convolvulus minor.*) It is a beautiful flower, with three distinct flowers, blue, yellow and white; the blue being of every shade, from purple to a delicate azure blue. There is also a white and striped variety. The species is a native of Spain, Portugal, Sicily, and the north of Africa, and was introduced into England early in the seventeenth century. Some botanists suppose this species to have been originally, only found in Barbary, but whether introduced or indigenous, it is now a common weed in Spain and Portugal. The flowers always fold in gloomy weather and at night. The French call it *Belle-de-jour.*—The Horticulturist says:

"We received last year several packages of this seed from France, among which were several varieties new to us, one of which was peculiarly dwarfish in its character. Among our large collection of annuals, last year, none attracted more attention among florists than this Dwarf Convolvulus."

When the seeds are sown, a shallow drill should be made for them, in which the seeds may be dropped and covered lightly. When the plants come up, they should be thinned so as to stand about an inch apart. They require a dry situation, and rather a rich, light soil.—Sow early in the spring, and they will commence flowering in July, and continue until covered with snow.

The *Convolvulus major*, or Morning Glory, is too well known to need a description, it being one of the most common, as well as the most beautiful and easily cultivated of our climbing annuals. It requires the same treatment as the Dwarf Convolvulus, but needs strings or poles on which to climb. It makes an excellent covering for arbors, porches, or unsightly fences.

The Dwarf Lupin, (*Lupinus nanus,*) is an exceedingly pretty plant, with blue or purple flowers, interminglied with a tint or rose-color and white. Its leaves are cut so as to resemble expanded fingers. It is about a foot in height, and bears long spikes of flowers, as seen in the engraving. The blossoms are of long duration, and this, together with its compact habit of growth, makes it an admirable plant for the masses. It requires rather a shady situation. The seed should be sown where the plants are intended to remain. It is a native of California, discovered by Douglass, in 1834.

PEACH-GRUB TREATMENT.

Eds. Rural:—Your late correspondent, Mr. E. H. Pinon, on the peach-grub, manifestly writes with much practical knowledge on the habits of the peach-grub or borer. His mode of treatment, so far as it goes, to destroy the grub on a limited or small scale, is a very good one. Although the hot water practice, as above alluded to, would be a very convenient and safe remedy for a few trees about your dwelling, yet for a more extended business, I submit the following mode of managing the peach-grub, which I have practiced for the last 15 or 20 years: some time in April, when the ground has become dry, and the weather mild, with a trowel or hoe remove the earth from the tree sufficiently deep to reach the worms; then with a regular pruning-knife (for no other instrument but a hooked, pointed knife is so well adapted to the work,) remove all grubs that have imbedded themselves under the bark of the tree; then return the earth to the tree.—Also heap up around the tree, 4 or 5 inches high, a small quantity of leached or unleached ashes, or old lime; if these cannot be obtained, earth will accomplish the same object nearly as well. The after treatment is to remove the mound from the tree, where you discover any appearance of gum, which will give opportunity to scrape off with your knife all the young grubs that have commenced their depredations. This latter process should be performed in the month of September, always keeping the mound up around the trees. H. N. Langworthy.

Rochester, N. Y.

CULTIVATION OF ASPARAGUS.

The land most suitable for asparagus, is a sandy loam, where water can never stand in the winter season, and should be made rich and light to a good depth, no matter how deep, and be prepared for setting the plants by digging trenches one foot or more deep, and four feet apart from centre to centre, and one foot wide. The trench should then be filled 4 or 5 inches in depth with well rotted manure, and mixed up with earth until it is half full. The plants should then be put in rows on each side of the trench one foot apart and set in their natural position, and alternately so as not to have them opposite to each other, making two rows in one, and 100 roots setting a row 5 feet long, which if well taken care of will be sufficient for a common sized family. After the roots are put in, they need not be covered more than an inch or two.

The cultivation afterward, consists in cutting off the old tops late in the fall, and plowing the soil from off the top of the roots as near as possible without injury to the crowns, then put on a good coat of manure, and turn the soil back with the plow, and let it remain until spring, when the bed should be prepared by mixing the manure with a plow, harrow, or any way to make it fine, and rake well, and the work is done. The last part of April, or the first of May, is the best time to set the roots.—*Granite Farmer.*

VEGETABLE GARDEN.

The operations of the garden at this season must depend on the weather, and the condition of the ground. Seeds not easily injured by frosts should be sown, such as peas, beets, parsnips, lettuce, radish seed, onion seed and sets, early carrots, asparagus seeds for new beds; and plant out two year old roots, cabbage seed, &c. Uncover spinach, parsley, lettuce, &c. Trench ground for horse-radish, and set pieces of old roots in rich soil. Dress up rhubarb, and manure thoroughly, if not already done. Give close attention to frames, &c., and cover on cold nights. Give air on fine days.—Tomato, pepper and egg plants, which have grown thickly, should be pricked out into other frames. Start Lima beans in soils inverted, within doors, so as to be ready for planting out for early crops, so soon as the weather is settled. Set out beds of sage, sweet marjoram, winter savory, pennyroyal and other perennial herbs, by dividing the roots of old plants.—Plant sweet potatoes in hot-beds for sprouting, and cucumbers in frames for forcing. As a general rule in gardening, make deep soil, manure heavily, and use plenty of seed. Better to thin out than to re-sow.—*Farm Journal.*

Planting Hedges.—In answer to inquiries, the *Ohio Cultivator* states that "in this climate, Osage orange plants do not start to grow before the 5th to 10th of May, so as to render it important that they should be set before that time; but the ground should be prepared earlier, else it is liable to become hard from dry weather. Osage orange seed should be sown about corn planting time—or any time in May, when most convenient. We have had it do well, sown as late as the first week in June. The only danger is from drouth, and watering must be resorted to whenever this occurs shortly after sowing."

The Horticultural Society of Toulouse has composed a boquet for the Empress Eugenie of France, containing 10,000 violets and 300 camelias, and of which the diameter is upwards of three-quarters of a yard, and the height somewhat more than a yard. The centre is a dome of violets, surrounded by a circle of camelias; the whole surmounted by a crown.—On the dome appear the initials of her Imperial Majesty in orange blossom and white purquerettes.

Look out for the Striped Bugs.—An agriculturist, who has tried the experiment successfully for three years, informs the Bangor Mercury that a few seeds of tomato dropped into the hill with cucumbers, or a tomato plant set out, which is the better mode, will keep off black fleas and striped bugs, who dislike the flavor of the tomato.

Mechanic Arts, &c.

LIST OF PATENT CLAIMS

Issued from the United States Patent Office,

For the week ending April 18, 1854.

Stephen Ustick, of Philadelphia, Pa., for improvement in brick machines. Ante-dated Nov. 15, 1853.

Stephen Waterman, of Williamsburgh, N. Y., for improved circular sawing machine.

Moses T. Rowlands, of Pittstown, Pa., for improvement in tailors' measures.

J. A. Ruth and Joseph Lea, of the county of Philadelphia, Pa., for improvement in machines for bleaching flax.

Matthias P. Coons, of Brooklyn, N. Y., for improvement in iron fences.

Thomas P. Forsyth, of Dalton, Ind., for improvement in machines for winding and folding cloth.

Garret Meldrum, of West Philadelphia, Pa., for improved turning-lathe.

Fowler M. Ray, of New York, for improvement in spiral springs for railroad cars.

John D. Sengrave, of Milford, Mass., for improvement in machines for paring apples.

George B. Dixwell, of Boston, Mass., and J. A. Dorr, of New York, for improvement in gas regulators.

Geo. Aulick, of Winchester, Va., for improvement in car-couplings.

Ari Davis, of Washington, for improvement in box machine.

Samuel T. Field, of Worcester, Mass., for improved apparatus for painting window blinds, etc.

James L. Cathcart, of Washington, for improvement in attaching propellers to the driving shaft.

G. M. Conner, of Charlton, N. Y., for improved water wheel.

Geo. W. LaBaw, of Jersey City, for machine for cleaning blinds, &c.

Wm. Buggelt and Geo. B. Pettit, of Westminster, England, for method of heating, warming, and cooking by gas. Patented in England, October 22, 1851.

Chas. DeSaxe, of New York, assignor to Thos. H. Bate, of Brooklyn, N. Y., for improved landing net for anglers.

Chas. DeSaxe, of New York, assignor to Thos. H. Bate, of Brooklyn, N. Y., for improvement in fishing rods and floats.

J. H. Fairchild and Sylvanus Richardson, of Jericho, Vt., for improvement in potato washing machines.

Thomas Armitage, of Philadelphia, Pa., for improved portable ladder or fire escape.

Philos Blake, of New Haven, Conn., for improved oyster knife.

James Ballard, of Ashtabula, O., for improved slitting gauges.

Richard M. Bunton, of West Troy, N. Y., for improved faucet.

David and Sam't. K. Flanders, of Parishville, N. Y., for improved fly-trap.

Martin Hallenbeck, of Albany, N. Y., for improvement in grass harresters.

Julius C. Hurd, of Medway, Mass., for improvement in cleaning cotton and other fibrous substances.

David A. Hopkins, of Elmira, Mass., for improved nickel-lux for railroad cars.

Abram C. Johnson, of Meadville, Pa., for improvement in operating dumping cars.

Lawson P. Keach, of Baltimore, for improvement in cooking oysters, &c.

Geo. W. Keller, of Philadelphia, Pa., for improved fire escapes.

Anthony John, of Monroeville, Ohio, for improved machine for filling match frames.

Wm. H. Towers, of Philadelphia, Pa., for improved machine for opening oysters.

Wm. Lapham, ex-exetor of Seneca Lapham, deceased, late of Salem, Ohio, for improvement in maize harresters.

RE-ISSUE.

F. McCarthy, of Putnam county, Fla., for improvement in the cotton gin. Patented July 3, 1849.

BENDING SHIP TIMBER.

Up to the time that steam supplied its power, the frightfully toilsome work of sawing wood and stone, was exclusively executed by human hands, and in ancient and mediæval times, slavery or serfdom appeared a necessary consequence of the severe labors imposed upon the bulk of humanity. Every year we are now made sensible of some higher law than political discoveries or abstract philosophy afforded, in the means of alleviating the hitherto enormous burden of brute labor which from the creation to this century has been imposed on man. In view of this fact we would remark that one of the grandest inventions of the age is just put into operation; but as it is no orator, as it does not speak on Capitol Hill, it is little heeded, and dispatched in a mere paragraph in the newspapers.

This, in a word, is the Ship Timber Bending Company. These words appear simple, but they have a complex significance. All the immense labor hitherto spent in rounding timber to suit ships, and houses, and machines, and furniture, and whatever other things requiring timber so curved, is now to be dispensed with by machines which can take the straightest and the straightest oak, and bend it like a Tartan bow for the use of the proudest man-of-war or the loftiest cathedral, and this too, adding strength and durability to the wood. The first experiment has just been made on timbers sixteen feet in length, eight inches by ten, bent to as short a curve as can be used in ship-building. This machine is a large one, designed for ship-timber, but there is another also ready for furniture, and both have just commenced operations. The place of action is Greenpoint, where there is a large foundry for making the machines, and steam-vessels for steaming the timber, with other requirements in the process.

Henceforward all the delicate curves of steamers, frigates or yachts, will be of solid timber, fashioned by this extraordinary innovation. So too, the most ponderous rafters, such as band in lofty arabesques over chapel or hall, may be composed of unbroken trees of the forest yielding under this new and wonderful power of man. So too, all the curvilinear beauties of furniture may be detailed by the same means. The statistics of the value of same discovery are vast beyond the conception of the uninitiated. All the immense shipping and building interests of the civilized world are included in this discovery.—*Tribune.*

AMERICAN COAL BASINS.

Sir Charles Lyell, the eminent geologist, in his "Travels in North America," says:—"From Uniontown we went to Brownsville, on the Monongahela, where the country consists of coal measures. I was truly astonished, now that I had entered the hydrographical basin of the Ohio, at beholding the richness of the seams of coal which appear everywhere on the flanks of the hills, and at the bottom of the valleys, and are accessible in a degree which I never witnessed elsewhere. The time has not yet arrived—the soil being still densely covered with the primeval forest, and manufacturing industry in its infancy—when the full value of this inexhaustible supply of cheap fuel can be appreciated; but the resources which it will one day afford to a region capable, by its agricultural produce alone, of supporting a large population, are truly magnificent. In order to estimate the advantages of such a region, we must reflect that the great navigable rivers (the Alleghany, Monongahela, and Ohio) intersect it, and lay open on their banks level seams of coal. I found at Brownsville a bed, ten feet thick, of good bituminous coal, commonly called the 'Pittsburg Seam,' breaking out in the river cliffs near the water's edge. So great are the facilities for procuring this fuel, that already is it found profitable to convey it in flat-boats for the use of steamships at New Orleans, 2,000 miles distant, in spite of the dense forests bordering the intermediate river plains, whose timber may be obtained at the cost of felling it."

A New Cart has been discovered, by which a horse can be made to draw a load one-half heavier than by carts as at present constructed. It has four wheels: when the horse is harnessed, the foremost pair come to about the middle of his body. The weight is thrown on the axles, and the vehicle is constructed so that part of it covers the horse up to the neck.

Colt's Pistols in Europe.—Colonel Colt, it is said, has received an order from the British government to furnish their Baltic fleet with 5,000 of his navy pistols, as soon as possible; and he is notified that the entire fleet is to be furnished with them. The armory, at Hartford, Conn., will be required to do a good portion of the work.

A patent has been taken out in England for making *artificial leather*, by subjecting to a peculiar process any of the substances having properties like those of such a hydro-carbon as gutta percha.

Domestic Economy.

Cocoanut Cake.—1 lb. of loaf sugar, ½ lb. of butter, ¾ lb. flour, 6 eggs, and one large or two small cocoanuts grated; then cream the butter and sugar, add the yolks well beaten, next the whites well frothed, and then the flour, mixing all well. When ready for the oven, stir in the cocoanut. Bake in two long pans, as pound cake.

Cocoanut Pudding or Pie.—¾ lb. sugar, ¼ lb. butter, 4 eggs; stir them together, and add to it two grated cocoanuts, and a pint of milk, (milk makes it rich enough,) or thin cream.—Put a rich paste at the bottom, and bake in a moderate oven, but not too long, as it destroys the sweetness.

Cup Cakes.—2 cups of sugar, 1 of butter, 5 eggs, a large cup of sour milk, a little saleratus; flour to make it stiff as pound cake. This will make two large loaves.

Sick Headache.—The following cure for sick headache was furnished to the Boston Medical Journal, by Dr. N. S. Folsom, of Portsmouth, N. H.:

"Take any number of drops of Croton Oil, mix them with flour and molasses, and make as many pills as the drops of oil used. When the patient feels the sick headache coming on, one half of a pill is to be taken every hour in molasses or something of like consistence, until it acts as a cathartic; and thus treat the sick headache at each attack. If thus taken, each attack will be less severe, and in some cases a few effect a permanent cure. He seems to think the Croton Oil acts in three ways:—1. By increasing the secretions. 2. By counteracting the antiperistaltic action of the stomach and bowels. 3. By acting as a counter irritant to the brain."

Beef Tea.—When one pound of lean beef free of fat, and separated from the bones, in the finely chopped state in which it is used for beef sausages or mince meat, is uniformly mixed with its own weight of cold water, slowly heated to boiling, and the liquid after boiling briskly for a minute or two, is strained through a towel from the coagulated albumen, and the fibrine now becoming hard and horny, we obtain an equal weight of the most aromatic soup, of such strength as cannot be obtained even by boiling for hours, from a piece of flesh. When mixed with salt, and the other usual additions by which soup is usually seasoned, and tinged somewhat darker by means of roasted onions or burnt sugar, it forms the very best soup that can in any way be prepared from one pound of flesh.—*Liebig.*

Bite of Mad Dogs.—An English Journal says that an old Saxon has been using for fifty years, and with perfect success, a remedy for the bite of mad dogs, by the agency of which "he has rescued many fellow-beings and cattle from the fearful death of hydrophobia." The remedy is to wash the wound immediately with warm vinegar or tepid water, dry it, and then apply a few drops of muriatic acid, which will destroy the poison of the saliva, or neutralize it, and the cure is effected.

Educational.

INS AND OUTS.

The young men who occupied the place of country school-masters during the winter, and "taught the young idea," etc; who labored, and no doubt suffered; who wielded the ferule, it may be, sometimes improperly and unjustly, but far more probably less than the circumstances warranted; who boarded around, at all manner of houses and with all manner of people, ate at some places scanty suppers and slept on hard beds, and at others found both of the best of their kind; who cracked nuts with the small scholars at their father's fireside, cracked jokes with the larger boys and girls when the labors of the day were over, and drank cider with the "old folks at home,"—have laid down the dignity and the duty of the school-room, put the padlock upon the school-house door, (Lock on the Understanding,) and vacated the premises without awaiting the service of a writ of ejectment. Some of these young school-masters go home to labor on the farm through the coming summer; for, with pride be it spoken, many of our farmer boys have an education adequate to teach, and to teach well, a district school; some of them count up the gains of the winter and then apply it in the most economical manner in an outfit for an academic term during the summer, with the laudable intention of becoming competent, by another winter, to assume a school of a higher grade. The winter past, perhaps their first at teaching, was spent in a *rural district*,—that is to say, a district on the very outskirts of the township, where the neighbors are at least half a mile apart, and the remotest patron of the school and the one who, in consequence of being blessed with the largest family of children, has the longest lease of the school-master to board, lives off a long mile and a half from the school-house. Next winter the young teacher, having acquired confidence in himself, hopes to get the Union school in the village, and an increase of pay. Another portion of these winter teachers being college boys, and having the fall previously found their funds sunken to the zero point, and possessing nothing wherewithal to replenish their stock, (for, be it known, dear reader, college boys are among the poorest in the nation,) make an irruption into all the country round about, and engaged themselves for the winter usefully,—to wit, pedagogically. Frequently these young collegians get more than they bargain for, and make contracts for the future which are subsequently perfected at the altar of Hymen.—The above classes and descriptions of persons are the *Outs;* and now for the *Ins*.

After the lock aforesaid has been suffered to rest undisturbed for a few weeks, until the ground becomes dry and settled, and the trees have put forth their foliage, another set of teachers take the places of the former, and a partial change occurs in the class of pupils. The older boys have disappeared, and in their stead sundry flaxen-haired and diminutive specimens of humanity appear—so diminutive, indeed, that the passer-by speculates upon the question, at what precise and very recent period of time they left their mothers' arms; and he wonders, also, as he hears their merry shouts, how those small patterns of Young America come in possession of such lungs. The teacher, too, is essentially different from her predecessor. A noun feminine has been substituted for one of the other gender, and the little children gather around her like a young brood around the parent bird. Especially is this the case if the mistress happens to be one of the right kind, with a sunny brow on which no cloud is permitted to rest; with a mild and gentle mien, and a smile that greets the tiny flock like sunlight on the hills! Twice blessed is the kindness and gentleness of the female teacher. The influence of her example distils itself upon the spirits of her young pupils like the dews of heaven! The reign is theirs for the balance of the present year, and as they have the *Ins* during the summer term, they have also my kindest wishes and regards; as they have of all intelligent men and all good citizens.

NORMAL SCHOOLS.

A Normal school, as now universally understood, is a public institution in which the school teacher is duly instructed in his profession, and prepared for the proper discharge of its active duties.

Almost every State in the civilized world, which recognizes intellectual and moral culture as necessary to the proper discharge of social duty, has founded and now supports, as an essential institution of government, schools of this class. Two years ago there were in the old world 264 such institutions, and there are now, probably a larger number; the tendency towards their establishment being general, without a single instance of abandonment being known. Giving them in the order of time in which they were founded in Europe, Prussia has 51; Hanover 7; Wirtemberg 7; Baden 4; Austria 11; Bavaria 9; Saxony 10; the lesser German States 26; France 97; Holland 2; Belgium 2; Denmark 2; Sweden 1; Scotland 2; Ireland 1; England and Wales 23.

METEOROLOGICAL OBSERVATIONS,

MADE AT ROCHESTER, STATE OF NEW YORK.

University of Rochester—Quarterly Abstract.—A. J. Ensign, Observer.

1854.	January. Barom.	Therm.	February. Barom.	Therm.	March. Barom.	Therm.
Highest Observation,	30.016	50.2	29.947	46.2	29.054	61
Lowest Observation,	28.243	4.5	28.834	56	28.663	14.4
Range,	1.772	51.7	1.113	40.4	1.391	46.6
Monthly mean,	29.456	25.56	29.515	21.17	29.383	31.83
Coldest day,		28		23		23
Warmest day,		12		1		15
Amount of Rain and melted Snow,		1.814		2.803		1.073

In January there were 11 days on which either rain or snow fell; 9 in February, and 16 in March. By comparing the amount of rain and melted snow of the above with the same months of preceding years, it will be seen that less snow and rain have fallen during the past winter than usual. The thermometer with which the observations were made, is placed in the shade, and hence is not so sensibly affected by sudden changes of temperature as one exposed in the open air. The annual mean, however, of either does not differ more than 2°, as has been proven by a comparison of last year's results with those kept by Dr. Dewey, from a thermometer placed as last mentioned. The coldest day of the past three months was the 28th of January, when the mercury stood 4° 5' above zero; and the warmest the 15th of March, the mercury being 61° above zero.—Hence, it may be seen that we have not experienced so keen and piercing a severity of old winter as many other places, where the mercury was several degrees below zero.

On the month of March, I quote the following remarks from Dr. Dewey, who is well versed in all matters pertaining to the weather:—"As March came in like a lamb, and has gone out like a lion, and has given us some weather, the wise in such a matter may desire some reminiscence of their weather enjoyments. To the facts let us recur, for facts are still stubborn things. The first half of the month was ten degrees above the mean for the last 17 years, and the last half more than seven degrees below the mean, so that the mean heat of the month has been a little above the mean heat of this month for 17 years past. On the 17th and 18th was that terrific storm whose winds swept with tremendous power from the Mississippi to the Atlantic in the Northern and Middle States and Canada. The wind was more violent at the east, and must have moved from 65 to 70 miles an hour,—a real tornado, producing wide spread desolation.

Cold snow squalls and much wind occurred on eleven of the sixteen days of the last half of the month. Though the birds disappeared, their notes are heard again, cheering to man as well as themselves. The flowers of the soft maple put out in some of our streets early as the 24th."

Useful Olio.

OLIVER CROMWELL.

Respecting the character of Oliver Cromwell, there are various opinions. A large number of people—Sir Leicester Dieillock among them—regard the Protector as a bold, bad, ambitious man, who deliberately and treasonably sought the supreme power, and reached it by unjustifiable war, base conspiracy, and atrocious regicide. Another class are of opinion that he *began* his career nobly, patriotically, religiously; but flattered by success, ambition gradually gained an ascendancy over his mind, and rendered him a traitor to his cause and country. This is perhaps, the most common opinion. A third class look upon Cromwell as a mere fanatic, deluding and deluded. Lamartine, we believe, has recently advanced this theory. There is yet another opinion, the avowal of which, in most companies, requires something of Oliver's own daring. It is, that Cromwell was *great and noble always!* that he was a man "*all* whose ends and aims were his country's, God's, and truth's;" who was in no sense and in no degree a fanatic, or a traitor, or a hypocrite: a man whose life was a consistent whole, and whose death was serene and sublime. This contrariety of opinion respecting the Protector existed in 1638, when he had just died, and exists now, after the matter has been in dispute ten hundred and four years. And why? Because Cromwell was the head of a party, and it has been a thing of party both to denounce and to defend him.

The difficulty of settling the Cromwell controversy, even to the satisfaction of a single mind, and that mind an impartial one, lies in the fact, that the sources of information come down to us from the corrupt period when to vilify Cromwell was the fashion, and the surest means of preferment, whether political or ecclesiastical.

Countless lives of Cromwell have been written since, but nearly all of them have taken their tone, and drawn their statements, from the literature of that venal time, and are, therefore, for the purposes of students who are in search of truth, worthless. There is a work, however, in which the man himself speaks, which portrays his soul, reveals his secret wishes, struggles, aims and opinions. We refer to "Oliver Cromwell's Letters and Speeches, with Elucidations, by Thomas Carlyle." Of these volumes, two things may be asserted; first, that they enable a candid person to arrive at positive conclusions respecting Cromwell's character; and secondly, that they change the nature of the Cromwell controversy so far as to throw the burden of proof upon those who accuse the Protector of hypocrisy, and self-seeking ambition. In the work to which we allude, Cromwell stands *revealed* as a high principled, brave, religious patriot, whom the course of events, and his own ability, bore irresistibly to the place of supreme authority, and who used that authority when it had been entrusted to him, only for high and patriotic purposes. It reveals him as one whose conscience was his law, and who was *utterly a stranger to remorse and fear.—Home Journal.*

Jefferson's Ten Practical Rules of Life.—1. Never put off till to-morrow what can be done to-day.

2. Never trouble others to do what you can do yourself.

3. Never spend your money before you have it.

4. Never buy what you do not want, because it is cheap.

5. Pride costs as much as hunger, thirst and cold.

6. We never repent of eating too little.

7. Nothing is troublesome that we do willingly.

8. How much pain those evils cost us which never happen.

9. Take things by their smooth handle.

10. When angry, always count ten before you speak.

Youth's Corner.

ILLUSTRATED REBUS, NO. 19.

☞ Answer in two weeks.

(Written for the Rural New-Yorker.)

ACROSTICAL ENIGMA.

I am composed of 24 letters.

My 1, 7, 5, 3, 20 are ornamental and fruitful.
My 2, 16, 10, 5 is a kind of fish.
My 3, 12, 7 is an organ of the body.
My 4, 5, 26, 1 is the abode of birds.
My 5, 19, 7, 23 is a Nobleman.
My 6, 11, 17, 10 is a place of deposit.
My 7, 8, 22, 24, 9 are used for fences.
My 8, 13, 15, 23, 5 is a part of the human frame.
My 9, 16, 24, 1 is an article that sares much.
My 10, 22, 9, 18 is a salutation.
My 11, 17, 1 is a model of industry.
My 12, 23, 3 is a beverage.
My 13, 8 7, 14 is a plant.
My 14, 22, 7, 15 is a weapon.
My 15, 4, 22, 1 is ladies' labor.
My 16, 9, 20 is a useful animal.
My 17, 5, 11, 7 is not far away.
My 18, 22, 13, 10 is to go down.
My 19, 14, 14, 3, 7 is poisonous.
My 20, 4, 8, 22, 24 is a creeping animal.
My 21, 5, 19, 17 is a plant.
My 22, 13, 15 is used in writing.
My 23, 16, 7, 14 is obtained from swine.
My 24, 8, 13, 1, 5, 7, 17 is what you will need to discover my whole, which has created great excitement. H. E. T. Clute.

Pavilion, N. Y., 1854.

He that is "fast" in his youth will traverse the downhill of life with a "drag" on.

ESSIE CAVE; A TALE OF THE TIMES.

[Concluded from the last page, this No.]

"Yes, *sweet* enough," said Byron, "and *that is all* she is. She isn't good for the least thing, but to look at. Ten dozen just like her wouldn't get a hungry man a dinner; and as for its not being necessary for my father's son to marry a wife who can support herself by washing, that may be true *now*, but who can tell how it may be in a few years? Fortunes are precarious things in this country. The rich man to-day, may be the poor man to-morrow, and the millionaire of this year, may not be worth a sou in five, aye, in one year hence. But," continued he seriously, "I am sorry to hear you speak in this way of Essie. You have always, heretofore, seemed to be very much pleased and flattered at my choice."

"That was before I had ever seen her, and when you had made me think she was an angel. Now I have seen her for myself, and can judge better. You can do as you please, Byron, but if you marry her, you must not expect that I, or your sisters, will countenance or associate with her. *We* cannot compromise our dignity in this manner."

"I certainly *shall* marry her," said the young man firmly; "unless," he added, and his voice grew suddenly sad, "unless Essie should herself refuse to enter the family under such circumstances;" and bowing to his mother, without another word, he left the room.

The next evening found Byron and Essie in the quiet parlor at Mr. Carr's. The conversation between his mother and himself, softened as much as possible, had been repeated to Essie, but her quick eye had detected all he would willingly have concealed, and she saw the truth at once. Several times the face had flushed, the eyes darkened with indignation, and she had half risen from her seat; but an appealing look from Byron had calmed her, and she had listened quietly, while he assured her again and again, how foreign all such tho'ts and feelings were to his own heart; and besought her not to withhold her consent to be his wife, and thus make shipwreck of his dearest hopes, though he could well see the pain and mortification she must suffer in entering the family under such auspices.

"No," said Essie gently, at length; "no, dear Byron, it would be wrong to sacrifice your happiness, as well as my own, to these foolish prejudices of your mother's. The arrangements you were speaking of, for removing to the west, can be made, so that we shall not be within her observation; and perhaps in a few years she will learn to know me better and love me."

"Oh! she must, she will!" exclaimed Byron, while the tears started in his eyes, and he drew Essie proudly and fondly to his heart.

In a few weeks the wedding took place, but neither Mrs. Barstow nor her daughters condescended to grace the occasion with their presence. Mr. Barstow, a fine-hearted, benevolent man, was the only member of the bridegroom's family present; and as Byron knew that Essie would only meet neglect and contempt at the hands of his mother and sisters, he did not take her to see them at all, but proceeded immediately to the new home his father had generously provided for them in one of our thriving Western States.

Five years from that time saw Byron's words verified. The millionaire was a beggar. Mr. Barstow was a bankrupt, and, as he was an honest and honorable man, he was a *poor bankrupt*. The claims of his creditors were all met, but it was at the expense of everything. His fine house, furniture, pictures, plate, all went; and at the age of sixty, he was left without a penny. Byron and Essie immediately came forward, and offered in the most cordial terms to share their home with their parents, and, though Mr. Barstow would gladly have availed himself of the offer, his wife would not consent. Never, during the past five years, had she written one line to Essie, or showed, by word or deed, that she was a member of the family; and it was more than her proud spirit could brook now, to become dependent upon Essie for a home. For two or three years they tried living, first with one daughter, and then with the other, but as they had both married fortune-hunters, and, as their husbands found, that instead of a fortune they had nothing, it came pretty hard to support father and mother too, and their homes, in consequence, were anything but pleasant. At last Byron came in person to urge a request from Essie that his parents would come and *try* the home in the west. Mrs. Barstow consented, and in a few days they were on their way to Illinois.

They have lived two years with Essie, and Mrs. B. can not only bear to see her daughter-in-law wash, but can herself help wash. She has no child like "our Essie," and the last time I was there on a visit, when I came within sight of the house, the aristocratic Mrs. Barstow stood holding open the garden gate, while Essie's oldest boy, a white-haired urchin, drove the pigs out of the potatoes.

Burlington, Ky., April, 1854.

Interest speaks all languages, and acts all parts; even that of disinterestedness itself.

Sunday Reading.

O'ER THE HILL.

One morning as he wended
Through a path bedight with flowers,
Where all delights were blended
To beguile the fleeting hours,
"Sweet youth, pray turn thee hither,"
Said a voice along the way,
"Ere all these roses wither,
And these fair fruits decay."
But the youth paused not to ponder
If the voice were good or ill,
For, said he, my home is yonder,
O'er the hill there, o'er the hill!

Again, high noon was glowing
On a wide and weary plain,
And there, right onward going,
Was the traveler again.
He seemed another being
Than the morning's rosy youth,
But I quickly knew him, seeing
His unaltered brow of truth.
"Rest, stranger, rest till even,"
Sang alluring voices still;
But he cried—My rest is heaven!
O'er the hill there, o'er the hill!

The shades of night were creeping
A sequestered valley o'er,
Where a dark, deep stream was sweeping,
By a dim and silent shore.
And there the pilgrim, bending
With the burden of the day,
Was seen still onward wending
Through a "strait and narrow way."
He passed the gloomy river
As it were a gentle rill,
And rested—home for ever!
O'er the hill there, o'er the hill!

(For the Rural New-Yorker.)

THE SABBATH.

"Hail! Sabbath: Thee I hail; the poor man's day."

Sabbath morning comes, a welcome guest to every pilgrim of earth. When worn and wearied with the week's toils and fierce encounters—when, perhaps, the sneers and scorns of a—too often—heartless world have oppressed the joyous spirit, how timely its arrival! How unconsciously does it seem to infuse a portion of its own heavenly calmness into the human bosom: and like the earliest beams of morn, that o'er the earth send kindliest light, sheds rays of light divine into the deepest recesses of the heart.

It comes, bearing upon its viewless wings a balm for the wounded spirit—a consolation and comfort for the way-worn child of care—an encouragement to the desponding, and a precious catholicon for many of the numerous ills of life. How quietly does it seem to step in and interrupt us amid the cares and perplexities incident to the busy week, and, speaking in the calm, mellow tones of a "still, small voice," bids us lay aside for a season all our worldly pursuits and engagements, and yield ourselves up to the exercise of religious thought and feeling! Then must we shut out the world with its vanities and follies—its business and pursuits—and admit the heavenly visitant into full possession of the audience-chamber of the heart. It shall teach us the conversation of heaven, in which angels, with such pure delight, engage. Our thoughts and feelings, the natural tendencies of which are to grovel, it shall elevate and ennoble. Pure and holy themes for meditation shall take the place of those sublunary objects that engrossed our attention during the weary week, and life,—the life we live here,—shall appear in the light reflected upon it from the eternal world; and the higher life,—the life we live in God—shall stand up before our vision in all its unclouded beauty.

The sacred stillness of the Sabbath, usually almost universal, possesses an amount of inspiration we are slow to notice and appreciate. Its very presence casts a halo of religion around the Christian's home. The daily avocations of the week are abandoned. The shrill sound of the anvil has ceased. The busy hum of voices and the sound of "multitudes astir" within the city are silent. In the country, the plowman's whistle—the joyous shout of the happy cowboy, as homeward he drives the flock—the echo of the woodman's ax, that told of the stroke in the mighty forest, and the clatter of rolling wheels, have given place to quiet and repose. The sound of the distant waterfall comes mingled with the music of the "far-off wind-harp," the lowing of cattle, and the tinkling of the sheep-bell from the grassy hill-side, and falls upon the ear in soft, sweet cadences, like that breathed forth from the Æolian, swept by unseen fingers. Though Nature utters a thousand voices—though simultaneously she strikes the strings of her myriad harps, yet they shall mingle and commingle, blend and harmonize, until the ear of the most skillful musician shall detect no discord. The clear shrill notes of the little insect piped at "mellow eve," sweetly harmonize with the thunder-tones of heaven's cathedral. At all times this music is sweet and soul-stirring. But on this day, when man has no part to act in the grand orchestra, and amid silence so profound, its sweetness is enhanced a hundred-fold.

This day, then, with all its sacred influences and the hallowed associations that cluster around it, is our legacy. How blessed the declaration that the "Sabbath was made for man, and not man for the Sabbath!" Rest, then, on thy toilsome march, weary pilgrim of earth! The Sabbath comes to you with news of peace. It kindly invites you to forget awhile your griefs and cares, and hold sweet communion with Heaven. Its consecrated hours improved, and its holy duties performed, it shall yield a sweet antepast of that *heavenly* Sabbath whose joys ne'er shall end.

Rochester, April 16th, 1854. S. A. E.

Miscellaneous.

BIRD MUSIC.

Singer of priceless melody!
Unguerdoned chorister of air,
Who, from the lithe top of tree,
Pourest all will thy music rare,
As if a sudden brook laughed down the hill-side there.

The purple-blossomed field of grass
Waved sea-like to the lilt wind;
Thick daisies, that the stars surpass,
Being as fair, and far more kind;
All sweet, uncultured things thy wild notes bring to mind.

Unconscious of thine audience,
Careless of praises as of blame,
In simpleness and innocence
Thy gentle life pursues its aim,
So tender and serene that we might blush for shame.

When that enraptured overflow
Of singing, into silence dies,
Thy rapid, fleeting pinions show
Where all thy spell of sweetness lies,
Gathered in one small nest from the wide earth and skies.

The patience of thy brooding wings,
That droop in silence day by day,
The little crown of callow things
That joy for weariness repay,
These are the living spring, thy song the fountain's play.

[New York Tribune.

[For the Rural New-Yorker.]

"I DON'T SEE HOW THEY LIVE."

"I don't see how they live; I don't go into the place, but I see half a dozen of them, young men, lounging around the groceries, saloons or hotels, with cigars in their mouths, never appearing to have any business. Can't see how they *live;* and it's a shame, too, to see young men in their prime, wasting golden moments—rusting instead of wearing out. And they are a disgrace to their parents, too—don't see what *supports* them."

This was the way an honest farmer once talked to me of the "village boys," and said he,—"It's no place to bring up children." It was too true—all he said of the boys in our village, though *all* did not belong to the class above described. But *how* did they live?—What supported them in idleness? Had they fortunes which made labor unnecessary? Was there no motive or incentive to labor and be useful? Ah, yes! and I wish to answer the question for you, as I did for my friend.

Go with me down street. Do you hear the ring of that hammer on the anvil?—do you see the man who wields it—with his face blacked with coal dust mixed with perspiration? To the shoemakers and then!—*driving pegs!*—Mark the lines of anxiety—watch the countenance of that man, as he glances at the vacant bench before him, and then into the street at a group!—to the saddlers, the hatter, the tannery, yes, even to the suburban farmer, and there, toiling faithfully and hard, you see the papas of these youth!—the mainspring of their prosperity—their support! Through the indulgence of these men—self-made men, who "commenced with nothing" and have *worked* upward—these offspring, these—(I was going to say, American youth,) are enabled to *live* in idleness!—to dress in cloth paid for by the strength and exercise of a father's muscle and mind,—are furnished with pocket money, and assume "Congressional airs!"

O *fatal* indulgence! Fathers, have *you* such a son? Is he willful and uncontrollable, and do you indulge him, fearing he may do worse? *Better*, far better, were you to place him under the discipline of our State's prison, where he may learn a useful trade, than *thus* to live a moth—a sloth of life! The influence which such indulgence exerts on his fellows, is of a fatal character—not only ruining your own child, his happiness in this life, aye, and forever, but is an upas tree to all of his associates.—Frame no excuses for this course. That boy has a physical nature equal to yours, if developed—mental faculties capable of comprehending that which is *good* and pure, and holy, as well as the intricacies and mysteries of *gambling!* He has an immortal soul! Are you a Christian father?—enjoying the sunlight of divine love, and appreciating the sweets and holy enjoyments of the Christian religion, and the hope of a blessed immortality, in contrast with unceasing misery?—and will you make no effort to draw your own offspring from the horrible whirlpool of licentiousness and profligacy, which is even *now* bearing him around and round towards its vortex? If a *desperate* effort is necessary, do not shrink one moment from making it.

"O," you say, "I hope he will see the folly of his course, and do better." So do I *hope* so. But will your indulgence and silence *aid* in changing that course? Then *about* with the Life craft! Change its course! Keep away from the "Maelstrom!" If the gentle cords of love and affection are useless, then work with the ropes of imperative and determined action.—Let the Mother co-operate. A *mother's* tears can often melt the will of the wayward, and her prayers are effectual means to promote reform. We have need of *working* men—of men who will *work*, tug, toil and strive in the vast and continually extending mental and moral domain—of men who are not afraid of the plow, the ax or the hammer—who are willing to earn their bread by the sweat of the brow.

Measures should be taken to *eject* these moths from the hive—to prevent the seeds of illness germinating and extending. Parents, take care they do not choke and retard the growth of those plants God has given you to rear. Enrich the soil with the principles and precepts of the Bible. There is no "foul seed" in such fertilizers. Dig around with the magic spade of love,—invoke showers of Heavenly grace upon it;—then fear not the result.

"Train up a child in the way he should go, and when he is old he will not depart from it."

CHARLIE CHESTNUT.

THE HERO OF THE PLAGUE.

When the plague raged violently at Marseilles, every link of affection was broken; the father turned from the child—the child from the father—cowardice and ingratitude no longer excited indignation. Misery is at its height when it thus destroys every generous feeling—thus dissolves every tie of humanity. The city became a desert—grass grew in the streets—a funeral met you at every step. The physicians assembled in a body at the Hotel de Ville, to hold a consultation on the fearful disease for which no remedy had yet been discovered.—After a long consultation, they decided, unanimously, that the malady had a peculiar and mysterious character, which opening a corpse might develop—an operation which it was impossible to attempt, since the operator must inevitably become a victim in a few hours, beyond the power of human art to save him, as the violence of the attack would preclude their administering the customary remedies.

A dead pause succeeded this fatal declaration. Suddenly a surgeon, named Guyon, in the prime of life, and of great celebrity in his profession, rose and said firmly:

"Be it so; I devote my life for the service of my country. Before this numerous assembly, I promise, in the name of humanity and religion, that to-morrow, at break of day, I will dissect a corpse, and write down, as I proceed, what I observe."

He left the assembly instantly. They admire him—lament his fate, and doubt whether he will persist in his design. The intrepid and pious Guyon, animated by all the sublime energy religion or patriotism can inspire, acted up to his word. He had married, and was rich; and he immediately made his will, dictated by justice and piety.

A man had died in his house within twenty-four hours. Guyon, at day-break, shut himself up in the same room. Full of enthusiasm, never had he felt more firm and collected. Kneeling before the corpse, he wrote:—"Mouldering tenement of an immortal soul, not only can I gaze on thee without horror, but even with joy and gratitude. Thou wilt open to me the gates of a glorious eternity. In discovering to me the secret cause of the terrible plague which destroys my native city, thou wilt render my sacrifice useful. Oh God! Thou wilt bless the action Thou thyself inspired."

He began—he finished the dreadful operation—and recorded in detail his surgical observations. He then left the room—threw the papers into a vase of vinegar, and immediately sought the Lazaretto, where he died in twelve hours—a death ten thousand times more glorious than the warrior, who to save his country, rushes on the enemy's ranks—since he advances with hope at least, and sustained, admired, and seconded by the whole army.

Physicians, who remain firm in the discharge of their duties, while the fears of their fellow citizens are prompting them to fly from contagion, display their moral courage, which is as far superior to the physical energy which sustains the soldier in battle, as mind is superior to matter.

BOY-THRIFT.

In looking into the position and treatment of boys upon farms, as we have done lately, our notion has more and more strengthened that it is as easy as it is certainly most expedient, to give every boy a chance of earning a little money for himself. This can be done by allowing him to set apart a corner of a garden, or pay rent for a single field; but we find, in the *American Agriculturist*, the following suggestion of another way to make the laboring lad proud of his home and interested in his occupation. It is from the Report of a "Farmers' Club:"

"J. Reynolds said he knew a lad who five years ago began to keep poultry. He bought five or six hens, raised chickens, and sold chickens and eggs. He fed largely upon fresh fish. He now has a flock of some fifty hens, has purchased a cow, repaired his little barn, clothed himself, assisted his mother more or less, and is now, from the sale of his milk and the produce of his poultry, quite a thriving young man, accumulating a very pretty capital."

AN ALLEGORY.

A venerable old man toiled through the burden and heat of the day in cultivating his field with his own hand, and in strewing with his own hand the promising seeds into the fruitful lap of the yielding earth. Suddenly there stood before him under the shade of a huge linden tree, a divine vision. The old man was struck with amazement. "I am Solomon," spoke the phantom in a friendly voice—"What are you doing here, old man?" If you are Solomon," replied the venerable laborer, "how can you ask this? In my youth you sent me to the ant; I saw its occupation, and learned from that insect to be industrious and to gather. What I then learned, I am following out to this hour." "You have only learned half your lesson," resumed the spirit. "Go again to the ant, and learn from that animal to rest in the winter of your life, and to enjoy what you have gathered up."

A comly life is the strongest argument that you can offer to a skeptic.

Trans-Atlantic Epistles,

TO COUSIN KATEY.

Communicated thro' Moore's Rural New-Yorker.

EPISTLE SECOND.

Tirlemont, Belgium, Jan., 1864.

Dear Cousin Katey:—My last letter was principally devoted to the royal family of Belgium; in this I will tell you something about the common people. There are two grand divisions here as in all European countries, the peasantry and the upper classes, which are readily distinguished by the language and the dress. The upper classes speak French almost exclusively, the peasantry Flemish, an almost intolerable jargon, closely allied to the Holland or low Dutch. The dress is a still more obvious mark of distinction. The upper classes follow the French fashions, as with us, and throughout Europe, while the peasantry have a costume of their own. The women wear a skirt and jacket, very much like the short-gown and petticoat of our grandmothers in Revolutionary time. For the street they add a large, full mantle, completely enveloping the person and furnished with an ample hood. In Tirlemont these mantles are universally made of purple calico, always the same shade of color and trimmed precisely alike, with a double ruffle of the same passing entirely round the mantle and the hood, starched stiffly, and fluted with the most beautiful regularity and nicety. The effect is really quite pretty. At Ostend the peasant women wear mantles of the same form, but made of black broadcloth, and often handsomely trimmed and lined. Nothing in the shape of a bonnet is worn by any woman of the *lower classes*, but they are never seen without caps, in doors, or out. These are often very prettily made of white or black lace, and coquettishly adorned with gaily colored ribbons; such a cap as this upon a rosy-cheeked peasant girl is far from disagreeable, but there are others of a different style, the most villainous night-caps imaginable, of thick cotton, sometimes white, sometimes of calico, (goddess of beauty defend us!) and in the latter case, without border or ornament of any kind. In the street when it is very cold, the hood of the mantle is called into requisition, and sometimes a small shawl is tied loosely round the head, but at all other times, the hood is thrown back, and the head is only protected by the cap.

The peasantry wear *sabots* or wooden shoes, which are to be found here of all prices, from the rough, uncouth things that cost less than sixpence of our money, to the more gracefully shaped ladies, "sabots," covered with a coat of shining black, and nicely trimmed with fur, which can be bought for half a dollar. These wooden shoes, beside their cheapness have in reality some advantages, being impervious to moisture, durable, and also exceedingly warm. Those whose occupation requires them to stand continually on the ground, or upon the stone and earthen floors, so much in use here, could hardly do without them. Many a farmer's wife in our own land, who has a poultry yard or a garden to look after, or who shares the labors of a dairy, would find a pair of "sabots" extremely serviceable. Poets might be shocked to see a milkmaid trip across the "dewy lawn" in a pair of *wooden shoes*, but considerations of health and comfort would outweigh in the minds of those immediately interested, all regard for the romantic and picturesque.—The garb of the peasant-man is not as peculiar as that of the women, the only distinctive garment, which they have, being the *blouse*, a kind of short, full frock of dark blue linen.—We never see a peasant without this; on Sundays and other holidays they appear resplendent, in shining new blouses, but they never seem to think of doffing this badge of their condition. Children of all ages wear the caps and the sabots. In our walks we see little tree things, of two or three years of age, toddling about the doors, apparently ready to fall every moment, but always escaping the danger; others, a little older are pursuing their childish sports, clattering their wooden shoes with marvelous speed and dexterity. The children's caps are made like the infants' caps, which were in vogue a few years ago in our own country, with very full borders all around.—I never see the round innocent face of a child in a cap of this description, without recalling the image of a baby brother, who was laid in his coffin, thus attired, and whose pale sweet face, surrounded by the soft folds of lace, seemed to my childish fancy, like the countenance of an angel encircled with a halo of glory.

Well, Katey dear, I dare say you are tired of this long account of the Belgian fashions; so just put on your bonnet and go out with us for a walk and you shall see for yourself. It is market day, and the peasantry are out *en masse*. Do not take the side-walk, or people will stare at you, for it is decidedly fashionable to walk in the middle of the street, and with good reason, for the side-walk is paved with cobble-stones, the same as the street, only that it is, if possible, more rough, while it is often encumbered as you observe with filth of the most disgusting description. Do not fancy that you are in Broadway, and in danger of being run over every moment; the only moving vehicles which you will see are the heavy lumbering carts, that pass occasionally, varied at rare intervals by a gentleman's carriage, or a *vigilante*, as they call their cabs here.

This large square which we are approaching, and which has not a vestige of tree, shrub or fountain to break its monotony, is the *Grand Place* of Tirlemont. It was once a little lake, and the old grey church opposite still retains the name of "*Notre Dame de Sue.*" This is the grain market, and there you see the peasants, each standing by his bag of grain, often with his wife to assist him in making the bargains, or to pocket the proceeds of the sale, for not a few of the Belgian women, you must know, hold the purse-strings.

But let us not linger here, for there are other things to be seen, which will interest you more. As we pass by the church you can glance at the images, placed over the doors and in niches around the sides of the building. If we had a little more time, we would enter and see some beautiful specimens of carving in wood. But here we are at the little triangular "*Place*" devoted to the vegetable market. This is occupied almost exclusively by women of all descriptions, young and old, ugly and pretty, but the old and the ugly preponderating. Each one has some product of her garden to dispose of, a basket of apples, a bag of potatoes, a few cabbages, some heads of celery, a small quantity of onions, or garlics, or perhaps a few nuts. The purchasers are circulating through the crowd, chaffering with one and another of the market-women. Let us thread our way through the busy multitude. Do not fancy you will be taken for one of the ladies of Tirlemont; you are at once singled out as a stranger, and all eyes follow your movement? though you have never been considered a great beauty at home, your fair complexion and golden locks will do wonders for you here, and half the market-women will carry home the news of the handsome English-woman they have seen to-day.

Now let us turn to the right and ascend this broad street, and we shall soon come to another large square, called the "*Marche aux Vaches.*" Here are placed the animals, brought for sale, with their heads fastened to the ropes which you see extended from one post to another, across the square. Do you observe that woman leading in her cow? I dare say she would not entrust it to her husband on any account. We often see a peasant and his wife together, she leading the cow, and he walking by her side with his hands in his pocket.—Yonder comes a man driving a pig with a stick, as oxen are guided in our country. How, think you, would he manage, if the animal should manifest the refractory disposition, for which he is somewhat famous? Nothing more simple. He would take him by his feet, swing him across his shoulders, and march on with as much nonchalance as if his weight were but a feather, and his shrill squeals sweet music in his ear. On the other side of the square we shall find the butter-women ranged in a row, holding up their heavy baskets for the inspection of customers, hour after hour, without manifesting any symptoms of weariness. Let us cross over and see what they have. These rolls of butter are *fresh*, in both senses of the term, for not a particle of salt has entered into their composition. All the butter in the country is brought to market in this way, and purchasers salt it afterwards to suit themselves.—At the left, as we descend this street to return to the Hotel, we see the entrance to St. Germain, the largest church in Tirlemont. It dates back to the eleventh century, and is mostly in the Roman style of architecture. But your attention seems to be more attracted by the miserable objects near the door, than by the church itself. That is the rag-market, and the poor tattered remnants of garments which are so carefully spread out on the ground, and which those wretched looking women are turning over and examining with so much attention, are really expected to do service yet; perhaps they are all that a destitute mother can provide for her shivering children to protect them from the winter's cold. Alas! for the poor in this country, so crowded with population.

Well, Katey, what say you to a Belgian market? you cannot but acknowledge that it is a pleasant, animated scene, when the sun shines brightly, and the air is soft and balmy; but, you inquire in regard to the stormy days, when the bleak winds whistle through these open squares, and the poor women must stand for hours, exposed to all the inclemency of the weather. Ah! that is another thing—I only go to market on pleasant days. MINNIE.

Love one human being purely and warmly, says Jean Paul, and you will love all! The heart in this heaven, like the wandering sun, sees nothing, from the dew-drop to the ocean, but a mirror which it warms and fills.

"TURNING OVER A NEW LEAF."

[See Rural of last week.]

"Turn over a new leaf"—indeed! I am much mistaken, if there is not *more* than one leaf, that needs turning over, in that house-book. Why look! poor Mrs. Grey seems to have laid upon her head, both her own and her husband's share of the "primeval curse." All those *children* to take care of, and all the *work* of the house besides. She'll never live to be three-score-and-ten, that is very clear. But by the time she is worn out, and her husband gets a *second wife*, it is likely he will feel rich enough to afford *her* the needful "help" about her house-work—and she will take a deal of comfort, upon the money that poor Mrs. Grey, No. I, was slaved to death in saving!

I should like to be informed, why Mr. Grey must needs lie in bed, (when he evidently could not sleep another wink,) till his wife was up, and had got breakfast ready, and everything in apple-pie order? If he had been anything but a selfish fellow he would have considered how late his wife was up Saturday night, getting all things in order for Sunday—whilst he was snug abed, and snoring. And all was in good order—not a string, nor a button missing—we should have surely heard of it, if there had been. Why didn't he get up, and get the fires made, and the kettle boiling, and the house comfortable, for his wife—and let her take an extra nap if she could; I am sure she had earned it. Then if "Julia" had been stimulated by her father's example, and a word about "poor, tired mama," she, too, would have been up and dressed, and helped the little ones with their toilets. And set the table nicely, too—"for a pleasant surprise."—Just think how comfortable to that poor, worn-out mother, to find things so nicely under way! That would have been a very nice leaf to turn over, don't you think so, Mr. Grey?

It is no wonder she forgot the steak for breakfast, nor the pancakes—that last was an imprudent promise, for who was to *bake* them? The nice bread and butter were much more suitable for Sunday breakfast—I don't object to the steak, (if some one else is at hand, to pour out the tea or coffee and preside at the table) but I beg leave to doubt the possibility of Mrs. Grey going through the broiling process, and appearing with it at the table, such a picture of neatness and *cool* propriety as she is represented, on the *model Sunday morning*.

I am quite in love with Mrs. Grey—such an amiable woman! Not a word of grumbling, when her considerate husband brings home strangers to dinner, that she alone must prepare—while he, good soul, in "best bib and tucker" sits comfortably in the parlor, (she put it in nice order whilst he was at church;) and enjoys their company. And then, she sees no one to blame but herself, that she has more labor, and less leisure and comfort, than when they began housekeeping—a family of two.

But look at the contrast. As her husband's business has increased, additional clerks have been hired to take the increased labor. But *her* family cares have doubled, tripled, quadrupled, and *her* energies have been taxed to meet the demand—hers only. No "material aid" has come to her relief. Now, I think a woman can find full employment, aye, and earn good wages too, taking the entire charge of four or five children; their ever active minds and bodies; and their clothes—ah! what a never-ending still beginning task! then add to this the housework, and the cookery you count upon so much; and get out of humor, if you don't find it to suit your dainty palate—and—your wife is overworked—she is dying by inches, Mr. Grey! I see you don't believe it, but look again—she is younger by several years than you, yet see how much older in appearance, than your sleek and comfortable self. Because she never complains, you don't realize how fast she is wearing out; yet the elastic step of old is gone—the hue of youth and health has faded from lip and cheek, and every one *but you* remarks, "How thin and old Mrs. Grey grows!"

Yet gentle and patient, she still toils on—and will do so, till suddenly, the overtasked energies give way. The pitcher is broken at the fountain, and the wheel at the cistern, and mourning friends exclaim—"What a mysterious Providence," as if it had been by his decree, that those helpless ones are left motherless—as if it were not rather the work of selfish, avaricious man!

Do you call my picture over-wrought, and highly colored? It is an "over-true tale"—and has its counterpart at many a hearth-stone, where the "turning over a new leaf," that might readily be done, would bring ease and comfort to an overtasked mind and body.

But all the world is so intent in giving lessons "how to be good wives," that nobody has time to teach "how to be good husbands,"—a lesson quite as hard to learn, and that much needs to be studied. This, also, is "a leaf," that most emphatically needs "turning over," in the opinion of

Your Observing Friend, F. F. Sr.

—Wellsboro' Advertiser.

A Fair Demand.—The *Constitutional* tells a story of an American young lady who has just been married to a captain in the navy.—The bridegroom having been ordered to join his ship, the bride wrote to the secretary of the navy, and referred him to the 5th verse of the 24th chapter of Deuteronomy, which says, "When a man hath taken a new wife, he shall not go out to war, neither shall he be charged with any business; but he shall be free one year, and shall cheer up the wife which he hath taken."

Home.—If there is a fountain of love in the human heart—the purest streams of affection nourished by the living waters of that fountain, are secret love and tender recollection of our fraternal home. How many hapless wanderers sigh for the bliss of the past and feel that for them no smiling home awaits! How many are doomed to travel over the earth who will never know the joy of thinking that fond and loving hearts are throbbing for them and praying for their return.

MOORE'S RURAL NEW-YORKER

ROCHESTER, APRIL 29, 1854.

SPECIAL NOTICES.

☞ *A new quarter commenced April 8,—a good time for new single and club subscriptions to begin; and the renewal of expiring subscriptions is now in order.*

☞ *Additions to Clubs are still in order. If back numbers are not wanted, we will send from 1st March or April to end of year for $1—and count on premium.*

☞ *During the season of navigation we can send the Rural to Canada West free of American postage, and hence will furnish clubs for six months from date at lowest rates.*

☞ *Clubs for six or nine months from this date at same proportional rates as for full year—and premiums allowed.*

☞ *Back numbers of the present volume furnished if desired, or subscriptions may commence at any time.*

Our May Premiums.—The Result.

Having posted our books, we are this week enabled to announce the result of the competition of agents and others for the Premiums offered for the largest lists of Rural subscribers obtained previous to the 15th inst. According to our figures, the following named gentlemen are the successful competitors:

1. B. Allen, Trumansburgh, 332 subscribers—$75 in cash.
2. J. H. Stanley, Le Roy, 302 subscribers—$50 in cash.
3. I. W. Briggs, West Macedon, 300 subscribers—$30 in cash.
4. S. E. Norton, Phelps, 255 subscribers—$20 in cash.
5. C. D. Langworthy, Alfred, 178 subscribers—$15, in books or plate.
6. J. Van Horn, Ovid, 150 subscribers—$12, in books or plate.
7. R. P. Aller, Lyons, 138 subscribers—$10, in plate or books.

As heretofore announced, the January premiums were awarded as follows:

1. J. H. Stanley, $25 in cash. 2. B. Allen, $15 in cash. 3. I. W. Briggs, $10 in cash.

A portion of the above named premiums have already been paid—and the remainder will be promptly attended to on receipt of orders from those entitled, specifying their wishes in the premises.

As before stated most of our agents and friends preferred competing for the *Specific* Premiums; hence the large prizes excited comparatively little competition. Indeed we find on reference, and count, that *over five hundred persons* have become entitled to Specific Premiums of from $1 to $10 each—making an aggregate which would surprise many of our readers, and perhaps astonish certain publishers who make no little ado about their liberality. Be that as it may, we are content with the result—willing to invest a few thousand dollars, annually, in rewarding its friends for their efforts, so long as the circulation of the Rural is increased and extended in the ratio of the past few months. And we embrace this opportunity to again acknowledge our indebtedness to the numerous generous and active friends of the paper who have so materially aided its progress during the past six months, throughout the land.

Our offers of Specific Premiums are extended to the 1st of July ensuing. For particulars—and list of Books for Premiums—see next page.

Trial of the Wards for Murder.

The trial of the Wards for the murder of Professor Butler, of Louisville, is now in progress at Elizabethtown, Ky.

A change of venue was obtained from Louisville, where the affair took place, to Elizabethtown, Hardin county, on the plea that no impartial jury could be obtained at the former place. The ablest counsel in the State have been retained by the Wards—among whom are Thos. F. Marshall, Ex-Governor Helm, Nathan Wolf, Ex-Governor Crittenden, &c.

It is stated that the people of Kentucky have become highly excited on the subject of the trial. Public feeling runs high on both sides. The nabobs and aristocracy sympathize and side with the Wards, while the mass of the people demand that justice shall be done.

Prof. Butler was an amiable, estimable, inoffensive man, and the Ward family are very wealthy—worth, perhaps, a million of dollars—many of them reckless sporting characters.

The Wards ride to the Court House in the carriage of Gov. Helm, and are accompanied by their parents, Mrs. Mat. F. Ward, and two younger brothers, all of whom occupy seats within the bar. Mat. Ward is said to be ill, and comes to court supported by a crutch. He was put upon his trial first.

The Address on the Veto.—The majority of the New York Legislature, whose action on the Maine Law was nullified by Governor Seymour's veto, have responded to his message in a most able address, taking up the various reasons which the Governor assigned for vetoing the bill. We hope that both documents will be published together, so that all may understand the exact nature of the legal and constitutional difficulties in the way of prohibition, and act accordingly. The address is one of marked ability and earnestness, and will command universal attention.

Powder Mill Explosion.—On the evening of the 20th inst., about 9 o'clock the Genesee Powder Mills, situated in Brighton, some five miles eastward of this city, exploded with a concussion so tremendous as to be experienced at Geneva, and other points fifty miles distant—causing in some localities considerable consternation. No person injured; loss, about $3,000.

Melancholy Marine Disasters.

The severe gales that prevailed on our eastern coast for the past few weeks, were attended with a great number of marine disasters, some involving a sad loss of human life.

Tuesday, the 18th, the fine New York Packet ship Underwriter, went ashore on Squam beach. She had 600 emigrant passengers on board, all of whom were fortunately saved; it is not certain whether she can be got off, as her hull lies imbedded in the sand, and she leaks badly.

On the 24th of March, in lat. 28° 11', long. 90° 88' W., Captain Day, of the schooner Lucretia, fell in with the schooner Francena, of Brookline, Maine, in a sinking condition, and took three seamen from her. She was bound from Attakapas for New York.

Two schooners have arrived at New York from Barnegat, with 300 bales of cotton in good condition, from the schooner Mary De Laine, which went ashore during the late gale.

On Saturday the 22nd inst., one of the most direful shipwrecks it has ever been our duty to record, occurred on the coast of New Jersey.—The emigrant ship Powhattan, of 900 tons burthen, bound from Havre to New York, went ashore during a gale and fog, and became a total wreck. Out of the officers and crew, and two hundred and fifty passengers, *not one escaped alive.* The vessel lay upon the bar not over one hundred yards from land, for a whole day before she went to pieces, and the Captain was able to converse through his speaking trumpet with the wreck master on shore, but the waves ran so high that it was found impossible to render the ill-fated crew and passengers any assistance whatever.

The scene is described as of the most heart-rending character. As the huge waves made a breach over the decks from time to time, the passengers would be swept off—their drowning cries would be heard above the roaring of the sea, and their dead bodies would be washed up on the beach. On Sunday evening the vessel keeled over towards the sea, and immediately went to pieces, at which time the whole remaining number upon the wreck perished. It is a rare occurrence even in these days of calamity that shipwreck is attended with such utter destruction.

The schooner Manhattan, of Bangor, Me., Capt. Fields, went ashore about a mile below the Powhattan on Sunday night. After considerable thumping on the bar, she was driven over and was beaten upon the shore. The sea ran very high, and drove her up within fifteen yards of the beach.

Capt. Jennings, the wreck master, repaired to the spot and endeavored to persuade the captain and crew, seven in number, to let themselves down by a rope from the end of the jibboom, which, when the surf ran out, was hanging over the land, and they could easily have got ashore.

Instead of following the advice of Capt. Jennings, the Captain and all the crew shut themselves up in the after cabin, thinking, most probably, that the vessel would outlive the gale, and would be high and dry the next morning. The waves, however, soon made quick work of the Manhattan, and in an hour or so she went to pieces, and all but one of the officers and crew perished.

The Missing Steamer.—The City of Glasgow, which left Liverpool for Philadelphia, March 1st, has not yet been heard from; and the chances are, although people are willing to shut their eyes against such a painful conclusion, that she has gone the same way as the ill-fated steamer President. The story of her voyage, in such a melancholy case, will be briefly told: "she left such a port at such a time, and was heard never of more."

Model Egg.—Mr. P. Seymour, of East Bloomfield, (who is *not* a chicken speculator,) has "laid on our table" an egg produced by his Cochin China hen, "Queen Victoria," which measures 8¼ by 7 inches, and weighs 7 ounces.

Cotton.—Charles Dickens, in a late number of his Household Words, after enumerating the striking facts of cotton, says:

"Let any social or physical convulsion visit the United States, and England would feel the shock from Land's End to John Groat's. The lives of nearly two millions of our countrymen are dependent upon the cotton crops of America; their destiny may be said, without any sort of hyberbole, to hang upon a thread. Should any dire calamity befal the land of cotton, a thousand of our merchant ships would rot idly in dock; ten thousand mills must stop their busy looms, and two million mouths would starve for lack of food to feed them."

The Year we Live in.—According to the "American Almanac," we are in the "78th year of the Independence of the United States of America; the 6567th year of the Julian Period; the 5614th year since the creation of the World according to the Jews; the 2697th year (according to Varro) since the foundation of Rome; the 2530th year of the Olympiads at 775½ years before Christ; the 1270th year (of twelve lunations) since the Hegira, or flight of Mahomet, which, as is supposed, took place on the 16th of July, in the year 622 of the Christian Era."

Mormon Law.—An editorial in the Salt Lake News thus speaks of the treatment of slander of the fair sex in Utah:—"It is too well known to need repeating, that if a son of Belial should defame one of our fair wives or daughters, his head must pay the forfeit, without judge or jury, in the most public place; and he must get his recompense for the loss of his heart's blood where he can find it, which will be in Tophet."

Ohio in a "Fix."—The old tax law of Ohio has been declared unconstitutional. To obviate the difficulty a new act has been under discussion in the Legislature. This, too, has just been defeated by a decisive vote. Something else must be proposed, or the State will be without a revenue to meet her obligations.—*Alb. Jour.*

Congressional.

The session of Congress continues to drag its slow length along with very little progress, on the whole. Such a catalogue of misunderstandings and cross-purposes between the Executive and Legislative departments of the governments, between the different parties, and even between the several wings of the same parties, has rarely before been seen.

The Nebraska bill seems to be the special bone of contention in the House, and no matter what subject may be under debate, it is sure to wander away into Nebraska. How much longer the session is to be protracted, depends upon the amount of brass (always large) in the people's representatives, and the amount of patience, always equally large, in the people themselves.

What are Consols?—Many inquiries having been made relative to consols, we take from the Banker's Magazine the following account of what consols are:

"They are a three per cent. English stock, which has its origin in an act of the British Parliament, consolidating—hence the name—several separate government stocks, called, in the act, consolidating annuities, and commonly quoted, for brevity, as 'consols.'

"When the consolidation took place, the principal of the several funds thus merged amounted to £9,137,821; by the funding of additional and subsequent loans and parts of loans into this stock, it amounted on the 5th of January, 1836, to £356,768,228. Since that period only one loan has been raised—that for compensation to the West India planters in the emancipation of slaves—£20,000,000—and a few millions have been paid off. The total, in January, 1848, was £317,821,981 English debt, and £6,191,271 Irish debt, out of a total debt of £772,401,851 sterling.

"This stock, from its amount and the immense number of its holders, is more sensitive in its financial influence than any other, and is therefore the favorite stock of the operation of speculators and jobbers. Its dividends are payable semi-annually."

Prosecutions for Violating the Excise Law.—The following act passed the late Legislature. The N. Y. Tribune thinks that if Temperance men do their duty with it, the illegal liquor traffic will be annihilated:

An act to authorize others than Overseers of the Poor to prosecute for violation of the Excise Law. [Passed April 15, 1854.

The People of the State of New York, represented in Senate and Assembly, do ordain as follows:

Section 1. In case the Overseers of the Poor shall neglect for ten days to prosecute for any penalty provided by title nine, part first, chapter twenty, of the Revised Statutes, any other person, being a resident of the same County, may prosecute therefor in the name of such officer or otherwise, by giving security to the Court or officer before whom he prosecutes, for the payment of all costs if he shall fail to recover judgment; and in such case, if prosecuted to effect, the penalty shall be collected and applied as now provided by law.

Sec. 2. This act shall take effect immediately.

Icebergs in the Atlantic.—Every vessel arriving at American ports reports extraordinary quantities of ice and icebergs in the Atlantic, directly in the ordinary track of the steamers. The ship Columbia, which sailed from Shields March 5, four days after the Glasgow sailed from Liverpool, reports that she was in the ice from 7th to 11th of April; fell in with the first part of it in lat. 47°, lon. 44° 26', running with wind at W. S. W.; was never during that time with less than from forty to fifty icebergs in sight, and frequently surrounded by them and much drift ice. 8th inst., lat. 46° 50', lon. 46° 30', saw an immense island of ice bearing from about S. W. to N. N. E., the nearest part of it within three or four miles distant, and extending as far as the eye could trace from aloft, between those two points; judged it to be about forty feet high; the last we saw was in lat. 43° 30' lon. 50°. The weather was generally clear while in the ice.

Louis Napoleon and Austria.—The Washington Star has the following. If its sources of information are as trustworthy as the editor of the Star represents, the intelligence is important:

"The last mails from Europe brought to this city more than one letter from very reliable sources, saying that Louis Napoleon has distinctly notified the Emperor of Austria that if he shows the slightest disposition to side with Russia in the war, he (the French Emperor) will raise the standard of revolt in Hungary and Lombardy. This information we know to be relied on in foreign diplomatic circles, and therefore place implicit confidence in it."

Emigration from the East to the West.—Now that the emigration from New England to California and Australia has in a degree ceased, the emigration to the West has re-commenced at a greatly increased rate. We learn that, during the present spring, the number leaving by the way of the Worcester and the Western railroads, is nearly double that of any previous year. In many cases whole families, apparently in comfortable circumstances, take their departure. A large proportion are from Maine, with some from Massachusetts and New Hampshire. Many intend to locate in Illinois, and a portion are bound to Wisconsin, and even to the territories still further westward.

☞ The Massachusetts House of Representatives, have adopted a proposition that the Secretary of State, Treasurer and Receiver-General, Auditor, and Attorney-General, shall be chosen annually by the people on the day in November prescribed by law for the choice of Governor.

☞ The Steam Marine of England is a sublime feature in the greatness and power of a Nation. She has 250 Ocean Steamers, each one of which is capable of transporting from 500 to 1,000 Troops to any point connected with the present theatre of War, in ten days.

Bridge Falling.—A dispatch from Washington, April 26, says—"The chain bridge over the Potomac, above Georgetown, fell this morning, killing several persons."

The Canal Board have established a Collector's office at Seneca Falls, and appointed Benson Owen Collector, at a salary of $300, with a clerk at $30 per month.

News Paragraphs.

☞ The Washington Star says it is decided by the proper officers of the Post Office Department, that letter postage is legally chargeable on packages, having writing, other than the simple address on the outside. If payment is refused, the party sending it cannot be prosecuted for a fraud on the Department: as an attempt to conceal the writing is necessary to constitute a fraud; as in the case of writing words or signs inside of a package of printing matter, which is a fraud, under the law.

☞ The Berkshire Courier, printed in Great Barrington, Mass, says in reference to the weather, that on Saturday, April 1st, a young lad discovered something like a bird in a hole in an old tree. On making a more particular examination he found twenty-six blue birds, who had probably collected together there to keep themselves warm, frozen to death by the severe cold of the previous few days.

☞ An intelligent writer estimates that at least 14,000 persons were prepared to leave Sweden and Norway for this country, on the 1st of March last. This vast emigration affects materially the price of land in those countries. Farms worth three or four thousand dollars have been sold for $800, so eager are their owners to find a home in the New World.

☞ The Quebec Journal publishes the prospectus of a Railway Company, the capital of which is to be £100,000, for the construction of a railway from Quebec, indefinitely northwards. The main source of profit is to be the conveyance of firewood to the city—1,000 cords being estimated as the quantity consumed in Quebec.

☞ Hon. John Davis died at Worcester, Mass., on Wednesday week. Mr. Davis has been many years in public life, having received the highest honors his State could bestow. He had held the office of Governor, and served twelve years, from 1835 to 1841, excepting the four years from 1841 to 1845, in the United States Senate.

☞ Messrs. Dutton & Raymond, Racine, give the following as the quantity of produce in store at that place awaiting transhipment: Wheat, 105,000 bushels; 140,000 bushels of oats, 32,000 bushels of barley; 10,000 bushels of corn, 3,000 bushels of rye. There are about 11,000 barrels of provisions for shipments, but no flour.

☞ Antioch College, (Unitarian,) Ohio, had 250 students when it had been but five months in operation, and has already rejected 1,000 applicants for want of accommodations. Its friends are now raising a fund of $100,000 to endow it; $25,000 of it have already been subscribed by the Unitarians of New York city.

☞ The largest steamboat ever built in New York is said to be the "Metropolis," which is to be launched from the yard of Saml. Sneeden, at Green Point, September 1st, for the Fall River line to Boston. She is 350 feet long, 45 feet beam, 15 feet hold, and measures 2,300 tons burthen.

☞ The contract for the North Shore railway, between Montreal and Quebec, has been given to Messrs. Sykes & Co., who undertake to build the road for £1,000,000, taking two-thirds of the price in bonds of the Company, and the remainder in municipal debentures.

☞ The Pennsylvania Legislature has finally passed the bill to sell the Public Works of the Commonwealth for $10,000,000, and it is now before the Governor for signature. The original cost of the whole line from Philadelphia to Pittsburg was about $30,000,000.

☞ The police of Boston have administered poison (strychnine) to at least a thousand dogs in that city, and but few have escaped from its deadly influences. Dogs are getting to be quite scarce in that city, but in the country towns adjoining they are as plenty as ever.

☞ Sunday labor upon the canals and railroads in New Jersey will be entirely prohibited after the 4th of July next, except for the transportation of the mails, or for milk. At the late session of the Legislature a very stringent law upon this subject was enacted.

☞ The Rev. Joseph Sawyer died on Monday week at his residence in Mamaroneck, Westchester county, in the 84th year of his age. He was the oldest Methodist clergyman in this state, and the first missionary sent by the Methodist Church into Canada.

☞ An Association for the improvement of "that noble animal the Horse," has been organized in Niagara co. There is too little attention paid to the breeding of Horses in this country, and we are glad to see a movement like that in Niagara county.

☞ The Albany Journal says:—"Prof. Comstock, of Dutchess county, New York, whose humbug was long ago exhausted in this State, is, we see, 'spreading himself' in Michigan. It requires dense credulity to swallow his nonsense."

☞ The New Jersey Railroad Company have placed on their trains a car for the exclusive use of the ladies and their companions. Signs on the corners of the car intimate that no gentlemen will be admitted, except those accompanying ladies.

☞ We understand that Rev. Dr. Welch, who for many years was Minister of the Congregation worshiping in the North Pearl st. Baptist Church will shortly move to Newtonville in this County, from his present charge in Brooklyn.

☞ It is said that, upon the average, sixteen men in every troop of the English army destined for Turkey, were married—consequently the 25,000 men would leave behind 2,500 wives, and between five and six thousand children.

☞ The Mississippi has broken through the levee in Bolivar county, Miss., and the whole neighboring country was under water. Damage not less than $150,000. The levee on the other side of the river has also broken.

☞ The catalogue of Harvard College for the present term has been issued. The number of students in the various departments, is 699. Of these 329 are undergraduates. The next college exhibition will take place May 2d.

☞ A lad about 9 years old, son of Mitchel Kelly, of Wheatland, was killed on Wednesday week, from the sliding of a straw stack about which he had been playing. His body was much bent and his neck broken.

☞ The Pennsylvania Legislature after discussing the subject of a Prohibitory Liquor Law, in all its forms, stringent and moderate, immediate and remote, have at last decided to submit the question to the people.

☞ The ship Tonawanda arrived at Philadelphia on Saturday from Liverpool, and reports fifty deaths on the passage, of a disease resembling the cholera.

☞ Cucumbers are selling in Cincinnati at 25 cents apiece. Green corn, asparagus, tomatoes and fresh peaches are in the market, and sold at reasonable prices.

News Brevities.

—— Severe frosts are reported at Mobile at the late date of April 18.

—— The New York Crystal Palace will be re-opened on the 4th of May.

—— Hon. Edward Everett completed his sixtieth year on the 11th inst.

—— The snow was eighteen inches deep at Staunton, Va., Monday week.

—— Twelve houses were destroyed by fire, at Amicus, Ga., on Tuesday last. Loss $12,000.

—— One fourth of the town of Dover, Ky., was burned on Sunday week. Loss, $10,000.

—— Nothing had been heard of the missing steamer City of Glasgow, when we went to press.

—— A new Unitarian journal has been started in Montreal, entitled "The Liberal Christian."

—— J. B. Gough's receipts in Great Britain for twelve months' lecturing, will not be less than £3000.

—— In Richmond, Va., an insane man named James Parker, shot his wife, his horse, and himself.

—— No tidings have yet been received from the steamer City of Glasgow, now out fifty-five days.

—— The Democrats of North Carolina have nominated M. Bragg as their candidate for Governor.

—— The ice in the St. Lawrence had broken up on the 20th, in front of Montreal; but had not moved.

—— The insurance on the property destroyed by the recent fire in Charleston, S. C., amounts to $427,000.

—— The Syracuse Standard announces the death of Archibald C. Perkins, one of the first settlers of Syracuse.

—— A report is current in England, that M. Mazzini is preparing to show himself among his partisans in Italy.

—— A Phonetic Conference—or, more strictly, a "Fonetik Konferenz"—was in session last week at Cincinnati.

—— The celebrated trotting horse Taconey was sold at auction last week in Philadelphia for the sum of $3,500.

—— The new college buildings of the Indiana University, at Bloomington, were destroyed by fire April 9. Loss $15,000.

—— The nomination of Mr. Angell, of Geneseo, N. Y., as consul to Honolulu, has been rejected by the U. S. Senate.

—— Col. Levi S. Lewis has been appointed Superintendent of the Auburn State Prison, and Charles Wheeler deputy.

—— J. G. Moore, formerly associate editor of the New York Courier and Enquirer, died in Washington, on the 19th inst.

—— Darius A. Ogden, Esq., has retired from the editorship of the Penn Yan Democrat. Mr. Reuben Spicer succeeds him.

—— There will be a convention at Washington, Iowa, on the 3d of May, to organize a colony for emigration to Nebraska.

—— A destructive fire occured in Charleston, S. C., 18th inst., destroying about a dozen stores on Hayne street. Loss about $100,000.

—— The Watertown Sentinel notices the death of Joshua Moore, Jr., a prominent lawyer and former Dist. Attorney of that place.

—— A company is about starting at Paris, to run pleasure boats between Marseilles and Constantinople, the charge to be sixty dollars.

—— Miss Mary J. Reynolds has been appointed keeper of the Light House at Biloxi, Mississippi, at a salary of $400 per annum.

—— The Mayor of Buffalo has been successful in raising funds in England for the construction of the Buffalo and Goderich Railway.

—— Dr. D. E. Boulton, Mayor of Cobourg, has been nominated as the Conservative candidate for the West Riding of Northumberland.

—— The People of Minnesota held a Convention a short time since and entered their Protest against the admission of Slavery into Nebraska.

—— Captain Canfield, of the Typographical Bureau, and son-in-law of General Cass, died at his residence in Detroit, Tuesday morning, April 18.

—— Mrs. Long, wife of Nathaniel Long, residing sixteen miles from Tampa, Fla., was recently bitten by a rattlesnake, and died in a few hours.

—— Nehemiah R. Knight, Governor of Rhode Island from 1817 to 1821, and senator in Congress from 1821 to 1841, died in Providence, April 18.

—— The Botanical College at Macon, Ga., and the stores of Messrs. Punch, Walker, Messett and others, were consumed by fire on Tuesday week.

—— George Anderson, of Providence, gardener of Gen. James, has been assigned to the superintendence of the public grounds at Washington.

—— At Hobart Town, Australia, on the 20th of last January, a fire broke out which destroyed sixty buildings and property of the value of about $300,000.

—— Hon. Nehemiah R. Knight, Governor of Rhode Island from 1817 to 1821, and U. S. Senator from 1821 to 1841, died in Providence on Tuesday week.

—— The eighth meeting of the American Association for the Advancement of Science was held at the Smithsonian Institution, on Wednesday, 26th inst.

—— A Russian vessel called the Aina is lying at Brooklyn, whence she came from Liverpool with salt, and dare not return home on account of the war.

—— Mr. Fillmore, in a recent speech at the south said, "it is the manifest destiny of this Government to embrace the whole North American Continent."

—— The bill transferring the Lake Shore Railroad to the Cincinnati and Ashtabula Railroad Company, has been rejected by the Senate of Pennsylvania.

—— A piece of land in Atlanta, Georgia, that four years ago was offered for $1,400, was recently sold for upwards of $15,000, after being laid off into building lots.

—— Only six times in thirty-one years has the opening of canal navigation in New York been as late in the season as May 1—the day fixed upon for the present year.

—— The Alb. Atlas says a little son of B. Cassidy, aged 5 years, was choked to death in that city by swallowing a common marble.—Boys, never put marbles in your mouths.

—— The General Assembly of the Presbyterian Church (Old School) of the United States, will meet in Buffalo on the 18th of May. Dr. Lord's Church will be the place of meeting.

Literary Notices.

TWO ERAS OF FRANCE; or, True Stories from History. By HENRI DE NORMAND. Auburn: ALDEN, BEARDSLEY & Co. Rochester: WANZER, BEARDSLEY & Co.—1854.

THIS volume embraces historical sketches descriptive of two important periods in the annals of France—the Massacre of St. Bartholemew, and the Revolution of 1789. The Stories are well related, and, though often told before, are of such remarkable interest as to bear repetition in the form in which they are here presented. The author discusses at some length the question originated by Rev. Mr. HANSON, "Have we a Bourbon among us?"—and embodies what many will consider conclusive testimony in the affirmative. The volume comprises 328 pages—is illustrated with steel-plate portraits of the supposed Dauphin, (Rev. Mr. WILLIAMS,) and MARIA ANTOINETTE, and otherwise creditable in externals.

THESAURUS OF ENGLISH WORDS, so Classified and Arranged as to facilitate the expression of Ideas, and assist in Literary Composition. By PETER MARK ROGET. Revised and Edited, with a list of Foreign Words, defined in English, and other additions,—by BARNAS SEARS, D. D. Boston: GOULD & LINCOLN,—1854.

THIS will prove an invaluable manual to all who would thoroughly understand and properly use English words,—all who wish to speak or write our language correctly. By its aid the student, speaker and writer—all who wish to express their ideas, either orally or in writing—will be enabled to use the very best words for the subject and occasion, a matter in which too many authors and orators are lamentably deficient. For sale by SAGE.

THE FRUIT GARDEN. By P. BARRY, of the Mount Hope Nurseries, Rochester, N. Y. Auburn: ALDEN, BEARDSLEY & Co. Rochester: WANZER, BEARDSLEY & Co.—1853.

ALDEN, BEARDSLEY & Co. have purchased this work from its original publisher, Mr. SCRIBNER, of New York, and are greatly increasing its circulation and usefulness. The Fruit Garden is so well known and appreciated that any encomium from our pen is unnecessary. The author is a practical and scientific Horticulturist, enjoying the most favorable opportunities for extensive observation of horticultural phenomena. He is, too, a practical and able writer, and has produced a book that should be in the hands of every Fruit Grower.

ALEXANDER MENZIKOFF; or, The Perils of Greatness. By GUSTAV NIERITZ. Translated from the German, by Mrs. H. C. CONANT. New York: CHARLES SCRIBNER—1853.

HERE is a beautifully written and entertaining volume, particularly adapted to the young. The narrative is interesting, and the moral most impressive. For sale by DARROW & BRO.

Foreign Intelligence.

Arrival of the Asia.

The Asia arrived at New York, April 20, bringing Liverpool dates to the 8th inst.

The Arabia arrived out on the 8th, and the Washington at Southampton on the same day. No battle yet in the Baltic. The Russians are dismantling their fortresses on the island of Aland. Napier's fleet is still at Kiox Bay.

Navigation is open at St. Petersburgh. The allied fleets entered the Black Sea, to effect a movement in conjunction with Omar Pasha. They had steered for Varna.

As soon as hostilities commence in the Baltic, the Empress and the Russian Court will remove to Moscow.

The Russians were razing all the fortresses in the Dobrudscha. Their position was deemed critical, and reinforcements were called for.

The Turks were falling back in good order on Trajan's Wall. They have beaten Gen. Uschakoff in Bessarabia, and forced him back. They have also crossed the Danube between Nicopolis and Rustchuck.

It is rumored that Austria will make the Russian passage of the Balkan, the cause of war.

The English and French governments entirely reject the proposals of the Czar founded on his letter to the King of Prussia.

A despatch from Berlin says negotiations between Austria and Prussia were not yet closed, but Prussia had joined in a protocol signed at Vienna, April 3d, between England, France and Austria.

ENGLAND.—In the Commons, on Friday, Lord John Russell confirmed the statement that Austria was gathering troops on the frontiers of Servia, but as negotiations were still in progress, he could not state what course Austria would pursue.

April 26th is appointed a National Fast Day throughout Great Britain.

A riot occurred at Barcelona on the 13th of March. The military were called out, and several citizens killed.

A man named Bocchi was arrested as the assassin of the Duke of Parma.

LIVERPOOL MARKETS.—Richardson & Co. quote a suspension of the excitement in the breadstuff market, and wheat declined 2d. and 3d.; flour 1s. 6d. to 2s. Corn, white and yellow, 41s.

Western canal flour, 36s.@37s.; Baltimore and Philadelphia, 36s. 6d.@37s.; Ohio, 37s.@38s. Corn a trifle lower.

PROVISIONS.—Beef.—Deminick's new, 120s.; Pork unsaleable; Bacon lower, fair quality 42s. @43s.; Lard, nominally 5-1s., and tending downward; Tallow lower.

COTTON.—Better feeling, and fair a shade lower.

Baring's London Circular quotes money unchanged. Consols, 87½@⅝.

The Asia passed, on the 16th, P. M., steamship Canada; signalled, 20th, at 2 A. M., the steamer Europa.

The Asia brings 106 passengers.

FURTHER.—On the 7th inst. the Canadian Steam Navigation Company's steamship Ottawa arrived in the Mersey, from Portland, Me., after a rapid passage of little over twelve days.

On the evening of the 6th inst. a banquet of more than ordinary magnificence was given to the Earl of Elgin, preparatory to his leaving for Canada, to resume its government.

The British government had seized two Russian screw steamers, now building at Northfleet, and contracted for some twelve months since. The machinery for them, to the value of £30,000, was also seized by the customs. The vessels are 1,300 tons, and pierced to carry twenty-eight guns.

Part of Lord Raglan's staff sailed from Portsmouth for the east on the 7th inst.

The departure of Prince Napoleon for Turkey is now fixed for the 9th. Marshal St. Arnaud was expected to leave the next day.

Agricultural accounts from Ireland are very cheering.

SPAIN.—Forty thousand artizans filled the streets of Barcelona on the 13th. They were armed, and when summoned to disperse they refused. They then turned their steps toward the Garcia suburbs, in order to join their comrades outside the walls. The gates were then barred by the troops, who, when pelted with stones by the mob, had recourse to their arms.

The result was, that several of the mob were killed and wounded, after which the mob dispersed.

LATEST FROM THE BALTIC.—Copenhagen, April 6.—The fleet has sailed from Kioge Bay. The following addresses to the fleet have been issued by Sir Charles Napier:

"Lads, war is declared; we are to meet a bold and numerous enemy. Should they offer us battle, you know how to dispose of them. Should they remain in port, we must try to get at them. Success depends upon the quickness and precision of your fires. Lads, sharpen your cutlasses, and the day is your own."

Arrival of the Steamer Arabia.

THE Royal Mail Steamship Arabia, Capt. Judkins, from Liverpool, on Saturday the 15th, arrived at Halifax, April 25th, with one week later news from Europe.

The steamer Pacific, from New York, on Sunday, the 2d, arrived at Liverpool at 9 A. M., on Friday, the 14th.

News by this arrival, although presenting no feature of striking importance, is of a very interesting character.

From Madrid we learn that the Spanish Government, has made prompt reparation for the Black Warrior outrage.

No fighting has occurred, either by sea or land.

The Russian and Austrian Governments are carrying on an active correspondence.

It is reported that the Russian expedition to Japan has succeeded in opening the ports of that Empire.

The business of the week ended on Thursday evening, the following day being Good Friday.

BREADSTUFFS had recovered from the depression of the previous week, and at the close showed an advance of 1s. on flour, and 6d. on wheat.

Western canal flour was quoted by the evening circulars at 37s.6d., Ohio 38s. White wheat 12s.3d. Corn—good qualities while 43s.; yellow 42s.

Rye had slightly advanced.

In the London Money Market, Consols had advanced to 77⅞. Quotations for American securities show nothing new.

Market Intelligence, &c.

RURAL NEW-YORKER OFFICE,
Rochester, April 26, 1854.

WHEAT and Flour are selling at the same rates as last week, viz. $9@9,25 for the latter, and $2 for the former.—Some choice lots of wheat in small quantities have sold as high as $2,00, but that price is above the market, and were disposed of to fill special orders and at a moment when the streets were nearly destitute of grain.

Fresh meats are higher. Pork is quoted at $5@6,50, and Beef $6,50@7. Mutton carcasses $5,50@6. Very little of either offered.

Eggs are lower and plenty, the *Shanghais*, &c., offering an unlimited supply.

Potatoes quoted higher; price 62½@75c.

In business and finance there is nothing of especial interest to call for a separate article this week. Businessmen in the commercial circles complain of a somewhat stringent money market. Thompson's (N. Y.) Reporter says, paper goes in the street at 10 to 12 ₹ cent. for the best names, but there is very little sold under 15 to 18 ₹ cent. First class railroad acceptances sell at about 15 ₹ cent.

Rochester Wholesale Prices.

NEW YORK MARKET—April 24.

FLOUR—Market for Western and State better, especially good brands. Canadian firm, but not active—sales of mixed brands at $7,68¾; Western canal at $7,62½@7,87½ common to good State; $8@8,31¼ mixed to good straight brands Mich., and $8,00@8,37½ common to good Ohio.

GRAIN—We have only to note the sale of 700 bu. good red at $1,87½. Barley scarce and wanted at $1,10@1,17.—Oats in brisk demand at 51@52c for Jersey; 54@55c for State and Western. Corn more plenty and lower. Sales at 81@82½c Southern mixed; 82@83c Western do. and Southern white; 83c round yellow; 84@84½c Southern do.

PROVISIONS—Market easier for mess pork but firm for prime; demand fair and arrivals light—sales at $14,37½@14,50 for mess; $13 prime. Lard dull and steady—sales at 14c common to prime. Butter quite buoyant and fresh much wanted at 27@30c; old 12@16c Ohio; 20@26c State. Cheese steady at 10@12c.

ALBANY MARKET—April 24.

IN Flour there is only a moderate business doing—sales extra Genesee in lots at $10. Corn Meal is selling at $1,02½ per 100 lbs.

Grain—We notice a sale of white Genesee wheat, to arrive by Canal by the first boats, at $2,25. Corn is selling at 86c. Oats 55@56.

Potatoes.—A brisk demand at full prices. Honest Johns are bringing $2,50@2,75 ₹ bbl. Red Western $3. Junes $3,25@3,75, and Mercers $3,75@4.

Seed.—There is but little doing in Clover at 8¾@9 for medium, and 13¼@14 for large. Sales 80 bush. Timothy, at $3,25.—Alb. Journ.

NEW YORK CATTLE MARKET—April 18.

AT Washington Drove Yard—Offered this day, 2,146 Beeves. Quotations:—Beef Cattle $5@6. Cows and Calves $30 to $45. Veal Calves 4 to 0¾c. Sheep—$4@8. Swine—(gross weight) 5¼ to 6¾c.

At Browning's—Prices—Beeves $8,00@11. Cows and Calves, $35 to 50, as in quality. Sheep $3,50 to $9.

At Chamberlain's—Prices—Beeves sold at from 8@11c. Cows and Calves, $25 to $50. Veal Calves, 5c to 7c. per lb. Sheep, $3,50 to $10, the latter for extra.

At O'Brien's—Sales Beef Cattle at from $3@6. Cows and Calves—$30 to $45 per head.

ALBANY CATTLE MARKET—April 24.

AT H. Woodruff's Bull's Head, Washington street.—Beef Cattle—450 at market. Prices—Extra $8,00; 1st quality $7,50; 2d do, $7; 3d, $6@6,50.

Cows and Calves—10 in market. Prices range from $30 to $50. Calves selling alone from $4 to $6,50.

Sheep—Few in market. Prices range at from $4 to $6.

Swine—None in market.

Remarks—Cattle are selling about the same as last week. The market was not very full with any kind of stock this week. Mostly all of the Cattle from here was sold for Brighton and Providence markets.

BRIGHTON CATTLE MARKET—April 20.

AT market 635 Beef Cattle, 70 pairs Working Oxen, 60 Cows and Calves, 1,350 Sheep and Lambs, 4,700 Swine.

PRICES—Beef Cattle—We quote Extra $8,50@0; first quality, $7,75@8,25; 2d, $7,25@7,75; 3d, $5,75@7. Working Oxen—Sales $90 to $180. Cows and Calves—$23 to 65. Sheep and Lambs—$6,50 to $11.

The above works are all well bound, in muslin or leather, and mostly of late editions and finely illustrated.

The following works are bound in paper, pamphlet style, and furnished at 25 cents each:—Elements of Agriculture; Hana's Essay on Manures; Every Lady her own Flower Gardener; The American Kitchen Gardener; Amer. Bird Fancier; Amer. Rose Culturist; Pests of the Farm; The Horse; The Cow; The Hog; Domestic Fowls and Ornamental Poultry; The Hive and the Honey Bee.

We shall pre-pay the postage on books sent as premiums. Though this is more than was promised, we presume none of our friends will object!

Advertisements.

ADVERTISEMENTS.—Brief and appropriate advertisements will be inserted in this paper at $1,50 pr. square, (ten lines or 100 words,) or 15 cents a line—*to be paid in advance.*

Those who send advertisements without payment will understand from the above *why* they are not inserted.

TO YOUNG MEN.—PLEASANT AND PROFITABLE EMPLOYMENT.—Young men in every neighborhood may obtain healthful, pleasant, and profitable employment, by engaging in the sale of useful and popular Books, and canvassing for our valuable Journals. For terms and particulars, address, post-paid, FOWLERS & WELLS,
No. 308 Broadway, New York.
P. S.—All Agents who engage with us will be secured from the possibility of loss, while the profits derived will be very liberal. 225-4t

ASIATIC FOWLS AND EGGS.
HAVING more Asiatic fowls than I wish to keep over, I am induced to offer them at the low price of from $5 to $2 the pair, according to size and form, the blood of all being the same. They consist of Brahma Pootra, and White and Buff Shanghais. Also, White Shanghai eggs at $1 per dozen, and Buff eggs at 50 cts. per dozen, carefully packed to order on receipt of the money. Address A. REYNOLDS, Arcade, Rochester, N. Y. 225-1t*

ASIATIC POULTRY.
GENTLEMEN wishing to obtain eggs of any of the different breeds of the above popular fowls, of stock warranted to be second to none in America, can secure them by addressing me, *immediately*. All orders carefully attended to.
W. W. MACOMBER.
Westfield, N. Y., April 20, 1854. 225-1t*

AGENTS WANTED.
CHANCES FOR MAKING MONEY!—The Publishers of a large list of highly entertaining, useful and popular books, offer great inducements to 500 energetic and thorough-going business young men, to engage in the sale of these publications, in which any young man of good business habits may make FIVE TIMES the amount, over and above all expenses, of the average wages of Common School Teachers. The MOST LIBERAL discounts are made to Agents from the list of prices. The Books command ready sales wherever they are introduced. None need apply un ess they wish to devote their whole attention to the business, and who cannot command a CASH CAPITAL of from $25 to $100, or give undoubted security for the amount of goods entrusted to them.
Full particulars in regard to terms, &c., will be furnished by calling on, or addressing, post-paid,
WANZER, BEARDSLEY & CO.,
24 Buffalo street, Rochester, N. Y.,
Or, ALDEN, BEARDSLEY & CO.,
225-3t Auburn, N. Y., Publishers.

EDWARD HARRISON'S PATENT ORIST MILL

RECEIVED the highest premium at the World's Fair; and more than 250 of them have been sold within two years. The stones are French Burr; the frames and hoppers, cast iron; and the spindles, cast steel. They will work both for flouring and on all kinds of grain, and will keep in repair longer than any other mill. Having just completed my new buildings, for manufacturing and running them, I am now prepared to supply all orders for all the sizes, from 20 inches to four feet diameter, including a superior farm and plantation mill, which will grind corn in the best manner, by horse-power, or even by hand. Public attention is invited to this small mill in particular. Descriptive circulars, with cuts, sent to post-paid applications.
225-7t* EDWARD HARRISON, New Haven, Ct.,
Sole manufacturer, and Proprietor of the Patent.

PATENT IRON FENCES, VERANDAHS, &c.,
GREATLY improved in quality and greatly reduced in price, and put together in such a way that they are much more durable, and admit of being taken apart and mended much more easily than a wooden fence. All this will apply to my Verandahs, as well as fences, of which I have a great variety, of beautiful styles, and very strong, as well as tasty. The price from $100 upward, according to size and amount of work on them. For my fences I use an iron base, and either stone or iron posts, which is much more economical than a stone foundation and much more secure against the action of frost. Both fences and verandahs are fitted together ready to be put up before leaving the shop, and so marked and numbered that any good mechanic can put them up. Distant customers can order from me with entire confidence that they will find no difficulty in putting up the work. This style of verandah is decidedly the most permanent and tasty ornament that can be put on to a house.
P. S.—I will furnish illustrated engravings and a list of prices, and make all necessary explanations to applicants by mail. Front st., Rochester, N. Y., next door to Commercial Hotel. J. G. SMITH.
April 18, 1854. 225-2t

TWO PRAIRIE FARMS FOR SALE.
FIRST—240 acres of first quality of Land, 150 acres of which are under a high state of cultivation. Good house, barn, carriage house and stone smoke house, 200 Apple trees, engrafted fruit. Good water power and plenty of water for stock.
SECOND.—200 acres of first quality of land, 150 of same being under high state of cultivation. Large new barn, small orchard, and stock water.
Said farms lying side by side, will be sold separate or together, to suit purchasers. Price per acre, $25.
ALBERT E. HULL.
Irving, Barry Co., Mich., April 15, 1854. 225-2t*

PEACH TREES FOR SALE.
THE subscriber has from 4,000 to 5,000 Peach trees of one year's growth, which he will sell at wholesale or retail, at low rates, to close his nursery business. Address West Greece, N. Y., or apply at the Nursery, 8 miles from Rochester, and 1 mile east of West Greece Post-office.
225-1t* CALEB B. JAMES.

HOP ROOTS.—Twelve bushels of Hop Roots, of superior quality, for sale at $1,12 per bushel. Apply to H. LYON, ½ mile north of Brighton Corners, near Rochester.

SPAYING ANIMALS.
THE subscriber has had many years experience in the business of Castrating and Spaying, and always had the most flattering success, of which he can produce the testimonials of thousands in this section if necessary. Cows which it is desirable should be reared for milch cows can, by the process of spaying, be secured for years.
Persons desiring my services will be attended to promptly, on notification. Orders by letter may be addressed to me at East Bloomfield, Ontario Co., N. Y.
225-2t* WM. CARTER.

CHOICE EGGS FOR HATCHING.
THE subscriber will furnish eggs of the following kinds, all warranted pure, safely packed for transportation, delivered at Ulica.—Brahma Pootra $2 per dozen; Gray Chittagong $2; Black Spanish $2; White, Black, Buff, Red and Speckled Shanghais $1; Cochin China $1; White Java Bantams 50 cents per dozen; Dominique 50 cts.; Bolton Grays 50 cts. Apply to or address
224-4t MOWRY H. LAPHAM, Paris, Oneida Co., N. Y.

NEW YORK RECORDER.
TENTH VOLUME ENLARGED, in quarto form. The Largest Baptist Newspaper in the World. Price, in advance, by mail, $2; by carriers, $2,50. LUTHER F. BERCHER & Co., Proprietors, 122 Nassau Street, New York.
In the determination to make their journal a complete repository of general and denominational religious intelligence, and of the news of the day, as well as the earnest advocate of sound Christian doctrine and social progress, the proprietors will summon for these ends every available facility, whether editorial, or in the way of contributors or correspondents. They have engaged able writers at home, and their correspondence from England and Continental Europe, from Asia and every part of America, they believe to be unsurpassed. By furnishing a paper of the highest grade, from this great commercial centre, they hope to increase the patronage with which they are already favored from every section of the United States and the neighboring British Provinces.
The tenth volume commenced March 29th. Subscriptions are solicited, and the present is suggested as the best time for forwarding names with payment—a specimen copy sent gratis.
S. S. CUTTING. [223-6twe] L. F. BEECHER.

LANGSTROTH'S MOVABLE COMB BEE-HIVE.
PATENTED Oct. 5th, 1852.
EACH Comb in this Hive is attached to a separate movable frame, and in less than five minutes they may be all taken out without cutting or injuring them, or at all enraging the bees. Weak stocks may be quickly strengthened by helping them to honey and maturing brood from stronger ones.
Queenless colonies may be rescued from certain ruin by supplying them with the means of obtaining another queen; and the ravages of the moth effectually prevented, as at any time the hive may be readily examined and all the worms, &c., removed from the combs. New colonies may be formed in less time than is usually required to hive a natural swarm, or the hive may be used as a non-swarmer, or managed on the common swarming plan.
The surplus honey may be taken from the interior of the hive on the frames or in upper boxes or glasses in the most convenient, beautiful and saleable forms. Colonies may be safely transferred from any other hive to this, at any season of the year, from April to October, as the brood, combs, honey and all the contents of the hive are transferred with them, securely fastened in the frames.
We are now prepared to sell state, town, county and individual rights, to make, vend and use these hives, on reasonable terms. The price for individual rights, which will entitle the purchaser to make the hives for his own use, is five dollars. We can also furnish hives to all who wish.—Price from two to five dollars. Upon the receipt of nine dollars we will send the right, together with a beautiful hive, with glass on four sides, showing all the combs. For seven dollars the right and a well made hive without glass, which any one can make who can use the simplest tools.
Agents wanted for the sale of the above rights.
All communications addressed to J. BEALS, Greenfield, Mass., will meet with prompt attention.
For one dollar, postage paid, Langstroth's book entitled the Hive and Honey Bee, will be sent free by mail.
224-4t J. BEALS.
Attorney for Rev. L. L. Langstroth.

FARM FOR SALE
IN the town of Waterloo, four miles north-east from Geneva, containing 100 acres, 15 of which are covered with good thrifty timber. A large portion is a sandy soil with clay subsoil, admirably filled to the growth of fruits and vegetables. The farm can be conveniently divided into two or three parts if desired. Apply to C. W. NICHOLSON, on the Sodus road, 2 miles north of Geneva, N. Y.
April 12, 1854. 224-3*

PREMIUM FOWLS.
I HAVE for the last few years received the First Premium on my Brahmas and other varieties at the N. Y. State Fairs—also Monroe Co. Fair at Rochester. I now have 23 varieties for sale—and eggs for hatching. My fowls are second to none in America. All warranted to be pure in every particular, and what they are sold for.
Rochester, N. Y. 224-6t* D. F. NEWELL.

OAKLAND HENERY.
THE Subscriber now offers for sale a choice lot of Asiatic Fowls, consisting of the buff and white Shanghais, Cochin China, and the celebrated Brahma Pootra. Also Eggs at the following prices:—Brahma Pootra $3 per doz. Cochin China, buff and white Shanghai $3 per doz. Not less than one dozen sent to one address. A less number will be sold at the office of O. B. EVANS,
224-3t 214 Main street, Buffalo.

GARDEN SEEDS.—We have a full and fresh supply of imported and best Shaker Garden and Field Seeds.—Merchants and dealers supplied on the most favorable terms. Catalogues gratis. Orders solicited at the Buffalo Ag'l Warehouse. [223tf] H. C. WHITE & CO.

FARM AND NURSERY FOR SALE
PLEASANTLY located on the Ridge Road, in Greece, near Rochester,—containing 55 acres of superior land. Has good buildings, and other improvements—including 300 bearing peach trees, and a variety of other fruits. The Nursery contains about 140,000 grafted apple trees, from one to four years' growth. Will sell 40 acres, with the buildings and nursery, or the whole together, or the nursery trees separate, or any part, at a bargain. Address or apply to the subscriber on the premises. Z. COLBY.
Greece, N. Y., April, 1854. 222-4t*

LAND PLASTER
AT Canandaigua, Victor, and Fisher's Railroad Depots. The subscriber has on hand at each of the above Railroad Stations, 500 tons of pure, fresh ground land Plaster.—Farmers can depend upon getting their Plaster at the above places, of a superior quality and not kiln dried.
217-4m. JIREH ROWLEY.

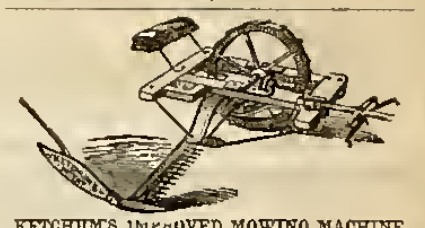
BROOKSIDE FAMILY SCHOOL FOR BOYS.
Berkshire, N. Y., 18 miles from the Owego Depot of New York & Erie Railroad.
THIS Institution enters on its 14th semi-annual Term on Tuesday, the 16th day of May next, with entirely new and very superior accommodations. A large additional building has been erected expressly for school conveniences, and other great improvements made. Its location is retired and beautiful, and the region proverbially healthy. Its aim is
1st. To secure the comfort and health of its pupils.
2d. Their thorough instruction and mental discipline.
3d. To exert the strongest moral and Christian influence on them.
Terms.—For those pursuing the ordinary English branches, $180 a year. For those pursuing the Classics, Higher Mathematics, &c., $200 a year,—or $90, and $100 a term of 22 weeks—one-half always in advance. The above terms include use of Reading Room, Gymnasium, and Stationery for all school exercises without additional charge.
Applications for admission or for circulars containing full particulars, testimonials, &c., should be addressed to
PHILIP F. JUDD, A. M., Principal and Proprietor.
Berkshire, April 1, 1854. 222-4t

PERUVIAN GUANO.
PERUVIAN GUANO.—We are prepared to supply all orders for this valuable manure. Price, 2½ cents per lb—be particular to observe that every bag is branded, "Warranted No. 1, Peruvian Guano, imported into the United States, by F. Barreda Brothers, for the Peruvian Government."
LONGETT & GRIFFING,
223-6t No. 25 Cliff street, New York.

BONE DUST.
BONE DUST sawings or meal, a very superior article, warranted pure. Price, $20 per ton.
Bone dust turnings, price, ... $2,50 per barrel
Do. ground, " . . . . . $2,50 " "
No charge for package. For sale by
LONGETT & GRIFFING,
223-6t No. 25 Cliff street, New York.

No. 1 SUPERPHOSPHATE OF LIME.
THIS valuable fertilizer has been used for several years in England and other parts of Europe, and, next to Guano, holds the highest rank in popularity, and the extent to which it is used among farmers. Its introduction in this country has been more recent; but the progress it has made in the estimation of the public has not been less marked or successful than abroad. It is now extensively used throughout the Northern States, after a full trial and investigation of its merits; and it is rapidly becoming, like its predecessor, Guano, a favorite manure at the South and West.
It is composed of crushed or ground bones, decomposed by the addition of about one-fifth their weight of sulphuric acid, diluted with water, to which is added a due proportion of guano and sulphate of ammonia. The latter is the active and one of the most efficient agents in the best Peruvian Guano.
It is suited to any soil in which there is not already a full supply of the phosphates, which is seldom the case—All crops are benefited by its application.
For sale in large or small quantities, in bags of 150 lbs. each. No charge for packages. All bags will be branded "C. B. Dellurg, No. 1 Superphosphate of Lime."
PERUVIAN GUANO of best quality.
AGRICULTURAL and HORTICULTURAL IMPLEMENTS of all kinds.
FIELD and GARDEN SEEDS, of various sorts, fresh home-grown and imported.
THE AMERICAN AGRICULTURIST—weekly, $1 per volume—two volumes a year.
For sale at R. L. ALLEN'S Agricultural Warehouse and Seed Store, 189 and 191 Water st., New York. [219-3teow

3,500 ACRES OF LAND, WITH STEAM SAW-MILL FOR SALE,
IN Scioto Valley, Ohio, and lying on the Ohio Canal.—Property as desirable as this, is seldom to be met with, and will be sold at a bargain, and on accommodating terms.—Persons desirous of purchasing, by calling upon, or addressing the subscriber, at Chillicothe, Ohio, will be promptly attended to, and full description of premises given. H. H. HOAG.
Chillicothe, O., March 23d, 1854. 221-tf



KETCHUM'S IMPROVED MOWING MACHINE,
WITH ENTIRE CHANGE OF GEAR, THE ONLY SUCCESSFUL MOWER NOW KNOWN.
Ketchum's *Improved* Machine, which we are building for the harvest of '54, was thoroughly tested last season, and the advantages gained by our change of Gear are in all respects as we designed, viz: *durability, convenience and ease of action.* The shafts now have bearings at both ends, which overcomes all cramping and cutting away of boxing. A counter balance is attached to the crank shaft, which gives it a steady and uniform motion. Each Machine can be thrown out of gear; there is great convenience in getting at each and every nut, all of them being *on upper side of the frame;* oil cups are attached to all the bearings, which, by the use of a wad of cotton, will hold oil for a long time, as well as protect the bearings from dust, grit, &c.; the finger bar is lined with iron its whole width, which protects it from wear.
These and various other additions for strength, durability, &c.; makes them the most simple and perfect agricultural implement in use. They weigh about 750 lbs. each, and can easily be carried in a one-horse wagon.
It requires not over ten minutes to get one ready for operation, there being but two bolts, (besides the pole bolts,) to be secured to have one ready for use. They will cut *all kinds of grass*, and operate well on uneven or rolling lands, or where there are dead furrows. This Machine took the highest award, with special approbation, at the World's Fair; it also received, during last season, one silver and four gold medals, and various other flattering and substantial testimonials of approval. We have spared neither pains nor money to make this machine deserving of public favor, and hope to be able the coming season to supply the great and increasing demand.
We take this occasion to caution farmers against buying *untried* Mowers; if they do (as was the case with many last year) they will incur loss, vexation and disappointment.
If any parts are wanted to repair any machine we have sold, or may hereafter sell, they will be furnished and only MANUFACTURERS' cost for the same be charged.
☞ In all cases where extras are wanted, be sure to give us *the number of your Machine.*
(WARRANTY:) That said machines are capable of cutting and spreading, with one span of horses and driver, from ten to fifteen acres per day of *any kind of grass*, and do it as well as is done with a scythe by the best of mowers.
The price of the Mower, with two sets of knives and extras, is $110 cash, in Buffalo, delivered on board of boat or cars free of charge.
Office and Shop, corner of Chicago street and Hamburgh Canal, near the Eastern R. R. Depot, Buffalo, N. Y.
HOWARD & Co., Manufacturers and Proprietors.
The Mower is also manufactured by REAGLES, NORTON, MASON & Co., at Worcester, Mass., for the New England States.
By SEYMOUR, MORGAN & Co., Brockport, N. Y., for Illinois, Iowa and Michigan.
By WARDER & BROKAW, Springfield, O., for Ohio and Kentucky. 220-4t

J. RAPALJE & Co. are also sole Agents for the sale of Ketchum's Mowing Machine in Rochester, and for the vicinity.

KETCHUM'S MOWING MACHINE.
THIS machine stands without a successful rival, as *the mowing machine of the age.* The supply will not be equal to the demand. If any person desires one for the coming season, they cannot speak too soon. The uniform price at Buffalo is $110,00. All who will forward us an order accompanied with the cash or satisfactory reference, may depend upon being faithfully served with a machine in good season. H. C. WHITE & CO.,
Buffalo Ag. Warehouse and Seed Store, 11 & 13 West Seneca street, Buffalo, N. Y 211tf.

ATKINS' SELF-RAKING REAPER.
FORTY of these machines were used the last harvest in grass or grain or both, with almost uniformly good success, in nine different States and Canada.
Twenty-Six Premiums, including TWO at *the Crystal Palace*, (silver and bronze medals,) were awarded it at the autumn exhibitions. I am building only 300, which are being rapidly ordered. Mr. Joseph Hall, Rochester, N. Y., will also build a few. ☞ Early orders necessary to insure a Reaper.
Price at Chicago $175—$75 cash with order, note for $50, payable when Reaper works successfully, and another for $50, payable 1st December next, with interest. Or $160 cash in advance. *Warranted to be a good Self-Raking Reaper.*
☞ Agents properly recommended wanted throughout the country. Experienced agents preferred. It is important this year to have the machines widely scattered.
Descriptive circulars with cuts, and giving impartially

Poetical.

GOING HOME.

BY ALICE CAREY.

Went a lady, sweet and white,
Rowing in her boat at night—
All the waves were edged with light.

Daintily, from head to feet,
Broideries wraped her—all complete—
Pale she was, but smiling sweet.

Passed she lonesome rocks and towers,
Passed she meadows full of flowers,
Blowing in the twilight hours.

Oft the boatman could not row,
Dropped his oars down, drifting slow,
And solemn, he was weeping so.

Fishers walking on the shore,
Pressed the children which they bore
In their brawny arms, the more—

When they saw the lady go
Through the twilight, soft and slow,
And the oarsman weeping so.

We could scarcely hear her say,
"Boatman, row me home, I pray—
We will come another day."

Lengths of silver and of bliss
'Twixt the stars the evening drew—
Then the smiling fainter grew,

And the lips, as white as foam,
Said they saw the shining dome
Of a palace—she was home.

Rural Sketch Book.

[Written for the Rural New-Yorker.]

ESSIE CAVE;

OR, A TALE OF THE TIMES.

BY MRS. M. WEBSTER HUDNUTT.

The ultra-fashionable Mrs. Barstow, wife of John Barstow, Esq., the wealthy miller prince, of the city of R——, had been invited to visit Mrs. Grant, for the purpose of meeting Mrs. Neil, a former resident of the city, and a friend of both ladies; but who had been for the last year and a half, living some twenty miles back in the country.

Just as the kettle was singing its last strain, preparatory to being removed from the fire, in the preparation for tea, Mrs. Barstow, dressed with the most perfect taste, and in the extreme of fashion, was ushered into Mrs. Grant's parlor, where Mrs. Neil had been some two or three hours awaiting her arrival. Mutual greetings were exchanged with the utmost cordiality, and in the genial atmosphere of plain Mrs. Grant's society, even the aristocratic Mrs. Barstow forgot pride and dignity, and was really, as she well knew how to be, friendly and social.

After tea, Mrs. Grant was called from the room to superintend some domestic concerns, and Mrs. Barstow took the opportunity of saying:—"You reside in the neighborhood of Essie Cave, the Poetess, I believe, Mrs. Neil. Are you acquainted with her?"

"Oh, very well, indeed! I knew her before we removed from R——, and they are now quite near neighbors, living only a mile or so from us."

"I have a great curiosity to meet her," said Mrs. Barstow, "I have heard her spoken very highly of, as a lady of talent and refinement, and I have read and admired her poetry in our journals, for a long time."

"Besides that," said Mrs. Neil, smiling, "if Dame Rumor says truly, you have a more active stimulant to your curiosity than a mere desire to see the authoress of a few pretty scraps of poetry. It is currently reported, and is currently believed, in our neighborhood, that she is soon to be your daughter!"

"Yes, I suppose it is so," said Mrs. B——, with the triumphant air of a person well pleased, "I suppose it is so. You know Byron spent the greater part of the fall and winter in her immediate neighborhood, superintending the flouring mills which Mr. Barstow has recently purchased in that vicinity; and he seems to regard her as but little lower than the angels. He told me a few days ago, that they were to be married this coming fall, and wished me to congratulate him upon his good fortune in securing the hand of one, for whom there are so many competitors, and of one, who, young as she is, has already won for herself no inconsiderable name among our literati.

"Her name among the literati is the *least* upon which you have to congratulate him, Mrs. Barstow," said Mrs. Neil, seriously. "Essie Cave is one of the very best girls I ever knew, and will not only be to Byron a true, earnest, and loving wife, but an invaluable treasure; and a comfort to all with whom she may become connected."

"I do not doubt it in the least. I know Byron's taste and discernment among the ladies is indisputable, and whomsoever he has selected for a wife must be the very personification of elegance and delicacy. Besides, her writings bespeak a mind free from and above all that is low or plebeian. I cannot restrain the pride I feel at the connection Byron is about to form."

The entrance of Mrs. Grant put an end to the conversation, but Mrs. Neil's face wore a most comical expression for some moments afterwards; and resumed it again and again, every time the name of Essie Cave was mentioned, which it happened to be several times in the course of the evening; Mrs. B. being too much pleased with the honor intended her family, to forbear and leave the poetess alone.

"Come out as soon as you can, Mrs. Barstow," said Mrs. Neil, at parting that night, "come out to our farm and spend a few days with me, and I will bring you to a sight of the lady you so much wish to see."

"I certainly will do so the first leisure I have!" and the emphatic tone in which the words were pronounced, left no doubt in the hearer's mind but that the promise would be fulfilled.

Accordingly in a few weeks, Mrs. Barstow drove out to Mrs. Neil's one Saturday, intending to stay over the Sabbath, and thus have an opportunity of seeing the object of her curiosity at church. The very costliest and most elegant outfit of a very costly and elegant wardrobe, was taken in which to make her debut in the little church at Willow Run, and do honor in the eyes of the elegant and refined Essie Cave, to the mother of her accepted lover; but unfortunately

"The best laid schemes o' mice and men gang aft agley;"

and after all Mrs. Barstow's painstaking, Essie was not at church; so the rich silk dress, white crape shawl, and lace hat, were thrown away upon the vulgar herd of plebeian farmers and their dowdy wives and daughters, as Mrs. B. remarked in a disappointed tone, as she and Mrs. Neil were on the road home.

"Never mind," said Mrs. Neil, good humoredly, but at the same time, with the old quizzical look in her face; "I will take you out to ride in the morning, and we can pass her father's house. I will find some excuse to call her out to the carriage, and you shall not return disappointed to R——."

And now, dear reader, while this combination is formed against her, let me introduce to you Miss Essie Cave, as she is. The daughter of a farmer, and unfortunately of a farmer with a considerable mortgage upon his farm to be cleared off; and having luckily an excellent manager and housekeeper for a mother, Essie had been early initiated into all the mysteries of house-work—and farm-work too, for that matter; and there were few things out or in doors but what she could turn her hand to.—Her father and brothers were strong advocates for woman's rights, and Essie used to declare laughing, that she wished Mrs. Bloomer, and sundry others of her class, only had her father and brothers to deal with; they would soon cry for an abridgment, instead of an extension of rights.

It was her father's settled conviction that the women ought to milk in harvest time; and when he came home cold and hungry, from the neighboring city, where he was frequently obliged to go on business, he could, without straining his conscience in the least, bring himself to consider it Essie's right to unharness and stable old Prince, and give him his oats after he had become sufficiently cool to eat them. Her brothers, too, were real woman's rights men.—It was Essie's right to turn fanning-mill or grindstone, when an extra hand was wanted—to drive the cows to and from pasture sometimes, when the hay or grain was in danger of a wetting by a night's exposure, and the boys couldn't well leave it, till it was too dark to see to work—to go with a huge basket of luncheon in one hand, and an equally huge pail of coffee in the other, half a mile to the harvest field, about three o'clock in the afternoon of every sultry day, during that interesting period of harvesting—to watch the rows of bee hives and then run a mile, mile and a half, or two miles, as the case might be, whenever a juvenile family dared to leave the paternal mansion, and launch into the world to see something of life on their own responsibility, in order to call some of those said brothers to come and establish the tyros in their new domicile—to carry occasionally, and not very *occasionally* either, pails of sour milk and other adjuncts of a farmer's kitchen, commonly yclept "swill," to a pen full of spring pigs, daily growing more and more fit, under Miss Essie's care, for the responsible position of roasters—and even once on the great occasion of threshing, when one hand happened to be taken suddenly sick, and in consequence the whole concern of eight horses and twelve or fifteen men came to a dead stand still, and seemed inevitably doomed to remain so, till another hand could be procured, her brother Zeb suddenly bethought himself that it was Essie's right to fill the place of the invalid, and accordingly she was installed at her post and scratched away straw with the best of them, for an hour; when the anxiously sought reinforcement arrived. Besides this, she had a general eye to the good condition of the barns and lands adjoining the house, during the absence of the men at the other side of the farm; was errand boy for her mother, and even filled the place of *dog*, and drove off sundry stray pigs and cattle which meditated foraging expeditions into the corn or potato fields, when old Rover chanced to be beyond call. Amid all this multiplicity of duties, with spirits as light and sunshiny as a sunshiny day in summer, thoughts and feelings would come gushing irrepressibly forth from the depths of a deep and loving heart, and would clothe themselves in the language of poetry in spite of all surroundings.

It was Monday morning. Essie had been deep in the mysteries of the wash tub since early dawn till about eleven o'clock, when, having finished washing, and having been favored during the time with a visit from the muses, (who generally chose that time to pay their devoirs,) she left her mother preparing dinner, and ran off up stairs, to jot down upon paper the thoughts and words that had been crowding her brain during the process of refreshing the family linen. Seated at her little desk, with pen, ink and paper, she was soon absorbed, and forgot all outdoor and indoor operations, till her mother's voice was heard at the foot of the stairs,—"Essie! Essie! there are some hogs in the corn! you must run and drive them out!"

Throwing down pen and paper, and catching up a sun-bonnet, which a day or two before had served the puppy for a foot-ball, and from which he had chewed and torn nearly all the cape, and calling to Rover, who was her friend and ally in all such emergencies,—when he was to be found, which was not more than half the time—Essie ran out the front door, across the road, and into the orchard, which was planted to corn, now just beginning to be fit for roasting. Letting down the bars and catching sight of the depredators, Essie, with old Rover at her heels, ran through the corn until she had collected all the marauders before her, and then drove them safely to the bars, which opened on the main road. Passing through herself, she waited just outside for Rover to do his duty and drive forth the trespassers.

And now, reader, have you her in your mind's eye, in her faded and not entirely whole (for there were two or three great rents in the skirt,) chintz washing-dress—her tattered, almost capeless sun-bonnet—her huge blue and white checked woolen apron, held up by the corners, and stuffed as full as it could hold with ripe early apples, and ears of corn, which she had gathered in her dodgings, in and out among the rows? While she stands quietly, for the last huge porker to make an extra effort, assisted by Rover in the rear, to step over the lower bar, a carriage in which are two ladies has approached close to her without being noticed, the inmates of which are earnestly regarding her; one with a whimsical expression of suppressed mirth, the other with an equally plain expression of disgust; while they are speaking of the house opposite as being the residence of the fastidious Essie Cave.

At this moment, Essie, startled by the sound of wheels so near, turns hastily round, meets a laughing, cordial "good morning," from the quizzical looking lady, a cold astonished stare from the strange lady, and the carriage passes on.

"You seem to be on quite intimate terms with Mrs. Cave's *servant*," said the fastidious Mrs. Barstow, (for it was that lady and Mrs. Neil,) in a slight tone of scorn.

"That wasn't a servant, it was Essie Cave!" said Mrs. Neil, unable to restrain her laughter any longer. "Essie Cave, herself."

"Essie Cave! the Essie Cave that writes poetry! can it be possible!" and Mrs. Barstow sunk back horror-struck, and in speechless astonishment.

It was some minutes before she recovered herself sufficiently to make any comment, and when she did, it was only to beg Mrs. Neil to say nothing to Miss Cave, or any one else, as to whom the lady was that had been visiting her, or the object of that visit; and as soon as they reached Mrs. Neil's, and dinner had been dispatched, she ordered her carriage, and took leave, unable to conceal the feelings of rage, disappointment, and mortification, such a sight of Essie Cave had occasioned her. Mrs. Neil would gladly have made some explanations, or said something to soothe Mrs. Barstow's irritated feelings, but whenever she thought to make the attempt, the recollection of the manner in which Mrs. B. had previously spoken of Essie, and the pride with which she had congratulated herself upon the addition to her family of such a pattern of *elegance, delicacy,* and *refinement*, overcame her, and she felt she could not control the risible muscles sufficiently to make the attempt.

One evening, a few days after this scene, as Byron Barstow was about leaving the house, after tea, for the office, the scene of his daily toils, his mother followed him into the hall and said:

"I wish, if you are not particularly engaged this evening, you would come up to my room, I have something to say to you."

Struck by her manner, the young man set down the hat he had just taken up, and without a word, followed his mother up stairs.

"What is it, mother? Have you heard any bad news?" said he, in a voice of anxiety, as she closed the door after their entrance.

"No, I have heard nothing;—what I wish to speak about, is your marriage with Essie Cave."

"And what of that, mother? speak quick! your manner really alarms me! Have you heard anything—do you know anything—is anything the matter?"

"No, no, Byron, don't be alarmed. What I wish to say, is that I fear you have been deceived in the young lady; that she is not what you imagine her to be."

"Been deceived in her? In what manner? What do you mean?" said the young man in a tone no less disturbed than before.

"Why, I mean simply this; that I am afraid, instead of being as we have always supposed her, refined and lady-like, she is decidedly low and vulgar."

"Low and vulgar, mother?" said Byron, while the hot blood crimsoned his forehead, and his dark eyes flashed fire: "who has dared tell you that?—who has dared traduce, in this manner, my chosen wife, to my own mother?"

"Nobody, my son, no one has told me aught against her,—I have seen it for myself. You know I have been spending a few days with Mrs. Neil, and while there we passed Mr. Cave's, and what do you think we saw Essie doing?"

"Milking, perhaps," said the young man quietly; for he began to see by this time, what the mischief was.

"No, but she was out in a torn dress and bonnet, a blue checked woolen apron on, a huge, overgrown dog at her heels, driving hogs out of her father's corn-field."

"Is that all?" said Byron, laughing. "I thought by your look and manner, she had been guilty of murder, at the very least.—Why, mother," continued he gaily, "the first time I ever saw her, was when I was about contracting wheat for father last fall, and she was then in the barn holding open the bags while her father filled them with grain, and I fell in love with her at once."

"You may make light of it if you will," said his mother angrily, "but I tell you such a girl is no fit associate for your mother and sisters. What would you think if you saw your sister Eugenia dressed so like a common washerwoman?"

"Just as much of her as I do now, and if she were really washing, a great deal more," replied he, good humoredly. "I tell you what, mother," he continued, "Essie Cave can wash and iron, milk, and make butter and cheese, and brend, can darn stockings, and mend old coats equal to anybody; but while she has been learning all these things, she has also found time to cultivate thoroughly a naturally fine mind, and become highly accomplished too. I don't think she can make tissue paper flowers, or wax fruit; or torture green dogs, or orange colored cats, out of zephyr worsted; but she can sketch from nature, with the skill of an artist, and she can play the piano better than nine-tenths of the so-called musical professors."

"All that sounds very fine!" said Mrs. Barstow, the angry spot growing deeper on her cheek; "but I don't think it necessary for a son of John Barstow to marry a wife who can support herself by washing. I really wish you would discard this girl and choose instead, one among the circle of your sister's associates; Mary Grinnen for instance. She is a sweet girl."

(Concluded on page 4, present No.)

Wit and Humor.

Not Bad.—In the New York *Independent* we find the following from a mother:

"But, did I never tell you what a time I had with my little Joe?"

"No, what was it?"

"Why, I was showing him a picture of the martyrs thrown to the lions, and was talking very solemnly to him, trying to make him feel what a terrible thing it was."

"Ma!" said he, all at once, "Oh, ma, just look at that poor little lion way behind there, he won't get any!"

The Last Agony.—The neatest style of fashionable pantaloons in New York, is described as "a light grey ground, with the castle of Heidelburg in dark blue, on one leg, and Mount Vesurius vomiting forth fire, on the other."

In going to parties just mind what you're at,
Beware of your head, and take care of your hat,
Lest you find that a favorite son of your mother,
Has an ache in the one and a brick in the other.

An exchange says that Hon. Henry A. Wise has recently married. To any dear bachelor friend still "halting between two opinions," we say, "Go and do like Wise."

One of the Albany editors says the only reason why his dwelling was not blown away during the late severe gale, was because there was a heavy mortgage on it!

A friend of ours kept his hands warm all winter from "mittens" he got from the ladies. Cheap way for a supply of comfortables.

Are you a Christian Indian?" asked a gentleman of one of the Cattaraugus tribe. "No," was the answer, "I whiskey Indian."

It may not be generally known that editors get one important item of subsistence at a very low price—they get *bored* for nothing.

FORBUSH'S MOWING AND REAPING MACHINE.

Patented July 26, 1852.

The American Mowing and Reaping Machine Co. have purchased the Patent Right for the above Machine for the United States, England and Canada, and are now manufacturing a large number to supply the demands of the coming season. The advantages which this machine possesses over all others are obvious, and will readily be acknowledged by all disinterested persons. Being a *combined machine*, and working equally well in grain or grass, it enables the farmer of moderate means to procure a valuable *Reaper and Mower* in one, which will do the work of both, and at less than half the usual cost. As a Mower it has no superior; it was thoroughly *tested* the past season in every variety of grass, and in many different sections of the country, and in every case where it was properly made, it gave perfect satisfaction. It will cut and spread from 10 to 15 acres of any kind of grass per day. As a Reaper it has never been excelled, and has no rival that can in all respects successfully compete with it. The patent for this machine covers many points of excellence which have heretofore been unknown, and which (of course) can be used in no other. In the construction and arrangement of these machines great pains have been taken to ensure the necessary strength, simplicity and durability. They are easily kept in order, and it requires but a few moments to change the machine from a Mower to a Reaper, and in either form it is equally strong and substantial. It is not liable to get out of order, and if any accident should happen it could be readily repaired by any ordinary mechanic. In the construction of the machines no expense has been spared to render them both perfect and durable. The Mower weighs but 731 lbs.—the Mower and Reaper combined 900 lbs. To any person desirous of purchasing, or of understanding the machine more fully, illustrated circulars will be sent with full descriptions, references, &c., &c.

Price of the Mower, ... $110 00
" " " and Reaper, ... 130 00

Terms—Cash in Buffalo. Delivered on boats or cars, free of charge.

Address orders or communications to the Company, or
CHAS. W. SHIELD, *Sec'y*, Buffalo, N. Y.

Further information can be had, and machines purchased of the following Agents:

REJECTED APPLICATIONS, &c.

The undersigned respectfully gives notice that he is at all times prepared to pay special attention to the prosecution of rejected applications for Patents; also to contested and interfering cases. In some instances he will undertake to prosecute rejected cases, receiving no compensation unless the Patent is granted.

Patent business of every description, whether before the United States Commissioner, or the Circuit and U. States Supreme Courts, promptly attended to.

The undersigned being represented at the seat of government by Wm. P. Elliott, Esq, formerly of the American Patent Office, possesses rare facilities for immediate reference to the patented models, drawings, records, assignments, and other official matters. Examinations for particular inventions at the Patent Office, made on moderate terms.

Persons wishing for information or advice relative to Patents or Inventions, may at all times consult the undersigned *without charge*, either personally at his office, or by letter. To those living at a distance, he would state, that all the needful steps necessary to secure a Patent, can be arranged by letter, just as well as if the party were present, and the expense of a journey be thus saved. All consultations strictly confidential. The whole expense of Patents, in the United States, is small.

223-4t ALFRED E. BEACH,
Solicitor of American and Foreign Patents,
People's Patent Office, 86 Nassau-street, New York.

FARMERS, LOOK TO YOUR INTERESTS!

J. Rapalje & Co., of the Genesee Seed Store, Rochester, having received their Spring supply of Seeds, &c., offer for sale, at the lowest cash price—

500 bushels Scotch Fife Seed Wheat, Canada growth.
500 " Canada Club do. do.
500 " Spring Rye.
200 " Barley, from Canada, premium seed.
200 " Clover Seed.
500 " A No. 1, Timothy.
1,000 " Early and late Field Peas.
300 " Pure Early Kent Peas.
300 " Early Washington Peas.
200 " Early Warwick Peas.
100 " Dwarf Blue Imperial Peas.
500 " Marrowfat Peas—and more coming.

13 casks of English Seeds, viz:—Turnip, Cabbage, Radish, Cauliflower, &c., &c. Several varieties of superb Garden Peas, imported from London. 221-6t

SOON IT WILL BE TIME TO PLANT!

At the Rochester Seed Store, opposite the Arcade, Buffalo Street, I can supply all kinds of Seeds, and the Implements usually wanted by the farmer or gardener. I have Seeds of my own growing; also those of my own importation from England, France and Germany, which I will sell at as low rates, as can be had in this country, both at wholesale and retail.

Clover Seed.—Medium from Ohio, and the large kind grown in this county, at market prices.
Timothy Seed—from Wisconsin, at market prices.
Peas.—Large Marrowfat—Early Washington—Early Kents, (the earliest variety)—Early Prince Albert, (imported)—Blue Imperial (imported)—and all the other varieties worth cultivating, by the bushel or quart.
Beans.—Lima—China Red Eye, &c.
Corn—Stowell's Evergreen Sweet Corn, at 50 cents per quart.
Poland Oats—At $1.25 per bushel.
Mexican Potatoes—of my own raising, at $1 per barrel delivered at the Rail-Road.
Osage Orange.—New seed, just from Texas, at $10 per bushel, or 75 cents per quart.

Orders by mail, enclosing the money, will be promptly attended to. The seeds forwarded without delay, or the money returned. JAMES P. FOGG.
Rochester, March 8, 1854. 218-6t-eow

LIVE STOCK AGENCY.

In compliance with repeated solicitation, the subscriber offers his services for the purchase of Horses, Cattle, Sheep, Swine and Poultry. His long acquaintance with different breeds and *breeders* of these animals, gives him superior facilities for procuring the best. SANFORD HOWARD.
{ Office of the Boston Cultivator,
{ Boston, Mass., March 1, 1854. 218-6tw-3tm

MEXICAN POTATOES—For sale at $1 per bushel, at Walcott, Wayne county, N. Y., by
221-5t T. G. YEOMANS.

MOORE'S RURAL NEW-YORKER,

IS PUBLISHED EVERY SATURDAY,

BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

Subscription—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion. As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 25 cents per copy to the club rates of the Rural,—making the lowest price to Canadian subscribers $1,50 per year.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

*** The postage on the Rural is but 3½ cents per quarter, payable in advance, in any part of the State—and 6½ cents to any part of the United States,—except Monroe County, where it goes free.

Advertising.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance*. The circulation of the Rural New-Yorker is several thousand greater than that of any other Agricultural or similar journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

The Wool Grower and Stock Register is the only American journal devoted to the Wool and Stock Growing Interests. It contains a vast amount of *useful* and *reliable* information not given in any other work, and should be in the hands of *Every Owner of Domestic Animals*, whether located East or West, North or South.—Published monthly in octavo form, illustrated, at Only Fifty Cents a Year—5 copies for $2; 8 for $3. Vol. 5 commenced July, 1853. Subscriptions can begin with the July or January number. Back volumes furnished.

Address D. D. T. MOORE, Rochester, N. Y.

Moore's Rural New-Yorker:

A QUARTO WEEKLY

Agricultural, Literary, and Family Newspaper,

CONDUCTED BY D. D. T. MOORE,

ASSISTED BY

JOSEPH HARRIS, in the Practical Departments:
EDWARD WEBSTER, in the Literary and News Dep'ts.

Corresponding Editors:

J. H. Bixby,—H. C. White,—T. E. Wetmore.

The Rural New-Yorker is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the Important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter, interspersed with many appropriate and handsome engravings, than any other paper published in this Country,—rendering it a complete Agricultural, Literary and Family Newspaper.

☞ For Terms, &c., see last page. ☜

Rural New-Yorker.

Progress and Improvement.

CULTIVATION OF PEAS.

Peas are termed, by common consent, "a fallow crop." This is an appropriate name, not merely, because when sown in drills, peas admit of the use of the hoe for clearing the land, nor because they are usually sown on land which otherwise would be summer fallowed, but because they are a crop which impoverishes the soil so little that the following crop is as good as it would have been, had the land been summer fallowed. Indian corn never was, nor never will be, termed by practical men a fallow crop. But is this opinion of experienced farmers, that peas are comparatively a non-exhausting crop, founded in anything but imagination? We believe it is. Long and carefully conducted scientific experiments indicate, not to say establish, that peas require for their growth less of the elements which are most needed for the production of good wheat crops, than any other of our commonly cultivated spring grain crops, such as oats, barley, etc. To be more explicit: In order to raise a crop of wheat, of say 25 or 30 bushels per acre, it is necessary that much more ammonia be supplied to the plants, than the atmosphere or rain water is capable of furnishing in a single year. This is owing to the fact that wheat *destroys* a large quantity of ammonia; that is, it requires for its production much more ammonia than the crop contains when grown. This is not the case with peas. They do not destroy ammonia, and hence the atmosphere is capable of supplying sufficient ammonia for the production of a large crop. So that it draws but little on the soil, and does not impoverish it of ammonia for the following wheat crop. There is another equally important fact in favor of pea culture on wheat farms. Not only is comparatively little ammonia used in its production, but a crop of peas contains, when grown, a very large quantity of nitrogen, which, by decomposition, forms ammonia. Thus a crop of peas of 25 bushels per acre, contains in peas 60 lbs. of nitrogen, and in haulm at least 40 lbs. more. Such a crop consumed on the farm, would supply in manure 100 lbs. of ammonia, sufficient to produce at least 15 bushels of wheat, and which cannot be purchased in grain for less than $16. The cultivation of peas, therefore, affords the farmer one of the best means of increasing his wheat crops, equaled only by the cultivation of red clover.

The great drawback to the profitable production of peas, is the "pea bug." We know of no remedy. But we think that as the bug does not materially injure the feeding properties of the peas till November or December, the crop might all be consumed by hogs previous to this. We think there can be no doubt that it will pay to grow peas for this purpose. They are excellent food for hogs, and the manure made by their consumption, as we have shown, would be particularly rich in ammonia, the very substance which our wheat fields require.

Peas do well on a recently inverted sod.—They flourish on all ordinary soils. A good strong wheat soil suits them best. Some farmers have recommended sowing them very late, say middle of June, in order to prevent the ravages of the pea bug. In most cases this remedy is worse than the disease, as the crop is almost sure to be much injured by drouth. We would sow early, say first week in May. By so doing you not only get a good crop, but it is off in good season, and thus affords ample time to prepare the land for wheat. Two bushels per acre is about the proper quantity of seed. It is usually sown broadcast. If drilled in rows twelve inches apart they do far better, especially if hoed. The increase of the crop will pay for the expense of hoeing, and the land will be left as clean for wheat as if it had been summer fallowed. We would like the experience of our readers in the cultivation of peas.

DOUBLE PLOWING TO KILL WEEDS.

The most approved system of rotation, on all light soils in England, is wheat, turnips, barley, clover, &c.; thus one-fourth of the arable land is annually in wheat, barley, clover, and turnips. The latter crop is the great main-stay of the British farmer. He spends more time and money in preparing the land for this crop, than for any other. It is called a "fallow crop," from the fact, that being sown late in the spring and in drills, it affords opportunity for cleaning the land and thus dispensing with the old fashioned long or summer fallow. The weed which gives the light land farmer most trouble is the Couch grass, (*Agopyrum repens.*) It is a terrible pest in the moist, growing climate of Great Britain. To destroy it, calls forth all the ingenuity of the farmer. After the wheat is off, the work of killing the couch and preparing the soil for the turnip crop commences in the shape of sundry harrowings, scarifyings, and plowings. The following spring the land is again plowed twice or thrice, harrowed, rolled, &c., before the couch is killed. As may readily be believed, this process is attended with no slight expense, under the most favorable circumstances, and frequently, owing to wet springs, the object is but partially obtained after all. No wonder, therefore, that efforts should be made to substitute a cheaper method of exterminating the enemy. Knowing that John Hilditch, Esq., of Stanton, Salop, had been for some time in the habit of double plowing for the purpose of killing couch grass, we wrote him on the subject, and in reply, received the following letter, which will be read with interest:

Stanton Salop, Eng., March 21, 1854.

Dear Sir:—I have been in the regular receipt of your Rural New-Yorker and Wool Grower, papers fraught with information pleasantly instructive and practical, combining the experience of the Old World with the energy of the New. With you, all seems full of life and animation, steam power and railway speed, while here we are at, comparatively, a stand still; we know nothing of rapidity, scarcely anything of motion. I think that the contrast may not be inaptly symbolized by youth and old age. Well, if so, may the son prove a better man than the father.

You ask me to furnish you with the results of the deep double plowing we were engaged in when you visited us. I will refresh your memory with the precise operation, as I am not aware that it has been practiced by others. But first, I would notice the common method of double plowing, which is simply one plow following in the track of the other; the defect of which is that the soil, which should stand firm after the first furrow is taken off, gets broken down in the operation, and renders the furrow taken by the second plow imperfect, so much so, as scarcely to permit it to cover the first furrow,* with the additional evil of burying the first furrow with the roots of couch upwards. This is a decided error, for one chief object to be accomplished, is to effectually bury the couch and thus afford a cheaper process in cleaning the land for a future crop.

Our plan is first, to pare the land to the depth of two or three inches. We commence this operation not in the hollow between the lands, but on the crown or ridge. We plow at pleasure, fifteen or twenty yards wide, or in fact to any extent, taking care to terminate near the old dead furrow, leaving the breadth of a furrow unplowed. We next take a strong plow with a deep mould-board, and attach to it four horses *in length*, and throw the beforementioned unplowed strip of land into the hollow, taking out soil to the depth of ten or twelve inches. Then follows the light plow, with one strong horse, just turning a plowed furrow with its grass upwards into this deep cut, ready to be well trodden down to the bottom by the four horses, and to receive a covering of soil ten inches thick. The work is complete. The land may be sown and harrowed with perfect confidence, that the couch will perish. It is desirable to sow a little guano to assist the new soil brought up by this process. I believe it will be found a more economical method of cleaning land than that commonly practiced, of repeated ploivings and workings with this great advantage in our climate, that it can be done, let the weather be ever so indifferent, and few persons will question its permanent improvement to the soil.

And now that I am engaged on the subject of tillage, I would like to tell you of another decided advantage in the path of improvement. We have succeeded in raising a very fine crop of Swedes, (ruta bagas,) after a wheat stubble (the next year after,) *without the aid of the common plow at all*; merely by the aid of an implement which is termed here, "skim plows." It is in the shape of a triangle, with a wheel on each side and one in front. There are five strong iron teeth, three feet long, with broad triangular feet, each six or more inches wide. To this implement we attach four or five horses and cut the earth from eight to ten inches deep. We then drag, cultivate, roll, etc., till the soil is fit for the ridging plow and drill.—It is my most decided conviction that this mode of preparing the soil for green or fallow crops, is the most direct advance that has been made of late years, in this country, in the art of tilling the soil. It is cheaper and more effectual than plowing, and ensures what is absolutely essential for the growth of green crops—a fine tilth and moisture. I believe that agriculturists are not sufficiently aware that *moisture* and *flour-like tilth* of the soil, are almost absolutely certain to secure what our Scotch brethren would call a good braid of turnips. Yours, &c., John Hilditch.

*We would remark that this is not the case when the two plows are attached together, as in the Michigan double plow. Indeed we are inclined to think that a good Michigan double plow would accomplish the object of our friend nearly as well as the plan he has adopted, and certainly much more cheaply and expeditiously. Mr. H. might find it to his advantage to get one of these plows from Reigles, Nourse & Mason, of Boston, and see what Yankees can do in the way of double plowing.—[Eds.

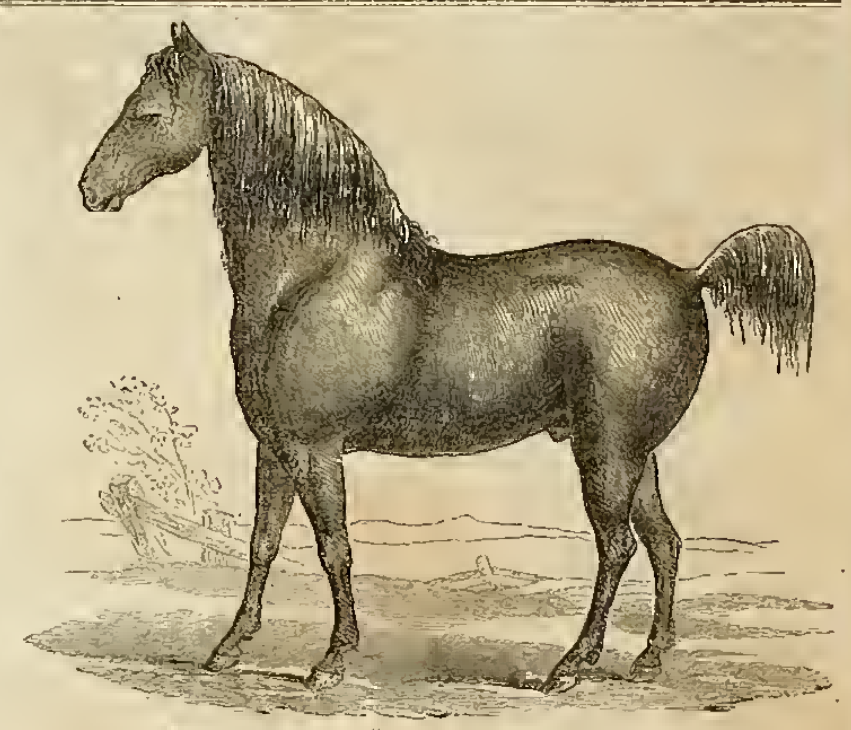
MORGAN HORSE "GREEN MOUNTAIN BOY."

Brown & Waldron, of South Otselic, Chenango Co., N. Y., send us the above engraving of their Morgan Horse "Green Mountain Boy," and add: "The engraving gives a very correct representation of the general outline and proportion of our horse, but it is far from flattering in its delineation of his head and limbs; in these respects he is very fine.

The Morgan breed of horses have become so well and favorably known, that commendation is merely superfluous. They possess, in an eminent degree, strength, courage and docility, with full muscular developments, compactness and remarkable soundness of constitution and limbs. In action and symmetry of form they are not excelled.

The result of the cross between the pure-blooded Morgans and our common mares, is the point of interest to breeders; and the fact that such stock is eagerly sought, and commands the highest prices, demonstrates its value. Indeed, their reputation for real excellence and high value, is such that frequent impositions are attempted and practiced where they have but recently been introduced; altho' a slight acquaintance with the genuine Morgan will enable an ordinary observer to discriminate readily between the legitimate and bastard.

The 'Green Mountain Boy' was bred by the Hon. Benj. Allott, of Vermont, in the town of Stockbridge, through the Old Woodbury and Gifford Morgans, and is believed to be as thorough-bred through both grand-sire and sire, and grand-dam and dam, as proved by both his lineage and full Morgan characteristics, as any living horse. In his general form, development of muscles, depth of chest, strength and cleanness of limbs, and in the grace and ease of his movements, he has no superiors. As a trotter, he is decidedly 'some,' having performed his mile in two minutes and fifty seconds. He received the first premium on stock horses at the New Hampshire State Fair, held at Manchester in 1851. He is a blood bay, eight years old, weight about 1,000 lbs. and his stock is highly Morganized."



MORGAN HORSE "GREEN MOUNTAIN BOY."

IMPROVED SUPERPHOSPHATE OF LIME.

Superphosphate of lime is an artificial fertilizer, which has been used for the past ten years in Great Britain. J. J. Mapes, a "self-styled" Professor of Chemistry, Consulting Agriculturist, Civil Engineer, and Editor of the *Working Farmer*, &c., &c., pretends to have made some valuable improvements in its manufacture. He calls his manure the Improved superphosphate of lime, and asserts that it cannot be made in England for $100 per ton; that at $50 per ton, the price he sells it for, it is far cheaper than Peruvian guano, and cheaper than farm-yard manure, even though it could be had for nothing. This remarkable manure was carefully analyzed by Mr. S. W. Johnson, in Yale College, who found that it contained the following ingredients:

Sulphate of lime (plaster,)	37 lbs.
Insoluble phosphate of lime,	21 "
Soluble superphosphate of lime	15 "
Sulphuric acid (free,)	5 "
Ammonia,	2½
Non-nitrogenous organic matter, sand and water,	19½
	100 lbs.

This is the only analysis we have seen that gives what is necessary to judge of the value of the manure, to wit, the soluble superphosphate of lime and the ammonia. The value of the other ingredients is well known. Sulphate of lime can be had in this city for about one mill per lb.; insoluble phosphate of lime, taking the price of animal charcoal in New York, Boston, &c., for the past five years, worth about half a cent per lb.; the sulphuric acid did not cost more than a cent and a half per lb.; and the sand, non-nitrogenous matter and water are of little or no value at all.

On the appearance of this analysis, we said that if this was a correct analysis of Mapes' superphosphate of lime, so far from its being impossible to make it in England for $100 per ton, a superphosphate superior to it in many, and at least *equal* in every respect, was sold by thousands of tons for $28.22 per ton. Mr. Mapes, aided by Dr. Ensenlin, then undertook to show that Mr. Johnson's analysis was erroneous, and assigned as a reason, that it was against all chemical possibility for free sulphuric acid and insoluble phosphate of lime to exist in the same mixture; and, therefore, the fact that Mr. Johnson found them showed that he was not capable of making a correct analysis. To this we replied, that unless the bones, animal charcoal, or whatever the manure was made from, was ground to an impalpable powder, and brought into direct contact with the acid, insoluble phosphate and free sulphuric acid must inevitably exist in such a mixture.—We then said, that in a late visit to Mr. Mapes' factory we found that the animal charcoal the refuse of the sugar refiners, from which he makes his manure, *was not ground before* mixing with acid, but was ground afterwards—simply, as the man said, "to dress it up for market." Furthermore, that there was no adequate means of regulating the proportion of acid and animal charcoal and that under such a system of manufacture it was quite impossible to make even a good superphosphate, to say nothing of the *improved* article. This was in the Rural of Dec. 17, 1853. We honored Mr. Mapes by sending him an early copy, in hopes that he would reply to it in the January number of his paper, the *Working Farmer*. But January came, and February, passed without a reply. In the March number the Professor(?) came out with the following affidavit:

[Affidavit.]

Improved Superphosphate of Lime Factory.
Near Newark, N. J., Feb. 2, 1854.

We, the undersigned, Superintendent and workmen at the above named factory, have read the statement attached, from the *Rural New Yorker*, of December 17th, 1853, and unhesitatingly pronounce it false, in all its pertinent points.

The burned bones, or bone black, used in this factory, are always ground before use, and in no case are they used in their coarse state. The process of mixing with the sulphuric acid, always occurs after the bone black has been ground. That the supply of black to the mixing apparatus is not regulated by elevators, but these elevators empty themselves into a hopper on top the mixing apparatus, which hopper is so regulated as to act as an exact measure of the bone black, always admitting the precise quantity required; and the faster or slower working of the elevators would not alter, in any way, the supply of bone black to the mixing apparatus.

It is not true that the sulphuric acid runs to this mixing apparatus through an auger hole, but is first received from the carboys into a vessel lined with lead, and from this passes through a lead pipe and valve to a second vessel, containing a float, so as at all times to insure the same height of column of the acid. This second vessel is also lined with lead, and the acid is carried from this to the mixing vessels through two short pipes, each armed at their extremities with valves made of lead, and of accurate workmanship, so that the relative quantities of bone black and acid are at all times the same. After the further manipulation and thorough drying of this mixture, (without the use of heat,) the other ingredients are added, and the whole is passed through fine sieves, the coarser parts, if any, passing from the sieves to a mill, and immediately returned, after being ground, to the sieves.

The Improved Superphosphate of Lime made in this factory is strictly prepared after the recipe furnished to the proprietors by Prof. James J. Mapes, and is all made by the above method.

We cannot believe that Mr. Harris ever passed

through the factory during business hours, as we never permit any one to do so, unless accompanied by one of the proprietors, or by Prof. Mapes. J. J. Van Wyck, Superintendent.

Then follow the names of the men.

This is a most serious charge—one which none but a desperate man would make. We are accused of writing the most wilful and deliberate falsehoods. First, we said we had visited the factory. The men, one and all, swear that they believe we never did. Second, we said that the animal charcoal was not ground previous to being mixed with sulphuric acid. The men swear it is. Third, we said that there was no apparatus for regulating the quantity of acid and animal charcoal, and of obtaining the due proportion absolutely necessary. In this particular, too, the men swear we lie. Now the fact is, we did visit the factory, honorably and openly, during business hours, and stated nothing but what we saw, and what these very men told us. Of the first fact we need offer no proof, as it is now unnecessary, as we will presently show. When we read these affidavits, a dark suspicion flitted across our mind, that Mapes had altered his process of manufacture, between the appearance of our article, and the time of swearing his men. The fact that he put off replying to the article from December to March, gave a shadow of confirmation to the suspicion. But how were we to satisfy ourselves? Mapes has written "No Admittance" on his factory doors, and a gentleman whom we sent down there to investigate the matter, could not gain admittance. He saw Mapes, who told him that "Harris had never visited the factory;" but he would not let him go into the factory, or let him have a sample of the superphosphate then being made. Nevertheless, one of the men told him that they had altered their process of manufacture since the first of the year; that formerly they used to mix the animal charcoal with acid, before it was ground, but now they ground it. One of Mr. Mapes' intimate scientific friends also said that Mapes was *now* grinding the animal charcoal before he mixed it with the acid, and that it was much better, &c. Yet even on this evidence we hesitated to charge him with the offence of which we are now satisfied he is guilty.

We could not but *know*, either that the men were ignorant as to the nature and object of the document to which they had made affidavit, or that Mr. Mapes had altered his process of manufacture since our visit. Our object, at this stage of the proceedings, was to obtain direct and satisfactory information on this point; and as the intention of Mr. Mapes in taking the affidavits of his men was not to justify his process of manufacture, but to confirm the charge of *falsehood* he had brought against us; and as there was no hope of gaining admittance to the men or the factory in our own name and character, we felt perfectly justified in resorting to stratagem for the purpose.—We accomplished our object by putting on a workman's rig, and applying for work on Mapes' farm. We were engaged by Mr. Van Wyck, the superintendent, for $4.00 per week, and sent by him to work in the factory. Once there, conversing with the men as a brother laborer, visiting every nook and corner of the establishment, and watching every manipulation, we had the most ample and satisfactory opportunity for obtaining the evidence we required—and we got it, more full, conclusive and condemnatory than we expected.—But as we obtained this information clandestinely, we shall use only as much as is necessary to clear ourselves from the charge of falsehood.

We found, then, to make a long story short, that since the appearance of our article in the Rural of Dec. 17, Mapes had obtained a new mill, and had been grinding the animal charcoal "about two months," and that before this he did not grind it. So much for the first charge of falsehood. The apparatus for regulating the flow of acid was also," put up about two months ago," but it was broken, and had been for three weeks, and the acid run into the "burning," or, as the men *now* call it, the "*boiling*" vessel, without its regulation. And to show that there is no connection between the supply of animal charcoal and sulphuric acid, we will mention what occurred while we were in the factory. Something got wrong about the elevator, and it had to be stopped. But the acid kept on running for at least half an hour, without any animal charcoal going over with it. We judged there was about three carboys, say 500 lbs. of acid, run over without anything to mix with it. It formed a basin on the top of the heap, which at length gave way, and the acid ran on to the floor, where it was licked up with animal charcoal, hurriedly thrown on it in large quantities for this purpose. Does any one suppose that it is "against all chemical possibility" to find free sulphuric acid and undecomposed phosphate of lime, in such a mixture? So much for the second charge of falsehood.

In the affidavit the men swear they believed Harris never passed through the factory during working hours. They told us a very different story. They said that he came there with Dr. Ward's son, and went all through the factory. This is the truth. On asking one of the men if they did not swear that they believed Harris did not visit the factory, he replied that they did not. The fact is, the men (most of them ignorant Dutch and Irish,) did not know to what they were making affidavit. They said that the Professor read the article he had drawn up to them, and asked them to swear to it. One of the men said he supposed Harris meant unground bones—"shankbones." So much for the third and last charge of falsehood.

We have thus succinctly answered the charges brought against us. In doing so we have necessarily laid a heavy charge on Mr. Mapes' moral character. For the purpose of convicting us of falsehood, he has been guilty of the most pitiful subterfuge. On the appearance of our article in December, he *altered his process*, and then took the affidavits of his men to a description of this new process, and used this description as though it referred to the process of manufacture practiced at the time of our first visit to the factory. The affidavits of the men were, probably, true at the time they were made; but Mapes obtained them for the purpose of convicting us of gross and deliberate misrepresentation, in reference to a time when they were wholly untrue. This he could not but have known. He was unable to vindicate himself from the scientific charges we brought against him, so he solemnly attacked our veracity, and, in doing so, was himself obliged to resort to refined yet deliberate falsehood.

The fact that Mapes put himself so much out of the way to disprove what was, after all a mere secondary, incidental consideration, while he has not *attempted* to answer the other far more serious charges which we brought against his improved superphosphate, proves clearly to our mind, that though he would do it gladly if he could, he is not able to sustain his assertions and give any proof of his loud and often repeated declarations.

Mapes has dragged several things into this controversy which have no connection with it, and which are evidently designed to distract attention from the main point at issue. Some of these we will notice hereafter. J. H.

CONVERSATIONS ON AGRICULTURE.—No. II.

BY HUGH T. BROOKS.

Potatoes.—Potatoes, and potato rot, the "American Union," *war*, and other great interests divide the public mind: we will prudently confine ourselves to the former. Rev. Mr. Lord, of Pike, who adds to "fervency of spirit," "diligence in business," is in favor of the "Russian mode" of drying seed potatoes by exposing them in a warm room for several days before planting. He thinks they produce more vigorous plants, are less liable to decay, mature earlier, and yield better. He also recommends sprouting potatoes in a bed of horse manure, care being taken to preserve the *sprouts* at the time of planting. They will come forward more in this way in one week, than in two or three in the cold ground. For early potatoes they should be put into the manure as soon as the first of April.

Paul C. Sprague, of Covington, though differing with Mr. Lord about John Calvin, and the "Confession of Faith," harmonizes on potatoes. He thinks potatoes should not at any time be exposed to the light. Thos. Fisher is much in favor of the Pennsylvania whites and prefers them for early potatoes, to the *Early Junes*, which, with the Early Yorks and the Meshannock, are all excellent early potatoes. Martin Chase, of Castile, gave me some Prince Regents, light colored, a rough skin and roundish. He prefers them for boiling to the pinkeye, but thinks they do not bake quite as well; they yield abundantly and do not rot—perhaps they may be objected to on *political* grounds. Mr. Olmsted, of Pearl Creek, Covington, cultivates the round pink-eye, his crop is uniformly good, and though they cut No. 2, they yield No. 1, and very seldom decay—for field culture, it is doubtful whether we can do better. Conservatives will stick to the *Peach blow*, and I have seen the eye of age moisten at the mention of the "Old fashioned red." Early planting is recommended, but Mr. Lord would get earlier *seed* by planting quite late, so that they would be forced to mature quick, and thus I suppose establish a habit of growing in a hurry.

Cold, wet, heavy or clay soils and even gravelly, are spoken against—loam is the thing. And old pasture will raise two or three crops without manure, and they will generally escape the rot, if you avoid the rotting varieties like the Mercer. Charcoal and plaster may be applied in the hill, but ashes and lime will injure the young plant if contiguous to it in considerable quantities. Barn-yard manure must not be used on potatoes, as it engenders decay and promotes too great a growth of vines. "Silas Brown, of Connecticut," says Mr. Tiernor, of Covington, "plowed his potato ground deep, and then furrowed it out to the depth of ten inches, and plowed in the furrow; he succeeded well, and I never knew him to fail."

A gentleman referred to above, furrows six inches deep, and covers two or three inches deep, and then makes the ground level by hoeing at the proper season. He thinks he escapes the rot by deep planting, as the depth of soil prevents the *atmospheric influence* which, in his opinion, occasions it, and he gets a better yield.

Anos Broxson, of Pike, dug in his garden at the depth of a foot or more, potatoes which were self-planted, weighing, many of them, four pounds a piece, and one weighed 4½ lbs.; they did not decay, though many planted in the usual way did decay. Mr. Olmsted has tried cutting his seed potatoes, and thinks he finds a material difference in favor of the uncut; he plants *large* potatoes and gets large. The balance of testimony seems to be in favor of planting *large* potatoes, but as regards *cut* or *uncut*, I am swamped in a labyrinth of contradictory testimony. *Too much seed* is a common fault; never put but one potato in a hill, great or small, and if the seed is cut spread the pieces some distance apart, and avoid getting the hills too near together. "Great mischief is done," says Mr. Burleigh, of Corington, "by disturbing the roots of potatoes by the second hoeing; let the potatoes be very carefully hoed soon after they come out of the ground, and then carefully remove the weeds without disturbing the roots, which approach near the surface." This I deem of vital importance. The ground should be well plowed and prepared in the first place, and the *weeds kept out*, but the vines and the roots should not be disturbed by plowing and hoeing after the potatoes are about to set. Mr. Shepard, of Corington, has observed that the potatoes which were dug before the fall rains did not decay like those dug later, and many others coincide in this opinion.

I hope the opinions expressed in this article will be carefully tested by experiment, and the result made public. There are *causes* for all the varied manifestations we observe, and careful scrutiny may reveal them. Before writing this article I intended to communicate with my friend, Rev. Mr. Stuano, of York, who is a scientific and intelligent observer, but I have not been able; I recollect, however, to have seen in the New York Tribune, his recommendation to cut off the tops of potatoes when the first sign of blight appears.

Pearl Creek, April, 1854.

CARE OF ANIMALS IN SPRING.

Eds. Rural:—While we have winter again "tarrying in the lap of spring," it will be necessary for farmers to exercise a great deal of care for their flocks, more even than was requisite during the winter months. Their relish for hay will be less than then; hence they will require the best of fodder at this season. Cattle should be kept off of the pastures and meadows, and in fact they will do better to be kept close confined in the yard, with free access to water. The sheep should be well seen to, and young lambs will require an extra amount of care at this time; during these cold storms, the ewes with their lambs should be well sheltered from the cold, and have some extra feed, such as a few potatoes or apples, or a little oat-meal, which I have found to be very good; as thus, by bestowing a little extra care upon the tender lambs now, you will be able to supply the earliest market, and obtain good prices. When the snow leaves the ground, and grass starts a little, there will be no danger of turning your ewes upon a piece of sod that you intend to plow; but they should not by any means be left to get their living alone, but should receive, as I said before, some potatoes or apples, together with a little oat-meal. It will be necessary to feed rather sparingly of the meal, unless they have been in the habit of receiving it during the winter. A Farmer.

Reed's Corners, N. Y.

STORING APPLES IN DRY SAWDUST.

I have a dark closet in my house, or rather I live in a row with windows back and front. The house is four story high, and the length from front to back is so great, that we have three rooms on a floor, the centre one dark.—On the third story the floors are plaster, and I find the temperature so even that I use it for a wine store in preference to the cellar, and have it fitted with bins. In this room I put some hampers of apples (like pearmain.) I wanted one of the hampers, and turned the apples on one of the bins, amongst the dry sawdust, (pine sawdust.) A fortnight ago we looked at them, having used up the others gathered at the same time and from the same tree, all of which were much wrinkled, but on taking those off and from amongst the sawdust, I found them in a most beautiful condition; those covered with sawdust were as plump and fresh as when gathered, while those partially buried were only so to the extent covered with the sawdust, the upper portions being wrinkled. I am so pleased with the discovery that I shall pack them in bins next year, for I have no doubt they will keep in this way till next Christmas.—*Correspondent Ayr Advertiser.*

A Large Leg of Mutton.—About fifteen years ago, a large sheep was sold in Fulton market, New York, by Mr. Jenkins, butcher, one leg of which weighed 37 pounds! It was bought by the late Charles Henry Hall, of Harlem, at a dollar a pound, and sent by him to England.

Agricultural Miscellany.

THE WOOL GROWER AND STOCK REGISTER.

The May number of this journal was promptly issued on the 1st inst. The table of contents indicates a variety of valuable articles on subjects pertaining to Wool Growing and Stock Husbandry.

Though particularly interested in the success of the W. G. & S. R., we have rarely noticed it in the Rural, and particularly avoided any thing like praise of a work which has received very high commendation from the press generally.—The paper has greatly increased in popularity and circulation during the past two years—so much so that the publisher has determined to materially enlarge and improve it on the commencement of the sixth volume, in July ensuing. Relative to the proposed improvement we copy from the May number the following

ANNOUNCEMENT.

Enlargement and Improvement of the W. G. & S. R.

Nearly two years since we assumed the proprietorship and management of this journal. We anticipated no material profit from the investment and other expenditures for some years, and thus far have not been disappointed—for it has enriched no one connected with its management. Many doubted whether the work would ever pay, and we certainly were not sanguine of any brilliant result in the future. However,—convinced that the public would be benefitted, and that any loss must be our own,—we determined to make an effort toward establishing the paper upon a permanent basis, in the belief that our labor would eventually be adequately rewarded. We believed there was a necessity for a Stock Journal, and that such a periodical as we hope yet to furnish, would ere long be properly supported. We knew the interests we designed to promote figured largely in all statistics enumerating the products and wealth of the country, and that hundreds of thousands were directly interested in the *subjects* and objects of our journal,—and confidently anticipated a cordial welcome from the more intelligent and enterprising portion of those interested. And the encouragement thus far received proves that we were not mistaken,—for our small and unpretending sheet has already been sought by thousands of Wool and Stock Farmers throughout the land.

The fact that the circulation of the W. G. & S. R. has more than *trebled* during the past two years, and is daily increasing, induces us to venture an enlargement and improvement, which will at once render the work far more acceptable and valuable, if not indispensable, to all engaged in Wool Growing, the breeding of Improved Stock, or the rearing of Domestic Animals generally. Though our arrangements are not entirely completed, we can safely announce that—

On the commencement of its Sixth Volume, July, 1854, the Wool Grower and Stock Register will be enlarged to Thirty-Two Pages monthly, printed upon new and handsome type, and essentially improved in other respects. The Yearly Volume will comprise 384 octavo pages,* or *double* the number contained in the present, (exclusive of the advertising cover, which will probably be omitted.)—This will give ample room for the discussion of many subjects which require attention, but which we can scarcely notice with our present limited space. Among other matters, we propose to publish Pedigrees of pure bred cattle, horses, sheep, &c., and to give the names, residence, &c., of the principal breeders of Improved Stock throughout the country—for the mutual benefit of owners and those desirous of purchasing.

Arrangements are making to improve the *quality*, as well as increase the amount of reading matter. Regarding the reliability and value of its Contents as of far more importance than the size or appearance of the paper, we shall endeavor to secure the assistance, as contributors to its pages, of the best and most experienced writers on the various subjects discussed,—and cordially invite the co-operation of all disposed to aid in enhancing its value and usefulness.

Although we hope to double the *value* of the paper, its subscription price will not be increased—except perhaps to clubs of 20 or over. Single copies will be furnished at Fifty Cents—5 copies for $2, and 8 for $3. As our expenses will be largely increased, an addition of several thousand to its subscription list will be necessary to sustain the paper at the low rates named. Hence we frankly solicit the kind offices of all present subscribers and friends—trusting that each will lend a portion of influence to augment the circulation of the paper.

* Or two volumes, of 192 pages each, in a year—which plan we may adopt, but have not decided.

GUANO FOR TURNIPS.

A correspondent of the *Country Gentleman* says:—"Turnips grown with guano alone are usually considered larger than those grown with farm-yard manure; but they appear softer and spongier, and do not weigh as well in proportion to bulk."

If Peruvian guano is here referred to, we think the conclusion erroneous. The effect of Peruvian guano, sulphate of ammonia, or any manure containing a large quantity of ammonia, is to produce a small specifically heavy bulb, with a large proportion of leaf. Mexican, and Saldanha Bay guano, and superphosphate of lime, have the effect mentioned. Yet these light and "spongy" turnips are found more nutritious than those grown with highly nitrogenous manures, owing probably to the fact, that the latter are immature.

M. De Candolle ascribed the fertilizing action of gypsum to the stimulating effects produced upon the leaves of the plants upon which it is sown. Others have supposed that its effects are owing to its exciting the absorbing vessels of the plant, or the interior organism, or else the entire system of the plant.

Root Culture.—Several requisites are important to root culture. A deep and rich soil, thorough preparation of the ground, and fine pulverization, effected by repeated plowings and harrowings. The ground after being deeply plowed, as soon in the spring as possible, should be harrowed every few days till the seeds are planted. This has the effect to destroy millions of weeds which just germinate, and will be killed by exposing fresh surfaces of earth to the hot sun before they become rooted. If the seeds of weeds are left to start, and grow to some size, and their extirpation postponed till the crop is in the ground, a vast amount of labor with the hoe will be required, and a great additional expense.

LIVINGSTON STOCK IMPORTING COMPANY.

Messrs. Brooks & Fuller, agents for the Livingston County (N. Y.) Stock Importing Company, have been making good use of their time, in England as will be seen by the following from *Bell's Weekly Messenger*, of London.—John Bull begins to understand that Brother Jonathan is not only his best customer in iron, crockery, woolen goods and cotton fabrics, but also in improved stock. We saw a statement, a short time since, in one of our English exchanges, to the effect that the United States demand for fine stock, and the high prices which we paid for them, were the primary causes, at the present time, of the profits of British breeders. We would be the last to discourage judicious importations; but, at the same time, we would advise to a calm consideration of the matter, before rushing into the business at a time when prices are extravagantly high.

"On Saturday were sent out from this part in the splendid ship "Sultan," for New York, 24 head of pure-bred short-horns, recently purchased in this country by Messrs. Brooks and Fuller, agents of the Livingston County Importing Company, in the Genesee Valley of the State of New York. Amongst them was a fine young bull, and eight heifers from the herd of Mr. J. S. Tanqueray, of Headon, Middlesex. The former is a son of the celebrated bull "Baloo," bred by Mr. Bates, and now owned by Messrs. Bear and Morris, of New York, United States; it will be remembered that he was sent out from here last summer. The heifers are choice specimens from Mr. Tanqueray's herd, and some of them are in calf to the Duke of Gloucester, the bull bred by Earl Ducie, and which sold for so high a figure at the Tortworth sale in August last. In addition to the above were seven cows and heifers, from the herd of Mr. Barnett, of Stratton Park, Beds, several of them by Horatio, now owned by Mr. Townely, of Townely Park, in this county, and brother to his far-famed prize cow Butterfly; also, one bull and three heifers from Mr. Ladd's herd at Ellington, Hunts; one bull and heifer bred by Mr. Cartwright, at Aynho, both by Upstart; with two other bulls, bred by Mr. Ambler, of Watkinson Hall, and Mr. Fawkes, of Farnley Hall, Yorkshire. I hope, also, to be able to send you further particulars of some important shipments that are intended to be made from here early in the ensuing month, for influential stock-importing companies from the Western States of America. The agents of one of them, Dr. Watts and Mr. Waddle, have been making great search throughout the United Kingdom for superior specimens of this favorite breed of cattle, and I learn that they have added a new feature to these exports, by having already made some purchases in the sister isle—a fact highly creditable to their judgment and to the Irish breeders, who have for a long time paid great attention, and spared no expense in the purchase of some of the best stock from Old England."

The Legislature of Tennessee recently passed an act establishing an Agricultural Bureau, appropriating a handsome fund to sustain it, and providing for the organization of auxiliary county associations. The Governor, who is ex-officio a member of the board, has just issued his proclamation appointing as his associates the following gentlemen, viz:—Drury P. Armstrong, of the county of Knox; George Elliott, of the county of Sumner; Henry J. Cannon, of the county of Fayette; John Shelby, Mark R. Cockrell, F. R. Rains, Willoughby Williams and William G. Harding, of the county of Davidson.

If Lima beans are planted in a rather stiff soil, with their flat sides upward, or parallel with the surface, few, if any of them, will vegetate and grow; but if the eyes of the beans be carefully placed downward, at the time of planting, they will generally come up, if not covered with more than three-fourths of an inch of earth.

Inquiries and Answers.

Conveying Water in Lead Pipe.—Will you or some of your able correspondents, give your experience in the use of lead pipe for conveying water. I wish to supply my barn-yard with water from a spring sixty rods distant. It will be necessary to convey it on the syphon principle, for the slight elevation intervening. My yard is considerable lower than the spring.—What sized pipe is preferable, and what the probable cost. Will it work well running so far; the durability, &c.? Any information touching the subject, will be duly appreciated by myself, and perhaps be a blessing to many of your numerous readers.—E. P. Phelps, *Castile, N. Y.*

Will some of our experienced friends answer the above inquiry?

Kitchen and Flower Garden.—Can you tell me if there is any work written on the management of the kitchen and flower garden—and where it can be had, and at what price?—A Subscriber, *Piffard, N. Y.*

We would recommend you to get Buist's Family Kitchen Gardener, and Buist's American Flower Garden Directory. The publisher, C. M. Saxton, 152 Fulton st., New York, will send you the former, postage paid, for 75 cts., and the latter for $1,25. They should be in the hands of every gardener.

Alsyke Clover.—I noticed in your valuable paper, of March 25th, an account of Alsyke Clover. Will you, or some of your correspondents, inform me whether the seed can be had in this country, and if not, what would be the best way to import it from Europe?—F. P. Maine, *North Manlius, Onondaga Co., N. Y.*

Sowing Clover with Corn.—Will it pay to seed with clover, corn ground at the last time of cultivating and hoeing? Will those who have had experience enlighten me on the subject?—A Subscriber, *Victor, N. Y.*, April 28, 1854.

Orchard and Garden.

HINTS AND CLEANINGS.

Lawns and Grass-plats.—We have found it a much easier and quicker way to make a lawn, by properly turfing it, than by sowing seed, and any after treatment. Newly sown grass very seldom grows evenly—some roots are much stronger than others—and a smooth lawn requires years for its establishment. But first prepare the ground as carefully and well as for garden culture, smooth it properly, and clear it from all roots and weeds. Then select a good spot for cutting the turf,—close-grazed, long-seeded, waste land is the best. With an edging-iron, or other sharp instrument, mark off the turf into strips three feet long and one foot wide, cutting down perpendicularly at least two inches deep. Then, with a turfing-iron, or very sharp spade, cut this turf up, one and a half inches thick, rolling each piece up separately. Lay it down orderly and carefully, and go over it with a beater or roller, and you will soon have a fine lawn, with a smooth, well covered surface.

Radishes Instead of Weeds.—By sowing a small quantity of radish seed over the vegetable garden when it is first plowed or spaded, and repeating the sowing whenever there is a vacant space, as the soil is stirred afterward, one may have, according to the *Am. Agriculturist*, "plenty of good radishes for a shilling." All for which there is not room, should be treated as weeds, and cut up at once, but there is generally plenty of unoccupied ground, not needed for the few weeks which a growth of radishes require.

Insect Pests.—Backward as the season is—the buds on fruit trees just beginning to start—the insects are up and doing. Every bud on a dwarf apple tree in our yard, was covered more or less with a minute dark green aphis, and they seemed eating their way into them quite rapidly. Last year, tobacco water stopped them. Caterpillars' eggs seem very numerous on all kinds of fruit trees. It is time to commence the war of extermination.

Early Vegetables.—Cucumbers, Melons, Lima Beans, &c., may be started on pieces of inverted turf in a sheltered situation, and, as soon as the weather is permanently warm, be removed and planted in the garden. Two or three weeks may thus be gained, if attended to in time. It is important to the perfection of Lima beans, particularly, that they get an early start, but if planted in the open ground they are very likely to rot, as we have found to our disappointment.

Farmer's Garden.—Old farmers, young farmers, and farmer's boys, do not neglect the garden. Give some of your spare time to it, and *spare* a day if you have not enough leisure to attend to it properly. Look kindly and *helpfully* on all the efforts of the women-folks for its improvement. It will pay—pay thrice—in pleasure, health, and profit.—R.

CULTIVATION OF ONIONS.

Eds. Rural:—Some acquaintance with the manner of cultivating onions in Connecticut, enables me to furnish the information desired in a late number of your paper. It is derived from practical, not theoretical, sources, and I hope will be of use to many of your readers.

The Soil and its Preparation.—A sandy loam of a dark color, is probably the best soil; though any loamy soil will answer. It should be manured freely, and then thoroughly plowed and harrowed until in very fine tilth. All stones and sod should be removed, that the drill may find no obstruction in sowing the seed. Cultivators do not generally plow very deep,—usually six or seven inches,— but the fact that better crops are obtained after carrots, shows that a deeper soil is useful. Prepare the ground and sow the seed as early in the spring as practicable.

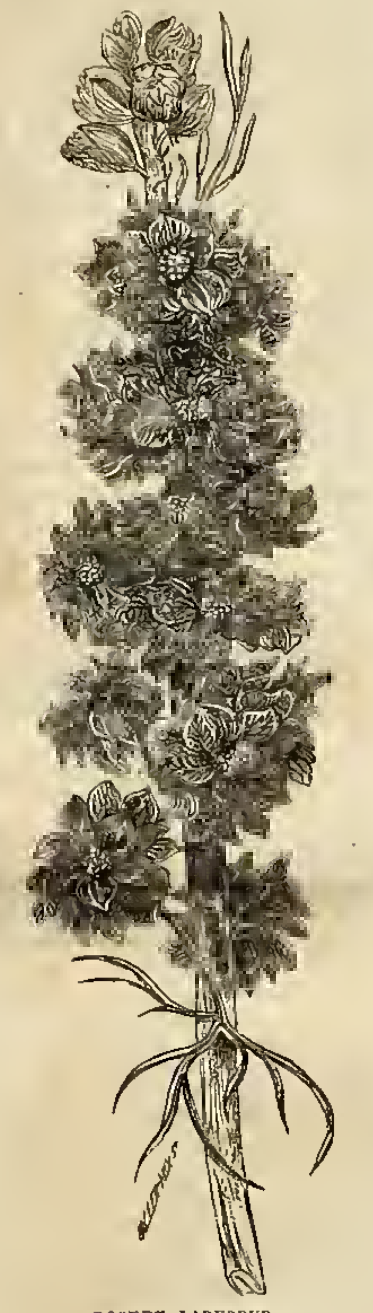
The best manure is that from stables where the horses are fed freely with grain, well decomposed, so that it may be thoroughly mixed with the surface soil. Leached ashes also are very valuable—more so than unleached. Any good compost manure may be used successfully, but that pretty active and quickly operating is the best.

Raising and Planting the Seed.—Those who raise their own seed, have found it to their interest to select the best shaped and most desirable onions for that purpose, and have thereby much improved the product. The *Silver Skin* is now the most popular onion. The *Red* is preferred in foreign markets, the *White* is milder, but does not keep as well.—From three to four pounds will grow an acre—and it is planted with a common drill machine, in rows about fourteen inches apart. If the seed is not first-rate, it is better to double the quantity than to have them too thin. They should stand from an inch to an inch and a half in the rows. The seed may be tested by sprouting a small quantity in boiling water. If it is good, it will sprout in fifteen or twenty minutes.

Cultivation and Weeding.—It is of much importance to the onion crop that it be kept free from weeds. The plants are very small when young, and will not bear rough treatment, so the fingers are the only machine which can be depended upon for the first weeding and thinning. Much labor may be saved by allowing no weeds to ripen on the land, and avoiding the use of manure which contains their seeds. The *onion hoe*, an instrument attached to a wheel, is much used in Connecticut for cleaning the space between the rows.

The greatest enemy of the onion is the grub or *cut worm*. They work in the night, but their tracks are easily found by the roothless and withering plants which mark it. The only remedy is capital punishment. Cleaning the ground in the fall, will lessen their numbers—or plowing at the same time.

The usual crop is from 450 to 700 bushels. The Essex Co. Ag'l Transactions contains reports of the crops of different cultivators to the amount of 20 acres, and the average product is over 500 bushels per acre. R. N. Y.



ROCKET LARKSPUR.

The Rocket Larkspur—Delphinium ajacis—was introduced into England, from Switzerland, in 1573. It is not, however, thought to be a native of Switzerland. It has been a very general favorite in British gardens for more than two centuries and a half; and, despite the introduction of innumerable new candidates for popular favor, it is still able to hold its place in every good collection of annuals. The Rocket Larkspur belongs to that age when ladies were not those dazzling, bewitching, deceptively fascinating creatures that some of our modern *belles*, superficially educated in all sciences, languages and accomplishments, have proved themselves to be, to the heartfelt sorrow of us susceptible bachelor mortals. She is very sedate in her manners, neat in her person, and, though adorned with the richest dress, it is so compactly put on that neither John Wesley, nor the most rigid disciple of Geo. Fox could accuse her of gaudy habiliments. The old lady, however, likes good living, and does not object to much company if it be the right kind. Though she has been in this country a great many years, yet she has not yet acquired our national habit of frequent change of residence. In other words, the Rocket Larkspur requires a very rich soil to bring it to perfection. The seed should be sown in drills where the plants are intended to blossom, as they will not bear transplanting. The compact habit of the plant renders it unnecessary to thin them out very much; they may be allowed to stand an inch and a half to two inches from each other in the rows. A large *thickly covered* bed has a beautiful appearance. The plants are of such a compact and symmetrical growth, that any device, such as a name, can be well made by them, merely by drawing the proper lines and sowing the seeds in them.

EARLY FRUIT.

On a recent visit to New York we were not a little surprised to find peaches, strawberries, green peas and tomatoes perfectly ripe, large, luscious and fresh, temptingly exposed for sale in the principal saloons. At the same time there were several inches of snow on the ground outside. This may afford some indications of the luxuriousness of the New Yorkers, but it also gives what is far more satisfactory, some indication of the advancement of the age in rapid navigation and friendly intercommunication. The peaches were genuine *Morris Whites*, and together with the tomatoes and green peas came from the West Indies,—we believe Bermuda. The strawberries came from the Southern States, principally from Georgia. The strawberries sold for about a cent each.

Peach Grubs.—One of our subscribers in Irondequoit, informs us that the easiest and best means of preventing the depredations of the peach grub, is simply to remove all the earth from the stem of the tree down to the roots. Two or three warm days will dry the bark and kill all the grubs. He has tried this plan on two hundred trees, and found it every-way satisfactory.

ROOTS OF PLANTS — TRANSPLANTING.

The roots serve to hold the plant in its place in the earth, and at the same time perform the important functions of respiration, and of absorption of moisture and of the various matter which go to make up the substance of the plant. It is the only part of the plant which takes up the earth matter, that is, the peculiar part of the plant. The power of the roots in absorbing water may be tested by taking a small plant from the earth and immersing its roots in a vessel of water; let it be a tumbler; and having another similar one, with an equal quantity of water, standing near. The difference in the diminution of the body of water will be very great, and will show the quantity absorbed by the plant. It will take up many times its own weight of water in a very short time. An experiment with four plants of spearmint in this way, being kept with their roots in water 56 days, proved that they took up about seven pints, the weight of which was about 54,000 grains, while their own weight was only 403 grains—being nearly twice and a half their own weight each day.

The absorption of the water by the roots must be in proportion to the exhalation by the leaves and the digestion and assimilation in the tissues of the plant, or it will suffer in health. This is the case in seasons of drought or in dry situations. The absorption is mostly performed by the new and growing root fibres or spongioles, which are spongy at the extremity. These young fibres are therefore of vital importance to the plant; and by breaking these, in removing a tree for transplanting, the power of absorbing nourishment is diminished, often to such a degree that the tree languishes, and sometimes perishes.

American Forest Trees.—In North America we have fifty species of oak, while all Europe has only 30 species. North America has forty species of pines and firs, the United States over twenty, while Europe has but fourteen species.

Domestic Economy.

Crullers.—One cup of sugar, one cup of sweet milk, two eggs, one table-spoonful of butter, one of cream tartar, one tea-spoonful of soda, roll and cut very thin, then fry them.

Ginger Snaps.—Two pounds of flour, one-half pound of butter, one-half pound of sugar, one-half pint of molasses, one tea-spoonful of saleratus, two table-spoonfuls of ginger; flavor with cloves or cinnamon.

Sally Lund.—One pint of new milk, two eggs, one table-spoonful of butter, one of lard. Make a stiff batter, and add yeast enough to lighten. This is good for breakfast, or in place of Johnny Cake.

Cure for a Dry Cough.—Take of powdered gum-arabic, half an ounce; liquorice-juice, half an ounce. Dissolve the gum first in warm water, squeeze in the juice of a lemon, then add of paregoric two drachms; syrup of squills, one drachm. Cork all in a bottle and shake well. Take one tea-spoonful when the cough is troublesome.

Grapes.—The use of grapes as an article of food is much recommended in case of consumption. They contain a large quantity of grape sugar, the kind which most nearly resembles milk sugar in its character and composition, which is also useful for consumptives, it having a great attraction for oxygen, and readily affording material for respiration.

A Hint.—A very pretty and economical finish for sheets, pillow-cases, &c., may be made from the cuttings of bleached muslin, by cutting one and a half inch squares, and folding them bias, from corner to corner, then fold again, so as to form a point, seam on the straight side on raw edge, and face on a strip to cover the seam.

Death from Eating Cloves.—A man by the name of Brown recently died in convulsions, and subsequent post-mortem examination showed that his death was caused by eating cloves, which he had been habitually using for a long time instead of tobacco.

Mechanic Arts, &c.

LIST OF PATENT CLAIMS

Issued from the United States Patent Office,

For the week ending April 25, 1854.

Josiah Ells, of Pittsburg, for improvement in revolving fire-arms.

James R. Stafford, of Brooklyn, for improvement in distilling and condensing apparatus.

Arthur Harvie and Charles Goild, of Cincinnati, for improvement in rinsing fermenting in close vessels.

Joseph C. Tiffany, of Coxsackie, N. Y., for improved mulching plow.

Geo. W. Glass, of Alleghany City, for improvement in cast iron car wheels.

Frederick Field, of Adrian, Mich., for improvement in traveling bridges.

Wm. E. Milligan, of New York, for improvement in railroad car seats.

John P. Avery, of Stonington, for improved mode of securing stones in foundations.

Thos. W. Brown, of Boston, for improved file or bill holders.

Chas. Boss, of Marlborough, N. Y., for improvement in fire-arms.

Reuben Burdine, of Washington, D. C., for improved rotary pump.

Stephen and James A. Bazin, of Canton, Mass., for improvement in machinery for laying pipe.

Henry Clark, of New Orleans, for improvement in machines for feeding sheets of paper to printing presses.

George H. Cottam, of Hampstead Road, England, for improvement in portable folding chair bedsteads. Patented in England, Oct. 5, 1852.

Geo. C. Jones, of Alna, Me., and Peter King, of Whitefield, Me., for improved wedge machine.

Geo. Little, of Ulica, for improved mode of operating the feed tables of printing presses.

W. Kuhlenschmidt and W. Hauff, of N. York, for improvement in apparatus for feeding paper to printing machines.

Daniel R. Prindle, of East Bethany, N. Y., for improved field fence.

Frederick Shann, of Baltimore, for improvement in glass furnaces.

John C. F. Salomon, of Washington, D. C., for improvement in brick making.

Albert Spencer, of New York, and August Loeschner, of Brooklyn, for improvement in forming and hardening hat bodies.

W. G. Stirling, of Bridgeport, Conn., for improvement in forming roofs.

Wm. M. Storm, of New York, for improved bullet moulds.

Varanes Snell, of North Bridgewater, Mass., for improvement in machines for cutting and skiving boot counters.

De Witt C. Smiley, of N. York, for improvement in oilers for machinery.

Wm. B. Thomas and Samuel Hickok, of Buffalo, for improvement in railroad car seats.

Simeon Towle, of Pembroke, N. Y., for improved syringe eye bath.

Isaac True, of Rochester, Ind., for improved reacting water wheel.

C. D. Van Allen, of New York, for improvement in invalid bedstead.

Wm. F. Kelchum, of Buffalo, assignor to Rufus L. Howard, of same place, for improvement in guard fingers of harvesters.

RE-ISSUE.

F. C. Goffin, of New York, assignor to A. B. Ely, of Boston, for improvement in fire and burglar proof safes. Patented Feb. 14, 1851.

IMPORTANT DISCOVERY.

Great guns, *boulets asphyxiants*, liquid fire, Paixhan's and Warner's long rangers, and other humane contrivances for shortening life and the duration of war, being in great repute just now, we give the following interesting communication from a writer in Paris, describing the application of an important French invention to naval warfare:

The great invention of the day, the submarine navigation of Dr. Payerne, is about to be put in practice at Cherbourg, the company purchasing the invention having volunteered to cleanse that harbor free of expense to the government. The secret consists in the discovery of a means whereby artificial air may be produced in sufficient quantity to enable a crew of fourteen men to breathe freely beneath the water for the space of four hours. A curious experiment has been already made at Marseilles, where Dr. Payerne, in company with three sailors, went to the bottom in presence of hundreds of spectators, and rose at a considerable distance and climbed the port-holes of a man-of-war without being perceived by the crew. Many experiments are about to be tried of the efficacy of this novel means of attack.—A submarine fleet of small boats, each to contain a crew of twenty men, is already talked of as being about to be organized for the Black Sea. It seems that no intimation whatever is given, by the slightest ruffle on the surface, of the approach of one of these vessels. The apparatus invented by Dr. Payerne enables the wearer, moreover, to move about with perfect ease at the bottom of the sea, and great anticipations are formed of the immense benefit to be derived in submarine history from the adoption of this new method of becoming acquainted with the hitherto unknown mystery of the ocean. However, it is not a bad reflection on the spirit of the age in which we live, to remark, that the first application of this tremendous power, which should take rank with the electric telegraph, as proof of the wondrous perseverance and ingenuity of man, has been made use of for the supply of oysters from Granville for the *halles* of Paris.

New Mode of Fencing. The Scientific American says that a gentleman residing in Windsor, Vt., has introduced into that region a method of fencing, which for cheapness or durability and efficiency can hardly be surpassed. He procured stakes of a suitable wood, five feet in length, and steeped the lower portion of them in solution of blue vitriol—one pound to forty of water. This renders them almost indestructible by the natural process of decay. He then drives the stakes into the ground at a distance of 8 inches apart, bringing the tops into a straight line, and nailing upon them a narrow strip of board, using one nail for each stick. Among the advantages of the fence thus made, apart from its cheapness, it is said that "cattle and sheep can't get through it, horses will not jump it."

A WONDERFUL CLOCK.

There is now in the possession of and manufactured by Mr. Collings, silversmith, of Gloucestershire, England, a most ingenious piece of mechanism—an eight-day clock, with dead beat escapement maintaining power, which chimes the quarters, plays sixteen tunes, plays three tunes in twelve hours, or will play at any time required. The hands go around as follows:—One, once a minute; one once an hour; one once a week; one once a month; one, once a year. It shows the moon's age, the time of rising and setting of the sun, the time of high and low water, half ebb and half flood, and by a beautiful contrivance, there is a part which represents the water, which rises and lifts the ships at high water tide as if it were in motion, and as it recedes, leaves the little automaton ships dry on the sands. It shows the hour of the day, day of the week, month of the year.—In the day of the month there is a provision made for the long and short months. It shows the twelve signs of the zodiac; it strikes or not, chimes as you wish it; it has the equation table, showing the difference of clock and sun every day in the year. Every portion of the clock is of beautiful workmanship, and performs most accurately the many different objects which are called into action by the ingenious proprietor, who is most willing to describe all its achievements to any one who may feel a pleasure in paying him a visit.

PREVENTION OF COLLISIONS ON RAILWAYS.

Mr. W. Gosling, of Woolrich, Eng., has registered an invention for the prevention of collisions on railways; consisting of a pendulum attached to the under side of the tender, and a series of stops placed on the sleepers, one opposite each telegraph post. These stops act on hinges or joints, and during the ordinary transit of trains lie flush with the permanent way; but should any indication of danger be apparent to a policeman, a station master, or any other official, by running a few yards he can raise a stop, which, coming in contact with the pendulum of the first locomotive, closes a valve, which shuts off the steam, and rings a bell, to call the attention of the driver to the fact. Should an engine make its escape without a driver, as has sometimes occurred, communication by telegraph would be made to the next station, and a like operation would bring it to a stand still without danger.

Manufacture of Candles.—F. Capiccioni, of London, has patented a new mode of making candles as follows:—When the tallow for making the candles is melted in the kettle, about one seven-thousandth of its quantity by weight, of the acetate of lead is added, and well stirred among the whole for 15 minutes. The heat is then lowered, but the tallow is still retained in a liquid state. About one-thousandth part of weight of turpentine, and a little of any of the perfumed resins are then thrown in, and all well stirred until the whole are thoroughly incorporated together; this takes about two hours, one hour for stirring, and one hour of rest for the uncombined impurities to settle to the bottom. The acetate of lead, it is said, makes the tallow hard and much superior to tallow not so treated; and upon the whole, the composition makes very superior candles.

A New Churn.—Silas Herit, of Seneca Falls, is a bold man; he has dared to offer the world a new churn—another patent churn.—The greatest curiosity about this last of the churn family is how any man could invent one different from the thousand and one already lumbering the Patent Office. This he has done by making two upright shafts, instead of one, armed with spokes, which, being driven rapidly by a crank with two bevel wheels working into pinions upon the head of the shafts, give them a motion which throws the cream to the center, where it is broken up instead of passing around in a continuous circle. The plan looks like a good one.

A New Use for Electric Telegraphs.—A Vienna paper in giving a description of a Russian camp visited by the writer, alludes to certain vehicles having the appearance of an omnibus, each of which contained a complete electrical apparatus for telegraphing. Each carriage carried a coil of wire so thoroughly insulated that the heaviest artillery could pass over it without damage. This wire was dropped along the ground by the locomotion of the carriage, and by the use of batteries and machines the Commander-in-Chief was enabled to receive information from different parts of the field and communicate orders instantly.

Tobacco Chewers, Beware!—Besides the poison contained in the weed itself, many of our tobacco chewers are absorbing into their systems an oxyde of lead—the same which kills so many painters, and paralyzes others.—Lead foil is cheaper than tin foil, and some of those who put up tobacco for chewing, use the latter instead of the former. The counterfeit may be known by its dark blue or bluish color, whereas tin foil is nearly white. Tobacco chewers who do not wish to absorb two poisons at once, will do well to profit by this caution.

A Word to Young Mechanics.—Young mechanics, who would prosper in business, have only two rules to live up to, to insure success. First, *do your work as your customer wishes to have it done.* The other rule is, to *do it by the time you promise to have it done.* These two rules complied with, and there is not much danger, if any, of a failure.

A Frenchman has invented a kind of paper made from gutta percha, which is considered to be superior to all other kinds for lithographs and engravings.

Cement for Bricks and Stones.—Sulphate of zinc and sulphate of iron, dissolved in water for slacking lime, makes it into a good cement.

Educational.

THE ILL-NATURED TEACHER.

"I HATE to go to school, above all things!" said a bright young boy; "Old Grimes, who teaches our school, is such a snarling and cross old dog!"

"Do you love to study?" was our response.

"Yes, I would like it, if the teacher would assist me out of tight spots in my arithmetic with any zeal or kindness; but he always scolds more than he explains, when applied to for assistance. He forgets that what is easy for him after having gone over and over it for years, is hard for a beginner: I can solve a problem a second time, after understanding it, but I cannot first go over the ground alone. If we only had a pleasant teacher, we would behave far better than now; for we often do things on purpose to annoy him."

Is it not a fact, that a pleasant teacher has a far easier task in school, than his antipodes? What the boy asserted in regard to his own school, is true everywhere; the ill-natured teacher is both hated and feared, and his pupils take special pains to render his situation uncomfortable as possible, on the ground of reprisal and compensation. Old father ADAM is too prevalent among all his posterity, to pass an injury or annoyance unavenged; and consequently, the ill-nature and tyranny of the teacher, and the hatred and stubbornness of the pupils go hand in hand.

The former has many things to try his patience, and it really seems that the very nature of his employment tends to render him irritable and unhappy. It certainly ultimately unfits him for any other employment, and even for teaching itself, after a long series of years. It is notorious, that, as a general rule, a district school teacher gives less and less satisfaction each successive year in any one location. A wise teacher watches the signs, and erudes the gathering storm by a timely retreat.

Many, and perhaps most of our ill-natured and unhappy teachers, are made so in a great measure, by extraneous circumstances. They hate their employment, as they hate the foul fiend, but have been driven into it for a livelihood, because no other offers itself to them.—They are generally well educated men, some of whom have undertaken other pursuits and failed; lawyers who have too much conscience, or too little brass, or too slow movement of intellect; clergymen whose health, or voices, or theology is not sufficient; doctors whose bills and boluses killed instead of cured; literati, whose writings served as opiates to the reader, and a losing venture to the bookseller; disappointed men in a thousand other employments where intelect is one of the first requisites to success, fall back on teaching, which, perchance, they were engaged in previously, and at the time they were studying for the purpose of occupying another sphere.

Let every teacher especially remember, that he must make up his mind to be interested in his employment, and love it, too, so far as a man can love labor; and, above all, he must watch over his temper and keep his passions under a double guard, or he will certainly fall beneath the ban which our young friend declares exists in the case of OLD GRIMES.

[Written for Moore's Rural New-Yorker.]

"SELF-IMPROVEMENT OF FARMERS."

To S. G., Esq.—*Dear Sir:* Having been a reader of the RURAL NEW-YORKER for some time past, and seeing articles from your pen on the subject of Self-Improvement of Farmers, please excuse me if I seem to trespass awhile on your time, and ask you to answer a few interrogatories. Most essays on the education of farmers amount to just nothing, for the reason that there is nothing practical in them. A random, round-about dissertation on the general advantages of education, is not sufficient; something more is needful—some practical direction that can be carried out when the young farmer leaves school and comes home to settle down in business, that will not interfere with, or cause neglect of such business.

But to the point. What should a young farmer, with a fair theoretical education, with several weekly and as many monthly papers at his hand, *do*, to get ahead, instead of forgetting what he has learned? Could one who spends most of his evenings at home, either reading, writing, or visiting,—who intends that not an hour shall pass unimproved,—do better than to keep on in that course? or should he write more, and on what subjects? I know of some of my school-mates, who have entered upon other pursuits, now standing far ahead of any who follow farming, although at school they stood behind. It may be a natural consequence of things: but should not farmers take a higher aim, and not allow themselves to remain, or relapse into a half-barbarous state like some? Do you not think, if farmers would spend a few weeks in each year, out of sight of their own homes, among the people of the world, that the rust for the remainder of the year would not eat so deep into their souls? and would not such a journey give them new tho'ts and ideas, for where the time and *money's worth?* Is there any way whereby a habit of easy, off-hand talking can be acquired—a habit but few of my acquaintance and in my situation possess? Society in most country places is not well calculated to cultivate the conversational powers, however agreeable it may be to hear one speak not his thoughts correctly, as he thinks. Now, I wish to adopt some practical plan which I can carry out, when in the field, or wherever I may be, so that at the end of the year I may feel that I have garnered something in my head as well as in my barn.

Yours, respectfully, "L. L. S.

Cardiff, April, 1854.

To L. L. S.—*Dear Sir:* Although a stranger, the interrogatories you address to me, leave no doubt of your sincerity and candor; and though unable to admire your choice of a counselor, yet I do not feel disposed to refuse to give that, which to keep is worthless, and to refuse might be thought criminal.

Those random, round-about dissertations on education which you complain of, if a fault, belong to a fashion in newspaper writing, supported by public taste, which will accept of scarcely more than points from which to draw conclusions,—and those must be finely turned, smoothly turned, and harmoniously arranged. In my opinion, no class of men in this country have more leisure, or better opportunity to acquire what I deem a thorough education, than farmers; and no better directions could I give in a newspaper article of a right course to pursue, than is given in No. 28, Vol. 4, of the RURAL NEW-YORKER.

All depends on what one aims to attain—what is the height of his ambition. If it is to become useful, he will strive to learn and practice what will benefit others as well as himself; if wealth be his aim, he will study his private interest-table, and neglect the rule of fair proportion, without thought of neglecting business more important.

It is natural for a man's thoughts to run most on what most interests him—and nature always guides to the best results; so study nature, or natural philosophy. And though experience is said to be the most reliable guide to knowledge, yet it is always found in accord with natural results, and too expensive for general use. The true intent of education is to dispense measurably with its aid; and those truly learned are able to profit by the experience and wisdom of others.

A fault in our educational system lies in teaching theory and practice separately; requiring the youthful portion of life to learn theory, and the remainder to learn practice; so that at the end man has just learned how to live aright. Self-education is the best, only because it is most practical; and practice is the primary principle of knowledge. Theory is an auxiliary, and but a fraction, without a knowledge of a practical application to the affairs of life. Dr. FRANKLIN's philosophical theories faithfully applied to any aim in life, could hardly fail of success; and without some practical aim, life is a hap-hazard affair, with chance or accident at the helm, and many chances of ending the voyage with or below the common level of humanity, to one of rising above in the scale of being.

I esteem writing thoughts the best mode of improving ideas and correcting sentiments; but a written correspondence, with that desire, in search of truth would rarely prove useful; but on the other hand, *worse than useless*, if merely adopted to support and defend opinions with cunning sophistry and fine argument, regardless of truth.

The forensic ability, like all else in human nature, is susceptible of improvement by cultivation. History proves it in DEMOSTHENES, and in him it proves also to be a quality more ornamental than valuable. It may ornament varied, extended, superficial information; but to become useful, it requires profound knowledge, strong judgment and sound sense. One may possess all these, and yet find it difficult to attain eminence as an orator, especially if leading a rural life, and much more difficult to acquire in any station in life, without a natural gift of easy, off-hand talking, than the ability to write thoughts beautifully; besides, not near as useful, however pleasing it may appear.

In conclusion, allow me to express my best wishes and hopes for your success in all your laudable efforts; and that you may be able to garner up wisdom with your other stores, and never have occasion to look back with regret at time squandered unprofitably.

Yours, &c., S. G.

Marcellus, N. Y., April, 1854.

EDUCATION IN VIRGINIA.—The Richmond Whig argues the necessity for adopting a more efficient system of education in that State. It says:

Every decade exhibits a rapid and fearful increase of this mass of ignorance. In 1840 the number of the unlettered in Virginia amounted to 60,000. In 1850, it exceeded 80,000. At this rate, it will not require many centuries to extinguish all knowledge of letters in the State."

THE SONG SPARROW.

This little bird is among our earliest spring visitants, and its species is widely diffused throughout the United States. Many of these birds remain through the winter in close sheltered meadows and swamps, although, like most other of our songsters, the larger portion migrate to a warmer clime on the approach of cold weather. The body of the Song Sparrow is about six and a half inches long, and the plumage of a chestnut color, streaked and mottled on the breast with white. It is a familiar acquaintance of every rural schoolboy, who, very often in his rambles "cross lots," and it may be truancies, frightens the female from her ground-built nest under a hummock in the meadow, or an old root in the pasture. It is not a shy or unsocial bird, and suffers the near approach of juvenile humanity, before taking the wing; and too often, with sorrow be it spoken, pays the forfeit with its poor little inoffensive life, from a fatally aimed stone, or the contents of some rusty old firelock. If anything will justify the beating of a boy by his companions, it is the cruel and wanton act of killing an inoffensive bird, or destroying its nest.

The Sparrow family embraces with us three distinct varieties, viz., the Song Sparrow, as above stated, the Chipping Sparrow, and the Field Sparrow.

The Essayist.

MODERN CIVILIZATION.

MODERN civilization presents an aspect quite distinct and different from its ancient prototype. An intense and ceaseless activity in the direction of the physical sciences, is its great exponent; and the astounding developments that crowd themselves upon our attention in quick succession, give us no time to recover from one surprise before another wonderful discovery is presented to our view. All the great themes of intellectual pursuit which occupied the attention of the Ancient schools of philosophy, are either entirely laid aside, or only used as subsidiary to the same great ends, viz. the control and management of the physical agencies by human hands.

Mathematics is now a means and not an end. It is mastered by the student, for the purpose of making it a handmaiden to the science of Engineering, Architecture, or the Mechanic Arts. Logic is turned aside from its old and trodden path of synthetical reasoning to the new and better track of analytical research.—Results are taken up and traced back to their true causes, instead of causes being seized upon speculatively and the results deduced.

"Nature abhors a vacuum," says the ancient philosopher, "to a certain height—but no higher." The modern student, not satisfied with this explanation, ascertains by numberless experiments the true causes of the phenomenon. A PLATO could philosophize and talk—a DIOGENES could roll his tub and sneer—a VIRGIL could poetize and pay fulsome compliments to a tyrant, by tracing his ancestry to the gods; but none of them could invent a steam engine, a self-acting mule, or a locomotive. None of them could draw the lightning from the clouds, or send it on a journey of a thousand miles with a message of wisdom or an errand of mercy. Demoniac agencies and princes of the powers of earth and air, are at this day repudiated, and the potency of the elements ascribed to its true cause, their own inherent characteristics breathed into them by the Creator.

The tendencies of the age partake perhaps too much "of the earth, earthly." Utilitarianism is the order of the day, and the production and multiplication of the creature comforts absorb by far the largest portion of human activity. Men of these days choose rather to ride in a rail-car, at the rate of forty miles an hour, than to travel on foot. They would much rather that an engine with no nerves for pain, or muscles for weariness, should do the sawing and grinding, and planing, while they sit by and watch the operation. They would much rather a steam press should do the work of ten thousand hands than to do one-ten-thousandth part of it themselves. They will study long and intensely to develop a physical agent to labor for them, and then observe its potent operations with the delight of a creator. They tear off the covering of an occult principle with a ruthless hand, and then turn its previously hidden throbbings to the amelioration of the condition of poor humanity.

The fear is, under present auspices, that men will become too closely wedded to the physical sciences, and neglect the moral. The intellectual is perhaps in no danger of decadence, while the present activity manifests itself; but high intellectual attainments do not necessarily exist in connection with religious or even moral sentiments. They are not antagonistic, it is true; they are very often, but far from always, co-workers. It is a fact over which the religious world is even now lamenting, that there is a great dearth of religious teachers. The theological school is less patronized than any other, and many even of those who do enter, turn aside before their course is finished to engage in some secular pursuit. Some of them become lawyers, (a bad exchange in far too many cases;) many of them civil engineers, designers, architects, editors. Others again, merchants, speculators, gold diggers in California, any thing in fact, but what they set out to be, and are really well qualified to become, namely, clergymen.

The development of the physical sciences is a noble and a glorious enterprise, and deserves the great encouragement it receives; but it ought not to become all-absorbing. Its fruits are nutritious, but not exclusively life-sustaining. Paper manufacture, the printing press, the steam engine, the power-loom, the rail-car, the daguerreotype, the magnetic telegraph, and a thousand other like inventions, are the characteristics of modern civilization. Man's progress is onward; but he is ascending a material, not a spiritual elevation, and he drags up with him a grievous burden of mortal cares.

A VOICE FROM THE GALLOWS.

YOUNG JEWELL, recently executed in Pottsburg, wrote to a friend of his as follows;

I trust what little I have to say to you will not be deemed wrong nor out of place; it may be a benefit to you in years to come, and you may profit by it, which I hope you will. Only look back to the morning of the 5th of July, 1852, and picture to yourself the happy man I was on that glorious, but unhappy day to me. I left my little family under the promise to be back again in the course of an hour, to accompany them on a railroad excursion; from there I got into the company of some young friends, took a social drink together, from that to another, and yet another; I then forgot my promise to those I held most near and dear to me. And it is this blighting curse, and against its use I wish to draw your attention. You are younger than I am, and I know you will bear with me in warning you from *ever, ever* touching it. I know you are not in the habit of it; but you are kind, open, generous and free hearted, and it is for this that makes me write to you on this occasion; and you will admit that no one knows your generous disposition better than I do.

I will say no more in regard to this, but my last word to you is, never, never drink liquor, and you will be a happy man. Leave off running with fire engines; they are the means of bringing many a good young man to shame and disgrace. Let your evenings be spent in the society of your wife and child, and my word for it, you will be the happiest of the happy.

SIZE OF OUR GREAT LAKES.—The latest measurements of our fresh water seas are these:

The greatest length of Lake Superior is 335 miles; its greatest breadth is 160; mean depth 988 feet; elevation 627 feet: area 32,000 square miles.

The greatest length of Lake Michigan is 360 miles; its greatest breadth 108 miles; mean depth 900 feet; elevation 587 feet; area 20,000 square miles.

The greatest length of Lake Huron is 200 miles; its greatest breadth is 160 miles; mean depth 900 feet; elevation 574 feet; area 20,000 square miles.

The greatest length of Lake Erie is 250 miles; its greatest breadth is 80 miles; its mean depth is 84 feet; elevation 565 feet; area 6,000 square miles.

The greatest length of Lake Ontario is 180 miles; greatest breadth 65 miles; its mean depth is 500 feet; elevation 262 feet; area 6,000 square miles.

The total length of all five, is 1,585 miles, covering an area altogether of upward of 90,000 square miles.

Sunday Reading.

THE SABBATH.

BY EDWARD LYTTON BULWER.

FRESH gildes the brook and blows the gale,
Yet yonder sits the quiet mill;
The whirling wheel, the rushing sail,
How motionless and still.

Six days of toil, poor child of Cain,
Thy strength the slave of want may be;
The seventh thy limbs escape the chain—
A God hath made thee free.

Ah! tender was the law that gave
This holy respite to the breast;
To breathe the gale, to watch the wave,
And know the wheel may rest!

But where the waves the gayest glide,
What image charms in life their eyes?
The spire reflected on the tide
Invites thee to the skies.

To teach the soul its nobler worth,
This real from mortal toil is given;
Go, snatch the brief reprieve from earth,
And pass a guest to heaven.

They tell thee, in their dreaming school,
Of power from old dominion hurled;
When rich and poor, with juster rule,
Shall share the altered world.

Alas! since time itself began,
That fable hath but fooled the hour;
Each age that ripens power and man,
But subjects man to power.

Yet every day in seven at least,
One bright republic shall be known;
Man's world awhile hath surely ceased,
When God proclaims his own!

Six days may rank divide the poor,
O thrives, from thy banquet hall!
The seventh the Father opes the door,
And holds his feast for all!

THE FLEETNESS OF TIME.

O COULD we but realize the true value of time, how careful would we be to improve it aright! GOD has placed us here to prepare for a higher state of existence. Our time of preparation is short, and what we do must be done quickly. We stand amazed and wonder-stricken as we see drop into the grave, the young just coming on to the stage of action. Let us be careful then, how we ourselves improve the time allotted to us here. We may not live another week. No one is exempt from death's dread summons. I knew a young boy, the idol of his parents, and loved by the whole community; the seal of intellect was enstamped upon his brow, and his eye beamed with generous fire. But alas! disease fastened itself upon his vitals, and he speedily passed away!

We may soon be called in turn to follow him to the eternal world, and there we shall have to render a strict and impartial account before God, a just tribunal. With the many privileges we now enjoy, we cannot sin with impunity. Let us live in such a manner that when we shall be called to try an exchange of worlds, it will be with pleasure and not with grief. J.

RELIGIONS OF TURKEY AND RUSSIA.

THE *North British Review* thus compares the religions of Turkey and Russia:

It is not true, in the sense in which it is ordinarily alleged, that the Russians are our *fellow*-Christians, and that the Turks are "Unbelievers." Both, according to our creed, are "*mis*-believers." We very much question whether, if the matter were truly understood, we should not find that English Protestants, and Scotch Protestants still more, have at least as much sympathy of faith and feeling with the Mahometan monotheist as with the benighted votaries of the Russian Church. The Turks pray to God only—"the God of Abraham, of Isaac, and Jacob;" the Russians pray to a host of saints who are an abomination in our eyes. The foundation and first point of all three communions—the Mahometan, the Oriental Christian, and our own—are identical. We all believe in one God, and in Moses, David, and Jesus Christ, as his inspired prophets; the last we, in common with the Greek, regard as our Divine Saviour. Both Russian and Turk go further: the latter add Mahomet—the former add St. Nicholas, St. Catharine, and an interminable calendar of canonized priests and worthies. It is sad and unsatisfactory to be called upon thus to cast the balance between two false and faulty theologies; but we will appeal to any earnest Protestant who has lived in Turkey, whether he did not feel as much prompt and natural religious sympathy with the follower of Mahomet, whose simple faith is comprised in two formulas—prayer to God and charity to man; who never fails night or morning, at business or at meals, when the Muezzin sounds the hour for his devotions; who never passes a mendicant without bestowing alms upon him "for the love of God," however poor he may be himself—as with the so-called Christian of the Oriental Church, whose whole religion is a mass of fasts and superstitious ceremonies, who is enslaved by a priest almost as ignorant as himself, who knows little of his Saviour, and even less of his God."

THE FURNACE OF AFFLICTION.—Afflictions make some people better, and others worse, as the fire reduces some things to a plastic state, capable of being moulded to any form of usefulness and beauty; while the same mighty agent applied to other things utterly ruins them. Sickness is an affliction that almost always softens the heart, at least for a time.—Pliny's observation was correct:—"I have always noticed that we are better men when we are sick, than when we are in health."

ADVERSITY is the true touchstone of merit.

Miscellaneous.

LIFE AND DEATH.

"What is Life, father?"

"A battle, my child,
Where the strongest lances may fail—
Where the wariest eyes may be beguiled,
And the stoutest heart may quail;
Where the foeman gathered on every hand,
And rest not, day nor night,
And the feeble little ones must stand
In the thickest of the fight."

"What is Death, father?"

"The rest, my child,
When the toil and strife are o'er,
And the angel of God, who, calm and mild,
Says that we need fight no more;
Who driveth away the demon band,
Bids the din of battle cease;
Takes the spear from our failing hand,
And proclaims an eternal peace."

"Let me die, father; I tremble, I fear,
To yield in that terrible strife!"
"The crown must be won, for Heaven, dear,
In the battle-field of life.
My child, tho' thy foes are strong and tried,
He loveth the weak and small;
Angels of Heaven are on thy side,
And God is over all!

Dickens' Household Words.

[Written for the Rural New-Yorker.]

MAY,—AND MAY-DAY PLEASURES.

"It is the choice time of the year,
For the violets now appear;
Now the rose receives its birth,
And pretty primrose decks the earth,
Then to the May-pole come away,
For it is now a holliday."

May, the last spring month, is so called from the Latin *Maius*. The French is *Mai*; the Dutch, *Mey*; the Saxon, *Mej*. These are terms denoting what is beautiful, sweet, and gay: for all hail with pleasure the advent of this lovely month. Life flows afresh, and in new, a quicker impulse animates every living thing. It is many-colored, and the hues daily brighten into greener life. The vivid verdure springs up in the moist meadow, and flowers deck the withered hill-side. The hawthorn blossoms into snowy whiteness, and the lilac bursts its buds into purple beauty. The flowering almond glows in rich coloring, and beautiful are the pale-red blossoms of the peach. The busy bee hums from flower to flower, sipping pure nectar, its liquid, golden store. The birds are heard in the sylvan nooks, trilling the sweetest notes of nature. The showers, so soft and mild, speak in the streams on a hundred hills. The shepherd leads out his snowy flock into fresh pastures. The lowing herd roam the extended lea, and crop the tender herbage. The plowman yokes his steers, and cheering them on with a simple song, turns up with a shining share the rich loam. All earth is smiling and exulting in the tone of gladness. And the heavens, too, are full of loveliness, and by their mildness and deep serenity, add a charm to the witching beauty of earth. The fleecy clouds, high above, floating in their stillness, seem whiter than snow. Thus, all things tend to render May the sweetest and gayest month of the year; and with joy and gladness its coming is hailed.

It once was the favorite custom in England and Scotland, and even in some parts of our own country, to celebrate with gay festivity the first of May. May-day was joyfully welcomed, by old and young. A May pole was erected on the village green, and adorned with wreaths of flowers, rosy garlands, ribbons, and streamers. When May-day came, the old and young, rich and poor, with glad hearts and merry countenances, assembled to celebrate the sports of this most glorious holiday. A Queen of May was chosen, the fairest of the village maidens. Often a bower was erected for her, of green branches and flowers. Her brow was trimmed with a roseate garland, the insignia of honor. All became deeply interested in the sports of the day. Various were the games and contests entered into for amusement; as wrestling, running, leaping, and all such as are common in rural districts. The Queen of May bestowed upon the victor a crown, twining it around his brow with her own fair hands. The festive board was plenteously furnished with good cheer. The song was heard. The witty story went the rounds, then peals of laughter broke upon the air. At evening, to close the halcyon festive scene, the young united in the dance on the green, around the May-pole. This simple custom has now become nearly extinct. The dance on the green, and all the other innocent amusements, entered into on May-day, have gradually disappeared, as the people have become expensive and artificial in their pleasures, and too proud or fastidious for simple enjoyment.

Another custom practiced on May-day, in some of the rural districts of Scotland, was for the young to go out at early morning and bathe their faces with the flowery dew-drop.—They believed this would preserve their beauty, and add a freshness to the rosy cheek. Simple and innocent custom, and well worthy of practice in our own day! A. J. E.

Esteem cannot be where there is no confidence; and there can be no confidence where there is no respect.

[Written for Moore's Rural New-Yorker.]

THE CITY OF ALL NATIONS.

We had now reached our destination,—the City of Cities—the Metropolis of all Nations. With considerable precision we had, as we thought, pictured to ourselves its gravel promenades, its marble towers, its costly palaces; but we soon found "the half had not been told us," and that the city suffered nothing from actual survey, tho' perhaps our correctness of imagination did.

The first thing which attracted our notice was an ancient Gothic archway—the principal entrance to the city. Massive in proportions, loaded with wreaths and flowers, which still budded in imperishable bloom,—indeed, almost prodigal in variety of sculptural design,—there it stood, gray with the dust and duration of centuries, fit specimen of the patient, yet daring genius of a by-gone age. But this gateway, fine as it was, was only a kind of venerable introduction to still greater wealth of architectural display. Above, around, everywhere were the richest specimens of ancient and modern art. We were struck with the abundance of *monumental* buildings. Here a pillar, there an obelisk; here a cupola, there a minaret; sculptured group here, solitary bust there,—columns and cenotaphs everywhere. While surveying these commemorative edifices we could not repress the thought that, unless the citizens here erect monuments to their great men, *before* they are dead, this must be a solemn place to live in! Yes, notwithstanding this profusion of elegance.

Everything was so finished, and beyond the range of ordinary city-scenery, that for a time we felt as if all criticism were disarmed. However, after a somewhat lengthy survey—when, perhaps the plenitude of surrounding magnificence had begun to create feelings of satiety—we felt as if there were somehow an incongruity somewhere, in something. The *houses*, for instance, tho' for the most part of polished granite, marble and costly specimens of Alabaster, were, nevertheless, shrubbish rather, and irregularly built,—out of keeping, as our poor taste would suggest, with a city of such pretensions to varied, choice, and well-sustained eminence. Instead also of huge *blocks* displaying an ample front, these dwellings were to a great extent, of dimensions less imposing than we have often witnessed in other great towns. We wondered if, in this vast aristocracy of magnificence, there were no large families requiring *capacious* and *lordly* mansions. We marvelled, why, what was seemingly a palace in other respects, should have its equal in a one-story house; and a question as to the existence of window-glass in that part of the world often occurred to our mind, as we witnessed an evident antipathy to that precious material, and indeed a studied aversion to the use of it. Never so emphatically did the customs of a people evince that they "loved darkness rather than light." Our own imperfect notions as to what the model of "Eastern" taste should be, scarcely curbed our audacity to reflect on an arrangement so manifestly incongruous. Such lavish display of unbounded resources did not, to us at least, seem compatible with this frequent diminutiveness and obscurity in the dwellings themselves; and it is easy to imagine our disappointment at this sacrifice of accommodation to ornament, and our surprise on being informed, that instead of two or three individuals, *large households* had ample accommodation in these Liliputian domiciles.—Built however, of such precious material, and in a style so prodigally rich, we must confess they looked more like the mansions of another world, than the habitations on our own green Planet.

The streets, too, attracted our notice. Home of ease, and sinecure retirement as the city seemed to be, we were not amazed to find these streets and promenades more for ornament than use. At least they seemed not intended for the tear and wear of commerce; for they were principally of gravel, and fringed off with green-sward; nor did they present the business and rushed appearance of the wheel of traffic. The gardens and pleasure-grounds were numerous and attractive; though indeed many would pronounce them rather small and confined—the ordinary necessity where they are attempted in the heart of any large city. There seemed no want of *space* simply, but the fashion was to have fine things on the "inch" scale; and with half-sympathy and half-indignant inquiry we had to ask why ivy, roses, jasmine, and many choice specimens of flowers should be cooped up within a bronzed railing not many feet square. We trust we had charity to believe, however, that they had not perverted their own taste, though, we must confess they not a little shocked ours.

Moving along, temple after temple, pillar after pillar, mansion after mansion, we passed in their labored magnificence. We had made an early visit to the city, and hitherto had seen no signs of early stir, common to other great towns. But as they seemed to be done with "the bread of carefulness," it was no miracle to find them "fulfilling the desires" of a luxury and ease. "Up late" "up early," was not their motto, so far as we could learn. Time sped swiftly on as the charming sight met our eyes in endless succession and unabating excellence. But in spite of our eager interest in these, the thought that men and women lay hushed in slumber, senseless to the splendor of a now almost meridian sun, was unpleasant. We were retiring for dinner, still they slept. Is this the way they enjoy their gardens—their landscapes—their promenades? Not yet a symptom of returning activity! What! Had they made a compact with Morpheus? Or had the destroying Angel shaken his wings over the devoted city?—Strange indeed! The city we left, had been up and active hours ago, but here! Not a store open—not a "blind" unclosed—no morning hammers—no early chimney—peal of no morning bell—rush of no busy foot—nor voice, nor whisper, to greet the visitor's ear.

Marvelous city, thou city of all nations!—May we ask thee thy proper name? How earnest thou by thy wealth, thy magnificence, thy fame? thou city of repose! Were thy pillars and palaces *dreamed* into this slumbering calm of existence? Are they the handiwork of men whose *business* is to sleep?

Reader! this city is not on the maps. It has no place in the Gazetteers. It is not a place of manufactures; it is not a seaport; it is not an emporium of commerce. What business is transacted comes not to the public; what successes or failures the Gazette does not record. If any distress is here, the light sees it not; if any accident, it appears not in the Journals; if any achievement, the winds carry not the tidings. Whether they buy, or sell, or speculate, or go errands—it is all done *within doors*.—This city is populous; yet no census has been taken of it. It is daily increasing, yet no colonization thins its teeming millions. There are thousands of poor, as well as rich, yet no list of paupers; there are thousands of rich as well as poor, yet they cannot grasp their gold.—Corruption revels night and day, yet is there no catalogue of crime. Jewels are here, but not for show. Adornment is here, but it courts not eyes. Here is a strong arm, but its strength is weakness. Here is a clever "head," but there's a "napkin" round it. Here is a sparkling eye, if it could only open. Here is an acute ear, if sound could reach it. Here is a

City! Silent city! We bid thee farewell!—nimble foot, but there is pressure upon it.—Here is a flippant tongue, but it must *conform*. For how long, we know not. Not for ever, we *know*. Ours be thy motto (till all that is ours be thine)—Whatsoever thy hand findeth to do, do it with thy might; for there is neither work, nor device, nor knowledge, nor wisdom in the Grave—whither thou goest. R. A. P.

University of Rochester, 1854.

GENIUS, TALENT AND CLEVERNESS.

Genius rushes like a whirlwind—Talent marches like a cavalcade of heavy men and heavy horses—Cleverness skims like a swallow in the Summer evening, with a sharp shrill note, and a sudden turning. The man of genius dwells with men and with nature; the man of talent in his study; but the clever man dances here, there and everywhere, like a butterfly in a hurricane, striking everything and enjoying nothing, but too light to be dashed to pieces. The man of talent will attack theories, the clever man will assail the individual, and slander private character. But the man of genius despises both; he heeds none, he fears none, he lives in himself, shrouded in the consciousness of his own strength: he interferes with none, and walks forth an example that "eagles fly alone—they are but sheep that herd together." It is true, that should a poisonous worm cross his path, he may tread it under his foot; should a cur snarl at him, he may chastise it; but he will not, cannot, attack the privacy of another. Clever men write *verses*, men of *talent* write *prose*, but the man of *genius* writes *poetry*.—*Hazlitt.*

CAVES IN THE ARCTIC REGIONS.

Dr. Kane, the American voyager, relates the following concerning the caves of the Arctic regions. Some of the bergs were worn in deep, vault-like chasms, to which a way was practicable to broader caverns within. In the crystal solitudes the echoes were startling.—"A whistle—your own whistle—you could hardly recognize for the length and clearness of the ring; the clang of a ramrod was heard running down the whole length of an army in review; and when you spoke, your words were repeated through the motionless atmosphere almost as long as your breath could hold out to make them. I tried a hexameter we used to quote at home, and it came back to me in slow and distinct utterance, word for word. There is a certain cousin of mine, whom I remember annoying in our school days, for the dispatch with which he could say his prayers of a frosty night before jumping into bed. My cousin's entire ration of winter prayer, I thought would have been repeated to him by a single effort of these echoes."

He who, early in life, makes up his mind to succeed, and goes to work, throws off his coat, rolls up his sleeves, drives ahead in earnest, and labors right on, through sunshine and storm, in summer and in winter, that man will succeed. There is no such word as fail for him. Reverses only stimulate to effort; success does not intoxicate, only encourages directness and labor.

Good qualities, like great abilities, are incomprehensible and inconceivable to such as are deprived of them.

Ladies' Department.

CONDUCTED BY A——E.

LITTLE LUCY, AND THE SONG SHE SUNG.

A little child, six summers old,
So thoughtful and so fair,
There seemed about her pleasant ways
A more than childish air,
Was sitting on a summer eve
Beneath a spreading tree,
Intent upon an ancient book,
Which lay upon her knee.
She turned each page with careful hand,
And strained her sight to see,
Until the doorway shadows slept
Upon the grassy lea;
Then closed the book, and upward looked,
And straight began to sing
A simple verse of hopeful love—
This very childish thing:
"While here below, how sweet to know
His wondrous love and story,
And then, through grace, to see his face,
And live with him in glory!"

II.

That little child, one dreary night
Of winter wind and storm,
Was tossing on a weary couch
Her weak and wasted form;
And in her pain, and in its pause,
But clasped her hands in prayer—
(Strange that we had no thoughts of heaven,
While here were only there)—
Until she said, "O mother dear,
How sad you seem to be!
Have you forgotten that He said,
'Let children come to me?'
Dear mother, bring the blessed Book,
Come, mother, let us sing."
And then again, with faltering tongue,
She sang that childish thing:
"While here below, how sweet to know
His wondrous love and story,
And then, through grace, to see his face,
And live with him in glory!"

III.

Underneath a spreading tree
A narrow mound is seen,
Which first was covered by the snow,
Then blossomed into green;
Here first I heard that childish voice
That sings on earth no more;
In heaven it hath a richer tone,
And sweeter than before:
For those who know his love below—
So runs the wondrous story—
In heaven, through grace, shall see his face
And dwell with him in glory!

THE HEROINES OF EVERY-DAY LIFE.

BY MRS. H. W. H.

The Heroines who have from time to time borne a part in the stirring scenes of civil and political Revolutions, have had biographers and historians, who have handed down their names to posterity encircled by a halo that will remain undimmed, till civilization shall cease to embalm the remembrance of worthy deeds. It is not of these I would speak, nor is it of those females who are demanding equal political rights with men. These efforts, if successful would rob the sex of much that constitutes the sweet and holy associations of that place, around which all should delight to wreath their happiest memories—*Home*.

I shall sketch no fancy portraits, in alluding to those females who are engaged in the stern realities of life, nor shall I draw on imagination for characters of those whose lives are a series of "plots and counter-plots," to circumvent the adversaries that beset their paths—those whose individual acts are registered by the "recording angel" alone. Foremost in rank, is that woman who "does battle" against the demon, Intemperance, that has entered her sanctuary and enrolled under his banner the idol of her young heart, and is ruthlessly dragging him down to misery and death. Her weapons are Faith, Love, Hope, and Charity. With these she strives to reclaim the erring one, fortifying the minds of her children by Christian example and precept, leading them in the paths of virtue, in spite of adversity,—this woman, I say, is no less a heroine than she who buckles on the armor of her country and leads armies on the sanguined battle-field. The former has none of the incitements that constitute the surroundings of the latter. Many think it would be an easy matter for such a woman to sever the ties that bind her to the man whom she took for "better or for worse," in the devotion of her heart, never thinking the latter "worse" would be her lot. That man became the corner-stone of her little temple, the father of her children, and degraded though he may be, many considerations forbid the severing of the marriage tie, totally unappreciated by those who have never realized the delicate and endearing relationship of wife and mother. Efforts that require less heroic virtue than such a wife exercises, frequently entitle the performer to a niche in the temple of Fame.

That wife and mother who finds in the vicissitudes of life, that her husband, by unavoidable misfortunes, has been reduced from affluence to poverty, instead of sitting down and pining inactively, encourages and stimulates her husband, by her own cheerful efforts, to alertness the necessities of the moment, and strives to assume the habits proper to reduced means—bears with equanimity the cold shoulder of the associates of prosperous days—if she can do all this, and retain the same manners and self-respect that characterized her days of prosperity, denying her children, with firmness and gentleness, the indulgences of former days; then is she richly entitled to the rank of a heroine in every-day life. There are to be met with occasionally, such wives, and if they are rare, it only increases the merit of the few.

There was heroism in the heart of the little beggar-girl, who came to the door and asked for cold victuals, for the father who was too infirm to labor. Heroism, inasmuch as she refused good food and clothing, and a comfortable home, because her "father would have no one to get food and take care of him."

There was heroism in the life of that daughter who was reared in all the luxuries of the richest southern home, with slaves to do her slightest bidding. Her father became reduced in circumstances, and emigrated to a free State with less property than would supply, for any length of time, the imperious wants of the family. The father became ill, and while the mother nursed him, this delicately nurtured daughter overcame the obstacles opposed by her former life, entered a paper-mill, and by superior tact and activity in ruling paper, earned a support for the distressed family. Romance would have given her to some rich professional character, merchant-prince, or gentleman millionaire, but reality effected what was far better—it destined her to preside at the home and hearth of a worthy American mechanic, who bids fair to be one of the pillars of American society.

In yonder humble tenement, may be found a widow oppressed with sorrow, her cheek blanched and brow prematurely wrinkled, her eyes dimmed by incessant toil, to acquire the little necessary comforts for an invalid husband, whose life was spun out to the longest period ever granted by that inexorable destroyer, consumption—her life, an example of virtue to those children whom she is striving to rear to usefulness and honor. Who that has visited her can say he has not seen a living, acting heroine?

That girl who relinquished the love of her youth, and resolved never to marry while her aged parents needed her care, keeping in the straight-forward path of her duty, while the lover took another to his heart and home, performed an act of heroism from which a common mind would instinctively shrink.

I know a lady whose affections were sought and won, by a gentleman of varied and extensive attainments—she was the sole dependence of parents in declining life, as far as their comfort depended on the kind care of one who could sympathize with them, and appreciate their feelings. After mature deliberation, she resolved to relinquish the lover, rather than leave those parents to the care of strangers.—He yielded with much reluctance to a decision, which only increased his admiration of her character. Years passed on—the lover married, his children grew to manhood—his wife died, and he was alone. He again sought his first love—the aged parents were still alive, their span of life having been lengthened to over ninety years—the patient daughter still watching over them and guiding their footsteps as if they were indeed little children. Already did the silver threads begin to fleck the brown locks of that devoted daughter, whom I can almost see, even now, with the same sweet smile and quiet manner as in days gone by.—A few years ago the village paper recorded the death of the aged mother; a few months passed, and the father followed, to rest by the side of the bride of his youth, who had gladdened his home and hearth, for nearly three-score and ten years. Yet a little while and the same paper brought a record of the long delayed marriage of the daughter, to her early and only love. May her declining years be soothed by hands as gentle as her own!

Before closing these sketches, I cannot forbear mentioning another heroine, whose efforts I hope will meet with suitable encouragement and reward. A young lady in A——, whose heart bled for the destitute and neglected children of her city, conceived the idea of devoting her time and the very limited means at her command, to the care and improvement of this class of children. After much opposition from her friends, and in spite of many obstacles, she has opened a kind of industrial school, into which she receives any children who will come, giving them better habits, teaching them as well as she is able, to become competent to earn a living in a reputable way. She never has solicited aid for her enterprise, excepting to pay for the house in which she lives, which is placed in the hands of trustees. Her school is as yet small in numbers, and is made up in part of little children, whose mothers are out at labor through the day—these share her simple dinner. As many as she can accommodate, she keeps all the time—having them around her, sleeping and eating with them, as if they were her own, imitating the example of the Saviour, who *laid his hands on little children*, when he blessed them. Since her object and efforts have become known, she has received some donations of food and clothing, appropriating the latter to the children, and sharing the former with them. A young lady, with capacities for obtaining a comfortable and respectable living, who can relinquish these and spend her life and means in striving to lift these poor creatures from the filth and mire of city beggary, must, I think, possess heroism of the highest order. May she be assisted in her noble efforts, by those who are blessed with overflowing stores, and her little industrial school become a nucleus that will attract and benefit hundreds who would otherwise grow up in ignorance and vice!

RURAL NEW-YORKER

ROCHESTER, MAY 6, 1854.

SPECIAL NOTICES.

☞ *A new quarter commenced April 8,—a good time for new single and club subscriptions to begin; and the renewal of expiring subscriptions is now in order.*

☞ *Additions to Clubs are still in order. If back numbers are not wanted, we will send from 1st March or April to end of year for $1—and count on premium.*

☞ *During the season of navigation we can send the Rural to Canada West free of American postage, and hence will furnish clubs for six months from date at lowest rates.*

☞ *Clubs for six or nine months from this date at same proportional rates as for full year—and premiums allowed.*

☞ *Back numbers of the present volume furnished if desired, or subscriptions may commence at any time.*

The Wheat Crop of the Genesee Valley.

When spring first made its appearance in this latitude, the wheat fields looked unusually promising; but the subsequent freezings and thawing's did some damage in the way of heaving out the roots. The late rains and cool damp weather, however, have done very much to remedy the evil, by giving the partially injured plants an opportunity to recover their strength and vigor before encountering the full blaze of the summer sun. We have been traveling through a portion of the Genesee Valley within a few days, and although some lots of wheat, for want of drainage or good culture in other respects, looked very unpromising, we venture to say that on the whole, the wheat crop of the valley has never appeared better in any spring during the past ten years.

Some of the farmers, in addition to their usual amount of winter wheat, have also put in spring wheat, in the hope of realizing handsomely out of the high price of breadstuffs. There is a large area of ground sown, and if the harvest fulfills the promise of the spring, the granary of Western New York will groan under such a burden of grain, as it has rarely been called upon to bear; and the preparations for the next year's crop will be also on a scale even more extensive.

It is a wise man who makes use of the passing opportunity, and many a farmer whose broad acres are yet under an incumbrance, will avail himself of the present and prospective price of grain, to escape from the last shackle which debt has fastened upon his otherwise free limbs.

The Dark and Bloody Ground.

The State of Kentucky has doubly merited this title in the acquittal of Matt. F. Ward of the murder of Prof. Butler. The strongest case that could be made out of justifiable homicide, and that case even by witnesses called in part by the defence, is that Matt. Ward went to a gunsmith in Louisville, on the morning of the murder, and purchased two pistols, which he ordered loaded, and then with his brother, Robert J. Ward, Jr., went to Mr. Butler's school-room, which he entered unceremoniously, and said to him:—"I have come for an explanation as to your having whipped my brother. Butler asked him to step into his private room, where he would explain it to him. Ward refused, saying *that* was the place to settle it; Mr. Butler nodded; Matt. said, what are your ideas of justice? which is the worst, the boy who begs chestnuts and throws the shells on the floor and then lies about it, or my brother who gave them to him? Mr. Butler said he would not be interrogated, putting his pencil in his pocket and buttoning up his coat; Matt. repeated the question; Butler said, there is not such a boy here; Matt. said, that settles the matter; but you called my brother a liar, and for that I must have an apology; Butler said he had no apology to make; is your mind made up? said Matt.; Butler said it was; then, said Matt., you must hear my opinion of you, you are a d—d scoundrel and coward."

The boys of the school swear that Mr. Butler did not strike Ward at all, but one or two of them state that he did put his hand gently on the prisoner's shoulder. Ward's brother, who is himself under indictment for participation in the same horrid deed, however, says Butler did strike, although with a weaponless hand; but he swears under circumstances of the strongest inducement, if not under suspicion of perjury, and in direct opposition to a dozen disinterested and intelligent young men, scholars of Mr. Butler. Ward deliberately drew a pistol and shot the Professor, inflicting a mortal wound, from the effects of which he died that night.

And yet, with a hand reeking in innocent blood, and desolation brooding in darkness over the home of his victim, a lovely woman left a widow, and a little boy an orphan, a jury composed of Kentucky chivalry, has set Matt. Ward loose again upon society. In contradiction to the common law every where, and the decision of all criminal courts guided by its precepts, this jury construes that laying of a hand gently upon an armed man's shoulder under the greatest provocation and abuse from the latter, renders the life of the unarmed man a just and proper forfeiture under Kentucky law!

> "O, Justice! Thou hast fled to brutish beasts,
> And men have lost their reason!"

☞ A bill is now before one of the branches of the Legislature of Ohio, providing, among other things, for the payment of wages by the State to the convicts of the Penitentiary.

☞ The famous car of Juggernaut, in India, has been destroyed by fire.

Hardship of United States Troops.

The same brave troops who suffered so many hardships by the shipwreck of the San Francisco, a few months since, have again been subjected to the perils of the sea through the incompetency, carelessness, or something worse, of those high in authority. It seems the government chartered the unseaworthy old hulk of a steamer, the Falcon, to transport the troops to Aspinwall; and when two days out, she came near foundering at sea, being obliged to put into Norfolk, Va., in distress. The Falcon has been laid up as unseaworthy, and was deemed by many, unsafe at the time of the embarkation.—The best her engines could do at sea was *four revolutions per minute.*

The *New York Times*, speaking of the matter, says:—"Gen. Scott, who ordered Major Wynn under arrest for *refusing* to order his detachment on board the *Falcon*, because he knew her to be unseaworthy, presided over the Court which made the disaster to the *San Francisco* the special subject of judicial inquiry. We should be most reluctant to ascribe this proceeding to a reckless disregard of the lives of U. S. troops,—but, under the circumstances, we find it very difficult to assign it to any other cause."

Direful Casualty.

On Tuesday night, April 25th, a fire occurred at a clothing store, No. 231 Broadway, N. Y., which soon destroyed the building with its contents; and shocking to relate, resulted in the death of twelve firemen, and the wounding of a large number of others, by the falling of the walls. The rear wall, it appears, was built upon an iron archway supported by pillars; and when these were burned away by the fire, the entire building tumbled into a mass of ruins, carrying down with it and burying in the burning and heated pile, the brave men who were engaged in a combat with the conflagration.

The utmost excitement and horror prevailed, and the bodies of the dead, and even some of the living, were not rescued from their terrible situation until the next day. The New York papers are unanimous in their condemnation of the frailness of the structure, and declare that half the architecture of Broadway is a shell, beautiful to look upon, but in fact little better than traps set by mammon, for the destruction of human life.

Sinking of the Ericsson.

The Caloric Ship Ericsson went on another trial trip on the 27th ultimo. When near Jersey City, on her return, a sudden squall struck the ship, causing her to careen so much that the water ran into an open port, out of which the firemen were throwing cinders and ashes from the furnaces. The port was a large one, and before the vessel righted she shipped so much water as to sink her. She now lies in several fathoms of water, with the upper part of her wheel-houses and her bowsprit in view. A steam tug, ferry boat, and several other craft, went to her assistance on perceiving a signal of distress, and rescued the crew and passengers.

This experimental ship, about which so much has been written and said, which has been so much lauded and abused, has made so many unsuccessful trial trips, and been on the point of sailing so many times without doing so, has finally concluded to take a trip to Davy Jones. The *Scientific American* always prophesied that this enterprise would prove a failure.

Fulsome Flattery.

The *Mobile Advertiser* relates the following piece of fulsome flattery, and calls it "an incident of exceeding beauty;" and several other papers which ought to be ashamed of such a falsehood, as well as violation of good taste, endorse the sentiment. It occurred during the ex-President's late tour to the South, possibly to let the Presidential electors know that "he still lives!"

"Mr. Fillmore had all along expressed a great desire to see a magnolia in bloom, but nowhere among the groves which we passed could one be found, though there were buds in great profusion. It was conceded on all hands that it was a few days in advance of the time for blooming. But upon arriving at Hollywood, after being presented to the ladies and inmates of the house, one of the ladies presented him with a large, magnificent full blown magnolia flower, on the broad white leaf of which, in plain and neat characters, was the inscription, 'I bloom in honor of Millard Fillmore.'"

Mr. Fillmore made an excellent President, and would do so again, no doubt, if he should choose to be re-elected, but such a piece of flattery to mortal man is as disgusting as it is sycophantic.

Freshet in the Hudson.

A tremendous freshet has been experienced in the usual placid waters of the Hudson, and all the lower part of the city of Albany is flooded. The telegraph of May 1st says:

The flood which has been increasing in the river here since Thursday night, reached a height this morning seldom if ever known in this city. Last night the whole lower part of the city was under water. Thousands of cellars and basements were filled. All the streets running to the dock were navigable for skiffs, and parts of Quay and Dean sts. and Broadway. No trains on the Hudson River Railroad have reached here since yesterday P. M.

In Troy the flood has been nearly as great as here. The loss of lumber is incalculable. The river has been covered with it all the morning.

Twenty-eight canal boats lie upon the flats above the city. A half-dozen more have gone past the city. A sloop was also carried down, with two men on board. The lumber district here has been swept of piles of timber, and small buildings have been carried off.

Congressional.

The storm for the past week has so damaged the telegraph wires, that very uncertain and meagre reports were received from the seat of government.

The most important act is the confirmation, by the Senate, of the treaty with Mexico. The injunction of secrecy touching the Senate's action has not been removed, but it is stated that Santa Anna's government is to receive $10,000,000, and the United States a certain portion of territory to secure a Railroad line to the Pacific; and also is to be released from the 11th article of the present existing treaty, which requires the latter government to defend the Mexican frontier against inroads of the Indians. Mr. Pearce reported a bill appropriating $4,000 for the portraits of the five first Presidents, by Gilbert Stuart, to be placed in the President's mansion. Passed. In the House of Representatives, the consideration of the bill granting lands to the several States to aid in the construction of Railroads and for educational purposes, was resumed. Mr. Disney, of Ohio, spoke in opposition to the bill, when it was postponed.

On Friday and Saturday the Senate was not in session, neither was the House on Saturday; the time on Friday being also mainly consumed in a personal altercation between Mr. Smith, of Virginia, and Mr. Giddings, of Ohio. Mr. Sapp spoke in opposition to the Nebraska bill.

Popular Indignation.

Nathan Wolfe, one of the Counsel of M. F. Ward, has excited against him the indignation of the people of Louisville, and his residence was besmeared with rotten eggs, on Friday night, the 28th ult. Mr. Wolfe, in his speech on the trial, complimented the people of Louisville, in this wise:—"My client, the interesting and innocent young man at the bar, has been forced to flee a city where mutterings of revenge were heard from every mouth—where the population was black-hearted and bloodless, seeking with blood-hound avidity the punishment of an individual who I believe, in the sincerity of my heart, is wholly guiltless."

The citizens whom he has thus defamed are very properly indignant at the imputation, although the manner of expressing it is not perhaps in the most appropriate manner.

Telegraphing Per Se.—On the afternoon of the 27th ult., the telegraph wires at Albany became so highly charged with the electric fluid, from the atmosphere, as to cause in the operating office, a couple of explosions resembling the discharge of fire-arms. Three relay batteries were torn asunder before the operator could cut off the communication; the wires in the office were disarranged, and the covering burnt off. The flames ran from the relays and over the wires with great rapidity, not only destroying them, but burning the wood work over which they passed.

This exhibition of telegraphing *per se*, put an end to all further action by the operators for the day, as effectually as John Tyler's veto did to a United States Bank.

Foreign News.—There have been two foreign arrivals since the Arabia, viz: the Havre steamer Nashville, which reached New York April 28th, but with dates older than those by the last preceding steamer; and the Pacific. The latter steamer has four days later news, as will be seen under our column of Foreign Intelligence. She reached her dock on the afternoon of Monday, but the telegraph being deranged in consequence of the recent storms, her reports up to the time of going to press, are somewhat meagre. They are sufficient, however, to show that no decisive blow has yet been struck in the Continental fight. Breadstuffs are again on the rise, with a still further prospective increase.

The Hendrickson Case.—Great effort is put forth to secure Executive interference in behalf of Hendrickson, convicted at Albany of the murder of his wife. The case has been successively carried up to the Supreme Court full bench, and to the Court of Appeals, both of which tribunals denied a new trial.

The most distinguished names of scientific men are produced by Hendrickson's friends to show that the chemical analysis to detect the poison, from the effects of which it is alleged the woman died, is unfounded in fact, and led to an unjust conviction.

Opening of the Canals.—The canals of this State were advertised to be ready for navigation on the 1st inst., and the water was let in on many of the levels some days previously thereto,—Navigation, under the most favorable circumstances, would not be freely resumed for a week after the time appointed, and the late bad weather has tended greatly to retard early operations. By the beginning of next week, however, the forwarding business will be in full activity, unless breaks of a serious nature occur along the line.

The Late Storm.—The late severe storm seems to have taken a very wide range; in some localities presenting features of a tornado, at others of a wintry snow storm, and at others again, of a long, drizzling, and uncomfortable rain. The latter was its feature in this vicinity. Accounts come to us from the region of the Lakes, from New York, Philadelphia, Baltimore, and Boston, of its effects, some of which are disastrous to property both on land and sea.

☞ A drover in Albany received $1,250 in Cochituate Bank notes a few hours before it failed. The Atlas says he looked anything but amiable when he ascertained the value of his notes.

News Paragraphs.

☞ A touching incident occurred recently at a steamboat sinking in the Missouri river.—Among the persons swept overboard, were a woman and a boy about 12 years of age. A man on the steamboat, seeing the boy buffeting the waves just beyond the boat, threw him a rope, and called to him to take hold of it. The little fellow replied, "never mind me, I can swim—save mamma." The little fellow, with his dear "mamma," was saved.

☞ The chaplain of a country prison in England, not long since, was dismissed from his situation by the magistrate, for forcibly holding the finger of a woman, who was under sentence of death, in the flame of a candle, until it was in a blister, as he said, to give her an idea of the eternal punishment to which she would be doomed, if she did not confess her guilt to him.

☞ The Detroit Democrat announces numerous arrivals at that point on the Underground Railroad. On the morning of the 13th ten passengers went over into Canada; two the evening previous, and the day before sixteen; ten others were expected hourly. The Democrat says facetiously, "No traveler by this line has ever met with an accident."

☞ The Washington Union says the Gadsden treaty, ratified by the Senate, arranges the Mesilla Valley difficulty, provides an eligible route for a railroad, abrogates the 11th article of the treaty of Guadalupe Hidalgo, and recognizes the inter-oceanic transit grant in 1853 over the Tehuantepec, for all which $10,000,000 is to be paid.

☞ The fixtures having been completed, Bunker Hill monument was lit for the first time with gas on the evening of the 17th ult. There are ten "bat-wing burners," and the pipe passes up the well or inner circle, two hundred and twenty feet. The expense of its introduction was between two and three hundred dollars.

☞ The Supreme Court has reversed the decree of the Circuit of Ohio, which recently declared against giving the Methodist Episcopal Church, South, part of the assets of the Cincinnati Book Concern, which have been held exclusively by the M. E. Church, North, since the separation of that denomination in 1844.

☞ A bequest of a hundred thousand francs has been made to the French Institute, as a premium for the discovery of means for curing the Asiatic Cholera, or of the cause of the pestilence; and until the cure can be found, the interest of the money to be given each year to him who does the most in combating the disease.

☞ The National Intelligencer publishes a letter from Col. Fremont to Col. Benton. He makes no mention of the loss of but one man.—He says he has had reasonable success in the object of his expedition, and that his explorations thus far have been decidedly favorable to the central route for the Pacific Railroad.

☞ The Pittsburgh Journal says that a wealthy farmer in Alleghany county, by the name of McCormick, has just had a verdict of $1,500 rendered against him for breach of promise of marriage. The joke of the thing is, that the faithless swain is in his second childhood, being about 70 years of age.

☞ Alexander Heilbronn, whose extradition under the Ashburton treaty created some excitement in New York a few months since, has been sentenced in England to transportation for a term of six years, on a different charge, however, from that of forgery, for which he was arrested here and remanded.

☞ A man named Alonzo Smith has been arrested at Palatine, on suspicion of being engaged in extensive thieving operations on the freight trains of the N. Y. Central Railroad. His arrest promises to be the means of uncovering a gang of rascals who have been carrying on similar depredations.

☞ A family in an old-fashioned covered wagon, with a dog tied to the hind axle, passed through Cleveland on the 16th ult., on their way to Nebraska. The man said he had a large family of boys, and he was going to spread himself on a free farm, under the action of the Homestead bill.

☞ No colporteur is allowed to enter Russia; no printing presses for printing the Bible; no versions of the Scriptures allowed to be imported, except those in foreign tongues; and since 1823-'4, there has not been printed in Russia, a single copy of Scriptures in the modern Russ.

☞ The Louisville Journal of the 20th ult., says:—About thirty negroes came down on the Frankfort train yesterday from Lexington.—They are on their way to Liberia, and were emancipated by parties in Fayette. The railroad companies carried them free of charge.

☞ The Yankee Blade steamed from Rio to Valparaiso, 15 days 20 hours; from New York to Valparaiso, 37 days; and from New York to Panama, 17 sailing days, where she arrived recently. All well. This is a remarkably short, if not the shortest passage ever made.

☞ Thomas O. Larkin, Esq., formerly of New York, has given to Bishop Kip, of the Protestant Episcopal Church, 640 acres of land in California, for an Episcopal College. The site selected by the Bishop is in Sonora valley, about thirty miles from Sacramento.

☞ A liquor seller was brought before the Police Court at Boston, charged with selling whiskey punch to some person "unknown;" he proved that he sold it to John Houltum, instead of an unknown person, and was for that reason discharged.

☞ The General Assembly of the Presbyterian Church (Old School) in the United States, will hold its next annual meeting in the Central Presbyterian Church, in the city of Buffalo, at 11 o'clock A. M., on Thursday the 18th inst.

☞ The General Assembly of the Presbyterian Church (New School) in the United States, will meet on Thursday, the 18th of May, at 11 o'clock A. M., in the First Presbyterian Church, in the city of Philadelphia.

☞ The London Lancet records two cases of serious illness among physicians, occasioned by the inhalation of poisonous gas, the escape from decaying corpses in a grave-yard that required to be inspected.

☞ Rev. Dr. Todd, on being asked his opinion of Edward Beecher's "Conflict of Ages," said he had concluded there were three sets of people in this world—saints, sinners, and the Beecher family!

☞ Nine whalers arrived recently at New Bedford, Mass., with 1,950 bbls. of Sperm and 15,200 bbls. of Whale Oil. The Ship Mohawk, of Wood's Hole, for Nantucket, has 2,200 bbls. of Sperm Oil.

☞ A postmaster entitled to the franking privilege is not permitted to exercise it by means of a printed stamp, his name being in print in it. He must sign his signature in his own handwriting.

News Brevities.

—— Archbishop Hughes is in Washington.

—— Both the candidates for Governor in Iowa are editors.

—— St. Peter's church at Rome can hold 54,000 persons.

—— The area of all the States of Europe is given at 3,634,832 square miles.

—— The papers of Milwaukee estimate its present population at about 35,000.

—— The Marine insurance companies now insert the war clause in their policies.

—— There are said to be sixteen thousand more women than men in Philadelphia.

—— The next meeting of the American Medical Association will be held at St. Louis.

—— Immense quantities of railroad iron are waiting at Albany for shipment westward.

—— Louisville can now boast of five of the largest and handsomest market houses in the West.

—— Not more than half the usual quantity of maple sugar has been made this season in Massachusetts.

—— Four sailors were washed overboard from the brig Olander Ap. 27, on Lake Erie, and were drowned.

—— Seventeen large canal boats, built the past winter at Ithaca, says the Journal, are ready to launch.

—— St. Paul and Stillwater have both been promoted to the dignity of cities by the Minesota Legislature.

—— It is stated that the Black Swan, Miss Greenfield, is about to be married to a white Englishman.

—— Tacony, the celebrated trotting horse, was sold at Philadelphia, April 20th, for $3,500, to James Hammill.

—— Ohio is to be explored, geologically. The expenses are estimated at $10,000 per year until the survey is finished.

—— Dr. E. L. Jones, of Cincinnati, has been sued for slander by a young lady of that city. Damages laid at $20,000.

—— The London papers state that large numbers of small farmers will emigrate this year from England to Canada.

—— The snow was eighteen inches deep at Staunton, Va., on the 17th inst., when the cars left, and continuing to fall rapidly.

—— Hugh Jameson, Esq., Naval Store Keeper at Charleston, Mass., and brother-in-law of President Pierce, died Wednesday week.

—— The St. Lawrence is now clear of ice through its whole length, and there have been arrivals and departures from Quebec.

—— The Legislature of Nova Scotia, in consideration of the "unwarrantable aggressions of Russia," has ordered out the militia!

—— Three lives were lost by the sinking of the steamer John McFadden, ran into on the Ohio by the Tribune, on Wednesday week.

—— The amount of notes of the Bank of England in circulation, exceeds twenty-five millions sterling—or one hundred millions of dollars.

—— Ten human skeletons were found lately in Trenton, N. J., about two feet under ground, supposed to be those of Indians or Hessians.

—— Mary E. Shaw has recovered a verdict of $15,000 against the Worcester Railroad Company for injuries received by an accident on their road.

—— In some parts of Aroostook county in Maine, hay is selling at forty dollars per ton, and oats at one dollar and twenty-five cents per bushel.

—— Rev. J. C. Richmond, who was under arrest in Austria some time since, is now in the Turkish camp, acting as correspondent of the London News.

—— George Peabody, Esq., of London, authorizes his agent to purchase 2000 volumes of standard books for the new Peabody Institute, of Danvers, Mass.

—— Mr. Nathaniel G. Greene, son of Col. Greene, of the Boston Post, has returned home, having made a tour of the world, and been absent about 20 months.

—— By advices from Puerto Cabello to the 9th, we learn that the Venezuelan Congress passed a law on the 24th ult., abolishing Slavery throughout the Republic.

—— The system of negro apprenticeship has been fully adopted in Cuba, and assignments of newly-arrived cargoes of negroes have been made among the inhabitants.

—— A public meeting has been held at Chicago to express the indignation of merchants against the Great Western Railroad Company for delay in the transportation of goods.

—— Patrick Nolan, a man who committed an outrage upon Mrs. Christiance, in Schenectady, has been convicted and sentenced to the State Prison for twenty-five years.

—— The Gage farm in the town of Gates, four miles from the city, containing sixty-five acres, with five buildings, &c., has been sold to Judge Wm. Buell for $120 per acre.

—— Mr. Webster's friends do not respond to his dying wishes, and his estate is announced to be insolvent. George W. Nesmith is administrating upon it as commissioner.

—— Cholera had made its appearance in Leeds, England. Out of thirteen cases, six proved fatal. In Ireland, also, the epidemic had broken out in a very malignant form.

—— The Court House, Documents of the Post Office, and many dwelling houses in Warrentown, S. C. were destroyed by fire on the 23d. Loss estimated at over $150,000.

—— Over one thousand human lives have been lost by disasters at sea, during the past four months, and several vessels are yet to be heard from which are supposed to be lost.

—— In Utah, on the death of a man, his property descends to the Mormon Church, his wives and children not being recognized as heirs. The church is the sole heir of all property.

—— It is calculated by those who are on the ground that one thousand buildings will be erected at Toronto, Canada West, the coming season, and mechanics of all kinds are wanted there.

—— A patent has just been taken out in France for making sugar from pumpkins. The quantity produced will be at least as great as could be obtained from an equal quantity of beet-root.

—— Rev. James Wood, pastor of the Presbyterian church in Stockton, California, has been compelled by the failure of his health to resign his pastoral charge, held for the past five years.

—— Wednesday was kept as a Fast in Montreal, to pray for the success of the Allies against Russia, and for making collections for the families of the soldiers who have gone to Turkey.

Literary Notices.

A Year with the Turks, or Sketches of Travel in the European and Asiatic Dominions of the Sultan. By William Brodie W. Smyth, A. M. New York: Redfield, 1854.

This is a very readable book, written by an Englishman who has been traveling in the East. Read, in connection with the work of Mr. Oliphant, in respect to Southern Russia, recently noticed in the Rural, it gives the reader a very good insight into the social and political position of the belligerents. Mr. Smyth cannot be suspected from national antipathies, of giving an unfavorable account of the Turks, since England is in close alliance with that power, and yet, according to Mr. Smyth's statement, Turkey in its social, political, and religious aspect, is most wretched, and on the brink of dissolution unless sustained by the strong arm of the Western Powers.

The work is for sale at Dewey's, who also has received the last issue of that sterling foreign review, *Blackwood's Magazine*.

McMahon has received and has for sale the May number of the *Knickerbocker Magazine*, full as usual, of good things, in the literary line.

Foreign Intelligence.

Arrival of the Steamer Pacific.

The Pacific with advices to the 19th, arrived at New York, May 1.

Flour had further advanced. Western Canal 33s.; Ohio and similar descriptions 40s. Corn 40s@41s.

Nothing has reached us from the war with the exception of the capture of five Russian merchant vessels taken in the Baltic.

The steamer Africa arrived out on the night of the 16th.

The Chinese.—The Rev. Mr. Speer, in writing to the Presbyterian Board of Foreign Missions, from San Francisco, thus speaks of the character, condition, and treatment of the people among whom he labors:

The Chinese are much stimulated to improvement by their residence in this country. Several have taken out the papers necessary to become citizens in due time. Many admire our institutions, and imitate some of our customs. Our own people regard the mission with favor. A deep interest is felt in the prospective commerce with China, when this city and Shanghae shall have been linked together by steam, and this port be the point of connection between the old and new world, and also in that wonderful revolution which is breaking down the ancient barriers of the East, and uprooting it to civilization and Christianity.

In their temporal condition there is much to mourn over. They are given to gambling almost universally, and their tables are encouraged by the sanction of a municipal license (at $30 per month for each table.) The men working in the mines have often been treated in the most barbarous manner by the whites of various nations; many have been shut down like brutes, and the offenders allowed to go unpunished by our laws. Their effeminate frames have often sunk under the hardships of mountain toil, miserable food, and insufficient shelter. They enjoy unhindered indulgence in the intoxicating drug, which has poisoned many thousands of their countrymen; and not a few, amidst their calamities, have used opium to destroy their wretched existence. As a people, the Chinese here are, in many respects, to be deeply pitied.

Stephenson, the Great Engineer.—George Stephenson, the celebrated engineer, whose statue now stands in the Euston station, London, was in early life a collier, working for his daily bread in the bowels of the earth. In his leisure hours he mended watches, so that his son might have the blessings of an education. While his fame as a mechanical and civil engineer was still in its infancy, he elaborated experimentally, the same results as to the safety-lamp, which Sir Humphrey Davy reached by the process of philosophical induction. The railways of the coal mines, and the rude forms of the first locomotive engines grew under the strokes of his rigorous intellect into a mighty system. By combining the gas pipe with the tubular boiler, he first endowed the locomotive with its tremendous speed. During his busy manhood he superintended the constructions of more than 2,500 miles of railway, and thought out everything connected with the iron highways—engineering lines extending in unbroken series from London to Edinburg.

Defences of New York.—The Fortifications of New York harbor, are in a very complete condition, and are probably far more capable of defence than is generally credited,—it being the policy of the government to give but little publicity to these matters. Within a comparatively short time, they have been furnished with heavy shell-guns (termed "Columbia" guns) of large calibre and the most approved pattern. The old style still remaining, will be removed before long. Twelve inch guns of this description throw shells with almost unerring accuracy three miles and a half! Or striking, the shells explode with destructive effect. Major Thornton, of the Ordnance department, incidentally stated yesterday, in conversation, that the steeple of Trinity Church could be struck from Governor's Island by every shot, and Woolsey & Co.'s sugar house, distant perhaps two and a half or three miles, would form a suitable mark for ordinary target-practice.—*N. Y. Jour. of Com.*

Wreck of the Powhattan.—A letter from Smithville gives some additional particulars of the bodies interred there, that came ashore on Brigantine beach from the wreck of the Powhattan. They were 51 in all, and were conveyed, from the beach to the main land, and the ladies of the place furnished shrouds for the females and children found among the victims of the awful disaster. They were all interred in burying ground at Smithville. Ten of the number were females, four girls, seven boys and 33 men. The whole number lost from the Powhattan was three hundred and eleven passengers and twenty-nine of the crew, making three hundred and forty in all. The number of bodies found and buried at the various places, is about 153, so that but one-half have been found.

☞ The Portland "State of Maine" estimates the number of passengers entering that city by Railroad at 520,000, and the number by steamboat at 80,000 during the past year.

A Clerical Scoundrel.

One G. N. Adams, who bears credentials as a Methodist clergyman, has been playing a series of villainous tricks in New Hampshire, among which is the following:

"Mrs. Emma G. Templeton, whose husband and one child were killed at the Norwalk Bridge catastrophe in May last, was awarded the sum of $5,000 by the railroad company, according to a provision in the laws of Connecticut, and word was sent her that the money would be paid at a specified institution in the city of New York, the "Rev. G. N. Adams," and as it was part of his mission to comfort the widow and fatherless, kindly volunteered his services in getting the money for the party to whom it was awarded. The necessary papers for the accomplishment of this purpose were made out, and away went the volunteer to New York, where he drew the money—put it in his pocket, and suddenly disappeared from public view—thus robbing a lone widow of nearly all her reliance for subsistence, and leaving behind a duped young woman, exposed to the pitiless peltings of an unforgiving world.

Three Cheers.—The editor of the *Clinton Courant* deserves a niche in the Temple of Fame for uttering the following:

The editor of the *Germantown Telegraph* says that he saw, *last week*, in Philadelphia market, *several large bunches of robins*, which had been shot and brought there for sale. We don't desire the death of any man, but if some humane sportsman would only manage to put shot enough in the legs of the murdering rugabund who killed those birds, to keep him busy at home during the remainder of the spring, he would confer an especial obligation upon us.—A man who would slaughter an innocent bird in "pairing time," would shoot his own grandmother, if her hide were marketable. If *white*-slavery were legal, we would try and buy that chap for the sake of the fun of driving him to market in fly-time."

Priestly Folly.—The Parkersburg Gazette informs us that some of the contractors operating upon the line of the North-western Railroad, Missouri, having declined to collect for the Catholic Priest in that neighborhood, the Peter-pence due him from the hands working on the road, his reverence formally cursed their section, forbade Catholics to work there, under severe penalties, and summoned the church to enforce his behest.

It is quite probable that the road will progress notwithstanding the anathema; and that steam will be just as effective in propelling the locomotives as though the concern was not under ban.

The Norwalk Calamity.—It was understood that the New Haven Railroad Company had compromised with most of the persons having claims against them for damages arising out of the terrible accident which occurred at the Norwalk draw-bridge, on the 6th of May, 1853.—At least one claim, however, appears to be still unsatisfied. The Superior Court of this city is now engaged in trying an action brought by Warren S. Newell, against the Company, to recover twenty-five thousand dollars damages for injuries to his person.—*N. Y. Com. Adv.*

A Model Steamer.—The *Courier & Enquirer* says that the steamship Baltic, of the Collins line, is being thoroughly overhauled for the first time since she was built. During the last three years the Baltic has crossed the Atlantic *forty-eight* times, running more than *one hundred and fifty thousand miles*: equal to six times the circumference of the world. She averaged a trip across the ocean every three weeks, and has not laid in port more than five weeks at one time.

The Wooster Monument.—The Hartford papers contain a long account of the ceremonies at Danbury on Thursday week, to celebrate the erection of a monument to the memory of David Wooster, the first Major General of the Connecticut troops in the Revolutionary war, who was mortally wounded at the Battle of Ridgefield, April 27, 1777, (just seventy-seven years ago that day.)

Ruralists in Council.

Oakfield, Mich., March 27th, 1854.

The year for the Rural New-Yorker bring about up, the committee of the whole took up the subject of Literature, D. B. Payne in the chair. The chairman read the following resolution:

Resolved, That the requisite amount for one years subscription for the *Rural New-Yorker* be forwarded to that office, with the request that the *Rural* be sent to the address of D. B. Payne, Oakfield, Kent Co., Mich.

Mr. Penfwiser said he was opposed to the resolution; he thought $1 was as much as they ought to spend for papers; there were plenty of papers in the country, larger than the *Rural*, that could be obtained for that price. He also urged the extreme barness of the treasury, and the improbability of increasing it from the products of a new farm for several years to come.

Mr. Wise said he perfectly agreed with the gentleman last upon the floor, in all that he had said concerning the treasury; and it was also true that there was a great deal of *literature* that could be had for a less price than the *Rural*; but he thought there was such a thing as being "pound foolish." He said a large amount of the literature of the day was a good deal like the itch—the more a man had of it, the harder he had to "*scratch*." Mr. W. said there were some things that occasionally found their way into the *Rural*, which he did not like to see in a paper of that kind. He thought there was an occasional political slang given to the world through its columns, which might better be left for those papers that make it their *business* to stoop. He was of the opinion, however, that it was *the best paper of the kind that could be obtained for the price*. The following, he said, were some of the reasons why he was in favor of the resolution: 1. It was a weekly paper; he thought too much time intervened between monthly returns. 2. During the two years they had taken it, it had not missed a number. He thought "punctuality" an important motto. 3. In addition to its Agricultural information, it was of high moral standing as a family paper. Its mechanical and educational departments were also of much merit.

The question then being on the adoption of the resolution, it was agreed to. The committee then arose and reported progress, as the enclosed amount testifies. D. B. Payne, President.

Commercial.

BUSINESS AND FINANCE.

The Northern Light and Illinois which arrived just after our last week's issue went to press, brought in about two millions of gold on freight and to the hands of passengers. The America, April 26th, took out $100,000 and the Star on Saturday about 400,000 more.

The English papers report seven Australian vessels homeward bound with 3,621,000 in gold.

An agent of the Treasury Dep't., lately delivered at the mint in Philadelphia fifty-two tons of ingots of silver, the value of which is one and a quarter millions of dollars.—The government purchased Mexican ingots of silver amounting to two millions of dollars at three per cent. premium, three-quarters of a million of which were left at the mint in New Orleans.

There is now over $8,000,000 in the N. York Sub-Treasury, and a proportionate amount in all the government coffers.

The last returns of the Bank of England show that the amount of notes in circulation is £21,410,849, being an increase of £2,716,609, and the stock of bullion in both departments is £14,140,699, showing a decrease of £309,119, when compared with the previous return.

Market Intelligence, &c.

Rural New-Yorker Office,
Rochester, May 2, 1854.

The products of the farm have gone up nearly all round the board since our last market report, and purchasers make a very poor figure playing the part of *brave*.

Wheat goes readily at $2,12½, and flour at $9,50. Corn is also higher, selling at 60c.

Butter scarce and high, good qualities selling wholesale at 18@20c; and at second-hand by retailers from 18 to 22c. per pound. Eggs 11c per doz. Flax Seed $1,50 per bushel. Hay $10@11 per ton. Potatoes six to seven shillings, and apples from six to eight. Fuel scarce and high.

Prices of Clover Seed have been going down steadily for some weeks, and are now quoted wholesale at $5,25@5,50.

Rochester Wholesale Prices.

Flour and Grain.		Fruits and Roots.	
Flour, bbl	$9,10	Apples, bush	75@$1
Wheat, bu	$2,12½	Do. dried	$1,25@1,50

NEW YORK MARKET—May 2.

FLOUR—Increased firmness in the market for Western and State flour, especially for the better grades. The extreme price demanded for the better grades restricts transactions. Canadian firm and in fair request for the Provinces. Sales at $7,81½. Western canal at $7,75@8 for common to good straight State; $8,12½@8,31 for mixed to fancy Michigan and roundon to good Ohio. Corn meal firm at $3,15 for Jersey.

GRAIN—Good milling demand for wheat but there is little here. Common Genesee $2,30; fair red Southern $1,85. Oats in fair demand at 54@57½c for State and Western—Barley firm; sales two-rowed $1,15. Corn better and in good demand for the East and export. 79@80c for New Orleans; 81@82½ for old Western mixed; 80@86 for Southern white; 84@86 for round yellow.

PROVISIONS—Pork $14@14,50 for mess; $13,25@13,31 for prime. Beef firm and in steady demand. Re-packed Chicago $14@14,50; country mess $9,50@12; prime $7@8,25. Lard 9¼@9½. Butter and Cheese steady.

BUFFALO MARKET—May 1.

The light supply of flour and grain on the market restricts operations, and although the inquiry for white wheat is good, the transactions are at present very limited. On Saturday white Ohio sold at $2 per bushel, and to-day holders are asking an advance on that quotation. Flour sells by retail at $8@8,50 for fair to good to extra brands. Corn is generally held at 60@62c, with small sales on terms which did not transpire. Oats may be quoted at 40c.

NEW YORK CATTLE MARKET—April 25.

At Washington Drove Yard—Offered this day, 2,239 Beeves. Quotations:—Beef Cattle $8@10. Cows and Calves $30 to $50. Veal Calves 4 to 6½c. Sheep—$5@6. Swine, (gross weight) 5 to 5½c.

At Chamberlain's—Prices—Beeves sold at from 8@10½. Cows and Calves, $35 to $45. Veal Calves, 5c to 7c. per lb. Sheep, $4,00 to $10, the latter for extra.

At O'Brien's—Sales Beef Cattle at from $7@9. Cows and Calves—$25 to $45 per head. Veal Calves 5@6c.

At Brownlow's—Prices—Beeves $8,50@10. Cows and Calves, $38 to 55, as in quality. Sheep $4 to $10. Lambs from $2,50 to $5. Extras $9@9. Veal Calves 5½@6c.

ALBANY CATTLE MARKET—May 1.

At W. Woolford's Bull's Head, Washington street—Beef Cattle—600 at market. Prices—Extra $8,00; 1st quality $1,50; 2d do, $7; 3d, $6@6,50. Fifty cattle, very extra, were sold for $8,50.

Cows and Calves—24 in market. Prices range from $25 to $45. Calves selling alone from $4 to $6,50.

Sheep—720 in market. Prices at from $4,50 to $5,25.

Swine—None in market.

Remarks—Cattle are selling about the same as last week. The market rather more full. Sheep are doing very well.

CAMBRIDGE CATTLE MARKET—April 26.

At market 550 Beeves, 112 Stores. Market Beef—Extra, per cwt. $9,00; 1st quality, $8,50; 2d do, $8,00@8,25; 3d do, $7,75; ordinary, $7,50. Hides, ₹ cwt. $6@6½. Tallow, $8¾@8½. Pelts, $1,37@2. Calf Skins, 12c ₹ lb. Veal Calves, $3,50 to $7.

Stores—Working Oxen—$90 to 120.

Cows and Calves—$22 to $58@76. Two years old—$35 to $61. Three years old—$45 to $56.

Sheep and Lambs—1,638 at market. Prices—Extra—$6 to $8@8,50. By lot—$4, to $5@7,75.

Swine—Wholesale, Shoats 4@5c; fat hogs 5, and hard fat at 5½c per lb.

BRIGHTON CATTLE MARKET—April 27.

At market 1,000 Beef Cattle, 30 pairs Working Oxen, 100 Cows and Calves, 1,600 Sheep and Lambs, 5,400 Swine.

Prices—Beef Cattle—We quote Extra $8,50@9; first quality, $8,00@8,25; 2d, $7,25@7,75; 3d, $7@7,50. Working Oxen—Sales $80 to $165. Cows and Calves—$19 to 50. Sheep and Lambs—$5 to 6@9. Hides $6@6,50; Tallow $8,25@8,50; Pelts $1,37@2; Calf Skins 12c per lb.—Veal Calves $4,50@7.

Swine—¾@8c.; retail 6@7c. Fat hogs 5¾@5¾c.

Marriages.

In Rochester, on Monday, April 10, by W. C. Storrs, Esq., J. T. Mercer and Ann E. Stephenson, of Benton, Yates Co., N. Y.

In Portland, Michigan, April 24, by the Rev. J. Bartlett, D. E. Millard, of West Bloomfield, N. Y., and Miss E. E. Andrews, of the former place.

Deaths.

In West Bloomfield, on the 19th inst., after a severe and painful illness, Lodowick C. Fitch, Esq.

Mr. Fitch was a man of great business capacities, activity, and usefulness, and was extensively known as such throughout the western part of this State. His decease will leave a void in the community that cannot easily be filled.

In Moodon, N. Y., April 20th, Margaret, wife of Roswell Whitcomb, in the 71st year of her age.

In Byron, on the 21st inst., at the residence of her father, Mr. Jesse Goodwin, Mrs. Harriet A., wife of Schuyler Budlong, aged 27 years.

Advertisements.

Advertisements.—Brief and appropriate advertisements will be inserted in this paper at $1,50 pr. square, (ten lines, or 100 words,) or 15 cents a line—*to be paid in advance.*

Those who send advertisements without payment will understand from the above why they are not inserted.

CALCINED BONES.

The subscribers have some hundreds of barrels of calcined bone-dust, a valuable manure, which will be delivered on the Railroad or boats at $1,25 per barrel of fifty and a half bushels. Orders by mail will receive the most careful attention. (226-4t) H. C. WHITE & CO.

ENGINE AND BOILER!

The subscriber has an "A, No. 1" 10 to 12 Horse Power Engine. Has been used 3 months only! Will sell cheap! Address PETER SAXE, P. M., Yates, Orl. Co., N. Y. April 28, 1854. 226-3t.

HALLOCK'S AGRICULTURAL WAREHOUSE AND SEED STORE.

Emery's Horse Powers, Thrashing Machines and Separators, Circular and Crosscut Saw Mills, Clover Hullers, Hay Cutters, Corn Shellers, together with other Machines fitted for Horse Power. Also, Plows, Harrows, Cultivators, Reaping Machines, Seymour's Grain Drills, &c. Hay Cutters of various sizes, for hand-use—Road Scrapers, Horse Rakes, Ox Yokes and Bows, Agricultural and Horticultural Implements generally. Also—Grain, Field and Garden Seeds, of the best Imported and Shaker growth.

E. D. HALLOCK.
Warehouse and Sale Rooms No. 24 Exchange Street, Rochester, N. Y. 226-6t

"HALTON" (11,552.)

My *first premium* Short-horn Bull, Halton, will serve a few cows this season, at $10 each. Thoroughbred Short-horn cows, $20 each; to be paid in advance. Cows not proving in calf, may be returned at any time within four months.

I shall have a few Short-horns for sale this summer, (male and female,) from premium animals. S. P. CHAPMAN.
Mount Pleasant Farm, Clarkville, Madison Co., N. Y.
May, 1854. 226-4t-eow*

IMPORTED HORSE "CONSTERNATION."

This well known thorough-bred horse, will stand the present season, as heretofore, at the farm of the subscriber, 1 mile west of Syracuse. For full pedigree see Derby & Miller's edition of Youatt.

Terms—$10 the season, $15 to insure, *payable in advance in all cases.* Good pasturage furnished at fifty cents per week. Mares at the risk of owners in all respects. No more will be served that is either ring-boned, spavined, or blind. J. R. HUNNET.
Syracuse, N. Y., May 1, 1854. 226-8t*-31m

SPANISH JACK FOR SALE.

The subscriber, intending to dispose of his property the present season, offers for sale his large *Spanish Jack* at the reduced price of $300. He is 13 hands, well proportioned, and a first-rate stock getter; stock large and active. He is perfectly kind and free from vice; weighs between 7 and 800 lbs. Samples of stock may be seen on the farm of the subscriber. For further particulars call upon or address, post paid, GEO. PLUMB,
w&m11 Oneida Lake, Madison Co., N. Y.

MEXICAN AND SWEET POTATOES.

The genuine "Mexican Wild Potatoes" at 2 dollars per bushel; and Sweet Potato plants at 1 dollar per hundred, will be forwarded by railroad or express to any address, and in any desired quantities, on the receipt by mail of the money or postage stamps. Give plain directions.

Address I. W. BRIGGS,
223-3t West Macedon, Wayne Co., N. Y.

RAIN WATER FILTERS.

It is now the time to use Filtered Water, previous to the sickly season. I make three much improved in the inside fixtures, (without extra charge,) for which I have obtained "Letters Patent." They are now complete and can be forwarded to any part of the country in safety. No family living in a line section of country ought to dispense with their immediate use, as the purity of water has much to do with health, as a preventive of ill disease. They are being used by hundreds of our citizens, giving the highest satisfaction.

I make four sizes at 5, 6, 8, and 10 dollars each. They are portable, durable, and easily uncocked. Orders for Fillers or Rights of Territory will be answered at No. 6 State Street, Rochester. J. KEDZIE.

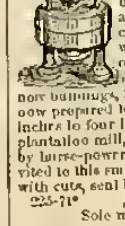
AGENTS WANTED.

Chances for making Money!—The Publishers of a large list of highly entertaining, useful and popular books, offer great inducements to 500 energetic and thorough-going business young men, to engage in the sale of these publications, in which any young man of good business habits may make FIVE TIMES the amount, over and above all expenses, of the average wages of Common School Teachers. The most liberal discounts are made to Agents from the list of prices. The Books command ready sale wherever they are introduced. None need apply on any other than to devote their whole attention to the business, and who cannot command a CASH CAPITAL of from $25 to $100, or give undoubted security for the amount of goods entrusted to them.

Full particulars in regard to terms, &c., will be furnished by calling on, or addressing, post-paid,

WANZER, BEARDSLEY & CO.,
24 Buffalo street, Rochester, N. Y.,
Or, ALDEN, BEARDSLEY & CO.,
223-3t Auburn, N. Y., Publishers.

EDWARD HARRISON'S PATENT GRIST MILL



Received the highest premium at the World's Fair; and more than 250 of them have been sold within two years. The stones are French Burr; the irons and hoppers, cast iron; and the spindles, cast steel. They will work both for flouring and on all kinds of grain, and will keep in repair longer than any other mill. Having just completed my new buildings, for manufacturing and running them, I am now prepared to supply all orders for all the sizes, from 20 inches to four feet diameter, including a superior horn and plantation mill, which will grind corn in the best manner, by horse-power, or even by hand. Public attention is invited to this small mill in particular. Descriptive circulars, with cuts, sent to post-paid applications.

223-7t* EDWARD HARRISON, New Haven, Ct.,
Sole manufacturer, and Proprietor of the Patent.

SPAYING ANIMALS.

The subscriber has had many years experience in the business of Castrating and Spaying, and always had the most flattering success, of which he can produce the testimonials of thousands in this section if necessary. Cows which it is desirable should be reared for milch cows can, by the process of spaying, be secured for years.

Persons desiring my services will be attended to promptly, on notification. Orders by letter may be addressed to me at East Bloomfield, Ontario Co., N. Y.

223-2t* WM. CARTER.

CHOICE EGGS FOR HATCHING.

The subscriber will furnish eggs of the following kinds, all warranted pure, safely packed for transportation, delivered at Utica.—Brahma Pootra $2 per dozen; Gray Chittagong $2; Black Spanish $2; White, Black, Buff, Red and Speckled Shanghais $1; Cochin China $1; White Java Bantams 50 cents per dozen; Dorkinique 50 cts; Bolton Grays 50 cts. Apply to or address

224-4t HOWRY D. LAPHAM, Paris, Oneida Co., N. Y.

NEW YORK RECORDER.

Tenth Volume Enlarged, in quarto form. The Largest Baptist Newspaper in the World. Price, in advance, by mail, $2; by carriers, $2,50. Luther P. Belcher & Co., Proprietors, 121 Nassau Street, New York.

In the determination to make their journal a complete repository of general and denominational religious intelligence, and of the news of the day, as well as the earnest advocate of sound Christian doctrine and social progress, the proprietors will summon for these ends every available facility, whether editorial, or in the way of contributors or correspondents. They have engaged able writers at home, and their correspondence from England and Continental Europe, from Asia and every part of America, they believe to be unsurpassed. By furnishing a paper of the highest grade, from this great commercial centre, they hope to increase the patronage with which they are already favored from every section of the United States and the neighboring British Provinces.

The tenth volume commenced March 29th. Subscriptions are solicited, and the present is suggested as the best time for forwarding names with payments accompanying.

E. S. CUTTING. [223-6twr] L. P. BELCHER.

3,500 ACRES OF LAND, WITH STEAM SAW-MILL FOR SALE,

In Scioto Valley, Ohio, and lying on the Ohio Canal.—Property as desirable as this, is seldom to be met with, and will be sold at a bargain, and on accommodating terms.—Persons desirous of purchasing, by calling upon, or addressing the subscriber, at Chillicothe, Ohio, will be promptly attended to, and full description of premises given. The land will be divided into farms of 200 acres or more if desired, to suit the purchasers. H. H. HOAG.
Piketon, Pike Co., Ohio, March 23d, 1854. 221-tf

TO YOUNG MEN.—Pleasant and Profitable Employment.—Young men in every neighborhood may obtain healthful, pleasant, and profitable employment, by engaging in the sale of useful and popular Books, and canvassing for our valuable Journals. For terms and particulars, address, post-paid, FOWLERS & WELLS,
No. 308 Broadway, New York.

P. S.—All Agents who engage with us will be secured from the possibility of loss, while the profits derived will be very liberal. 225-4t

PREMIUM FOWLS.

I have for the last few years received the First Premium on my Brahmas and other varieties at the N. Y. State Fairs—also Monroe Co. Fair at Rochester. I now have 23 varieties for sale—and eggs for hatching. My fowls are second to none in America. All warranted to be pure in every particular, and what they are sold for.

Rochester, N. Y. 221-6t* D. P. NEWELL.

BONE DUST.

Bone dust sawings or meal, a very superior article, warranted pure. Price, $20 per ton.

Bone dust turnings, price, ... $2,50 per barrel
Do. ground, " ..... $2,50 " "
No charge for package. For sale by
LONGETT & GRIFFING,
223-6t No. 25 Cliff street, New York.

PERUVIAN GUANO.

Peruvian Guano.—We are prepared to supply all orders for this valuable manure. Price, 2½ cents per lb.—be particular to observe that every bag is branded, "Warranted No. 1, Peruvian Guano, imported into the United States, by F. Barreda Brothers, for the Peruvian Government." LONGETT & GRIFFING,
223-6t No. 25 Cliff street, New York.

GARDEN SEEDS.—We have a full and fresh supply of imported and best Shaker Garden and Field Seeds,—Merchants and dealers supplied on the most favorable terms. Catalogues gratis. Orders solicited at the Buffalo Agl Warehouse. [223tf] H. C. WHITE & CO.

FORBUSH'S MOWING AND REAPING MACHINE.

Patented July 20, 1852.

The American Mowing and Reaping Machine Co. have purchased the Patent Right for the above Machine for the United States, England and Canada, and are now manufacturing a large number to supply the demands of the coming season. The advantages which this machine possesses over all others are obvious, and will readily be acknowledged by all disinterested persons. Being a *combined machine*, and working equally well in grain or grass, it enables the farmer of moderate means to procure a valuable *Reaper and Mower* in one, which will do the work of both, and at less than half the usual cost. As a Mower it has no superior; it was thoroughly *tested* the past season in every variety of grass, and in many different sections of the country, and in every case where it was properly made, it gave perfect satisfaction. It will cut and spread from 10 to 15 acres of any kind of grass per day. As a Reaper it has never been excelled, and has no rival that can in all respects successfully compete with it. The patent for this machine covers many points of excellence which have heretofore been unknown, and which (of course) can be used in no other. In the construction and arrangement of these machines great pains have been taken to ensure the necessary strength, simplicity and durability. They are easily kept in order, and it requires but a few moments to change this machine from a Mower to a Reaper, and in either form it is equally strong and substantial. It is not liable to get out of order, and if any accident should happen it could be readily repaired by any ordinary mechanic. In the construction of the machines no expense has been spared to render them both perfect and durable. The Mower weighs but 731 lbs.—the Mower and Reaper combined 900 lbs. To any person desirous of purchasing, or of understanding the machine more fully, illustrated circulars will be sent with full descriptions, references, &c., &c.

Price of the Mower, ... $110 00
" " " and Reaper, ... 130 00

Terms—Cash in Buffalo. Delivered on boats or cars, free of charge.

Address orders or communications to the Company, or CHAS. W. SMITH, *Sec'y*, Buffalo, N. Y.

Further information can be had, and machines purchased of the following Agents:

KETCHUM'S IMPROVED MOWING MACHINE,

With entire change of Gear, the only Successful Mower Now Known.

Ketchum's *Improved* Machine, which we are building for the harvest of '54, was thoroughly tested last season, and the advantages gained by our change of Gear are in all respects as we designed, viz: *durability, concealment and ease of action.* The shafts now have bearings at both ends, which overcomes all cramping and cutting away of boxing. A counter balance is attached to the crank shaft, which gives it a steady and uniform motion. Each Machine can be thrown out of gear; there is great convenience in getting at each end every nut, all of them being on *upper side of the frame;* all rods are attached to all the bearings, which, by the use of a wad of cotton, will hold oil for a long time, as well as protect the bearings from dust, grit, &c.; the finger bar is lined with iron its whole width, which protects it from wear.

These and various other additions for strength, durability, &c., makes them the most simple and perfect agricultural implement in use. They weigh about 150 lbs. each, and can easily be carried in a one-horse wagon.

It requires not over ten minutes to get one ready for operation, there being but two bolts, (besides the pole bolts,) to be secured to have one ready for use. They will cut *all kinds of grass*, and operate well on uneven or rolling lands, or where there are dead furrows. This Machine took the highest award, with special approbation, at the World's Fair; it also received, during last season, one silver and four gold medals, and various other flattering and substantial testimonials of approval. We have spared neither pains nor money to make this machine deserving of public favor, and hope to be able the coming season to supply the great and increasing demand.

We take this occasion to caution farmers against buying untried Mowers; if they do (as was the case with many last year) they will incur loss, vexation and disappointment.

If any parts are wanted to repair any machine we have sold, or may hereafter sell, they will be furnished and only manufacturers' cost for the same be charged.

☞ In all cases where extras are wanted, be sure to give us *the number of your Machine.*

(Warranty:) That said machines are capable of cutting and spreading, with one span of horses and driver, from ten to fifteen acres per day of any *kind of grass*, and do it as well as is done with a scythe by the best of mowers.

The price of the Mower, with two sets of knives and extras, is $110 cash, in Buffalo, delivered on board of boat or cars free of charge.

Office and Shop, corner of Chicago street and Hamburgh Canal, near the Eastern R. R. Depot, Buffalo, N. Y.

HOWARD & Co., Manufacturers and Proprietors.

The Mower is also manufactured by Ruggles, Nourse, Mason & Co., at Worcester, Mass., for the New England States.

By Seymour, Morgan & Co., Brockport, N. Y., for Illinois, Iowa and Michigan.

By Warner & Brokaw, Springfield, O., for Ohio and Kentucky. 220-3t.

J. Rapalje & Co. are also sole Agents for the sale of Ketchum's Mowing Machine in Rochester, and for the vicinity. 220-tjy m11-3t

Poetical.

[Written for Moore's Rural New-Yorker.]

THE WITHERED WREATH.

BY IDA FAIRFIELD.

A little grave—its soft, brown sods,
Arranged with utmost care,
But burial stone or slab, was none,
To tell who slumbered there.
A withered wreath, of blossoms pale,
In fairy beauty lay,
Above the tiny hands which late
Had tossed each flower in play.

There was no need of marble pile
To tell the mournful tale,
Some mother's idol borne to rest,
Within death's shadowy vale.
A pearl from love's rich jewelled wreath,
Had slipped its silver string,
A song-bird gone to sunnier skies,
To try its untledged wing.

A radiant beauty must have fell
That youthful brow upon,
When this frail wreath was laid aside,
For Heaven's immortal crown.
But ah! with it, fond eyes behold
Life's raiebow hues depart;
Affection knows no stronger tide,
Than swells a mother's heart.

And aching eyes have looked upon
This little narrow bed,
And tears of bitterest agony,
Or wild rebellion shed.
No wonder that the lava flow
Has withered every leaf;
The heart's most fragrant blossoms die,
Seared by one blighting grief.

But, mourner, lift thy sorrowing gaze,
A spirit wing is near,
Thy cherub carols in yon skies,
And canst thou wish him here?
Here, that the cloud of woe and care
Might dim that glorious brow;
Or here, that sin and crime might stain
That soul, so spotless now?

Turn then, and with the eye of faith
In yonder realms behold
The lost lamb thou hast mourn'd so much,
Safe in thy Savior's fold.
Remove the withered wreath, and plant
Spring's fresh, delicious flowers;
Thy bud will burst in fadeless bloom
In Heaven's perennial bowers.

New Haven, April, 1854.

Rural Sketch Book.

TRUE BENEVOLENCE.

BY MRS. C. H. FORD.

"How shrilly the storm whistles around the corners of the streets, or bowls down the chimney; and hark to the sleet pattering furiously against the casement! Oh! the poor—what sufferings must be theirs on such a night as this!"

The speaker was one in whom such language would have seemed, to common ears, strange. He was attired with great nicety, almost amounting to foppishness, and his broad forehead and handsome face betrayed none of the furrows of care. Rich, courted, and as yet a stranger to sorrow, Judson Layton had still a heart open to the miseries of his less favored fellow beings, and now, as he sat before the cheery fire in that luxurious parlor, his thoughts turned involuntarily to the houseless outcasts who might be wandering in the streets. His words were partly to a lady, who sat opposite to him on the sofa. She was dressed fashionably, and with exquisite taste. Her face was lovely, surpassingly lovely, with regular features, and eyes, eyebrows and forehead, of unrivalled beauty. It was evident from the look with which Layton turned toward her, that his heart had been touched, if not overcome, by her beauty. She returned his fond look and replied:

"Yes; poor wretches! I fear enough has not been done for them this winter. You don't know, Mr. Layton, how my heart has bled, during the explorations I have lately been making among the lanes and alleys of the suburbs.—Such scenes of destitution and sickness! Oh! I shudder even to recur to them;" and she covered her face with her hands, as if to shut out some disagreeable object. Layton's fine eyes expressed deeper admiration at this evidence of her sympathy; and had they been alone, perhaps his feelings would have hurried him into the declaration he had long been meditating. But there was a third person in the room, whom we have hitherto forgotten, though to be thus put away for her cousin was the usual fate of Ellen Clifford. And yet, when one came to look at her, the causes of this neglect seemed doubtful. True, she was not as splendidly beautiful as Lucy, but her soft, dove-like eyes shone with an expression which seemed more angelic than earthly; and her whole countenance impressed the beholder with feelings of purity and awe. She was sitting at a table, a little apart, busily plying her needle, and seemed to take no part in the conversation, though when her cousin answered Layton, she started and looked up, first at her, then at him, and catching the expression on his face, she turned deadly pale. Bending over her work to hide her feelings, she remained silent, and almost unconscious of what was going on, until Layton rose to take his leave.

"You have been quite still to-night, Ellen," he said; "but I attribute it all to that beautiful pair of slippers you are working. I never knew before that you loved embroidery."

Ellen blushed, and without raising her eyes, replied quietly,

"They are not for myself."

Layton colored, and it was evident from his manner, that what he heard was, from some cause, disagreeable to him. He looked inquiringly at Lucy, and then answered:

"Whoever the person is, Miss Ellen, he has great reason to be proud, and would be even more so if he knew how devoted you have been to your work;" and without waiting for a reply, he bowed to both ladies and left the room, without noticing the flash of triumph in Lucy's eyes.

The instant the door closed on him, Ellen sprang from her seat, and left the parlor by the opposite entrance, while Lucy flung herself again on the sofa, and following her cousin with her looks, burst, when she had departed, into a clear, ringing, exulting laugh. Ellen, the instant she left the parlor, burst into tears, and hurrying up stairs, locked herself in her room. Then flinging herself passionately on her bed, she wept as if her heart would break.

"Oh! cruel, cruel," she sobbed, "to tell me I am working the slippers for another, when only he is in my heart. He little knows that I am embroidering them to raise a few dollars to assist nurse in her poverty. And Lucy, heartless Lucy! to talk about her sympathy for the destitute, when she will do nothing for our almost second mother, who is now sick and in poverty. Could Judson only know the truth!" and she wept afresh.

Ellen, unlike her cousin, was not an heiress; for the little pittance left her by her deceased parent barely sufficed for her most necessary wants; and had not her uncle offered her a home, her scanty annuity would have been insufficient even for these. Thus, though her heart was open as day to charity, she had no means of relieving the necessitous, unless by the manufacture and sale of such articles as the embroidered slippers, on which she had been working that evening. These were intended, as her words implied, to relieve the wants of a sick, and perhaps dying old servant, who had formerly been a nurse in her father's family, and who was now in the lowest depths of poverty. She had applied to her friends for assistance, and Ellen was anxious to supply her with every comfort that her limited means could purchase.

Our readers have already suspected the state of Ellen's heart. Her love for Layton had grown up insensibly to herself. He had long been in the habit of visiting at her uncle's, and for some time his attentions had been equally divided between Lucy and herself; and his warm heart, high intellect, and extensive acquirements, rendered him just the person to win the heart of such a girl as Ellen. She would sit whole evenings listening to his eloquent conversation, never speaking unless spoken to, but busily plying her needle. Nor did she become aware of the nature of her feelings for Layton until the increased particularity of his attentions to Lucy awakened her to the fact that she loved him. Then she strove against her passion, but alas! it had became so interwoven with her gentle heart that only death could remove it.

Lucy had long desired to become the wife of Judson Layton, for his standing in society was high, and his fortune that of a millionaire. She had early seen that he had wavered between her cousin and herself, and all her arts had been exerted to win the prize. She, therefore, assumed feelings she did not entertain, as in the conversation we have just recorded; and at length, by such duplicity, united to her extraordinary beauty, she succeeded so far as to regard her ultimate triumph certain. The consciousness of this caused the exulting laugh with which she saw Ellen depart from the parlor.

The next day, Mr. Layton called, and invited the cousins to go with him to a beneficial concert that evening. Ellen would have declined, but had not sufficient plea; besides, her uncle, who was present, insisted on it. After the concert there was an address for the poor, to be followed by a collection. The speaker was one of the most eloquent men in the city, and on this occasion he surpassed himself. The enthusiasm he awoke was perceptible when the plates were passed through the assembly.—Many who had left their purses at home, took off their rings and threw them down for alms. Among these persons was Lucy, who threw a valuable diamond from her finger, and thus gave it away. Layton saw the action, and mentally resolved to wait on the committee in the morning and redeem the ring, and with this determination, glanced at Ellen to see what would be her offering. Ignorant of her pecuniary situation, he saw with disgust that she merely bowed and suffered the plate to pass on, though a deep blush mantled her cheek.

"How mean!" was the inward ejaculation of Layton. "Well, I have chosen between the two; but, selfish as she is, she has yet the feeling of shame."

Ellen caught his look, and understood it; and when she returned home she spent the night in tears.

The next morning Ellen entered the parlor with a note in her hand.

"It is from nurse," she said; "she has got the poor woman who waits on her to write it. She is failing fast, and wishes, dear Lucy, to see you, for she has not forgotten the time when we both were in her arms together."

"I cannot go," said Lucy peevishly; "the carriage is in use this morning, and the snow is a foot deep on the ground. I wouldn't walk out in the suburbs, to the dirty den where she lives, for any thing. Besides, how unreasonable she is! Did I not send her five dollars when she was first taken sick?"

"But that was a month ago."

"And what if it was?" said Lucy, sharply; "one isn't made of money."

"But for our old nurse."

"*For our old nurse*," said she, mimicking Ellen; "why, I can't see what peculiar claim she has on me. I shan't go to see her, that's certain; and as for giving her any more money, I can't afford it. I gave away a ring last night worth a hundred dollars, and shan't give a cent again for years. The county takes care of the poor, and we all pay taxes for them. Let aunt Betty go to the poor-house."

Ellen sighed, but said nothing. She took up from the table the embroidered slippers, and, wrapping them in paper, was about to leave the room; but, with her hand on the door, she turned and said hesitatingly,

"Aunt Betty doesn't ask you, dear Lucy, for money—she only asks to see you; it would be such a comfort to her, she says, before she dies."

Lucy turned around, for she was looking at the fire, and with an angry tone answered:

"Do shut the door—the chill air of the entry makes me shiver. If you are fool enough to go out on such a bitter day as this, go; but assuredly I shan't go with you."

With a sad heart Ellen departed, and arraying herself warmly and in a partial disguise, left the house. She first went to the rooms of a society which purchased fancy articles from indigent females, and resold them to those wealthy persons who preferred patronizing a benevolent institution to buying elsewhere.—This society was the one whose concert she and Lucy had attended the night before, and when she entered the sale-room, Layton was, by chance, in an inner apartment, where he had been shown while the ring which he came to buy was sent out to be valued by a jeweler.—He was listlessly reading a newspaper, when his attention was arrested by a voice in the outer shop.

"Can you buy these slippers?" said the voice to the shop-woman. A pause ensued, as if the woman was examining them, and then came the reply:

"Why, Miss, they are not finished."

"I know that, I know that," quickly said the other, in emotion; "but I am in want of money for purposes of charity. The comfort, perhaps the life of an aged person is at stake. If you will advance me the money now, I will finish the slippers."

"This is a strange request," said the matron, "but as you seem honest, and wish the money for charity, I will accede to your terms if you give me your name and residence."

There was a pause, as if a struggle were going on in the other's breast; then she asked for a piece of paper to write her address.

"Ellen Clifford!" said the matron in some surprise; "I have often heard of her, though I do not know her personally. Surely, Miss, there is some mistake here. That lady is, if I mistake not, the niece of Mr. Fletcher."

But Layton had risen from his seat, for now recognizing the voice of Ellen, he was about to enter the shop. He checked himself, however, but the matron, hearing him rise, fortunately left the shop to see if he wished her. In a few hurried words he told her to buy the slippers, placing his purse in her hand. He then waited until Ellen had left the shop, when he followed her at a safe distance, until she entered a narrow lane, and passed into a dirty, rickety house. He could not resist going in after her, and cautiously opening the door, saw her approach the bedside of an invalid old woman.

"God bless you, Miss Ellen," she fondly said; "your visits are the only comfort I now have. But where is Miss Lucy? won't she come once to see her old nurse? I thought I heard a second step on the stairs."

"No, it was only the echo of mine. Lucy can't come to-day, but I have brought you my little purse to buy a few comforts for you.—You know it is a scanty one, but all I have you are welcome to."

"I know it, I know it. God bless you, for an angel as you are. And as Lucy is not well, else surely she would have come to see me, after my dying request."

Ellen wanted an answer, which Layton noticed, though the invalid did not. He had seen enough, and gently withdrawing from the door, was soon in the street.

"How have I misjudged this angel! And Lucy—Oh! how I loath her hypocrisy! I cannot believe she is sick, but will go at once and see."

Layton found Lucy at home, and to an inquiry about her health, she replied she had not been better in her life. Convinced of her duplicity he departed, grateful for his escape, resolving to give his hand and fortune to Ellen, if she would accept them. What her answer was, our readers, who know her feelings, can imagine.

"How I wronged you, dearest," said Layton to his young bride, a day or two after their marriage, "at that concert, when you gave nothing while Lucy threw in her ring. I little thought what sacrifices you were making at that very moment."—*Odd Fellows' Literary Casket.*

MARRY.—Jeremy Taylor says:—"If you are for pleasure, marry; if you prize rosy health, marry. A good wife is Heaven's last best gift to man—his angel and minister of graces innumerable—his gem of many virtues—his casket of jewels; her voice is sweet music—her smiles, his brightest day—her kiss, the guardian of his innocence—her arms, the pale of his safety, the balm of his health, the balsam of his life—her industry his surest wealth—her economy, his safest steward—her lips, his faithful counsellors—her bosom, the softest pillow of his cares—and her prayers, the ablest advocates of Heaven's blessings on his head."

A FARMER'S WIFE IN OLDEN TIMES.—Sir Anthony Fitzherbert, Chancellor to Henry the VII., thus describes the model farmer's wife:—"It is a wyves occupation to winnow all manner of cornes, to make malte, to wash and ironying, to make hay, fill the muckwaye or dung cart, drive the plow, lead hay, corne, and such other. And go or ride to market to sell butter, cheese, eggs, chickins, capons, hens, pigs, geese, and all manner of cornes."

WHEN we gaze upon the stars they look down on us with pity, from their serene and silent places, like eyes glistening with tears over the little lot of man. Thousands of generations, all noisy as our own, have been swallowed up by Time, and there remains no record of them any more. Yet Arcturus and Orion, Sirius and Pleiades, are still shining in their courses, clear and young as when the shepherd first noted them on the plains of Shinar.

CANINE LOGIC.—There is a chapter in one of our metaphysical works showing how dogs make syllogisms. The illustration is decisive. Thus, a dog loses sight of its master, and follows him by scent, till the road branches into three; he smells at the first, and the second, and then without smelling further, gallops along the third.

ANY creditors are a superstitious sect, and great observers of set days and times.

Youth's Corner.

ILLUSTRATED REBUS, NO. 20.

☞ Answer in two weeks.

WE will send the RURAL three months (the current quarter, from April to July,) to each of the first *four* persons, residing out of this city, who send correct answers to the above Rebus,—and the numbers of the previous quarter to the next *ten* persons furnishing correct solution—previous to the publication of the answer.

NOTE.—We give no premium for solution of any Rebus, unless the offer is made in connection with its publication, as above. This explanation is given for the information of those who have claimed premiums for answering Rebuses published during the past two months.

[Written for Moore's Rural New-Yorker.]

MISCELLANEOUS ENIGMA.

I am composed of 25 letters.
My 1, 6, 11, 21 signifies long ago.
My 2, 3, 17, 7, 5 is the name of a bird.
My 3, 6, 1, 24 is the name of a Mexican General.
My 4, 10, 5, 21, 11 is a Heathen Deity.
My 5, 20, 16, 1 is much used.
My 6, 15, 23, 1 is a city in Europe.
My 7, 8, 25, 15, 6, 4 is to forget.
My 8, 4, 21, 1 is used by farmers.
My 9, 24, 24 is an article of dress.
My 10, 6, 15, 3, 21 is the name of a fish.
My 11, 17, 5, 19 is much used.
My 12, 21, 9, 15 is a king in Europe.
My 13, 24, 18 is used by ladies.
My 14, 17, 11, 22, 20, 25, 8, 21, 15, 18 is a territory in the United States.
My 15, 6, 24, 18, 8, 1 is a fruit.
My 16, 24, 6, 20, 12, 25 is an officer of the Revolutionary war.
My 17, 6, 8, 3, 11 is a Heathen God.
My 18, 4, 20, 5 is a useful article.
My 19, 1, 24, 5, 21, 9 is agreeable.
My 20, 15, 18, 7, 17, 25 is a cluster of Islands.
My 21, 17, 7, 5, 12, 6 is the ninth part of a man.
My 22, 24, 6, 1 is a wild animal.
My 23, 3, 6, 17, 10 was one of Bonaparte's Marshalls.
My 24, 5, 1 is a beverage.
My 25, 1, 14, 12, 6, 5, 1, 24, 18, 11 is a city in the United States.

My whole is creating a great deal of excitement in the State of New York, at the present time. C. B.

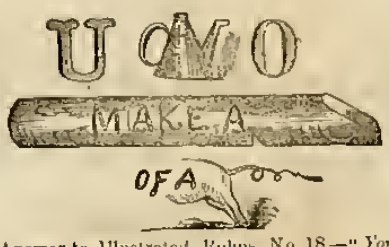
PROBLEM.—How far may a light-house two hundred feet high, be seen at sea; the diameter of the earth being 7,912 miles?—M. H. A., *Chili.*

☞ Answer next week.



Answer to Illustrated Rebus No. 18.—"*You cannot make a whistle of a pig's tail.*"

Answer to Acrostical Enigma in No. 17.—*The Nebraska and Kansas Bill.*

Answer to Mathematical Question in No. 17.—7 37-56.

Wit and Humor.

ECONOMIZING IN SPACE.—A paper out west, desiring to publish a stanza of poetry occasionally, but not having much space to spare for the purpose, does it in the following manner:

"Those frogs, of which, aforetime, our muse was wont to sing, again ring out, with piping chime, a welcome to the spring. From swamps and pools, and marshy nooks, and creeks and rivers' banks, in notes not found in music books, they clamor forth their thanks."

"How is it," said a gentleman to Sheridan, "that your name has not an O attached to it? Your family is Irish, and no doubt illustrious." "No family has a better right to an O than our family," said Sheridan, "for we *owe* everybody."

GWAHAMITE PUDDING.—Cut up four laths in a peck of saw-dust. When well mixed, bake it by placing a pipkin containing it, in the sun for half an hour. Serve up with sauce made by soaking a cedar shingle in a pail of well-water.

ALLITERATIVE.—A friend, pleading plumbily phigurative, phurnishes the phollowing:

"4ty 4tunate 4esters 4tuitously 4tifying 4 4lorn 4tresses, 4cibly 4hale 4ty 4nviably 4eigners 4ming 4ging 4ces."

A BARBER desired a groggy customer of his, on Sunday morning, whose breath smelled strong of alcohol, to keep his mouth shut, or the establishment might get indicted for keeping a rum hole open on Sunday.

PATENT IRON FENCES, VERANDAHS, &c.,

GREATLY improved in quality and greatly reduced in price, and put together in such a way that they are much more durable, and admit of being taken apart and moved much more easily than a wooden fence. All this will apply to my Verandahs, as well as Fences, of which I have a great variety, of beautiful styles, and very strong, as well as tasty. The price from $100 upward, according to size and amount of work on them. For my fences I use an iron base, and rib or stone or iron posts, which is much more economical than a stone foundation and much more secure against the action of frost. Both fence and verandahs are fitted together ready to be put up before leaving the shop, and so marked and numbered that any good mechanic can put them up. Distant customers can order from me with entire confidence that they will find no difficulty in putting up the work. This style of verandah is decidedly the most permanent and tasty ornament that can be put on to a house.

P. S.—I will furnish illustrated engravings and a list of prices, and make all necessary explanations to applicants by mail. Front st., Rochester, N. Y., next door to Commercial Hotel. H. E. SMITH,
April 18, 1854. 225-2t

TWO PRAIRIE FARMS FOR SALE

FIRST.—240 acres of first quality of land, 150 acres of which are under a high state of cultivation. Good house, barn, carriage house and stone smoke house, 200 Apple trees, engrafted fruit. Good water power and plenty of water for stock.

SECOND.—230 acres of first quality of land, 130 of same being under high state of cultivation. Large new barn, small orchard, and stock water.

Said farms lying side by side, will be sold separate or together, to suit purchasers. Price per acre, $24.

ALBERT E. BEACH,
Irving, Barry Co., Mich., April 16, 1854. 226-2t*

LANGSTROTH'S MOVABLE COMB BEE-HIVE

PATENTED DEC. 5th, 1852.

EACH Comb in this Hive is attached to a separate movable frame, and in less than five minutes they may be all taken out without cutting or injuring them, or at all enraging the bees. Weak stocks may be quickly strengthened by helping them to honey and maturing brood from stronger ones.

Queenless colonies may be rescued from certain ruin by supplying them with the means of obtaining another queen; and the ravages of the moth effectually prevented, as at any time the hive may be readily examined and all the worms, &c., removed from the combs. New colonies may be formed in less time than is usually required to hive a natural swarm, or the hive may be used as a non-swarmer, or managed on the common swarming plan.

The surplus honey may be taken from the interior of the hive on the frames or in upper boxes or glasses in the most convenient, beautiful and saleable forms. Combs may be safely transferred from any other hive to this, at any season of the year, from April to October, as the brood, combs, honey and all the contents of the hive are transferred with them, securely fastened in the frames.

We are now prepared to sell state, town, county and individual rights, to make, vend and use these hives, on reasonable terms. The price for individual rights, which will entitle the purchaser to make the hives for his own use, is five dollars. We can also furnish hives to all who wish.—Price from two to five dollars. Upon the receipt of nine dollars we will send the right, together with a beautiful hive, with glass on four sides, showing all the combs. For seven dollars the right and a well made hive without glass, which any one can make who can use the simplest tools.

Agents wanted for the sale of the above rights.

All communications addressed to J. BEALS, Greenfield, Mass., will meet with prompt attention.

For one dollar, postage paid, Langstroth's book entitled the Hive and Honey Bee, will be sent fier by mail.

224-4t J. BEALS.
Attorney for Rev. L. L. Langstroth.

OAKLAND HENERY.

THE Subscriber now offers for sale a choice lot of Asiatic Fowls, consisting of the buff and white Shanghais, Cochin China, and the celebrated Brahma Pootra. Also Eggs at the following prices:—Brahma Pootra $3 per doz. Cochin China, buff and white Shanghai $3 per doz. Not less than one dozen sent to one address. A less number will be sold at the office of O. B. EVANS,
224-3t 214 Main street, Buffalo.

REJECTED APPLICATIONS, &c.

THE undersigned respectfully gives notice that he is at all times prepared to pay special attention to the prosecution of rejected applications for Patents; also to contested and interfering cases. In some instances he will undertake to prosecute rejected cases, receiving no compensation unless the Patent is granted.

Patent business of every description, whether before the United States Commissioner, or the Circuit and U. States Supreme Courts, promptly attended to.

The undersigned being represented at the seat of government by Wm. P. Elliott, Esq., formerly of the American Patent Office, possesses rare facilities for immediate reference to the patented models, drawings, records, assignments, and other official matters. Examinations for particular inventions at the Patent Office, made on moderate terms.

Persons wishing for information or advice relative to Patents or Inventions, may at all times consult the undersigned *without charge*, either personally at his office, or by letter. To those living at a distance, he would state, that all the needful steps necessary to secure a Patent, can be arranged by letter, just as well as if the party were present, and the expense of a journey be thus saved. All consultations strictly confidential. The whole expense of Patents, in the United States, is small.

223-4t ALFRED E. BEACH,
Solicitor of American and Foreign Patents,
People's Patent Office, 86 Nassau-street, New York.

FARMERS, LOOK TO YOUR INTERESTS!

J. RAPALJE & Co., of the Genesee Seed Store, Rochester, having received their Spring supply of Seeds, &c., offer for sale, at the lowest cash price—

500	bushels	Scotch Fife Seed Wheat,	Canada growth.
500	"	Canada Club do,	do.
500	"	Spring Rye.	
200	"	Barley, from Canada,	premium seed.
200	"	Chevre Seed.	
500	"	A No. 1, Timothy.	
1,000	"	Early and late Field Peas.	
300	"	Pure Early Kent Peas.	
300	"	Early Washington Peas.	
200	"	Early Warwick Peas.	
100	"	Dwarf Blue Imperial Peas.	
500	"	Marrowfat Peas—and many coming.	

13 casks of English Seeds, viz:—Turnip, Cabbage, Radish, Cauliflower, &c., &c. Several varieties of superb Garden Peas, imported from London. 221-6t

OSAGE ORANGE SEED.—We will supply new crop Osage Orange Seed, at *twenty-five cents* per quart, neatly put up, and with each package full directions for cultivation. Address orders to H. C. WHITE & CO., Buffalo Agl Warehouse and Seed Store, Buffalo, N. Y. 223-tf

MOORE'S RURAL NEW-YORKER,

IS PUBLISHED EVERY SATURDAY,

BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

SUBSCRIPTION—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion. As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 25 cents per copy to the club rates of the RURAL,—making the lowest price to Canadian subscribers $1,50 per year.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

*** The postage on the RURAL is but 3¼ cents per quarter, payable in advance, to any part of the State—and 6¾ cents to any part of the United States,—except Monroe County, where it goes free.

ADVERTISING.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance*. The circulation of the RURAL NEW-YORKER is several thousand greater than that of any other Agricultural or similar journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

The Wool Grower and Stock Register is the only American journal devoted to the WOOL and STOCK GROWING INTERESTS. It contains a vast account of *useful* and *reliable* information not given in any other work, and should be in the hands of *Every Owner of Domestic Animals*, whether located East or West, North or South.—Published monthly in octavo form, illustrated, at ONLY FIFTY CENTS A YEAR—5 copies for $2; 8 for $3. Vol. 5 commenced July, 1853. Subscriptions can begin with the July or January number. Back volumes furnished.

Address D. D. T. MOORE, Rochester, N. Y.

MOORE'S RURAL NEW-YORKER

Progress and Improvement.

CROPS FOR SOILING PURPOSES.

Good timothy hay, at the present time, in this city, is worth $16 per ton. In Detroit, Chicago, Cincinnati, and other western cities, it is quite as dear as with us, while in the large Atlantic cities it commands still higher prices. With high prospective prices for all kinds of grain, and the consequent increase of *arable* land, it is quite probable that next year, to say the least, hay will be equally scarce and high as it has been this season. It might be well, therefore, for every farmer to glance for a few moments at some of the means whereby he can dispose of a larger quantity of hay than usual. Some say, "keep less stock, sell off your sheep immediately after shearing, and in this way you will need less pasture land, and be able to cut more hay." This is true, but then beef, and mutton, and wool, are all proportionally high, and though, for the time being, it may be more profitable to sell hay than to feed it to cattle and sheep, yet no farm can long sustain the exportation of large quantities of hay and grain without being materially impoverished, unless great efforts are made to manufacture rich manure by keeping a large stock on rich food. It will not answer, therefore, to dispose of a portion of the stock on the farm; if any thing, it must be increased. But how shall this be accomplished, and at the same time have an increased quantity of hay to sell? We answer: by Soiling; that is to say, by growing green crops for feeding cattle in the yards during the summer months.

There can be no doubt that at least three times as many cattle can be kept on an acre of land by this method, as by the pasturage.—There is more labor attending it, and when land is cheap and produce low, the practice cannot be profitably adopted; but here, where land is held at $100 per acre, and in the neighborhood of all our large cities, where hay, milk, and all that the farmer has to sell commands ready sale at high cash prices, no other system of feeding horses and cattle is so economical.

The greatest difficulty in the way of an extensive system of soiling in this country, and indeed in all countries, is the want of a plant which comes *early* enough to the scythe. In Great Britain, Italian rye grass is the earliest crop. It has not been sufficiently tested in this country to enable us to speak of its merits, but from what we know of it, we should be doubtful of its adaptability to the Northern States. We believe Indian corn is the best of all *cereals* for soiling purposes in this country. It does not come early enough, and from certain theoretical considerations we suspect it is rather exhausting to the soil, yet considered simply as an article of food, it has no superior either for cutting green for the use of oxen or milch cows in summer, or for conversion into fodder for winter use.

For early use we know of nothing better for soiling than red clover. Could English farmers produce it with as much certainty, and in such quantity as we do in Western New York, it would be very extensively used by them for soiling purposes, especially for horses. Every farmer should make it a rule to have an acre or two of red clover, on rich, early ground, as near the barn as possible. By manuring it in the fall, an early and luxurious crop of clover would be obtained. It would be found of great advantage to feed to the teams at noon and before turning them into the field in the evening. And, indeed, if enough could be obtained, the horses might be kept up and fed on it altogether. A few acres so manured and cut early, would afterwards yield a splendid crop of clover seed, or it might be mown twice as green food for the horses and cattle.

Indian corn, for soiling purposes, may be sown at different periods till mid-summer. The soil should be either naturally very rich, or be well manured. A cool, moist soil is better than a very dry one, as the crop is very liable to injury from drouth—much more so than corn under ordinary cultivation. Prepare the ground as for the usual corn crop. The deeper it is plowed, and the mellower it is made the better. A gentleman near Rochester who grows considerable corn for soiling purposes, sows it broadcast, at the rate of four bushels per acre. He thinks thick seeding very essential. We believe, however, that it would be far better to sow it in drills, two and a half to three feet apart. The drills may be formed with a light plow and one horse. Then scatter the seed in this furrow, say 40 seeds to the foot, and cover by running a harrow lengthwise of the furrow. Corn sown in drills, in this way, can be horse hoed, and the soil kept clean with little trouble, while the cultivation greatly promotes the growth of the corn. We should be pleased to hear from any of our readers who have had experience in soiling.

A FEW WORDS ON UNDERDRAINING.

An observing, practical, agricultural friend said to us the other day, "I have just come from Buffalo, and I am fully satisfied that, on lands along the railroad, the loss sustained from injury to the wheat plant in consequence of stagnant water, would more than pay the whole expense of underdraining the land."—This assertion could not probably be maintained, yet we agree with him that nothing would do so much to improve American agriculture as the introduction of a good system of thorough underdraining. No matter how well you may cultivate or manure, if the land is saturated with stagnant water, you cannot grow good crops. We believe there are few farms in Western New York which might not be made to produce about one-third more of all crops, simply by underdraining. "But it costs so much; thirty dollars per acre is a good deal of money to bury out of sight in underdrains."—True, but it must be remembered that it is a permanent investment. It is not like sowing eight or ten dollars worth of guano per acre which benefits a crop merely for one season.—It is a perpetual means of obtaining increased crops. It must be borne in mind, too, that the *increase is all nett profit.* The cost of seed and cultivation is no more, while the yield is one-third greater. In fact, the cost of cultivation is much less, for land that is underdrained requires less labor to prepare it for the reception of the seed than one undrained. It can be plowed much earlier in the spring and later in the fall; and after heavy rains, when land not drained is so wet that man nor beast can go on it, the underdrained land will be in fine condition to work.

Our object, at this time, is not to speak of the precise reasons why underdraining is beneficial, or of the various modes of underdraining, of these we will treat hereafter, but simply, while farmers are suffering the effects of an excessively wet and backward spring, to call their attention to the only means of removing the surplus water from the soil and of preparing it for the proper reception of the seed in good season. Now make arrangements this coming summer to underdrain at least a few acres of your farm next fall. If we can only persuade you to judiciously underdrain one acre, we feel fully assured that you will need no farther persuasion to proceed with the work so long as you have an undrained acre on the farm.

ANSWER TO QUERIES ABOUT OATS.

In the Rural you speak of plowing in oats, and I want you, if you please, to answer me a few inquiries. I sowed a piece to oats late last spring and seeded. The summer being so dry, the seed did not take. I wish to sow to oats again this spring and seed. Not having plowed the ground last fall, will it do to plow in my oats on the stubble? Will it do to sow my clover and timothy seed after the plow and then smooth with the harrow? Or should I drag first? Do you drag at all after plowing in your oats where you do not stock the land? How much oats should I sow to the acre? Do you think winter wheat is benefited by plowing in? You speak of soaking your seed corn in saltpetre—will it prevent the wire worm as well as birds? Hiram Smith.

Wales County, Mich.

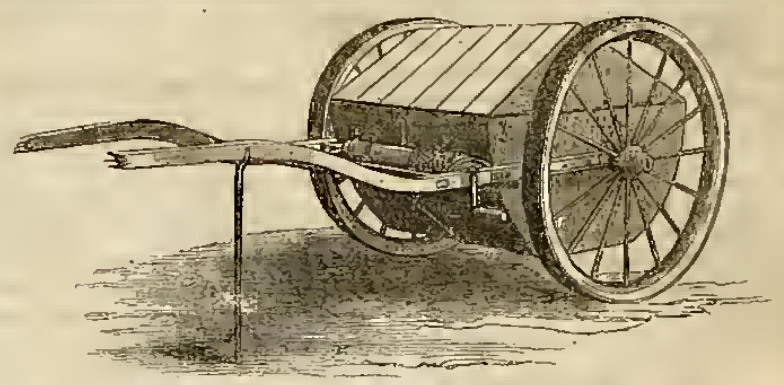
If Mr. Smith had observed the article he refers to a little more attentively, he would have seen that the method of plowing in oats, and soaking seed corn in a solution of saltpetre, were not the practice of the writer, but of Mr. J. R. Martin, of Kingston, Penn. Here in this neighborhood, oats are a light crop, and are but little raised by the writer, who will, however, answer Mr. Smith's inquiries so far as he can, very cheerfully. But the answers must be more suggestive than otherwise. If any of our readers have had experience in plowing in oats, why will they not communicate it for the pages of the Rural?

To plow in the oats on stubble land, would undoubtedly give a portion of the seed too great a depth, unless the plowing be too shallow for the profit of the crop. The stubble, weeds, &c., should be buried deeply—this done with a *good* plow, would leave the land in good tilth, provided it be in proper condition. If this had been done in the fall, then the writer would not hesitate to plow in the oats with a light draft. Next to this, I would sow on the furrow and harrow lengthwise. Sow the clover and grass seed after the harrow, and cover with a bush or roller. The smaller the seed, the lighter the covering. Sowed after the plow, much of the clover seed would be buried too deeply to vegetate, or if vegetating, the tender plant could not struggle to the surface. I would not use a harrow to cover such seed on freshly plowed land, unless the harrow was a very light one, and the soil a light one. I should think there would be no necessity of harrowing after the plow, where the land was not stocked. It would be a matter of convenience in harvesting the crop, more than benefit to it undoubtedly. So far as the writer's experience goes with the amount of seed per acre, he finds that with him three bushels to the acre give a better yield than less. Regarding plowing in wheat, he has noticed instances of wheat covered with corn plows that gave a decided improvement to the crop.—And on land in general, especially the lighter soils, he sees no reason why all such grains as wheat, oats, barley, rye, &c., may not be better covered deeper than they can be ordinarily with the harrow alone. It is in a good measure owing to the greater depth which seeds are planted by drills, that the crop is materially increased, and that too with a less quantity of seed.

The writer has never been troubled with birds or worms among his corn, except the cut worm—has not, therefore, had any experience with any of the soaks in vogue. Twine strung through the fields, before the corn appears, has, with the writer kept away the crows. If the saltpetre will keep the birds, &c., from eating the kernels, it probably may the worm, though I should be inclined to think it would not save the *stem* of the plant. Mr. Smith will have noticed, no doubt, the suggestion of corn cobs placed in the ground by the hill, as a good preventive against the wire worm. It seems to have the sanction of experience, and that from several sources, and may therefore be the best thing against these depredators.

A word for the crow, which is a great help to the agriculturist in clearing the ground of worms, grubs, &c., which do vastly more injury than the crow can. Where they abound, and for want of proper food, make attacks on the young corn, the farmer would find it more for his benefit even to scatter corn on the surface of the field, than with gun and powder to take the crow's life. Turring will keep the corn from his bill, for the crow is somewhat fastidious in what he eats, though he may take to dead flesh. T. E. W.

Kent County, Mich.



TUMBLER CART IN A POSITION FOR TRAVELING.

THE TUMBLER CART.

Modern British Agriculture repudiates the use of wagons. Visit any of the model farms of England and Scotland, and Carts of all kinds, sorts, and description meet your eye, but a wagon or carriage with four wheels is no where to be seen. The fact has been fully demonstrated that a horse will draw a much greater weight in a cart than he can in a wagon. For many purposes we think carts might be advantageously adopted in this Country. That they will ever be as common here as in England is not to be supposed. The "go a head" habits of Americans are against such a supposition. We must have three minute horses.—Heavy English horses are intolerable and a light horse cuts a sorry figure in a cart. Before the general substitution of carts for our lumber wagons, we must go to work and raise a heavier breed of farm horses.

The Tumbler Cart is the most recent improvement in the construction of carts for certain special purposes that we have seen. Its chief peculiarity consists in its extreme lowness obtained by passing the axle through the body of the tank, while at the same time the conveniences of completely tipping the cart is attained in the larger sizes by the introduction of an eccentric which allows the body to tip, and in fact entirely to revolve on the axle, without touching the ground. The body of the cart or tank is made of wrought iron, and is fitted up with a delivery pipe and valve that can be affixed or removed in a very few minutes; so that in cities it answers the purpose of a watering cart for the streets, while for agricultural purposes, the cart can at any time be adapted to the delivery of liquid manure, either from a pipe, or in the form of a sheet over the back edge of the cart.

P. Barry, in his letters from the World's Fair describes this cart, and speaks of it in the highest terms of commendation he says:—"It is chiefly intended to carry off the sweepings of streets, night-soil &c. * * * The great advantage of the low body for filling, not only with fluid or semi-fluid substances, but with earth, gravel, lime, or any other material, for the handling of all which it is exceedingly well adapted, must be too obvious to require comment. For the purpose of filling, the body can be canted to any required inclination, so that the labor becomes less than that of filling a wheelbarrow, thus effecting an immense saving in the cost of carting every description of earth and minerals. The complete method of discharging the load by entirely tipping the cart, also gives it an advantage for many purposes over every other kind of cart.

I would recommend this cart to all who collect street sweepings, nightsoil, &c. To the scavengers of large cities it would be particularly valuable. In Rochester they use boxes placed on carts, from which the filth is not unfrequently sprinkled over the streets, and I have seen contrivances quite as bad in the city of New York."

The season for active operations has arrived, and every farmer should be fully prepared to accomplish much in a limited period.

THE GRAINS AND GRASSES.—NO. III.

Barley—(*Hordeum.*)

Barley is a native of a warm climate, but in what country it originated, or where first cultivated, is not known. There are many theories on the point, but they lack authenticity, for the fact is, that barley has been cultivated, according to both sacred and profane history, for more than 3,000 years; hence, the fact of its now being found wild in any country, is no evidence of its purity. Barley has been extensively cultivated for ages, in Egypt and Syria, and used by the inhabitants as food. It is best adapted, of all the grains, to the habits of a migratory people, as in a hot climate it will ripen in 56 days from the time of sowing, and it has been known to ripen in 42 days. Barley was anciently eaten extensively as food, and is yet to some extent, by the inhabitants of southern Europe. It makes good cakes, coffee and gruel, when properly prepared. Two crops of it are frequently raised in one season on the same ground in southern Europe, and is one of their staple crops.

Barley was introduced into this country by the first settlers. It was sown by Gosnold, on Martha's Vineyard, in 1602, and by the colonist of Virginia, in 1611, and was one of their staple crops, till 1618, when it gave way to a less useful but more profitable article—Tobacco.

Barley is not exclusively cultivated in the United States. According to the census of 1840, the quantity raised was 4,161,504 bushels, and in 1850 it was 5,167,016, of which New York produced 3,585,059; being seven-tenths of the whole amount, and the larger portion of this is grown in western and central New York. The greater part of the barley raised is consumed in making malt and spirituous liquors, amounting to no less than 3,780,000 bushels, in 1850. The same is true, also of Great Britain. The amount thus consumed in 1846, was over 42,000,000 bushels, and costing over $24,000,000.

Cultivation.—Barley requires a lighter soil than our best wheat lands, and heavier than will grow good rye. The land must be well drained, or naturally dry, as it is very sensitive of moisture in excess. A rich, mellow loam, ranging between light sand and clay is best, and let this be in the finest tilth. The best crops that I have seen grown were from clover sod well manured, and a crop of corn raised the previous year. The thorough culture of the corn crop thus prepares the ground for the succeeding crop of barley. If barley is to be sown on soil ground, it should be plowed in the fall previous, so that the frosts of winter, acting on it, may reduce it to a fine tilth; and in spring, let this be thoroughly cultivated on top, if the sod is not well decomposed. Use no coarse manure, as it is of little value for barley, as its quick growth does not give time for the manure to become fit for its use, and such manure pays much better when applied to corn. Fine manure, with ashes and plaster, has a very beneficial effect when applied as a top-dressing.

Barley should never be sown on poorly prepared soil, especially if not suited to it, as failure of crops will be inevitable, and oats are surer. It should be sown as early as the season will admit of it, as in our hot and dry climate late-sown barley will be light in yield and light in weight. The best method of sowing is by drilling and afterwards rolling the

land. The rolling may be done some time after the barley is up, and is then beneficial in causing the soil to press the roots, and the plants to tiller, and it has been known to add one-third to the yield.

The quantity of seed per acre is from 2 to 4 bushels, but on good soil from 2½ to 3 is sufficient, especially if sown by drill.

Barley is an excellent crop to sow clover and grass seed with. It is less exhausting to the soil than oats, and frequently large crops of wheat are produced when it is sown on barley stubble. I have harvested over 40 bushels to the acre, thus raised. On good soils barley tillers much, producing as many as 30 or 40 stalks from one seed, and each stalk producing a head that has 40 or more kernels; this is not common, as that rate of increase would give more than a hundred fold. The produce varies per acre; a good crop should be at least 40 bushels. In England they raise more per acre, and heavier per bushel, than we do. It is no uncommon produce there, of 60 bushels, each weighing 56 or more pounds per bushel. Time of cutting should be as soon as the straw turns yellow below the ear, and after cutting it should be secured as soon as possible from exposure to rains or dews, as they injure its market value. Care should also be taken in securing the crop in stacks or the barn, to have it thoroughly dry, as it frequently heats, which injures its malting properties and gives it a musty flavor. The straw of barley is well liked by sheep and cattle when free from must, but is considered by many to be of little value.

Marion, April 21th, 1854. I. A. CLARK.

CHARRING POSTS, AGAIN.— COAL TAR, &c.

Eds. Rural:—I have latterly noticed some communications in the Rural, on the merits and demerits of charring posts for their preservation, in one of which the writer advocates charring, whilst another condemns it, for the reason that it cracks the wood on the outside, and causes it to rot sooner than it otherwise would. With the latter opinion I partially agree, as the inner part of those cracks cannot be sufficiently charred to be any benefit. I do not wish to enter into a discussion on the subject, but will proceed to give my plan. I char a portion of the posts, say 18 inches or 2 feet, in such a manner, that 6 or 8 inches of the charred part will be above the surface of the ground when they are set, the balance being below, (not being particular about charring the extreme lower end.) When it is a little cooled, but not cold, I apply enough of coal tar or pitch to completely coat the wood in the cracks or fill them if possible. When dry, or nearly so, repeat the application, and then that part will be completely "water-proof." Set them when dry.

Coal tar, I consider of great value to the farmer. For plows, harrows, sleds, wagons, ladders, posts, board-fences, gates, &c., it is an excellent article, combining convenience and durability with cheapness—costing about one dollar per barrel, at gas manufactories.

Directions for using it.—Provide yourself with a kettle or pot—put in the tar—set it over a slow fire and boil it completely, the more the better, taking care that it does not catch fire—after boiling provide yourself with a brush (a whitewash brush with a short handle is the very thing,) apply the tar tolerably hot with the brush—when dry or nearly so, give it another coat. If the wood has been previously planed or made smooth, two or three applications will fill all the pores and form a beautiful glossy black, not unlike varnish. Don't be afraid of it,—grease your hands before you begin, and it will come off easily, and don't mind the smell, it will not last long, and if your extremely fastidious neighbors should have the olfactories somewhat excited by it, and complain, just "go ahead" with the consciousness that you are doing your duty in trying to preserve your labor, and from my own experience, I have no doubt you will be rewarded.

G. W. Allen.

Washington County, Pa.

CORN HILLING vs. FLAT CULTURE.

Eds. Rural:—In your paper of April 29th, you ask for your reader's experience in hilling corn. Willing to contribute my mite in return for the many valuable hints I receive from your columns, I reply to your invitation. My experience has uniformly been as follows:—1st. Hilling corn produces a little diminution in the crop. 2d. It delays the period of maturity from six to ten days. 3d. The little support it receives by way of propping up, does not compensate for the above named injuries.

The reason of the above may appear from the following:—When corn (or other seed,) is properly planted, its roots *naturally* start out at just the right depth to receive the best influence from the air and sun. This is a universal law in vegetable physiology. The right depth will vary, according to the warmth and openness of the soil. After the roots have taken their position in the ground, if a little earth is placed over them, of course they will be a *little* too deep, and will not perform their office quite as well as when in their natural position. If buried sufficiently deep, they will serve the plant so poorly, that new roots will be thrown out nearer the top of the ground, where their wants can be better supplied. The new roots absorb the vitality of the plant and those first formed gradually cease their growth. To make this change in the circumstances of the plant requires time, and its growth is retarded and injured. For a similar reason, when corn is planted very deep, a new set of roots will spring out above those first formed, and thereby delay the maturity of the crop. It is easy to make a difference of a week or ten days in the ripening of a crop of corn, by planting too deep. After the roots of a plant have become established in the ground, it hardly needs demonstration to prove that they would be injured by being broken off, exposed, or driven out of their course by making the surface of the ground uneven. If corn *must* be hilled, it should be hilled *before* planting, never *afterward*.

I. B. Ansorn.

Fairfield, April 29, 1854.

CHESS GRASS, QUACK GRASS, WILD GRASS.

And a host of other cognomens are applied to a kind of grass which is infinitely troublesome on arable land. It grows as high as timothy, with a head as long, or longer, and of a waving or chess like form. In mellow ground the roots will run two or three feet without a branch. When once in the soil, it is worse to exterminate than a Western squatter. Annual plowing seems only to accelerate its growth, as the roots grow so vigorously, that mellow soil is better for it to spread in than sward. Then again, the roots are so long that the neck of the plow, or the teeth of the harrow or cultivator will carry them from one end of the field to the other, and wherever a root is dropped there a new patch is started. Let those having this grass, which they wish to destroy, beware of plowing too much, unless they gain some headway. I have found it better to *plow when the top was somewhat grown, and then cultivate thoroughly during the hottest and dryest weather.* In moist ground it is more difficult of extermination. Small patches may be destroyed by covering with straw if covered thick enough, and kept during the whole season. If one blade grows through the straw, it will reproduce the whole patch after the decay of the straw.

I have pretty nearly subdued one field of this grass with a good deal of trouble, and I would be glad to hear of the experience of of others in regard to the easiest and best means of destroying it. W. B.

West Bloomfield, N. Y. April, 1854.

Cultivation of Onions.—Having had some experience in the cultivation of onions, I venture to answer R. B. E.'s inquiry. Sandy land is unquestionably the best; I prefer the yellow variety; sow as soon as the frost is out of the ground, in rows 12 inches apart; weed as soon as up. I have raised onions on the same ground forty-one years with good success. Once in three years apply a good coat of stable manure, that has lain a year in a heap; plow the year the manure is applied; other years an iron tooth rake is sufficient. Under the last manner of culture I have raised at the rate of 1,000 bushels to the acre. Harvest with the tops on; spread six inches deep on wide shelves, one above another, to the top of the cellar. I should have said that in sowing, the seed should be covered very shallow, and if sown by hand, boards should be laid lengthwise of the rows, and removed as you proceed, standing on the boards to harden the ground, and if sowed with a machine, by no means omit the use of the boards. The year the ground is plowed, I have practiced rolling the land with a common farm roller, but it must be done by hand, after the boards have been used. T. B. Miles.

Watertown, N. Y., April 24, 1854.

SHADE A FERTILIZER.

That shade is a fertilizer, is a fact which has long been noticed, and much has been written to explain it. A few words will be sufficient for that purpose. Shade operates simply by preserving the ammonia which is in the soil, and which is continually furnished by rain and snow water, and also by manures, and which is rapidly driven off from a naked surface of the soil by a scorching sun. To preserve the ammonia the skilful farmer plows in his manure shortly after it is spread upon the soil; and spreads his manure upon his meadows late in the fall, or in the winter, or early in the spring, so that the ammonia may be washed out of it into the soil, and prevent its evaporation by the sun. Ammonia is either food or condiment for most plants, which is necessary to their rapid growth. It has been ascertained by repeated experiments in England, that the largest crops of wheat can be raised by imparting to the soil an extra quantity of ammonia, either directly by spreading salts of ammonia, or by guano. Hence the greatest fertility of the soil will be more surely preserved by an alteration of crops, rather than naked fallow, from which a scorching sun drives off the ammonia rapidly.

We should bear in mind the eloquent words of an English writer, that "mighty nature renews her strength, not by indolent repose, but by alternations in energy."—*Ohio Cultivator.*

BEANS NOT AN EXHAUSTING CROP.

Can the bean be considered a fertilizing, or is it an impoverishing crop? It is commonly received amongst farmers that it is not at any rate an exhausting crop, that it is rather ameliorating, and that it prepares a soil better than almost any other crop for wheat. And yet chemists show us that it takes off from the soil absolutely more nitrogenous matter than any crop of a similar kind—we mean corn, grain, and pulse. Thus a produce of 30 bushels of beans per acre will remove say 490 lbs. of nitrogenised or flesh-forming substance, while the same quantity of wheat per acre will remove only 260 lbs; of barley, 40 bushels will remove 280 lbs.; of oats, the same quantity will take away 275 lbs.

Though there have not been, that we are aware, any investigations into the organic composition of the bean-straw, there is no doubt that it is highly nitrogenous also. Pea-straw, a material of the same class, shows nitrogenous matter about 8 times as great as the straw of wheat per acre, 10 times as much as oats, and about 15 times as much as that of barley. Hence, then, it is a de-azotising crop, both in the grain and in the straw, taken per acre—the most certain mode of calculating such articles of produce.

Theory immediately says, chemistry therefore has decided the bean to be an exhausting crop; and the reason why farmers so advocate it is just the same as induces them to advocate the growth of any corn crop which they know deteriorates the soil in its permanent effect, but puts money immediately into their pocket. But we are not prepared to subscribe even to this, plausible as it may seem; what we mean to say practically is this, that *when properly cultivated*, the bean is not an impoverishing crop, *but the reverse.*

A very few physiological and practical facts will easily set us right on this point, and obviate the great objection some landowners have to see beans cultivated even on soils where the clover has got worn out, and where the bean is used, and most successfully, as a substitute for that plant.

The *bean has a large leaf system.* Hence it derives a large portion of its element from the atmosphere. Treating leaves as the lungs of the plant, and knowing that the turnip, the clover, and others derive a proportion of nourishment from the atmosphere almost, we had said, in the ratio of a large or a small leaf development, we easily see how the clover, even when all mown off, is not much of an exhauster; while the wheat or the oats, having a small and feeble leaf system, will take most from the soil.

Nor are we altogether to forget the benefit of the shelter of the bean leaves. The moisture or the ammonia may fall on the soil. In many cases, a hot sun may evaporate the one, and dissipate the other; the beans will, in the very reverse, shelter the soil till both are absorbed. And these leaves fall off. It is known how planting even with trees, which take off tons of inorganic matter, will enrich a soil in vegetable constituents. The fall of the leaves, year after year, which are mostly formed of carbon and moisture, forms a superstructure of soil rich in vegetable matter. So the bean leaves fall off at harvest, by frosts or from ripeness; and these all assist in improving the carbonaceous matter of the soil, and so fitting it at least for some kinds of crops.

The *bean is a deep tap-root feeder.* Corn of all kinds permeate the surface soil with fine, small spreading filaments of roots. Deeper, it is true, it might go, if the soil were deeper worked and pulverized, and there were more inducements; but in ordinary circumstances, it is a shallow spreading root-feeder. The bean is the reverse. Its deep feeding root strikes directly down, and it is only at the lower parts of that root that the spongeoles are sent out.—It derives its food, in fact, from a different part of the soil, so far as the root is concerned; and therefore it may be said to have a mode of supply altogether different from the corn crops, which usually follow it.

But we must not be led away to forget the saving clause of proper cultivation. It is not the mere drilling or dibbling or broadcast sowing of beans we now object to, or recommend. If the bean is a deep feeder, it must be assisted to get food where the root really goes. Hence all good farmers *ridge their beans* and in the ridge put some fertilizing matter. All manures covered by the soil have a natural tendency downwards; and hence the bean root will follow the manure deposited in the furrow, and the bean planted above it.

Not only so, but as the leaves are a great means of supplying the plant with food, they must have plenty of room to expand. Beans must be *sown in wide ridges.* We have seen good—the best perhaps we ever saw—at 30 inches; we have seen excellent at 32 inches; but they never ought to be less than 27 inches, and if properly cultivated they will meet at these widths long before harvest.—But the soil between must not be neglected, otherwise it will grow weeds, which will not only impoverish the soil, unfitting it for a future crop, but injure the progress of the beans themselves. Hence the horse and hand-hoe must be liberally applied: or what is better, the grubber, or even the plow itself may be used with advantage. Here, there is both a crop and a fallow in the same year; the surface soil is being cleaned and pulverized, while the subsoil is enriched and growing a crop.—Hence the bean crop, when properly managed, *derives its nourishment from the subsoil, while the surface soil is being fallowed, sheltered and improved for the wheat crop.*

Practice steps in, therefore, and shows that mere closet chemistry can never unravel the secrets of the true position of the bean crop.—*Mark Lane Express.*

Hen Lice.—Lice may be killed on hens and chickens by oiling or greasing their heads and necks. But to save this labor let your hens have room enough, and all manner of dust to wallow in. A sprinkling of lye on their roosts and sleeping chambers will positively kill all the lice with which it comes in contact. This should be applied two or three times each year.

Agricultural Miscellany.

THE BRITISH WHEAT MARKET.

We copy the following from the *Mark Lane Express*, the best British authority on the subject of the grain market. A quarter is 8 bushels:

The following return of the quantities of English Wheat sold at the towns which return the averages, during the first three months in 1853 and 1854, affords a striking proof of the deficiency in the last crop. The sales were, in—

	January.	*February.*	*March.*
1853	542,282 qrs.	345,329 qrs.	358,886 qrs.
1854	260,477 "	256,061 "	227,556 "

The last weekly return is 36,628 qrs, against 88,343 qrs in the corresponding week of 1853. In comparing the total quantities sold during the three months as stated above, they will be found to stand thus—1,236,497 qrs. against 759,094 qrs.; the falling off is therefore 486,403 qrs. The same test cannot be tried in regard to the kingdom generally; but we see no cause to believe that the result would differ materially. The liberal character of the foreign supply has, however, thus far, prevented the shortness of the home deliveries being very seriously felt, and there are still considerable quantities of wheat and flour on passage from different quarters to this country; but can we expect that the importations during the time which must necessarily elapse before the next crop can be rendered available will be on an equally liberal scale? America has drained her ports on the seaboard to furnish what we have received from thence; and though we do not doubt that she has considerable stores in the far west, it will need high prices to cover the expenses of transporting the same to the east coast, and from thence to England. The northern ports of Europe have also been nearly cleared of previous accumulations, and the war with Russia cuts off further supplies from the Black Sea and Azoff. We offer the foregoing for the consideration of our readers without further comment.

IMPROVED SUPERPHOSPHATE OF LIME.

We clip the following from the *Gospel Banner*, published at Agusta, Me. Brother Drew is a careful experimenter, and is not a "constitutional enemy" of Professor Mapes:

We had nearly a ton of this Prof. Mapes' Superphosphate of Lime, that cost us towards fifty dollars. We have *lost* the money; but the public shall have the *gain* of our experiment. We experiment sometimes, and often at our own cost, for the benefit of others who may gain their knowledge at our personal expense. We applied the fertilizer to oats, to wheat, to corn, to potatoes, to grass, and to various sorts of garden vegetables. We applied it at different times, from spring to mid-summer, and in different soils, as clay and sand; and in different weather, as wet and dry; we applied it generally in alternate rows or hills, to to ascertain what, if any, should prove the difference between the dressed and the undressed crops; and upon our soul we cannot say that we could perceive in the growth of the plants, or the amount of produce, where the superphosphate of lime was, and where it was not applied. In our case we set it down as a failure.

How to get rid of Rats.—Prof. Dascom, of Oberlin, in a letter to the *Ohio Farmer*, says: "Would it not be well to call the attention of your readers to the ease and certainty with which they may be relieved from the annoyance of the large brown rat. This impudent intruder often visits my laboratory and other premises. As they come singly, I 'take off' each, the night after I discover signs of his presence, in this wise:—I take half a tea-spoonful of dry flour or Indian meal on a plate or piece of board, and sprinkle over it the fraction of a grain of strichnine. This is set in a convenient place; and I *invariably* find the culprit near the spot dead in the morning. The peculiar advantage of this poison is, that it produces muscular spasms, which prevent the animal from reaching his hole to die and decompose. It is needless to add that such a violent poison should be used with care."

Is the First Milk Poison?—A friend informs us that Mr. H. B. Wyman, of Sidney, lost a valuable sow not long ago, in consequence of giving her the first milk of a cow after calving, and asks if it invariably causes such trouble if hogs me fed on it? We believe that it does. We one year gave some such milk to a sow that was with pig. It made her sick and she cast her pigs before her time, all of which were dead. We were told that such would be the result if we fed her with it, but were faithless. The next year we fed it to another under the same circumstance, and the result was the same—all the pigs being dead. We found that rather costly experimenting, and have never tried it again. Last spring one of our neighbors, who had a very fine sow, fed her with a pretty generous portion of such milk; she immediately became sick and came very near dying.—*Maine Farmer.*

A Big Farm.—The *California Farmer* says that the amount of wire fence around the farm of Messrs. Horner & Beard, but a few miles from San Francisco, exceeds, in the aggregate, eighty miles, and is worth one hundred thousand dollars. The two gentlemen have in cultivation 2600 acres of wheat, 750 acres of oats, 500 of barley, 1200 of potatoes, and acres upon acres of cabbage and root crops. In addition to all this, Mr. Beard designs planting during the present season, 10,000 fruit trees and a large number of vines.

It is idle to expect cows to give rich and wholesome milk and butter, unless some attention is paid to the requirements of the animal economy, and the raw materials furnished them from which only it can be manufactured.

Inquiries and Answers.

Red Hawthorn, Osage Orange and Carrots.—I wish to know through the Rural, either by the editor or some of your correspondents, whether or not the wild red hawthorn, which is common in the Middle States, has ever been used for hedging, and if so with what result, &c.? Or what is the difference between it and the common hedge thorn, if any? I have thought that the common hawthorn would make an excellent hedge, by proper treatment, having observed some exposed brambles which have not greatly increased in height for many years, about the height of a good hedge, perfectly impenetrable, very compact, and having thorns about two inches long, very sharp. I am of opinion, from some isolated specimens of the osage orange that I have seen, that they will grow too large for hedges, being what I would call trees, some 20 feet high; but they might not grow so in a hedge? What is the right time to plant carrots for a good crop?—G. W. Allen, *Washington Co., Pa.*

Will some of our correspondents give their experience with the Red Hawthorn as a hedge plant?

The Osage Orange is naturally a tree in every sense of the word. It is a thrifty grower, and when planted as a hedge in latitudes where the frost does not cut off the young wood, and the plants are left to themselves, they make, as some one has facetiously remarked, admirable fishing poles. But it is vain to think of making a good hedge with any plants without constant trimming. We are such a *fast* people that we must have a hedge in a few months or a couple of years at the longest; we cannot bring ourselves to cut down four-fifths of the growth of a hedge every year, and till we can we must be content to forego the advantage and beauty of good hedges. Osage Orange, in this vicinity, when properly managed, succeeds admirably as a hedge plant. We have nothing superior.

The earlier carrots are sown after this date the better. See an article on the cultivation of carrots in the Rural of April 22d, current volume.

Guano for Wheat.—Would land which now by the use of plaster and clover, produces every other year 30 bushels of wheat per acre, be made, by the use of guano and leached ashes, to produce 30 bushels per acre *every* year? If it will what amount would it be necessary to apply each time, and how should it be applied? You will pardon me for intruding on your time, but I am very anxious to learn the answers to the above questions.—J. A. Cowles, *Oakfield, Genesee Co., May* 1, 1854.

On such land as you describe, there cannot be the least doubt but that, by the aid of guano and ashes, from 30 to 40 bushels of wheat per acre may be raised every year. Some 500 lbs. of *good* Peruvian guano would be required per acre each year. We would sow half of it in the fall and the other half early in the spring. The great practical difficulty in the way of growing wheat every year is in *keeping the soil clean.* In Mr. Lawes' experiments, where he has grown wheat eleven years in succession, he drills in the wheat in rows a foot apart and hand hoes it twice or thrice in the spring. By such constant tillage the soil is apt to become too light for the wheat plant. But this may be avoided to some extent by sowing early and treading it with sheep in the fall, or by the use of a heavy roller, or Crosskill's Clod Crusher. But will such a system of cultivation pay? We answer it will pay well, if wheat sells for $2,00 per bushel. It certainly will not pay with wheat at $1,00 per bushel.

Barley, Ashes, &c.—As the season has been very backward here this spring, and there is but little barley sown yet, would it be advisable to sow much after the first of May? Can you tell me what is the effect of ashes on clover, or on corn? soil a black muck.—Aumsen, *Reeds Corners, N. Y.*

It is possible that barley may do well sown the first or second week in May, but we should prefer to plant corn rather than to risk it. On corn, ashes have a good effect, especially on a black muck. Apply a handful to each hill before the first hoeing. Ashes would be beneficial on clover, but pay better when applied to corn; such, at least, is the general opinion.

Pipe for Conveying Water.—Can you give me the best and cheapest way to bring water to a barn, say sixty or seventy rods? Some advise wood, some stone or clay-burnt pipe, and some lead, and some water-lime. If clay-pipe is preferred, where can it be obtained, and what price per rod? What size caliber is best.—J. Evans, Jr., *Girard, Erie Co., Pa.*, 1854.

Will some of our readers answer the above. Alvin Wilcox, West Bloomfield, Ontario Co., N. Y., makes clay pipes for this purpose. They fit into each other and are cemented, and answer well.

A Curious Fact.—I have a sheep that gave birth to two lambs, at two different times.—The first one was born March 29th, and owing to the severe cold it died. The last one was born April 6th, and is yet alive and doing well.—N. Coapman, *Hallsville, N. Y.*

Orchard and Garden.

RENOVATION OF OLD ORCHARDS.

There are many old and long neglected orchards about the country, which by proper pruning and cultivation might be made productive and profitable. They grow, perhaps, in old meadows, seldom or never manured; and, if ever grafted, have since been left mostly without pruning or care, until their heads are masses of stunted branches so crowded as to render the production of good fruit impossible. The trees themselves are not particularly unhealthy or decayed—they only show neglect and inattention to all right management. In the many changes always going on, such orchards frequently come into new hands, or the owners wake up to a sense of their forlorn condition, and ask, "what course of treatment will best renovate and renew my orchard?"

In answer to this question we reply, "Pruning, Manuring, Cultivation." If the fruit is of worthless varieties, grafting will be necessary.

Pruning.—Do not go into the orchard with an axe and handsaw, and cut off all the lower limbs, careless of large wounds or the symmetry of the top, but *thin* out the thick, broken and stunted branches—leaving the most healthy and vigorous—*evenly* throughout the whole tree. Thin the outside even more than the middle, so as to let in the sun and air, and let this be your rule except in what you cut away to improve the *shape*. If the trees are to be grafted keep shapeliness in view, as well as the health of the future tree and its necessary cutting and trimming. Some recommend grafting but one-third of the tree, beginning at the top, each year, and where they are very large, this would be the wisest course.

Manuring.—Poor, exhausted soils will not produce good apples, however fine the trees may have been originally. Orchards need manuring annually. Barn-yard manure, with occasional applications of lime and ashes are indispensably necessary. Give the whole surface a good dressing, and apply a special mulch of straw, tan-bark, or half-decayed chips around the base of each tree. This will assist in keeping down the weeds, as preventing the effects of long continued dry weather—often very injurious to the value of our orchard crops.

Cultivation.—Many of our best fruit growers have found it to their advantage to plow their orchards every year, and harrow or cultivate every month of the season—keeping the ground a bare fallow. In this way the largest crops of fruit have been produced. But where the trees do not shade the ground too much, hoed crops, other than corn, may be taken from the soil without detriment to the orchard. The crops will not be as large as on the open ground, but the field will be more likely to get the requisite cultivation.

All orchards, at this season of the year, need a thorough scrubbing with lye or potash water. One pound of potash to four gallons of water, gives the proper strength, we believe. This removes the moss, dislodges and destroys insects, and promotes the health of the bark generally.

Trees necessarily planted in meadows or lawns should be manured and mulched around the roots. This will aid their growth—and indeed fine apples have been produced on well cared for trees in such situations. The Apple is a hardy tree, patient of ill treatment and neglect,—but it is also a grateful one, returning largely for every extra attention. There is no need of so many miserable orchards disfiguring the face of the country; we should have better ones or none at all.—R.

THE DAHLIA WORM—A REMEDY WANTED.

Eds. Rural:—One year ago I planted out in my garden eight promising dahlias. They all grew well for a time, and several budded quite early. One of these, though not the earliest, bloomed beautifully in the latter part of June, and through the remaining part of the season. The buds on the others would one by one reach the size of from that of a pea to that of a hickory nut, when they would become stunted, parts of the buds turn black, and finally perish, and the whole plant be checked in its growth, short and stocky, with a superabundance of short thick-set leaves. After a time the dahlias would take a new start, send out new shoots, and more buds would appear, to go through the same phases and suffer the same fate as the others. Not a dahlia blossom did I have save what grew on the one first mentioned.

I afterwards found in the stalks of each of the seven, one or more worms which had eaten their way from the root to the point from which the flower stalks branch, and after cutting off the top, destroying the worm, and plugging the cavity made, with Scotch snuff in a few weeks found new worms in the same plants. The worm is one or one-half inches long, spotted, and about one-quarter inch in diameter. My object in writing is to get an antidote for these depredators. W. H.

West Bloomfield, N. Y.

CALANDRINIA SPECIOSA.

The ornamental species belonging to the genus *Calandrinia* are mostly natives of South America, and like the Mignonette are shrubby plants there, though with us, and also in Europe, they are treated as annuals. The name *Calandrinia* was given to this genus in honor of L. Calandrini, an Italian botanist. Few flowers have a more striking effect than the little *Calandrinia speciosa*, (of which the accompanying engraving is a very good representation,) with its brilliant dark crimson flowers peeping out from its thick and beautiful bed of leaves. The flowers open in the morning, and present as rich a mass of foliage and flowers as can be desired; but by three o'clock in the afternoon every little flower is closed.

"With the exception of the early closing of the petals," says the *Horticulturist*, "this species deserves to be generally cultivated, as nothing can exceed the rich velvety look of the flowers. It is quite hardy, a true annual, and ripens its seeds in great abundance. It is a native of Northern California, whence its seeds were sent to England in 1842, by Douglas. It should be sown in dry and exposed situations, where it can have abundance of light and heat; as the situation in which Douglas found it was a hot, dry bank. It requires very little water, and flourishes best in weather when most other plants are burnt up. It is well adapted for rock-work. It may be sown two or three times during the season, and at any time from April to July."

SHORTENING-IN PEACH TREES.

Eds. Rural:—In No. 6 of this volume, you give an article from Mr. Hunnewell on this subject, in which he says, "this shortening-in has a tendency to keep the branches upright, and cause an excess of leaves to grow while the trees are young," and also that it hinders their bearing in this latitude, though it might be beneficial in the South.

This is contrary to the general experience. Many who have tried it say that it causes the head of the tree to become rounded like that of an apple tree, the centre filled in with live and productive branches, instead of naked and dead limbs, as is generally the case. Of course the number of peaches, or of peach blossoms, will be diminished by as many as are cut away, but the weight of ripe, good fruit is almost invariably increased. A friend in New England says he not only shortened-in his trees, but thinned out one-half of the fruit,—that which remained—a good crop, by the way,—was unusually large and fine. The next year intending to remove the tree, it was untouched, retaining all its branches and all its fruit. The tree was filled with fruit, loaded down to the ground, but not one peach remained on till ripe.

The tendency of the peach to push out new branches at the extremity of the limbs only, and at the expense of all below, needs some check or the tree will soon be bare and leafless in the centre, while the outside is over-loaded with leaves and fruit. This check is found in shortening-in as explained and recommended in a recent article in your paper. But like all other operations about fruit trees, it must be performed thoughtfully and carefully—with an understanding of the principles upon which trees grow—or it may be an injury instead of a benefit. E. K. V.

Bees and Fruit Trees.—It is stated that bees greatly improve the fructification of fruit trees. Orchards in which several hives of bees are kept, always produce more fruit than others in which there are none. In the provinces on the Rhine the fruits are more abundant and finer than in any other part of Germany, and there it is the custom to keep large quantities of bees. Plants, too, which bees visit, thrive better in the neighborhood of hives.

An Excellent Plan for Growing Cucumbers.—Take a large barrel, or hogshead; saw it in two in the middle, and bury each half in the ground even with the top. Then take a small keg and bore a small hole in the bottom; place the keg in the centre of the barrel, the top even with the ground, and fill in the barrel around the keg with rich earth, suitable for the growth of cucumbers. Plant your seed midway between the ridges and the keg, and make a kind of arbor a foot or two high for the vines to run on. When the ground becomes dry, pour water in the keg in the evening—it will pass out at the bottom of the keg into the barrel and rise up to the roots of the vines, and keep them moist and green. Cucumbers cultivated this way will grow to a great size, as they are made independent of both drouth and wet weather. In wet weather the barrel can be covered, and in dry the ground can be kept moist by pouring water in the keg.

How to Enlarge Vegetables.—A vast increase of food may be obtained by managing judiciously and systematically—carrying out for a time the principles of increase. Take, for instance, a pea. Plant it in a very rich ground; allow it to bear the first year say half a dozen pods only; save the largest, the following year, and retain of the produce three pods only; sow the largest the following year, and retain one pod: again select the largest, and the next year the sort will by this time have trebled its size and weight. Ever afterwards sow the largest seed, and by these means you will get peas or anything else, of a bulk of which we at present have no conception.

Strawberries.—We ought to say a word at this season about strawberries—a fruit that everybody, who owns or occupies a patch of land, ought to cultivate. The strawberry is a hardy plant and very easily cultivated. We are persuaded, that a great mistake is made in manuring too much. Give it a fair chance; keep down the weeds; and keep it well moistened—and with a moderate amount of manure, you will be sure to get abundant fruit, without a superfluity of vines.

Tanners' Bark is now understood to be capitally adapted to the strawberry; spread it completely over the soil: it will keep the fruit clean and the soil moist. This is the true mulching for the strawberry.

Pruning Ornamental Trees.—If a tree has plenty of sunshine and air, with a congenial soil, its beauty will be perfect, and the pruning knife should never touch it. What can add to the grandeur of a tree standing alone in a yard or a field, or by the roadside, where it has had opportunity to develope itself in all directions? Could symmetry and proportion be more complete? Let the man who has a passion for trimming and spoiling trees, study these models. The limbs are none too many, nor too long, and hang none too low, notwithstanding he may think otherwise. Prune, "spare that tree; touch not a single bough."—*O. Farmer.*

Dry Land for Pear Trees.—No fruit trees should be set in low and flat land, for they invariably fail after a few years. Even quince bushes and willows grow better on side hills than near stagnant water.

In old times many people set their apple trees in some of their low interval lands. They seemed to suppose that it would be difficult to make them live in dry soil. But such orchards have never produced enough to pay the cost of setting. It is now a general practice to set pear and apple trees on high land.—*Massachusetts Ploughman.*

A Farmer, (says Cole,) dismissed a hand because in his absence, he set only nine trees in a day. The farmer set out the remaining ninety-one of the hundred himself the next day. The result was that the nine bore more fruit the first year of bearing than all the others.

Crush the caterpillars in the egg, and you will save much time and injury, and secure a larger crop of fruit.

It is an error to plant seeds from States further south. In a cold season, only the seed of a colder climate will ripen well.

Mechanic Arts, &c.

LIST OF PATENT CLAIMS

Issued from the United States Patent Office,

For the week ending May 2, 1854.

Isaac M. Singer, of New York, for improvement in sewing machines.

Amos Young, of Georgetown, D. C., for improved method in discharging cargo from canal boats.

Nicholas G. Norcross, of Lowell, Mass., for improvement in certain devices in tongueing and grooving lumber.

Matthias Lachenmeier, of Philadelphia, Pa., for improved device for constructing strap iron railing.

Wm. M. Storm, of New York, for improvement in chargers for fire-arms.

Mahlon Loomis, of Cambridgeport, Mass., for improvement in plates for artificial teeth.

Martin T. Laulfear, of Manchester, Conn., for improvement in reed boxes for musical instruments.

Hubror Halvorson, of Boston, Mass., assignor to himself and John T. Heard, of same place, for improvement in processes for distilling rosin oil.

Halvor Halvorson, of Boston, Mass., assignor to himself and John T. Heard, of same place, for improvement in distilling apparatus.

John W. Adams, of Thompsonville, Conn., for improvement in spinning cotton.

Wm. E. Arnold, of Rochester, N. Y., for improvement in the couplings of endless chain horse powers.

John Allender, of New London, Conn., for improvement in operating catches in coal buckets.

Wm. Ballard, of New York, for improvement in making ships' knees.

Wm. H. Churchman, of Philadelphia, for improvements in hydraulic-beaters.

John Crabtree, of Philadelphia, Pa., for improvement in adjusting the packing of pistons in steam engines.

Henry W. Farley, of East Boston, Mass., for improved means of adjusting the valves of locomotive engines.

John Gallagher, of New York, for improved cutter for metallic bars and rods.

Curtis Goddard, of Edinburgh, Ohio, for improved machine for making bed pins.

Robert Hodgin, of Barnesville, Ohio, for improvement in straw cutters.

Archibald C. Ketchum, of New York, for improvement in car trucks, with adjustable axles.

Conrad Liebrich, of Philadelphia, Pa., for improvements in trunk-lock hasps.

Washington F. Paget, of Stone Bridge, Va., for improvement in harrows.

G. M. Patten, of Bath, Me., for improved arrangement of spring dies in machines for making clinch-rings.

Wm. B. and Geo. M. Ramsay, of So. Strabane, Pa., for improvement in flexible harrows.

Wm. Robinson, Jr., of Warsaw, N. Y., for improvement in machinery for making rope.

Sewall Short, of New London, Conn., for improvement in violins.

Philander Shaw, of East Abington, Mass., for improvement in air engines.

LeGrand C. St. John, of Buffalo, N. Y., for improved hydrodynamic engine.

John M. Weare, of Saybrook, N. H., for milker's protector.

Elbridge Webber, of Gardiner, Me., for improved rotary planing knife.

Asa Weeks, of South Boston, Mass., for improved expansive bit.

Parley Williams, 2d, of Barre, Mass., for improved slotting machine.

Seth Whalen, of West Milton, N. Y., for improvement in hay-knives.

BRICK CISTERNS.

Eds. Rural:—Ch. K., of Chili, inquires in your April 8th number, "Whether a cistern paved with brick and two coats of water-lime, is as expedient as one of stone in the same way." If your correspondent's inquiry refers only to the bottom (paved) of the cistern; I would certify him that he may just as well dispense with both brick and stone, and spread his mortar on the earth, provided he has a dry bottom. If he means the wall or sides of the cistern, stones are preferable to brick, unless he can procure of the hardest kind. Almost any kind of stone will answer as well, and as a general rule are cheaper than brick; but to build of stone will require more water-lime than brick.

Another equally good and still cheaper method of building a cistern, is to dispense with both brick and stone altogether. This method may be adopted to advantage where perpendicular walls are not a prerequisite, and where there is ample room, and no pressure from water. In this case excavate the earth sloping outwards, in the form of a mushroom kettle. Lay on three coats of mortar at intervals of from four to six days between each. Put on your covering before the last coat of mortar is spread. In all cases put your cistern top below the frost. A cistern allowed to freeze is "a broken cistern that can hold no water."

Webster, May 1, 1854. P. KENT.

A New Rope.—On Tuesday last, a number of gentlemen connected with railways attended at the Vauxhall station at Birmingham, to test the strength of a new rope recently patented by Messrs. John and Edwin Wright, of that town. The rope is constructed of the best hemp and galvanized wire spun together in the ordinary way by machinery, and is calculated to resist the effect of exposure to weather, and is not liable to break by those sudden jerks which so frequently lead to the loss of life. The rope is 4¼ inches in circumference, and it carried along a train of coals of 300 tons with perfect security, while a common hemp rope of nine inches circumference snapped asunder like thread with a train of 225 tons.—*London Chronicle.*

To Mend Iron Pots.—Mix finely sifted lime with some white of egg till a thin kind of paste is formed; then add some iron filings. Apply this to the fracture, and the vessel will be found to be nearly as sound as ever.

CHEAP PAINT.

This is a phrase which we often hear used, and the question asked, what is the best "cheap paint?"

We are inclined to believe that paint made of the best linseed oil, with some mineral coloring matter of good substance or body, such as the preparations of lead, zinc, or some of the ochres, are the cheapest, notwithstanding the first cost may be greatest.

We have often given recipes for making these cheap paints, because they are often useful to the farmer.

A writer in the Boston Cultivator, over the signature of "Dock," week before last, gave the following recipe for making cheap paint, which he recommends as good, having used it on his own buildings.

Take skim milk, six quarts, 24 ounces of freshly slacked lime, 18 ounces of linseed oil 6 ounces of Burgundy pitch, and 9 pounds of Spanish white or whiting. Slake the lime in water, expose it to the air, and mix in about one fourth of the milk, the oil in which the burgundy pitch is previously dissolved, and afterwards the Spanish white.

This he says is sufficient for ninety square yards and costs about seventy-five cents. If other colors are wanted, use instead of the Spanish white, such coloring matter as you desire.

The same writer recommends the following preparation, to be used instead of oil, for colored paints:

Take one gallon of soft brook water, heat it, and while boiling, add four ounces of pearlash, or eight ounces of saleratus, and when dissolved add one pound of good shellac, boil about five minutes, stirring while boiling.

If it separates while cooling, add more pearlash, this would be owing to the pearlash or saleratus not being good. It will then mix with oil, and I should recommend to use one half oil.—*Maine Farmer.*

ANOTHER MONSTER SHIP.

This is truly the age of great enterprises.—There seems to be no limit to the ambition of ship-builders. They aim to outdo, nay, eclipse each other in the gigantic proportions, speed and splendor of their vessels. The late English papers bring accounts of a gigantic ship about to be constructed for the Eastern Steam Navigation Company, to carry passengers and freight between England and India. This vessel will be of 23,000 tons burthen and composed of iron. She will have a pair of side wheels propelled by a set of marine engines of 1,700 horse power; she will also have a screw propeller at the stern, driven by another set of engines of 1,300 horse power. The total power of her engines will be 3000 horse, and she is expected to run 18 miles per hour. We believe a ship has never been constructed on this plan of using a double driving apparatus.

Domestic Economy.

To Polish Mahogany Furniture.—Rub it with cold damp linseed oil and polish by rubbing with a clean dry cloth, after wiping the oil off from the furniture. Do this once a week and your mahogany tables will be so finely polished that hot water would not injure them. The reason is this, linseed oil hardens when exposed to the air; and when it has filled all the pores of the wood the surface becomes hard and smooth like glass.

To Cure Boils.—The leaven of gingerbread placed on the boil, and left there until it bursts has been found to be a good remedy. When the matter is removed, place some more leaven on the part. Another, and perhaps easier mode, is the application of the rough side of the nettle-geranium leaf to *draw* the boil, and the smooth side to be applied to heal it.

Etna Shaker—Queen's Bread.—Slice as much bread as is needed; soak each slice, first in milk and then in egg well beaten; have it quickly fried with lard or butter; make a thick syrup of loaf sugar and water, and pour it over the bread whilst hot; grate nutmeg over it.—This will be found simple and delicious.—*Southern Agriculturist.*

Fire-Proof Cement.—Make a pailful of whitewash in the usual manner; add two pounds of brown sugar, three pounds of fine salt, and one pound of alum. Mix them thoroughly.—This cement may be used on fences, the roofs of houses, around fire-places, &c., as a protection against fire.

Bronchitis.—A receipt gives the following as a cure for bronchitis:—Take honey in the comb, squeeze it out and dilute in a little water, occasionally moistening the lips and mouth with it. It has never been known to fail in cases even where children had throats so swollen as to be unable to swallow.

To Remove Superfluous Hair.—Lime, two ounces; carbonate of potash, four ounces; charcoal powder, two drachms. Make up into paste with warm water, and apply to the part, which must be previously shaved close. When completely dry, wash it off with warm water.

To Take Ink out of Mahogany.—Mix in a tea-spoonful of cold water a few drops of oil of vitriol; touch the spot with a feather dipped in the liquid.

To Boil Potatoes Mealy.—When the water nearly boils, pour it out, and put in cold salted water; it makes them mealy without cracking them.

To clean Pictures.—Dust them lightly with cotton wool, or with a feather brush.

Acids combined with water condense it and produce heat.

Educational.

THE SCHOOL-BOY'S APPEAL.

O! strike not hard, once boyhood's bloom
Beamed on the face that now wears gloom;
Mischief and sport lit up the eye,
That does our little faults descry;
Then don't strike hard, we are but wild,
Remember thou wert once a child.
O! strike not hard, forgiving be,
As thou would others do to thee,
Let not thy heart be turned to steel,
And merciful toward us feel.
Then don't strike hard, we are but wild,
Remember thou wert once a child.
O! don't strike hard, let pity move
Thy heart, and turn it into love;
Let kindness rule o'er cruelty,
And God will then be kind to thee.
Then strike not hard, we are but wild,
Remember, thou wert once a child.

PUBLIC SCHOOLS IN CANADA.

William Chambers, the editor of *Chambers Edinburgh Journal*, is publishing in that periodical an interesting series of papers entitled "Things as they are in America." He landed at Halifax during the latter part of last year; went to Boston, thence to Albany and Canada East, by the way of Lake Champlain. His observations on American are of the most interesting character; very liberal and fair, and entirely free from that prejudged illiberality so characteristic of the British travelers in America, not excepting even Chas. Dickens.

But Mr. Chambers's observations in Canada East, are anything but complimentary to the intelligence and public spirit of that people.—Ignorant, unenterprising and superstitious, subject to a kind of Feudal vassalage to large landed proprietors called Seigneurs, they have hardly yet begun to wake up in the sun-light of modern civilization. Public schools are nearly unknown, and the rising generation grow up in ignorance, to fill the places of their stolid and imbruted fathers. In the commercial cities, like Montreal, it is true the Anglo Saxon is pushing back the original French and Indian element, and progress both in science and literature is decisive even among the common people; but in the rural districts the inhabitants present nearly the same features that their ancestors did at the time of the British conquest of Canada. There is indeed a law for the establishment and support of Common Schools, but the power of its enforcement is vested in the people, who, ignorant themselves, will, from the very nature of the case, bring up their children in the same wretched way, and vote down all taxes for the support of schools. The tide of emigration that pours incessantly into the Provinces in common with the States, stops only long enough in Lower Canada to change steamers at Montreal, and then speeds on towards the Upper Province, where there is a soil and climate as salubrious and fruitful as ever blessed the husbandman with health and comfort.

The population of Canada West is very different from that below, and is daily assuming a character consonant with that of the Free United States; active, energetic, progressive, seizing hold of all the aids of modern civilization to develop their resources physical and intellectual, and rapidly assuming a position of respectability beside their Republican neighbors.

Among the most powerful stimulants, as well as the most efficient agencies to produce such results, is the Common School. From the annual report of the Normal, Model, and Common Schools in Upper Canada, for the year 1852, which has lately been published by order of the Legislative Assembly, it appears that great exertions are made to perfect and extend the benefits of education to all classes of citizens. There are, it is true, a large number of children who do not attend any school, yet the means are placed within their reach, and the number of delinquents are diminishing from year to year. On this subject the report says:

The whole number of children between the ages of five and sixteen years reported for 1852, was 262,755—being only 4,148 more than the number reported for 1851. The whole number of pupils reported for 1852, was 179,587—being 9,333 more than the number reported for 1851. The number of boys reported as attending school, was 99,264, and the number of girls, 80,323. As the number of girls attending the common schools is nearly twenty thousand less than that of boys, so the number of girls attending private schools is much greater than that of boys. There is, however, a difference of 83,168 between the number of children of school age reported, and the number of children reported as attending school; and after the most liberal allowance for the number of children attending private and other schools, there is still the painful and startling fact of more than 60,000 children in Upper Canada not attending any school in 1852,—a fact that ought to rouse to exertion every friend of humanity, good government and civilization, until the number of children reported as attending the schools, shall equal the number of children of school age.

The doctrine of Free Schools is recognized in the Province, although not fully carried out in detail. The number of Free Schools reported is 901—being an increase of 46 during the year; in addition to which, 429 are reported as partly free — making in all 1,330 that are supported, in part or altogether, by a self-imposed tax upon property. The 13th section of the Supplementary School Act, does not permit the imposing of a rate-bill of more than one shilling and three pence per month for each pupil attending school; so that all the schools in Upper Canada are now, in a great measure, supported by a rate on property.

COMMON SCHOOLS OF BUFFALO.

The annual report of the public schools of our sister city, for the year 1853, is published and circulated under the superintendence of Victor M. Rice, late of that city, and now State Superintendent of Schools.

From the tables which accompany the report, it appears that the whole number of scholars taught in all the public schools, except the Central school, in 1853, was 15,027. The yearly average attendance was 5,520. The salaries of teachers amounted in the aggregate to $43,867.19. The average cost per scholar for forty-five weeks was $9.19. The total number of scholars taught in the evening schools was 1,796. The cost per pupil for instruction in the evening schools was $3.63. The number of volumes in District libraries on January 1st, 1854, was 5,558, and the number of drawn books during the year 25,815. The pupils registered for four years stand as follows:

January 1st,	1851	6,971
"	1852	6,848
"	1853	6,958
"	1854	7,306

EDUCATION IN TURKEY.

From "the Czar and the Sultan," an interesting little volume just published by Harper, we learn some facts in regard to the diffusion of popular instruction which will probably be new also to many of our readers.

In 1846 a council was formed, by imperial decree, for the management of all questions of public instruction, and the supervision of the new university. The state of the primary schools under their charge is of the most satisfactory description. Elementary instruction in Turkey is not only free but *obligatory!* The law requires every citizen, as soon as his sons and daughters have reached their sixth year, to inscribe their names in the books of one of the public schools, unless he can prove his means of educating them at home. In Constantinople the most recent report shows the existence of 396 free schools, frequented by 22,100 children of both sexes. After five years passed in one of these schools, the pupil can enter a secondary school, where instruction on all points is also gratuitous. There are now six of these schools, with about a thousand pupils. There is also a high school for young men intended to fill public appointments, a college founded with the same view, a normal school for the eduction of professors, the imperial college of medicine, a military, a naval and an agricultural school. The Sultan is himself the Superintendent of these schools, and visits in person at their examinations. The public libraries of Constantinople contain 80,000 volumes. During the reign of the present Sultan, protection and toleration have been extended to all religions. Christians have been permitted to take their position among the servants of the State, and to share in the administration of public affairs; some have been attached even to important embassies. Old abuses in levying taxes have been done away with, monopolies have been abolished. A national bank has been established, and is now in successful operation. Railways are in course of construction. Polygamy is on the decrease, slavery has been suppressed.—*Amherst Exp.*

PUBLIC SCHOOLS OF BOSTON.

The city of Boston appropriates yearly, about $330,000 for the support of public schools. It has invested in school-houses, about $1,500,000. The whole amount of money raised yearly, by taxation, for all its expenses, is about $1,200,000. Substracting from this amount the $330,000 appropriated to educational purposes, it leaves about $870,000 to meet all the other expenses of the city.

More than one-quarter of the whole tax of the city is appropriated to schools. The valuation of the city for the year 1852-3, was some $188,000,000. The amount taxed upon every dollar of property for education, was therefore some two mills. The population of Boston in the year 1852-3, was nearly 150,000, and if the amount appropriated to schools was raised *per capita*, the proportion of every man, woman and child, would be about two dollars. The number of voters in Boston is about 22,500.—If this amount was divided among them, each would pay fourteen dollars. The average number of pupils in the schools is not far from 23,000. The yearly cost of educating each child is therefore about fifteen dollars.

The State and Education.—In all parts of the country the feeling in favor of general popular education has been growing stronger and stronger. In almost all the States, the governments have provided the means of common elementary education for all the people. Thus far all its friends have gone on harmoniously. A sense of necessity has led them to overlook all objections, and no inquiry has been made into the grounds of the right of the State to educate, or the extent of this right. But now some propose going further. Not content with elementary education, (to which from its obvious benefits no objection could be made,) writers now advocate the duty of the State to give every one a complete education, for the business he intends to follow. This may seem a sort of reductio ad absurdum, and yet it is gravely put forth. But few have spoken out as yet, but the same thoughts and ideas are doubtless entertained by many.—*Rhode Island School Report.*

Useful Olio.

THE COMET.

The wonderful developments made in the field of Astronomy, as in all other departments of physical science, have essentially modified the opinions of men. The earth was once supposed to be the great centre of the universe, and the sun, moon, and stars were considered subsidiary thereto. It is doubtful which had most influence in producing this conclusion, man's ignorance or his self-love. The earth's apparent size: compared with the sun was one cause, and then the idea that he was "the Lord of Creation," and the especial care and crowning work of the Almighty was exceedingly consoling. It is humiliating to consider that this mighty world on which we live, instead of being the great centre of the universe, is only a minute speck upon the verge of creation, and even compared with our own solar centre, it is insignificant; to say nothing of the countless other suns and systems scattered throughout illimitable space.

Among the small and regular planets which make their periodical revolutions around the sun accompanied by their respective satellites, there are to be seen now and then an erratic traveler that sweeps athwart the sky, sometimes in a broad portentuous blaze which strikes terror to the hearts of ignorant men, and gives rise to fearful rumors of pestilence or war. The Comet, among the ancients, was always so regarded; and the manifestation was looked upon as a threatening messenger from the gods. The form of a sword, a torch, or a bundle of rods, (Fasces) which the more brilliant Comets usually assume, conveyed to the ignorant rabble the idea of scourgings, bloodshed, and conflagration.

In more modern times, after science had made some progress but was still far behind its present position, another fear arose in the minds of men concerning comets. These bodies came in towards the sun from the unknown realms of space, far beyond the orbit of the remotest planet; and the fear was that some of them would at one time or other actually *run down our insignificant* planet in their mad career. Modern science, however, has scattered to the winds this baseless theory also. In the first place, a very large number of comets never come within the orbit of the earth at all, before resuming their outward flight; and of those which do approach nearer the sun, comparatively very few have the plane of their orbits coincident with that of the earth. In addition to this, we must consider that in the whole wide circuit of the earth's and the comet's paths, they must be at the identical point of intersection at the identical moment of time. The millions on millions of chances against this contingency is above all calculation. Again, modern astronomers have observed stars of the sixth magnitude directly through the densest part of a comet, which could not be done unless its substance was many times rarer than our atmosphere; and consequently, an actual collision would amount to nothing so far as the earth is concerned, although it might *upset the comet.*

Some years ago a comet became entangled among Jupiter's moons, and entirely changed its orbit without disturbing their motions in the least; which could not have happened if the specific gravity of the comet had (to make use of a boy's expression) amounted to a row of pins. A comet's orbit is very nearly — not quite — a Parbolic curve, that is to say, an ellipse with its sides spreading outward until they become parallel lines at an infinite distance. If the orbit was an actual Parabola, the comet of course would never come back.

Sir James Brooke, Rajah of the territory recently acquired by the English in the island of Borneo, writes thus of the individuals there who are occupied in endeavors to Christianize the natives:—"I am inclined to believe the American Missionaries, in general, superior to the English, not in religious qualification, but in their general system."

ENGINERY OF WAR.

War, at the present day, is carried on in a manner quite different from what it was in ages past. As in the arts of peace, processes by the human hand have given place to the action of the machine, whose Briarian arms perform the labor of a thousand men, so in war the hand-to-hand weapons of offence and defence have all, or nearly all, been laid aside. Implements of wholesale slaughter—the bomb, the Congreve rocket, canister and grape-shot, and a hundred other death-dealing inventions—have taken a front rank in the array of hostile armies and navies.

Peace and prosperity, the advancement of science and the development of the arts, have brought about these wonderful changes. Although at first sight the invention of such deadly weapons may appear to be a prostitution of human energies, yet it must be acknowledged their tendency is to do away with the direful necessity for their use. When the puny arm of a child can set in operation an agency of sufficient power to overthrow a host; when the stalwart warrior, with nerves of iron and a heart of adamant, is less effective than a quiet student who has spent his whole life in the laboratory or in the scientific school; when the youth, who knows the secrets of chemistry or the doctrine, of projectiles, can sink a ship or burn a town, blow a squadron of cavalry over the top of a monument, or knock down a regiment of infantry like a row of nine-pins, war will sink lower and lower in the scale of *honorable* employments.

It may seem paradoxical, but it is true, that the more deadly the effects produced by weapons of war the less frequently will occur the opportunity to use them. If two nations possessed the power of annihilating each other, of razing every city to its foundations, depopulating every province, burning up every blade of grass and corn, and burying beneath the ruins of their empires both the rulers and the people ruled, and sowing salt upon each other's graves, those two nations would be the very last in the world to engage in a war; for by as much as the science of offensive and defensive warfare approaches this point, through the aid of improved means of wholesale but mutual destruction, by so much will the human family have approached the happy epoch of universal peace.

A French correspondent of the *Cincinnati Gazette* writes to that paper an account of several scientific improvements on the enginery of human destruction, in progress of experiment at the English arsenals at Woolwich; among which are enumerated a Congreve projectile, intended to glide along the surface of the water till it strikes an enemy's ship, to which it then adheres and explodes, breaking in the stoutest timbers, and shattering them so terribly as to exclude the possibility of plugging or repair. Submarine torpedoes, capable of being fastened to a hull and exploded under water—fire-ships and fire-balloons, armed with inextinguishable combustibles, are also mentioned, as also an asphixiating ball, which, on being projected into a ship or redoubt, emits a deadly and paralyzing gas, and prostrates and suspends thereby all the functions of animal life. In this way the martial spirit, as well as the power to fight, is overcome in a whole ship's crew as effectually as if every one of them were actually dead.

There is no reason to doubt that these or similar contrivances, even if not yet perfected, will be brought into effective use before the world is much older; and the sooner the better. The use of chloroform in surgery, and of the fire annihilator in conflagrations, are only steps in the line of discovery which will develop and bring into use the asphixiating ball.—The Peace Society has been agitating the question, how far a nation is justified in using these deadly methods of warfare; to which question Sir Charles Napier is understood to have answered thus significantly:—"If you fear to hurt the enemy, put into your guns balls of cotton, and into your cannon cakes of rice."

Important Optical Fact.—Mr. Alfred Smee observes, that the fact of time being required for vision has an important bearing upon railroad accidents, as it is quite manifest that only a certain number of objects can be seen every minute of time. Under the present system, the engine-driver has to look out for signals, regulate his engine, and attend to its working. Now, "when an engine is traveling at sixty miles an hour, an immensity of objects has to be focused and observed before the engine can be driven with safety, and practically we find, that if anything is amiss it is frequently unobserved, and a frightful accident is the result.—The laws of vision indicate that one man's entire attention is required to inspect the road for safe traveling.

Three Sorts of Servants.—God has three sorts of servants in the world; some are slaves, and serve him from a principle of fear; others are hirelings, and serve him for the sake of wages; and the last are sons, and serve him from a principle of love. A mere hireling is a changeling. He who will not serve God unless something be given him, would serve the devil if he would give more.

Whole years of joy glide unperceived away while sorrow counts the minutes as they pass.

Sunday Reading.

EVENING TIME.

BY JAMES MONTGOMERY.

Zech xiv. 7.

At evening time let there be light:
Life's little day draws near its close;
Around me fall the shades of night,
The night of death, the grave's repose
To crown my joys, to end my woes,
At evening time let there be light.

At evening time let there be light:
Stormy and dark hath been the day;
Yet rose the morn divinely bright,
Dews, birds and blossoms cheered the way:
O for one sweet, one parting ray!
At evening time let there be light.

At evening time there *shall* be light;
For God hath spoken;—it must be:
Fear, doubt, and anguish take their flight,
His glory now is risen on me;
Mine eyes shall his salvation see:
—'Tis evening time, and there is light!

[Written for the Rural New-Yorker.]

DIVINE ORIGIN OF THE SCRIPTURES.

You believe the truths of the Bible are the discoveries of human reason. If the inspired writers had claimed for themselves the authorship of the Scriptures, you would have acknowledged their claim. But because they gave to God the glory of having inspired them to write it, you believe they lied. You would force them to wear the honor, thus making them the best of men, and the same time branding them liars.

My brother, is it not a settled principle in law, that a man's admissions are evidence against himself. And will you, who have sat at the feet of Gamaliel, so forget his teachings as to force upon them the glory they acknowledge belongs to the Most High? Can you, a lawyer, adjudge the glory to the party that admits the claim of the other? Sussex.

THE HEROIC MINER.

A poor but pious miner in Cornwall was down deep in the earth with another miner, sinking a shaft. They were blasting rocks, and their custom was, after the rock was charged, for one to ascend in the bucket, and the other to wait till the bucket came down again, then ignite the fuse, get into the bucket, give the signal to the man above, and be drawn to the top before the explosion. In the present case, the train unexpectedly took fire. The fuse was hissing, both men rushed to the bucket, got in and gave the signal to hoist; the man above could not draw them both. They at once saw their danger; both could not escape, and delay was death. One of the miners was pious.—Looking for a moment at his companion, and stepping from the bucket he said, "Escape for thy life; in a few moments I shall be in heaven." The bucket was drawn up, and the man was safe. Eager to know the fate of his magnanimous companion, he bent over the mouth of the shaft. Just then the explosion rumbled below; and a splinter struck him on the brow, leaving a mark he will carry to the grave.—They soon commenced laboring among the fallen rocks to extricate the corpse. At last they heard a voice. Their friend was yet alive. They reached him, and found him without injury or scratch. All he could tell of the fearful scene was, that at the moment his friend was gone, he sat down and took up a stone and held it before his face. When asked what induced him to let his companion escape, he replied, "I believed my soul was safe; I was not sure of his."

Now look at him who, to build a city called by his own name, sacrificed a hundred thousand men, and at this poor miner, who, to save the soul of his unconverted comrad, sat down there to be blasted to pieces; and say which is the true hero.

WE SEE BUT IN PART.

"We see but in part," in the beautiful language of the Bible, is well and forcibly illustrated in the following:

A traveler, as he passed through a large and thick wood, saw a part of a huge oak, which appeared misshapen, and almost seemed to spoil the scenery.

"If," said he, "I was the owner of this forest, I would cut down that tree."

But when he had ascended the hill, and taken a full view of the forest, this same tree appeared the most beautiful part of the landscape.

"How erroneously," said he, "I have judged while I saw only a part."

"This plain tale," says Dr. Olin, "illustrates the plans of God. We now see but in part. The full view, the harmony and proportion of things, are all necessary to clear up our judgment."

Singular Biblical Manuscript.—In the library of the late Dr. Williams, in Redcross street, London, there is a curious manuscript, containing the whole Book of Psalms, and all the New Testament, in fifteen volumes folio.—The whole is written in characters an inch long, with a white composition on black paper, manufactured on purpose. This perfectly unique copy was written in 1745, at the cost of Mr. Harris, a tradesman of London, whose sight having decayed with age, so as to prevent his reading the Scriptures, though printed on the largest type, he incurred the expense of this transcription, that he might enjoy those sources of comfort which are "more to be desired than gold, yea, than much fine gold."

"I fear God," said a man of good sense; "and next to Him, I fear only the man who does not fear Him."

How can I come to know myself? Not by contemplation; by action only. Do your duty, and you will know your value.

Miscellaneous.

[Written for the Rural New-Yorker.]

THOUGHTS FOR MY DEAR ONES.

BY MRS. JENNY A. STONE.

A thought for thee, mother,
As evening comes on,
The sunbeams have faded—
Their glory is gone:
Dim is the light,
May the Father above thee,
Love e'en as I love thee,
Mother—good night.

A thought for thee, father,
I gaze on thee now;
Thy locks are all whitened
And furrowed thy brow.
In fancy I gaze;
For the shadows are creeping,
While memory unsleeping,
Calls back my young days.

A thought for ye, sisters,
All near to me now,
And the fire-light is playing
O'er each gentle brow,
Star-lamps are bright,
Your voices around me,
With magic have bound me,
Sisters—good night!

A thought for ye, brothers,
A sweet childish call,
Comes ringing in music
Through chamber and hall,
Your sister is here,
My heart is all gladness,
How can it hold sadness,
When ye are so near!

A thought for thee, dear one,
My vision has fled,
And I have been talking
Alone with the dead;
But thou art still here,
Nay heed not my weeping,
I must have been sleeping,
Still, still art thou dear.

TRAVELING — THEN AND NOW.

"Farewell, farewell! we may never see you more;" and with tears and embraces a father and mother parted with one of their elder children, a daughter, just married and about to emigrate. The young couple took their departure in a covered lumber wagon, from a little New England town, and wended their way over hill and dale toward the setting sun. After three days' traveling they reached the east bank of the Hudson, and after some delay were ferried across in a horse boat; that is to say, a ferry-boat propelled by horses walking on a horizontal wheel, connected by rude gearing to the paddles. Albany was at that time, a small city, compared with what it is to-day. The canal was finished and in operation in its primitive capacity, it is true; but its advantages had yet scarcely began to be developed, and as to railroads, such a thing had not been thought of. It is true, some strange rumors had come across the Atlantic, that one Stephenson, an Englishman, so erratic genius, perhaps a hair-brained enthusiast, was at work upon a steam wagon; and it was stated that some members of the British Parliament had been foolish enough to introduce the subject into the House of Commons, where it was laughed to scorn, as it deserved to be; but as to an iron track, even for a single mile in this country, why the thing was so utterly out of question that any man would be in danger of an insane asylum, (if there had been any such in existence at the time,) who mentioned it.

Two weeks from the time our emigrants left Albany they had reached that little remote village, on the lake frontier, known by the name of Buffalo; a place not in very good repute, and more famous for the pecuniary ruin of most of those who had previously been so foolish as to meddle with it, than for anything else.—The charred and desolate traces of the conflagration, which years before had left Buffalo a smoking ruin, because the British officers who crossed the frontier were brutes, and the American officers who commanded and were expected to defend the place were cowards, could still be seen. Here emigrants, who a few years previously went West, by way of Olean and the Allegany river, now began to congregate, and to venture over the blue waters of Lake Erie, in sail vessels of very small dimensions.—But our travelers had a wagon and horses—very inconvenient freight for those skittish and doubtful craft, which the chopping surges of the lake tossed about like corks—so they took their onward and slow march up the lakes along the south shore. After a toilsome journey of three weeks more, they reached the ancient city of Detroit, a place much too Frenchified and uncouth to suit their Puritanical and Yankee tastes. So after a brief sojourn, of a day or so, they made still further progress Westward, and settled in the midst of the woods and prairies in Central Michigan. There were no neighbors, no markets, no cash, no schools, no churches; and many a time in the earlier years of their sojourn in the wilderness, were they tempted to turn back. But pride and *poverty* prevented, and they did what they then deemed to be the *next best thing*, viz., set about improving the lands on which they squatted; built a comfortable log house and barn, let into the forest the light of day, and planted garden and fruit seeds. Letters were a month coming and going from home, and cost forty miles private conveyance to Detroit and twenty-five cents postage at that.

Things are not now as they were then.—Those early emigrants are in years scarcely yet past the meridian of life, and find themselves now located in the very middle of a wealthy and powerful State. They have all the comforts and luxuries of life, and enjoy in abundance, all those things of which they were so destitute at the beginning. There is not only a continuous iron track from their own door to Boston and New York, a distance of more than a thousand miles, but it extends also to the Mississippi river, five hundred miles further westward, towards the setting sun. It cost them eight weeks painful traveling from the old homestead, in the first instance, and last year they went back with all ease and comfort within a period of two days, to see the old folks still alive, although well stricken in years. The old people think their home among the hills of New England is the next best place to Paradise; and they were greatly scandalized to hear their bluff Wolverine of a son-in-law declare that he would not swap his four hundred acres of Michigan land for every rod of the old State. He is one of the "squatter sovereigns" under the ordinance of 1787.

[Written for Moore's Rural New-Yorker.]

HOMER, THE EPIC POET.

The sweetest and purest strains of poetry come floating to us across the abyss of time, struck from the melodious lyre of the "blind old man of Chio's rocky isle." We call him old when the mildness of enduring spring still garlands fresh chaplets around his brow. He is still with us, still speaks to us in language as truthful and enchanting as years ago, when the precepts of wisdom distilled from his lips, as honey from the honey-comb, and being moulded into harmonious verse, enlightened and refined the age.

He was the first of those great and noble souls who evolved civilization out of barbarism, who tore the shackles of vice and error from humanity, and opened to its view a vista magnificent in appearance and beautiful in truth. His poetry, as fresh and vigorous as the productions of to-day, excites our feelings, intensifies our passions, and purifies our hearts. It infuses into us a new spirit, a love of the beautiful and good. We are delighted with the simplicity of the scenes there presented, the admirable skill by which each is made to act his part in the living drama, the marked delineations of human character, revealing every sentiment and thought, every motive and desire.

The waves of his imagination, at times, lave the boundaries of that dark sea by which his hero knelt, and looking far over the gloomy waters, invoked, in language tender and pathetic, the spirit of his sainted mother. Again, his fancy vividly paints, in rainbow hues, images, the bright ideals of a land fairer than Hesperian climes.

He is all youthfulness and love. He comes forth as radiant in beauty as his own rosy-fingered Aurora. To him, nature in all her variety is enchanting. He lives in her glowing beauties, and is refreshed by her soothing pleasures. He inhales the freshness of early dawn—drinks in the cool dew of the morning—basks smilingly in the noontide blaze—welcomes gracefully the evening twilight—loves the stillness and solemn grandeur of night. A. J. E.

A REMARKABLE MAN.

At a temperance meeting held in Alabama, about six years ago, Col. Lemanousky, who had been 23 years in the army of Napoleon Bonaparte, addressed the meeting. He arose before the audience, tall, erect and vigorous, with a glow of health upon his cheek, and said:

"You see before you a man 70 years old.—I have fought two hundred battles, have fourteen wounds on my body, have lived thirty days on horse flesh, with the bark of trees for my bread, snow and ice for my drink, the canopy of heaven for my covering, without stockings or shoes on my feet, and only a few rags of clothing. In the deserts of Egypt I have marched for days with a burning sun upon my naked head; feet blistered in the scorching sand, and with eyes, nostrils and mouth filled with dust—and with a thirst so tormenting that I have opened the veins of my arms and sucked my own blood. Do you ask me how I have survived all these horrors? I answer, that under the providence of God, I owe my preservation, my health and vigor, to this fact, that I never drank a drop of spirituous liquor in my life! And, continued he, Baron Larry, chief of the medical staff of the French Army, has stated as a fact, that the 6,000 survivors, who had safely returned from Egypt, were all of them men who had abstained from ardent spirits."

A Beautiful Conceit.—Some author, we remember not who, informs us how we became indebted for the red rose. They were all of a pure and spotless white when in Eden they first spread out their leaves to the morning sunlight of creation. Eve, as she gazed upon that tintless gem, could not suppress her admiration of its beauty, but stooped down and imprinted a warm kiss on its snowy bosom. The rose stole the scarlet tinge from her velvet lips, and yet wears it.

ALMANACS,—THEIR ORIGIN.

It is scarcely worth while to do more than to give a bare notice of the existence of instruments answering some of the purposes of modern almanacs amongst the ancient Egyptians. The first of these, however, which can truly be recognized as calendars, were the Log Almanacs of the Saxons, so-called *Almon-aght*, or observations on all the moons.—These were square pieces of wood, horn, and sometimes metal, about a foot in length, and two inches in diameter, on the fore-sides of which were graven the golden numbers, dominical letters, and epacts of the different Sundays in each quarter of the year. Beyond this they professed nothing, and were mostly of extremely rude workmanship. These appear to have existed as early as the present century, and are believed to have had an Eastern origin. Several such are still to be seen in the British Museum, St. John's College, Cambridge, and in the Ashmolean Museum.

Following on these, though after a considerable lapse of time, came the early written almanacs; these were of two descriptions,—the ecclesiastical, which seems to have been of the greatest antiquity, and were to be found added to most of the Latin manuscripts of the Scriptures; and also the astronomical. The former contained lists of saints' days, festivals, and other matters of religious interest; the latter comprised nothing beyond certain astronomical computations.

Of these written calendars, perhaps the most interesting, as well as the most ancient, were the "folding-almanacs," of which there are a number still to be seen, in a fine state of preservation, in the British and Oxford Museums. Some are in Latin; but others again, dating in the middle of the fifteenth century, are in English. Not a few of these compositions were of an astrological nature, and amongst them may be instanced one by the famous Roger Bacon, and another by the not less notorious Dr. Lee.

In the year 1472, the first printed almanac made its appearance on the Continent, prepared by one Johannes de Monte-Regio. From Germany and Holland these almanacs found their way into France, whence, in the year 1497, one of them was translated into English, and printed in this country. The first of the kind, by Richard Pynson, under the title of "The Shepeheard's Kalendar." The contents of these printed almanacs were very miscellaneous, and not unfrequently quite beside the nature of the publication; but, in every case, mixed with the grossest absurdities. Great pretensions were made to prognosticate the changes of the weather in certain phases of the moon; indeed, this astrological branch of the information appears always to have been a very prominent feature in them. Of the quality of these predictions and pretended calculations, the reader may form some opinion by a perusal of the following lines, taken from one of these almanacs of the "good old time:"

"Some hot, some colde, some moyst, some dry;
If three be good, some be worst at the most.
Saturne is highest and coldest, being full old,
And Mars with his bluddye sword, ever ready to kyll.
Jupiter very good, and Venus maketh lovers glad.
Sol and Luna is half-good and half-ille.
Mercury is good and evil verily,
And hereafter shall thou know,
Whyche of the seven most worthy be,
And who reigneth hye and who a-lowe;
If every planet's properlie,
Whyche is the best among them all,
That causeth wrathe, sorrowe or shame;
Tarry and heare soone thou shalt,
Speak softe, for now I beginne."

In some of the almanacs of the sixteenth century may be found the original of the well-known rhymes on the number of days in each month. They appear slightly different from our modern version:

"April, June, and September,
Thirty dales have, as November;
Each month also does never vary,
From thirty-one, save February,
Which twenty-eight doth still confine,
Save on Leap-years, then twenty-nine."

It may be perhaps unknown to many of our readers, that the nursery rhymes beginning—"Multiplication is my vexation," first appeared in one of the early almanacs, so long since, indeed, as the middle of the sixteenth century.

FLOWERS AND MUSIC.

Yes, two gifts God has bestowed upon us, that bare in themselves no guilty trait, and show an essential divineness. Music is one of these, which seems as if it were never born of earth, but lingers with us from the gates of heaven; music, which breathes over the gross, or sad, or doubting heart, to inspire it with a consciousness of its own mysterious affinities, and to touch the chords of its unsuspected, undeveloped life. And the other gift is that of Flowers, which, though born of earth, we may well believe, if any thing of earthly soil grows in the higher realm—if any of its methods are continued, if any of its forms are identical, they will live on the banks of the River of Life.

Flowers! that in our gladness and in our sorrow are never incongruous—always appropriate. Appropriate in the church, as expressive of its purest and most social themes, and blending their sweetness with the incense of prayer. Appropriate in the joy of the marriage hour, in the loneliness of the sick room, and crowning with prophecy the foreheads of the dead. They give completeness to the associations of childhood, and are appropriate even by the side of old age, strangely as their freshness contrasts with wrinkles and gray hairs; for still they are suggestive, they are symbolical of the soul's perpetual youth, the inward blossom of immortality, the amaranth crown. In their presence we feel that the body shall go forth as a winged seed.

The best part of human qualities is the tenderness and delicacy of feeling in little matters, the desire to soothe and please others—minutiæ of the social virtues. Some ridicule these feminine attributes, which are left out of many men's natures; but I have known the brave, the intellectual, the eloquent, to possess these gentle qualities; the braggart, the weak, never! Benevolence and feeling ennoble the most trifling actions.

Ladies' Department.

CONDUCTED BY A——E.

Trans-Atlantic Epistles,

TO COUSIN KATEY.

Communicated thro' Moore's Rural New-Yorker.

EPISTLE THIRD.

Tirlemont, Belgium, Jan., 1854.

Table manners indicative of good or bad breeding—National characteristics—Table manners and customs in Belgium—Belgian hotel fare—"Pistols and coffee"—Roasted larks, and other luxuries—Dining leisurely—Dear and wine-al supper—The Belgians not a handsome people, and the reason why.

Cousin Katey:—Do you remember what our dear, good teacher used to tell us when we were school-girls together, in her lectures on etiquette, that a person's behavior at table afforded the best criterion for judging whether he were well bred, or deficient in refinement and politeness? I begin to think this principle is susceptible of a still wider application, and that the way to become acquainted with the character and habits of a nation is to observe the people who compose it at table,—to notice the dishes which they prefer, the manner in which they are served and eaten, the beverages with which they are accompanied, &c. For example, what could be more suggestive of the rosy-faced, corpulent, sturdy Englishman than the ample round of roast beef and the generous plum-pudding in which he especially delights? Across the Channel we find the lithe, mercurial Frenchman, an embodiment of the sparkling wines and fragrant Mocha over which he loves to linger; and his neighbor, the phlegmatic, metaphysical German, whose philosophy is as cloudy and intangible as the fumes of the pipe which is his inseparable companion, while his physical organization is equally indicative of the strong potations and the heavy dishes which he particularly affects. To apply the principle in question to our own land—if we wished to illustrate to a stranger in the most forcible manner possible some of the peculiar characteristics of "*Young America*," what better way could we devise than to show him our business men at table, their minds wholly absorbed in some commercial scheme, mechanically *bolting* their dinner in ten minutes, and then hurrying away with brows knit and fevered brain to the ledger and the counting room? Would not the observer at once recognise a nation in haste to be rich, ready to sacrifice health and even mental and moral improvement at the shrine of gain or of ambition? Would he require any stronger evidence that we are a *fast* people?—But I will reserve the further expansion of my theory till another time, and proceed to give you some account of table manners and customs in Belgium.

We arrived here with the famous appetites that a sea-voyage usually gives, were accommodated with pleasant, airy rooms at the "*Hotel du Plat d' Etain*," (who would suppose this formidable looking name meant nothing more than the Hotel of the Tin Plate?)—and contented ourselves with a simple lunch for that night, as the evening was already considerably advanced. By the way, I must not forget to tell you that the apartment we occupied was the identical one in which Napoleon once passed a day during his consulship. The shade of the unfortunate prisoner of St. Helena did not return to trouble our repose, and the next morning found us refreshed by our slumbers, and prepared to do full justice to all the good things that a Belgian hotel might afford. When the *garcon* brought us the welcome intelligence that our morning meal was prepared, we descended the stairs with visions of beefsteak, broiled chickens, buck-wheat cakes, and the other savory dishes which compose an American breakfast floating before our imagination, but when we entered the "*salle a manger*" these images vanished as if by magic. The table displayed simply a coffee service, half a dozen rolls, and a plate of butter. We seated ourselves somewhat disconcerted, but the excellent coffee, the rolls and butter, so delightfully fresh and sweet, soon appeased us, and before we rose we were disposed to regard a Belgian breakfast quite favorably. The coffee is made after the French mode; the delicate flavor which depends on the presence of the volatile oils of the berry, and so much of which is lost by evaporation in our own stupid way of preparing the beverage, is here preserved in its highest perfection. The rolls bear the murderous name of *pistols*, because they were originally made long and narrow, and bore some fancied resemblance to that weapon. They have lost the shape, being now quite ordinary in their appearance, but they still retain the name, so that your peaceable cousin can say with truth that she was treated to "coffee and pistols" for her first Belgian breakfast.

Our morning meal was so little in accordance with our anticipations that we did not indulge in any conjectures respecting dinner, but prepared ourselves to submit with the best grace possible to whatever Belgian custom might dictate. We found the table nicely arranged, with linen beautifully white and clean, and in great profusion; each napkin was a small table cloth in itself, being not less than a yard square. A decanter of water, two salt-cellars, one filled with salt, the other with pepper, and a piece of bread for each person, were all the visible signs of dinner which presented themselves, but by the time our enormous napkins were unfolded and arranged, the waiter had served us each with a plate of excellent soup, very different from many of the soups at our American hotels, which seem only intended as a medium for conveying a certain quantity of pepper into the stomach. Next came fish, then roast beef with potatoes, then several courses of meats unaccompanied by vegetables of any kind, and lastly a fowl with a dish of stewed apple. This constitutes about the ordinary routine of a "table d' hote" at a Belgian hotel, modified occasionally by the introduction of the dishes peculiar to each season. I must describe to you, cousin Katey, one of the dishes which is considered a great delicacy here, and which, when in season, takes the place of poultry. It consists of larks, roasted whole, without removing head, claws or interior, as the French delicately express it, and the birds are entirely consumed, bones and all, with the exception of the beak. An amateur will dispose of six or eight of them in this manner, leaving only so many beaks to tell the story. The head is considered a particularly desirable morsel, and is frequently recommended by physicians to invalids. How, think you, would one of our delicate American girls regard her medical attendant if he should propose to her such a dish? But to return to my dinner, which I left under way.

The dessert consists of tarts about the size of one's palm, an endless variety of little cakes, confectionary, and the fruits and nuts of the season. The plates are changed with every course, the knife and fork only for the dessert. By the way, the use of the knife is confined within very narrow limits by the laws of etiquette. When you have received a portion of meat you are expected to take your knife and at once divide it all into the proper morsels; after this the knife must be laid down by the side of plate, and must remain untouched until you are again served with meat. The dishes which compose each course are first placed upon the table that you may see what you are to have, and then the garcon removes them to a side table to be carved. In this way bills of fare are rendered unnecessary, inasmuch as you are not allowed the liberty of making a selection, but must sit out each course whether you choose to partake of the dishes which compose it or not. An American is at once struck with the absence of that hurry and confusion which attend all dinners at our hotels. Every one seems to be at his leisure, even the garcon moves with a certain dignity, as if impressed with the importance of the occasion. Between the courses there is necessarily an interval of five or ten minutes to allow time for the performance of all the ceremonies which must be gone through, but no one seems impatient.—Dinner is apparently the great event of the day, and an hour and a half is not considered too long a time to devote to it, even by travelers and business men. After dinner the gentlemen frequently adjourn to the *cafe*, and spend an hour in trifling over a cup of coffee and a cigar.

Supper, which is usually taken about seven o'clock, is only a second edition of the dinner, somewhat condensed and abridged. Beer or wine is the universal beverage at this meal as well as at dinner. Tea is kept at the hotels for the accommodation of the English who are frequent guests, but a Belgian servant girl would feel herself abused if her mistress should give her tea instead of beer at supper. Besides the three principal meals very many of the Belgians, particularly the laboring classes, take a lunch at four o'clock, which they call the *gouter* or *taste* it consists of coffee and *tartines* or thin slices of bread and butter, arranged like sandwiches, minus the ham. All the servants in a house expect this meal as much as their dinner, whether the members of the family take anything at that time or not.

There, Katey, I have given you a faithful, and I fear a tiresome account of all the particulars connected with eating and drinking here. Do you observe the preponderance of animal food, and the constant use of stimulating beverages, particularly coffee and beer? Then you will not be surprised to learn that the Belgians are a dark, heavy looking race, with little vivacity or intelligence. Even the children seem prematurely old, and almost every man we meet past middle age totters along as if he had one foot already in the grave. I have scarcely seen a pretty woman since I came here, while I can not go into the street without encountering scores of toothless old crones who could any of them personify Shakespeare's witches to the life. *Entre nous*, I entertain serious fears that I shall grow ugly myself from the mere force of association. Minnie.

How! there is music in the world! It falls on the weary heart like a breath from the Eden-land, and as our hearts feel a thrill of its voiceless melody the Future's sky before us seems lit by an angel smile.

ROCHESTER, MAY 13, 1854.

SPECIAL NOTICES.

☞ *A new quarter commenced April 8,—a good time for new single and club subscriptions to begin; and the renewal of expiring subscriptions is now in order.*

☞ *Additions to Clubs are still in order. If back numbers are not wanted, we will send from 1st March or April to end of year for 25—and count on premium.*

☞ *During the season of navigation we can send the Rural to Canada West free of American postage, and hence will furnish clubs for six months from date at lowest rates.*

☞ *Clubs for six or nine months from this date at same proportional rates as for full year—and premiums allowed.*

☞ *Back numbers of the present volume furnished if desired, or subscriptions may commence at any time.*

Re-inauguration of the Crystal Palace.

The New York Crystal Palace was re-inaugurated with imposing ceremonies on Thursday, the 4th inst. The late completion of the Palace last year, rendered the time of exhibition comparatively limited, and made the concern a sorry speculation for the stockholders, whatever advantage it may have been to visitors. Not only were the entire receipts exhausted, but the corporation was found to be many thousand dollars in debt. Under these circumstances Mr. Barnum was chosen President, and immediately set himself about lifting the concern out of bankruptcy. He called upon the Hotel-keepers, Merchants, and other business men of the city, to take one hundred thousand dollars worth of admission tickets to dispose of among their customers and friends, which was readily assented to, and payment made by them. The price of admission was reduced one-half, viz., to twenty-five cents, and exhibitors invited to furnish works of art and articles of manufacture, which was immediately done, and the Palace rendered more than ever attractive. It starts off for the season under much better chances of success.

On the day of inauguration, an imposing procession marched through the principal streets to the Palace, where addresses were made by the President, Mr. Barnum, Parke Goodwin, Elihu Burritt, and others, followed by an illumination in the evening. The scene is represented as most magnificent, and the exhibition much superior to what it was at the opening last year. The Palace is re-opened under favorable auspices, and the enterprise apparently deserves the success which its energetic President and Board of Trustees anticipate.

The Ward Trial.

The most intense excitement prevailed in Louisville on the receipt of the intelligence that Matt. Ward had been acquitted. Hand-bills were circulated for a public meeting, and some eight or ten thousand persons assembled on Saturday evening succeeding the trial. They hung and burned the Wards, the jury, and some of the Counsel, in effigy; invited John J. Crittenden to resign his seat in the U. S. Senate, and Natt. Wolfe, his seat in the Senate of the State; passed resolutions of the most denunciatory character, and called upon the Wards to remove from Louisville forth with. The house of Matt. Ward was stoned and set on fire by some of the indignant populace, and the fire department had to be called out to subdue the flames.

If Noble Butler, a brother of the murdered man, with a magnanimity worthy of all commendation, had not came out with a card invoking the people, in the name of his dead brother, to abstain from all violent demonstrations, there would not have been one stone of the Ward habitation left upon another. The Wards went secretly and hastily from the city, and the principal actors in the tragedy will probably never show their faces there again.

Eclipse of the Sun.

On the 26th inst., about half past four in the afternoon, there will be an annular eclipse of the sun. This form of the eclipse is caused by the moon's shadow converging to a point before reaching the earth, which consequently makes the eclipse to assume the appearance of a dark round spot passing across the sun's disk, surrounded by a luminous ring. The coming eclipse of the sun, is the largest that has occurred in the United States for many years. It will be central, and largest in Canada West, the North-eastern Counties of New York, Vermont, and Southern New Hampshire. In our locality the eclipse will be annular also, but the ring of light will be widest on the sun's Southern limb. We would recommend our school-boy friends, as well as other friends not *school-boys*, to provide themselves with a good large piece of smoked glass, in order to save their eyes while watching the progress of the interesting phenomenon.

The Broadway Fire.—The Jury on the Broadway catastrophe, brought in their verdict May 4th. In the course of it they say, among other things, "the whole building was, in our opinion, a complete death-trap, and could scarcely have been more insecure and dangerous had it been constructed for the express purpose of sacrificing human life. It was, moreover, deceptive in its appearance, and on that account doubly dangerous in case of fire."

They find further that the Architect, the Mason, and the Carpenter who were engaged in erecting the building, and the Lessees who made some alterations in it afterwards, are responsible for the calamitous results.

Our Albany Correspondence.

Execution of Hendrickson—Politics of the Capitol—The Weather, &c.

Albany, May 8th, 1854.

For some time past the prevailing topic of conversation in this city, has been the case of John Hendrickson, Jr., to whom I have alluded several times during the past six months. His original sentence, which was to have taken effect last August, would have been carried out but for the strenuous efforts made to secure a new trial. His friends were quite wealthy, and no means were omitted that seemed to promise his acquittal.

Just on the verge of his execution, a statement was obtained from some eastern chemists, with the intention to impeach the testimony of Dr. Selbscht, in which statement many of the Albany physicians concurred. These documents, and some referring to the medical testimony, were laid before the Governor, in hopes of procuring a pardon; but Gov. Seymour, after a very attentive examination of the whole case, declined to interfere; so that the last hope was extinct, and preparations made to execute the sentence, which was done on Friday, April 5.—He died denying his guilt and apparently stolid and indifferent to his fate.

This case, like most other criminal tribunals of law, is full of lessons to the public. If children were brought up to habits of intelligence and virtue, murder and other crimes might be numbered with the things that were. Let the readers of the Rural, especially the young, heed the many injunctions they there find, to save them from wickedness and its consequent evils.

Political matters are rather dull about this season. Under the law creating a State paper, the *Evening Journal* has been designated as said paper. The other papers seem much dissatisfied, as they had offered to perform the same services *gratis*. The different parties begin to assume a more direct opposition and fault-finding towards each other, preparatory to the coming election in the fall.

The weather has been very unpleasant. Since the great storm, we have had it cold enough for March. At present it seems to be moderating.

Business is quite good. I am told that the wholesale merchants have had an unusual run of business. "Owl."

Letter from Minnesota.

Noticing in the Rural of April 8th, several accounts of snow and the backwardness of spring in New York and other parts of the east, I thought it would not be unwise to apprise you of the state of the weather in "cold, snowy Minnesota." This is the first winter I have passed in this Territory, and it has been as pleasant and agreeable as I could wish. Though the mercury several times stood 30° below zero, yet the air was still as solitude, and the keen, dry atmosphere only braced one up the stronger. The steady cold of our winter, is much preferable to the frequent changes of Western New York.—There was not an inch of snow fell here before the 20th of December, and not half an inch since the 25th of January. The greatest depth of snow was 11 inches. A thunder shower took off the snow on the 2d of March, and the ground has not been covered since. Spring has opened dry and warm, and farmers began to plow before the 20th of March.

Our spring crops are up, and look well, and gardens are being made rapidly. Our soil is a rich, black loam and sand, free from stone, and easy to till, rewarding the farmer bountifully for his labor. We have a very healthy climate, good market, and the best of roads. Agricultural Societies and Farmers' Clubs are being formed. A Territorial Fair is to be held this year; all goes on smoothly,—*Pacific Railroad speed*,—while the Rural comes regularly to cheer us, and is fast gaining friends by its affable and intelligent countenance and conversation.

Anoka, Benton Co., Min., April 28, 1854. W. W. F.

Beware of Poisons.

The *Syracuse Standard* states that a whole family were recently poisoned, and the father and one daughter died at Lafayette, Onondaga Co. from the effects of White Lead that some blundering retailer at the town of Tully, sold them for Saleratus.

A little care, and a little familiarity with the various mineral substances, on the part of house keepers, will very often prevent similar melancholy accidents; Saltpetre and oxalic acid are frequently mistaken for Epsom salts, Arsenic for Magnesia, &c. &c.

The Legislature of Rhode Island, which met on the 2d, organized by choosing Whig officers throughout. All the State officers except the Governor, failed of an election by the people, and they were also chosen by the Legislature out of the same school of politics. The following were the officers chosen:—Lieut. Governor, Secretary of State, Attorney General, General Treasurer. The whole number of votes in Grand Committee, including the Lieut. Governor, is 104. Whigs 60, Democrats 44.

Increase of Rochester.—The following exhibit of the population of our city at successive periods, illustrates the onward march of Rochester. The results are given in round thousands next less than the whole number of inhabitants.

In 1820 there were 1,500 inhabitants; 1825—4,000. Increase 233 per cent. In 1840 there were in the city 20,000 inhabitants; increase in 15 years 900 per cent.; in 1845—25,000, increase 25 per cent.; in 1850, 46,000, increase 84 pr cent.

Congressional.

May 1.—Senate.—Mr. Slidell spoke on his resolution as to the suspension of the neutrality laws against Spain. He presented evidence of supposed plan for the Africanization of Cuba.

Mr. Seward moved to postpone the matter as it might involve us in war, and it was finally referred to the Committee on Foreign Relations.

The Indian Appropriation bill was then taken up, but subsequently postponed, and after a short executive session, the Senate adjourned.

House.—On motion of Mr. Bailey, chairman of the Committee on Foreign Affairs, the President was requested to communicate any correspondence with other governments on the rights of neutrals, &c.

The House then took up Territorial business.

Congress, May 2.—No business of importance done in the Senate.

House.—Mr. Richardson reported a bill for admission of Oregon as a State.

A bill was passed providing for the extinguishment of the title of the Chippewa Indians to lands in Wisconsin and Minnesota.

Mr. Wheeler asked leave to introduce a resolution to authorize the Secretary of the Navy to send a steamer suitably provided, to search for the missing steamer City of Glasgow.

The house went into Committee of the Whole on the Territorial business, and, when the committee rose, the Speaker laid before the House a message from the President concerning the documents relative to the arrest in Austria of the Rev. James Cook Richmond. Adjourned.

The House went into committee and resumed the consideration of the bill to establish the office of Surveyor General in New Mexico, and to grant land to actual settlers therein.

Mr. Pettit, from the Judiciary committee, to which was referred the resolution directing inquiry as to the propriety of having the U. S. statutes revised, corrected and properly collated, reported that it was inexpedient to legislate on the subject.

At 1 o'clock a message was received from the President, vetoing the Land Bill for the Indigent Insane.

Washington, May 4th.—Senate.—Messrs Seward and Chase, presented petitions against the Nebraska Bill, and Mr. Sumner a Memorial from Missouri and Wisconsin on the subject of Spiritual Manifestations asking for an investigation into the subject by a select committee.

A resolution was adopted calling for a report of the exploration of the North Pacific Ocean.

The Veto Message was taken up, and a motion to print 10,000 copies agreed to. Mr. Gwin moved the postponement of the subject till Monday week.

House in Committee on territorial bill.

March 5.—The Senate was engaged on the private calendar.

The bill to pay for property destroyed by the English in Maryland during the war of 1812 was passed.

The House went into Committee on the bill establishing the office of Surveyor General in Utah. Adjourned to Monday.

New York City.—The city of New York extends from the Battery to Kingsbridge, a distance of thirteen and one-third miles, and the width is one mile and three-quarters. Of this area, about one-fifth is compactly built upon. The vacant or upper part of the city is traversed lengthwise by seventeen avenues, which are again crossed by streets numbering from one to two hundred and twenty-nine. These streets form squares, which are surveyed for building lots of the size of twenty-feet in width by one hundred in depth. The survey of New York was commenced in 1811, by John Randall, Jr., under the direction of Gouverneur Morris, De Witt Clinton and John Rutherfurd, and occupied them ten years in its completion. The entire are was originally purchased of the Indians for twenty-four dollars, and it was estimated to be worth, in 1852, the sum of $253,278,384.—*N. Y. Evening Post.*

Struck by a Thunder Bolt.—The Academy at Southampton was greatly torn and shattered to pieces, on Friday morning week, by a thunder bolt. The ball was seen by the fly-stunders rapidly approaching the building, bearing a south-easterly direction, and it was thought by them that it would pass over without touching the building; but it struck the spire and went down the belfry—the concussion being so great as to take everything before it. Throwing large beams from the first floor up through the next, tearing down the wall, and not, as we are informed, leaving a single seat whole in the school room. The ball of fire appeared to be about ten or twelve inches in diameter, and to have a train about five feet in length. There were some seventy or eighty children attending the school, but fortunately the accident happened about an hour before the commencement of school, and no one was injured.—*Sag Harbor Corrector.*

Santa Anna's Policy.—The Washington correspondent of the Journal of Commerce disbelieves the report that Santa Anna intends to import foreign troops into Mexico. He says that he intends to encourage immigration from Germany and other countries, by advancing passage money for immigrants, and granting them lands for settlement, to be paid after a certain time. He has learned a lesson, the writer remarks, by seeing "how the United States have been benefited by means of the constant flood of foreign laborers, mechanics, and farmers into this country, who bring into the country large sums of money, and rapidly develop the agricultural resources of the country and assist in the construction of the public works."

Riot.—Boston, May 8.—Mr. Orr, alias the angel Gabriel, preached in the open air in East Boston yesterday, against Popery—the police interferred, when his friends carried him in a carriage to Chelsea, where he commenced preaching again—a riot ensued and several were injured. It was finally suppressed by the police. The riot commenced again in the evening between Irishmen and Americans—the former were driven from the grounds. An attack was then made on the Catholic Church—windows were broken, the cross torn from the steeple and destroyed. Sheriff Blood read the riot act, the military were called out, and the rioters dispersed. Several parties were more or less injured. One boy shot in the leg.

Parliament House Burned.—The Canadian Parliament House, at Quebec, has been again destroyed by fire. This is the third or fourth time that calamity has happened to our Provincial neighbors, and it would seem as if they would learn ere long, that a fire proof building is the most economical in the end. The public records and archives destroyed by the last year's conflagration is an irreparable loss.

News Paragraphs.

☞ Col. Hart, Superintendent of the Western Division of the New York and Erie Railroad, has announced that the company intend during the ensuing season, to run over the whole length of the road, a train expressly for the conveyance of dairy products to New York market. The cars used for this purpose will be so many huge refrigerators, securing the transportation of butter from one end of the road to the other, in the warmest weather, without the risk of injury.

☞ The New Hampshire Superior Court, at its late term, held at Concord, heard arguments in eighty-three divorce suits. Thirty-three of the applications were granted, seven denied, and the decision of forty-three reserved. The Superior Court of Rhode Island at its last term had seventy-seven similar cases before it, of which forty-two received judgment of dinner, four were denied, three settled, and the remainder continued for consideration.

☞ The newspapers have given currency to a rumor that Henry Ward Beecher was about to take charge of a Congregational church in Washington. In noticing the rumor, the Star, a newspaper published in that city, threatens him with a coat of tar and feathers, if his sermons should be similar to those he has preached elsewhere.—A shot from Beecher's quixau might obscure the brilliancy of such a genius.

☞ Reverence for the memory of Columbus is one of the few sentiments in which the natives of Old Spain and the Cuban creoles agree. The former show respect at every mention of his name, for the good he rendered to Spain, and the possessions he bestowed upon her; the latter, as they say, for his having discovered a country where they could be born and live away from her.

☞ The Yarmouth Register states that a gentleman of that place recently attempted to pick up a dead gull on the flats in the harbor. On digging down, it was found to be held fast by a large sea clam. The victim of misplaced confidence probably attempted to gull the shelly gentleman out of a dinner, and after having introduced his bill, had leave to withdraw refused him.

☞ The first issues of the new three-dollar gold pieces were made on Saturday last, and 600 of them were sent to Washington. They are beautifully executed. The front has an Indian head with a feathered crown, and the "United States of America" around it; the reverse has the words "Three Dollars—1854," encircled in a wreath of wheat, corn, oak leaves and acorns.

☞ The Faculty of the College at Cambridge, Mass., in view of the recent trouble between the students and the firemen of Cambridge, administered to the former some wholesome advice, which so offended the students that during the evening some of them broke into the chapel, and after freely using paint and oil on cushions and walls, carried off the Bible.

☞ Rev. Mr. Chamberlain, of the Presbyterian Church, the pioneer missionary to the Rio Grande, still remains at his post, as pastor of the Presbyterian Church at Brownsville, Texas, opposite Matamoras. His people have built him a comfortable parsonage. The Episcopalians and Methodists have also each a church edifice and minister.

☞ Senor Mota, formerly Lieutenant-Colonel of the National Guards at Chihuhuse, having expressed his contempt for the Dictator Santa Ana, has been, by order of the would-be Emperor, arrested and imprisoned among the vilest bandits and cut-throats, with whom he is now chained and compelled to sweep the streets of Mexico.

☞ The new comet was first seen in Paris, not by one of the official astronomers, but by a poor man who picks up a precarious livelihood by stationing himself in the Palace du Carrousel with a telescope for the accommodation of workmen, soldiers, grisetts, and others of the lower orders astronomically inclined.

☞ A Polish physician at Kalafat, has made a curious and important discovery of a species of camera, or optical telegraph, by which a reconnoissance could be effected at an incredible distance. It could be used on horseback, and the Turks had as many as 400 persons employed in this way about them.

☞ An important scientific discovery has recently been made in Paris, being a means whereby artificial air may be produced in sufficient quantity to enable a crew of fourteen men to breath freely beneath the water, for the space of four hours. It is to be applied to the purposes of naval warfare.

☞ The trial of ten negroes, charged with conspiring and assisting to poison Capt. Haney, (Haley?) came on at Northamberland, (Va.,) County Court last week. They were found guilty, and three sentenced to be hung on the first Friday in June next, and the other seven to be transported.

☞ A negro was recently executed by order of the chiefs of the Creek nation, for the murder of two Creeks. He was executed according to the furies of Creek law; the culprit being seated on a log, his head covered with a blanket, and the nearest relatives of the deceased shooting him with rifles.

☞ The father of the present Sultan of Turkey was destroyed by his intemperate habits.—His son, learning wisdom from the event, on his accession to the throne, issued a proclamation against the use of wine, and caused one million piastres worth of wine to be thrown into the Bosphorus.

☞ The Archbishop of Mexico has addressed to all his clergy a circular, in which he recommends to them the greatest vigilance in preventing the circulation and reading of Protestant Bibles, which are being introduced from the United States in Tamaulipas, across the Texas frontier.

☞ The Archbishop of Paris is diligent in promoting periodical and earnest preaching.—The observance of Sunday is rapidly gaining ground. Protestants and Roman Catholics both joining hand in hand, and the movement being headed by a zealous member of the Church of England.

☞ The bail of J. C. Gardiner (brother of Dr. Gardiner who committed suicide after conviction,) indicted for perjury, amounting to $12,000, was declared forfeited, he not appearing when called for trial before the Criminal Court at Washington. It is said that he fled to Cuba three weeks ago.

☞ No clergyman can cross the boundaries of the kingdom of Bohemia, without permission from both the civil and ecclesiastical authorities, and all intercourse of the clergymen with their ministerial brethren in foreign countries is strictly prohibited.

News Brevities.

—— The next session of the Canal Board will commence on the 6th of June.

—— Thirty-three canal boats were carried away from Troy by the late freshet.

—— The President, has vetoed Miss Dix's Land Bill for the relief of the Insane.

—— Seven locomotives have been manufactured at Mr. Lyon's establishment in Toronto.

—— The number of logs lost by the breaking away of the booms at Glens Falls, is 120,000.

—— The Canadian Parliament will probably meet for the despatch of business on the 2d of June.

—— The Syracuse papers announce the death of Dr. Samuel Healey, for 40 years a physician of Onondaga.

—— The Washington Star declares the story that Senator Douglas is a hard drinker, to be a bold falsehood.

—— Steam tugs and derricks are at work with the Ericsson and it is expected that she will be afloat again this week.

—— A new Baptist Church edifice in New Orleans, is to be built in the English Gothic style, and to cost $10,000.

—— Extensive frosts have prevailed in the interior of Louisiana and Alabama, and much replanting will be necessary.

—— A new Presbyterian Church edifice, in the Byzantine order, is to be erected in Baltimore, at a cost of $30,000.

—— Two thousand German emigrants were at Antwerp, at the latest date, waiting vessels to take them to the United States.

—— Gov. Bigler of Pennsylvania, has signed the bill providing for the sale of the main line of the public works at $10,000,000.

—— The Boston and Portland steamers are taking away from the Canadian trading vessels much of the most valuable cargo.

—— It is estimated that nearly a million dollars' worth of property has been shipwrecked on the Bahamas within three weeks.

—— The sum of $100,000 has been contributed by the United Presbyterian Church, during the last year for foreign missions.

—— The convention of Maine Law men have nominated Judge Conrad of Philadelphia, as their candidate for the office of Mayor.

—— The Future of the Human Race, is a fresh pamphlet by Robert Owen. It is based upon table-rapping and spiritual letter-writing.

—— In New York, furniture is manufactured now on purpose to be sold as having belonged to some of the first families. It goes off well.

—— The mail contracts were declared in Washington last week Tuesday. The names of the successful bidders were not made public.

—— The annual Conference of the Methodist Episcopal Church, south, has commenced its session in Columbus, Ga., Bishop Soule, presiding.

—— Rev. Abner Chase, a venerable Minister of the Methodist Episcopal Church died at Penn Yan last week Friday. His age was 80 years.

—— The Ohio Legislature has passed a bill prohibiting the circulation of foreign bank notes within that State, of a less denomination than $10.

—— The New York and Brooklyn Foreign Missionary Society, auxiliary to the parent American Board, collected the last year $26,961.

—— On the last Saturday of April, there was frost at New Orleans, and Friday is reported "to have been the coldest day ever known in that month."

—— A lady in New Orleans was severely burned, and narrowly escaped death, a few days since, in consequence of falling asleep while reading in bed.
